Mr. BENDER. Mr. Speaker, how shall we make available the materials provided for under the lend-lease bill to Great Britain? Radio stations, newspapers, and citizens throughout Ohio are asking this question. No question more vital to the welfare of our country could be asked. It was a problem from which the best minds of the present National Government steered clearly away throughout the congressional debate on the lend-lease bill. They were afraid of it. They knew that it was packed with dynamite, and that the implications of this question would be enough to rouse national protest.

Boiled down to simple terms, here is the issue we are discussing: Shall we furnish convoys to Great Britain or not?

I say that we owe it to the American people to do everything within our power to keep this country at peace. We are still nonbelligerent. No matter how strongly our sympathies may lie with the British, the Greeks, the Yugoslavs, and the Chinese, we still regard ourselves as nonparticipants in the war. I believe that the American people want to remain out of the war. I agree that we have a definite interest in maintaining democracies and free peoples against aggressors. To assist those people who are fighting for their independence, we are ready to furnish food and materials of every kind. We must draw the line at furnishing men.

If we embark upon a program of convoys half way across the Atlantic, or all the way across, we shall be committing an act which must be regarded as a clear act of war. International lawyers tell me that an act of war is whatever a belligerent nation chooses to call an act of war. But the temptation to attack and to sink any vessel convoying materials to Great Britain, must be recognized. Surely, none of the fighting nations would hesitate to destroy any vessel engaged in convoying materials to their enemies. Out of such an incident there rose the tremendous clamor which caused in no small part our entrance in the last war. I do not believe the American people are ready for another *Lusitania*. Let those nations with which we sympathize come to our shores to get the materials we furnish. We make them available. That is our part. With the British Fleet still in command of the Atlantic Ocean and the Mediterranean Sea, it should be able to protect the sea lanes to see that the goods we have begun to produce are delivered.

The administration leadership played a very evasive part in discussing convoys during the recent congressional debates.

They were never pinned down. They were willing to accept a meaningless amendment providing that nothing in the lend-lease bill could be construed to permit the convoy of ships across the ocean. But they refused to insert anything like a blanket prohibition.

Today the issue is becoming all the more important.

I believe that we must not take the last step, the step which may precipitate our entrance into this war. I am fearful that convoys may prove to be one scene beyond the last act short of war. I am concerned lest such an act plunge us into the European conflict. I for one do not propose that we shall sacrifice more American boys for the questionable gains of a bloody war.

We furnished money, materials, and men in 1917.

We must not make the same sacrifice again. Money and materials are ready. Let us keep our men at home.

Airplane Crashes

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 31), 1941

LETTER BY ASSISTANT SECRETARY HINCKLEY

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the Assistant Secretary of Commerce, Mr. Robert H. Hinckley, to the editor of the Chicago Daily Tribune, on the subject of airplane crashes.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EDITOR, THE CHICAGO TRIBUNE,
Chicago, Ill.

DEAR SIR: On March 9 your paper carried an article by Wayne Thomis headed "Flying experts blame crashes on rule revision—Change lifts curb on trips to icy areas." The article said:

"Aviation experts believe that a recent amendment which political appointees of the Civil Aeronautics Administration in Washington, D. C., made to civil-flying rules is one of the basic causes of the four most recent airline crashes. The amendment permits air lines to dispatch planes to destinations where they know the ships will accumulate ice. This is the first time passengers and mail were allowed to be flown into such conditions. The amendment, No. 51 of the air-carrier section, was written into the rules 5 months ago."

Every statement above which relates to air safety is completely false.

The recent amendment, No. 51, was made on May 17, 1940, by the Civil Aeronautics Authority, some 6 weeks previous to the reorganization. It, therefore, has been in effect 10 months instead of 5. The "political appointees" to whom you refer, then, were the five members of the Civil Aeronautics Authority, under whose regime the unparalleled safety record was achieved.

I was chairman of this body at the time, and I state unequivocally that the amendment constitutes no relaxation of the regulations regarding flight into icing conditions. It does not in any way approve flights into icing conditions with unapproved deicing equipment. I reprint here the original language on the left, the amended language on the right.

BEFORE AMENDMENT	AMENDMENT NO. 51
61.7113. Icing conditions: No aircraft shall be dispatched in scheduled air-line service into any known or probable icing condition unless equipped with approved propeller and wing de-icing equipment.	15. By striking sections 61.7113, 61.7700, and 61 7701 and inserting in lieu thereof the following new section:
61.7700. De-icing equipment (not approved): When an aircraft not equipped with approved propeller and wing de-icing equipment is engaged in scheduled air-line operation and encounters or, in the knowledge of the pilot, may encounter any icing condition, the pilot shall immediately so alter the course or altitude of the flight as to avoid or withdraw from the icing condition. If any icing condition is encountered, the pilot shall, if possible, immediately notify his company radio ground station.	"61.7700. Icing conditions: No air carrier or employee thereof shall dispatch or operate an aircraft in air transportation into any known or probable icing conditions unless the aircraft is equipped with approved propeller and wing de-icing equipment adequate to assure the safety of the flight under the particular conditions to be encountered. When an icing condition is encountered in flight the pilot shall, if possible, immediately notify his company radio ground station of such fact and the company shall immediately relay such information to the nearest office of the United States Weather Bureau in accordance with paragraph 61.733."
61.7701. De-icing equipment (approved): When an aircraft equipped with wing and propeller de-icing equipment is engaged in scheduled air-line operation and encounters an icing condition, the pilot shall so alter the course or altitude of the flight as to withdraw from such condition if, in his opinion, it appears that the icing condition may be of such duration or severity as to otherwise endanger the safety of the flight. The pilot shall, if possible, immediately notify his company radio ground station.	

In either case, if a plane is equipped with approved de-icing equipment, the continuance of the flight is left to the discretion of the pilot; and this, also, is in complete conflict with statements in your article.

This article is such a complete series of errors in fact that it would be comic except that it deals with stark tragedy. Every important element in it being factually untrue—the identity of the agency which made the amendment, the date on which it was made, the nature of its contents, and the nature of the regulation it supplanted—I herewith request that this reply be given equal prominence in your columns to the original article.

Very sincerely yours,

ROBERT H. HINCKLEY.

The Revolution Has Started

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

Mr. HOFFMAN. Mr. Speaker, with the confession of Governor Heil of Wisconsin that the law-enforcement officials of that State are unable to cope with the horde of Communist-led strikers at the Allis-Chalmers plant just outside of Milwaukee, even the blindest of our citizens should be able to see the red flag of those who take orders from Stalin waving in the forefront of the revolutionary battle being carried on here in America.

Hiding behind the cloak of unionized labor, boring from within, those Communists, who advocate the overthrow of our Government by force; who, as disclosed by the Dies committee, take their orders direct from Moscow, joined by radical labor leaders and by racketeers who are in the movement solely because of the money which they can collect, are now out in the open.

Long have they worked in secret. Long has the administration not only tolerated but acquiesced in their undercover movements. High Government officials have closed their eyes to the open, violent assaults upon the civil liberties not only of employers, of citizens generally, but of employees as well.

When the President called the National Guard away from the States, it left our towns, our cities, and our States without adequate police protection from these subversive groups.

For months the C. I. O., now headed by Phil Murray, has been determined to secure, at any and all costs, a monopoly of the job-selling prerogative, to attain a position where if a man would work he must first buy his job of the C. I. O. and then continue to pay whatever dues might be assessed against him each week or month.

This practice has been known to the President of the United States, who frequently has said that every man should be secure in his job; that no man should be denied equality of opportunity; but who has consistently and persistently aided in denying those privileges to hundreds of thousands of citizens.

The violence at the Allis-Chalmers plant, where the car of the Governor of Wisconsin was stoned and damaged as the Governor sought to quell the violence, the sit-down strike in the Ford plant at Detroit, are the direct and natural results of the President's support of Sidney Hillman and radical C. I. O. leaders.

The President knew or, if he had common sense, he should have known when he appointed Sidney Hillman, a paid official of the union, a vice president of the C. I. O ., to the National Defense Council that he was openly throwing his support to the side of those who intended to drive from the Ford motor plants all who would not pay the C. I. O. for their jobs.

When the administration denied the Ford Motor Co. national-defense contracts, because it would not acknowledge the rule of the C. I. O., it gave notice to all that it was more interested in obtaining political support than it was in national defense.

The Communists never sleep. They never cease to work and, for that reason, patriotic citizens who chose to believe that they were secure because their forefathers won freedom must now pay the price for their carelessness.

Nor do the Communists confine their activities to any one class. They seek to undermine our Government, not only by violence, but by more peaceful means and, in this latter procedure, they have the support of self-seeking politicians, who again place party loyalty before patriotism.

This peaceful attempt, through the use of legal means, to undermine our Government is glaringly apparent at the present time in the city of Detroit. It would seem as though those in power in the State of Michigan, those charged with the government of Detroit, in view of present happenings, would realize that the future of the great industrial city of Detroit, the welfare of the State, is being threatened by the Communists and those acting in conjunction with them at the present time.

Just how long do the people of Detroit think industry will attempt to carry on the battle if the citizens of the State, of Detroit, fail to protect it in its efforts?

If this strike at Ford succeeds; if R. J. Thomas, the Reuthers and others who think more of themselves, of their drive for power, of the collection of dues, are permitted to defy the law, to corrupt the courts, by the election of judges with leftist views, what do the citizens of Detroit think the future of that city will be? How long do they think that the men who have invested their money in Detroit, who are giving hundreds of thousands of jobs at higher wages than were ever paid before anywhere in the world, will continue the uneven battle?

There are other places in this country where the citizen will give protection to those who want to provide jobs. There are places in the country where our people believe in law and order; where those who, like Thomas and Frankensteen and Reuther and Addes would bring civil strife, will be met by legalized authority which will convince them that they have no license to carry on civil strife.

Unless the President backs up the State authorities, as he is authorized to do by the Federal Statutes, in case of civil strife, it will be necessary for the cities and the counties to organize home-guard defense units to protect their citizens and the industries engaged in national-defense production.

No one wants to see that done, but it will be done if the President violates his constitutional oath to protect the citizens of the country.

There are communities in this country of ours, there are communities in the State of Michigan, where leaders like Thomas and the others named, if they conspire to bring about riots, to incite violence, will be tried for those violations of the law and thrown into jail, where they can indulge in all the sit-downs they may wish.

It is a disgrace to the State, to the county of Wayne, that men, so-called labor leaders, who day after day conspire to violate the law, escape without even being prosecuted.

If the citizens of Detroit wish to drive all industry from their community; if they wish to see a complete break-down of all semblance of authority; if they want to destroy the effectiveness of our laws, the integrity of our courts, they will have the opportunity to go one step farther on election day, April 7.

We have a conscription law. We have a great national emergency. We are, if the President has his way, about to take part in the fighting of World War No. 2. Knowing his record, the people of Detroit have nominated, as a candidate for judge in their city, Maurice Sugar, a man who did his part in the first World War to destroy the efforts of our people to prepare for that war.

Maurice Sugar, who is a candidate for judge—think of it!—a candidate for a judicial position where he would be charged with the interpretation of the law—in 1917 was twice convicted on his plea of guilty of what might well be termed "disloyalty" to the Union. He was first convicted of a conspiracy to induce others to violate the Conscription Act. Later he was convicted and sentenced to a year's imprisonment for a violation of that Conscription Act.

It was only because he was pardoned in 1934 by President Roosevelt that he now can be a candidate for this office.

What kind of a judge will a convicted criminal make? What sort of a judge will the man who, when the fate of the Nation was involved, flaunted her laws, conspired to induce others to evade them, make?

No wonder the Communists are supporting Maurice Sugar. Will the decent, law-abiding people of Detroit select as one of their judges a candidate of the Communists—a man who has served time in her own Detroit House of Correction?

Sugar expressed some of his views while he was serving in the Detroit House of Correction. Then—and he may still have the same views—he apparently was a believer in an international union, in the theory of a "universal brotherhood." He then had words of praise for the Soviet Government. He then thought that "one big union" might be a good thing for America. Apparently, he now, as then, while in the Detroit House of Correction, is a believer in the "international identity of interests of the workers" throughout the world.

Do the workers of Detroit realize that if Sugar and his kind have their way they will drag down the workers of America to the level of those of Russia and other countries cursed with the practice of the things in which Sugar evidently believes?

Are the present strikes in industry, but actually against this Government of ours, but another front on the battle which Sugar and those who believe with him are waging at the present time? Do the Communists and Sugar believe that if they elect him judge they will have a legal method of supplementing the violent one which they use to prevent men from aiding in national defense?

Do the workers of America, the men who work in the factories of Detroit, want to join hands with the workers of Russia? That apparently was Sugar's theory, his doctrine, his belief, when he was confined in the Detroit House of Correction. It apparently is his belief and the belief of those who would close the Ford Motor plant at the present time.

The citizens of Detroit should look into Maurice Sugar's record.

In 1915, he appeared before a committee of the Detroit Board of Education and strenuously opposed any military training in the schools of Detroit. That was about the time the R. O. T. C. was being set up there. In the course of his argument, he made the flat statement that "soldiers are not good citizens."

Sugar continually opposed United States participation in the World War and refused to register for the draft, as stated. He was convicted before Judge Tuttle, and, on March 8, 1918, was fined $500 for subversive writing and speaking against draft. He was also sentenced to serve 1 year in the Detroit House of Correction for failure to register.

This conduct in the first World War is of a piece with his present conduct, for, on Friday, February 28, 1941, he signed, as the official representative for the U. A. W.—C. I. O.—a notice to the President of the United States and Governor of Michigan of intention of the C. I. O. to call a strike in the Ford plant, now so largely devoted to defense work.

The John Reed Club is a front for the Comintern, or Communist Internationale. In 1932, Maurice Sugar was a delegate from the John Reed Club at Detroit to an Internationale convention in Amsterdam, and, on January 16, 1933, the Detroit News reported some of his speeches praising Russia and the Soviet system.

In 1935, the school board barred him from use of school buildings on the ground he was a Communist, and he sued John Webster, a member of the school board, for $100,000. This case has never been tried.

On April 16, 1937, Sugar was quoted in the Detroit News as having said:

> The sit-down strike is legal to millions of workers.

And, further—

> The sit-down strike now being held illegal should be held legal.

In 1939 a pamphlet was distributed around the Northern High School, where Sugar was scheduled to make a speech. This pamphlet purported to be an ap-

peal of the Communist Party for support for Comrade Sugar in his candidacy for election to the common council.

On April 12, 1939, Maurice Sugar signed a warrant for criminal libel against Raymond Tessmer—Recorder's Court File No. 8890—, alleging that Tessmer, by circulating those pamphlets—

did falsely and maliciously accuse, attribute, and impute to Maurice Sugar the commission of certain crimes, felonies, and misdemeanors, to wit: Advocacy of criminal syndicalism and infamous and degrading acts, viz, advocacy of murder, fomenting of racial hatred between Negro and white race, advocacy of the forced closing of churches and destruction of religious worship, denial of the existence of God, and insulting generally priests of the Catholic Church and ministers of the Protestant Church.

Attached to this complaint was a copy of the pamphlet.

The defendant pleaded justification; that is, that the charges were true. The case was tried by jury before Judge Cotter, who charged the jury that Maurice Sugar had testified that he was a member of the Friends of the Soviet Union and of the John Reed Club and that there was testimony tending to prove that Maurice Sugar was closely identified with active Communist leaders; that he was present at meetings open only to officials of the Communist Party and participated therein; that he took orders from the Communist Party and that he "voluntarily assembled with officers and members of the Communist Party, a group founded to teach and advocate doctrines of criminal syndicalism; and that, if the jury found that Maurice Sugar was a member of the Communist Party at the time of the circulation of the pamphlet, February 25, 1939, then he was guilty of the acts attributed to him in the circular and that Raymond Tessmer was not guilty of criminal libel."

On June 30, 1939, after 5 days' trial, the jury found Tessmer not guilty. This means that the jury found Sugar guilty of being a Communist and advocate of criminal syndicalism, and so forth.

The Detroit News, November 8, 1923, announced that Judge Ira W. Jayne had reinstated Maurice Sugar to the practice of the law in Michigan courts. The petition has disappeared from the court files.

In January 1941, at a banquet given in honor of Judge Ira W. Jayne, George F. Addes, in a prepared statement announced the U. A. W.-C. I. O. endorsement of Judge Jayne and attacked most of the other members of the circuit court, announcing that the C. I. O. was out to defeat them.

The Michigan C. I. O. News, February 14, 1941, announced the C. I. O. endorsement of Nicholas J. Rothe for the circuit court and Maurice Sugar for the recorder's court.

On November 4, 1935, the Detroit News reported a police raid on Communist headquarters at 5969 Fourteenth Street, in which the police seized cards advocating Sugar for election as judge of the recorder's court, together with pictures of Lenin, Trotsky, Mooney, and Sugar.

In Odyssey of a Fellow Traveler, by J. B. Matthews, printed in 1938, is found on page 188 the statement by Matthews:

In 1935, I addressed mass meetings of the Friends of the Soviet Union, in Milwaukee, Chicago, and Detroit. * * * In Detroit, Maurice Sugar was running for judge of the recorder's court. Sugar's campaign was the first of Communist Party's efforts to launch a labor party in this country.

Who wants a Communist judge?

Yes, some may say, what interest have we in out-State in what the people of Detroit may do or not do? The people of Michigan, outside of Detroit, have been proud of the great industries which have been established and carried on there. We are proud of the record as an industrial city that Detroit has made.

We know that hundreds of thousands of men have been given employment in Detroit; that they have received wages which have enabled many of them to purchase homes for themselves and their families, to educate their families, and by their own efforts to establish security for themselves in their old age.

Anything which affects Detroit affects the whole State, and if we of out State have our way, we do not propose to see the Communists, the radical labor leaders, the racketeers, the leeches, and the parasites destroy industry in that city.

If Detroit does not herself take care of the situation, sooner or later the State of Michigan, through the legislature, through a Governor who has courage—and if not the present one, then one to succeed him—through its State police, will reestablish respect for law and order in the city of Detroit.

We of out State know that the patriotic and loyal citizens of Detroit, the patriotic and loyal workers of that city, if they have protection from those officials who have sworn to uphold the law, will do their own housecleaning without any help from without.

It remains to be seen whether the citizens of Detroit will on April 7 indicate that they intend that Detroit shall be ruled by law and not by men.

Henry Ford and the Ford Motor Co. have hundreds of thousands of friends throughout the State of Michigan, millions of friends throughout the Nation, and they do not propose that he or the Ford Motor Co., or those who are employed by it, shall be deprived of their civil rights just to fatten the pocketbooks of the C. I. O. or to gratify the ambition, further the cause, of those who serve Soviet Russia.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. LAMBERTSON. Mr. Speaker, nationally we have never known our Gethsemane so well before.

The fishing trip ended just in time for April Fool's Day.

Is the die cast with the rank and file? At Seneca, Kans., March 28, 300 assembled human beings voted "No"—300 to 0.

"Buy British" is the new slogan here—from whiskey to clothes for women and children. Argentine had the call last week.

If the British Empire should lose its present world position, whom would you rather see dominate Europe—Russia or Germany?

The Quartermaster Corps has bought 50,000,000 pairs of socks. The $90 saddle rode the taxpayers, but now we plan to "sock 'em."

A St. Louis Post-Dispatch cartoon features Mr. John Q. Public behind the fence stripped naked and warbling "Roll out the barrel."

Washington County, Kans., would like to have a Ludlow resolution vote on toleration of strikes in defense industries.

Toward the Unknown, Saturday Evening Post editorial for March 29, takes its place alongside of Mark Twain's forecast of how all future wars for a thousand years would start.

This is the anniversary of Fort Sumter, Lee's surrender, Lincoln's death, opening of war to free Cuba, of war to end all wars and save democracies, and the crucifixion. Let's hurry by.

Allocation of Defense Contracts

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

ARTICLES FROM THE KNOXVILLE NEWS-SENTINEL AND AN EDITORIAL FROM THE NASHVILLE TENNESSEAN

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks I include two illuminating and instructive articles from the Knoxville News-Sentinel and an editorial from the Nashville Tennessean. The news articles were written by John Montoux, who has carefully analyzed the subject matter. They follow:

[From the Knoxville News-Sentinel]

NEW JERSEY GETS AS MUCH DEFENSE WORK AS DO 32 OTHER STATES COMBINED

(By John T. Moutoux)

WASHINGTON, March 20.—"I am afraid that in the defense effort to date we have followed the same pattern of regional concentration that was followed in 1917 and 1918."—Chester Davis, member of the National Defense Advisory Commission, in a speech last Saturday before the Southern Governors Conference at New Orleans.

One State—New Jersey—has been awarded as many dollars' worth of national-defense contracts as 32 States and the District of Columbia combined.

Six States have been awarded as many dollars' worth of national-defense contracts as

the remaining 42 States, the District of Columbia, and all the United States possessions.

Defense contracts awarded by States between last June and the first of this month ranged from $1,359,051,132 given to firms in New Jersey to $534,359 awarded to firms in North Dakota.

Because of the difference in population among the States of the Union, a comparison of awards given to each State does not present the picture so well as a per capita expenditure in those States.

It was this latter state of affairs that Chester Davis had in mind when he warned against the practice of concentrating the industries in one or two sections and thus compelling the workers living in the other sections to move to the favored areas in order to work in defense industries.

The per capita expenditures by States ranges from $326.68 per person in New Jersey to 83 cents per person in North Dakota.

The average per capita expenditure for the 48 States and the District is $74.40; 17 States are above that average; 31 States and the District of Columbia are below the average. Only 2 Southern States—Virginia and South Carolina—are among the 17 above the average. South Carolina just got under the wire as No. 17, with a per capita expenditure in that State of $75.40.

Virginia is the only Southern State with a record to be proud of. It is fifth in total contracts awarded to that State and second in per capita expenditures. The main reason is the presence at Norfolk and Newport News of vast defense projects, chief of which is the Newport News Shipbuilding & Drydock Co.

Alabama ranks seventeenth in the amount of contracts awarded and twentieth in per capita expenditures made in that State.

This is how the States stack up in contracts awarded since the defense program got under way last June to the first of this month:

1.	New Jersey	$1,539,051,132
2.	New York	1,323,475,986
3.	California	1,267,070,109
4.	Pennsylvania	1,005,426,800
5.	Virginia	852,896,486
6.	Massachusetts	832,143,984
7.	Michigan	722,880,512
8.	Washington	505,282,172
9.	Indiana	418,858,433
10.	Ohio	416,649,197
11.	Connecticut	358,586,420
12.	Missouri	335,533,904
13.	Maryland	319,836,392
14.	Illinois	297,831,428
15.	Texas	228,712,454
16.	Maine	178,698,862
17.	Alabama	164,118,188
18.	South Carolina	143,248,286
19.	Colorado	128,508,003
20.	New Hampshire	96,377,203
21.	Wisconsin	91,004,567
22.	West Virginia	78,074,408
23.	Florida	61,758,999
24.	Kansas	59,382,745
25.	Iowa	57,313,901
26.	Tennessee	56,096,850
27.	North Carolina	54,124,763
28.	Oregon	50,531,263
29.	Rhode Island	47,541,282
30.	Georgia	45,726,068
31.	Kentucky	41,821,596
32.	Louisiana	34,796,512
33.	Delaware	25,745,186
34.	Nebraska	20,805,224
35.	Mississippi	19,117,512
36.	Minnesota	16,886,499
37.	District of Columbia	16,465,407
38.	New Mexico	10,791,904
39.	Oklahoma	9,702,586
40.	Utah	8,897,040
41.	Arkansas	6,116,679
42.	Arizona	5,518,144
43.	Nevada	3,362,112
44.	Vermont	2,293,619
45.	Wyoming	2,282,563
46.	Idaho	1,842,459
47.	Montana	1,134,240
48.	South Dakota	678,633
49.	North Dakota	534,359

These figures include all expenditures made for national defense—new plants as well as war materials.

As a rule, expenditures are found highest in coast States, because of the huge naval orders received by shipbuilding yards in those States.

The per capita ranking that follows shows how much defense money has been poured into each State for every man, woman, and child in the State. This listing starts and ends with the same States as the listing just given, but it varies in respect to a number of the other States. This list follows:

1.	New Jersey	$326.68
2.	Virginia	318.50
3.	Washington	291.03
4.	Maine	210.92
5.	Connecticut	209.80
6.	New Hampshire	196.08
7.	Massachusetts	192.77
8.	California	183.44
9.	Maryland	176.72
10.	Michigan	137.53
11.	Indiana	122.20
12.	Colorado	114.40
13.	Pennsylvania	101.56
14.	New York	98.11
15.	Delaware	96.60
16.	Missouri	88.65
17.	South Carolina	75.40
18.	Rhode Island	66.64
19.	Ohio	60.32
20.	Alabama	57.93
21.	Oregon	46.38
22.	West Virginia	41.57
23.	Illinois	37.71
24.	Texas	35.65
25.	Kansas	32.97
26.	Florida	32.55
27.	Nevada	30.41
28.	Wisconsin	29.01
29.	District of Columbia	24.83
30.	Iowa	22.58
31.	New Mexico	20.30
32.	Tennessee	19.24
33.	Utah	16.17
34.	Nebraska	15.81
35.	North Carolina	15.15
36.	Louisiana	14.72
37.	Kentucky	14.70

Defense Industry Massing Blamed on Army and Navy

(By John T. Moutoux)

WASHINGTON, March 22.—The more you study the figures the worse they become—for the South and the West.

I refer to the amount of the defense money that has gone to the different States since the program got under way last June to the first of this month.

Earlier this week I reported that one State—New Jersey—received as much as 32 other States and the District of Columbia. In fact, $6,450,332 more. The figures are: New Jersey, $1,359,051,132; the 32 States (including most of the South and West) and the District of Columbia, $1,352,600,800.

Just to see what that really means, let us make two comparisons. Let us compare New Jersey's area with that of the 32 States and the District. Then let us compare New Jersey's population with that of the 32 States and the District.

Here are the figures:

New Jersey has an area of 7,514 square miles.

The 32 States and the District have an area of 2,036,862 square miles.

New Jersey's area is less than one-fourth of 1 percent of the total area of this country.

The 32 States and the District's area is 67.3 percent of the total area of the country.

JERSEY IS VULNERABLE

Of course, one might say that the area of a State should not be the governing factor. Maybe not, but it is, or should be, an important factor nevertheless. In the case in point, it means that defense industries are highly concentrated in one State, at a seaboard State at that, where they are highly vulnerable to attack by air, sea, or land. When they are thinly scattered over the 32 States that form the great interior of our country they are least vulnerable to attack.

But if it is population rather than area that is to be considered, on the ground that it would be foolish to locate defense industries in regions where there is not an ample labor supply, let us look at the population figures.

New Jersey has a population of 4,160,165.

The 32 States and the District have a population of 51,099,654.

What does that mean? It means exactly what Chester Davis, member of the National Defense Commission, told the Southern Governors Conference at New Orleans—that if new industries required under the defense program are not located in areas where existing industries are not now concentrated, it will mean "uprooting families and shifting them thousands of miles into communities where ebbing of their armament effort would leave them stranded."

That is, if the bulk of the defense industries are to be located in New Jersey and other Eastern and Northern States, men and women from the South and West will have to go to New Jersey and other Eastern and Northern States to supply the necessary manpower, and then when the war is over and the defense industries are no longer needed they will be left stranded there.

THREE STATES GET MORE THAN 40

New Jersey isn't the only State that has been given a monopoly on defense industries and defense contracts. I singled it out because it led the list. New York and Pennsylvania are also near the top—New York second, Pennsylvania fourth. California is third.

These three Eastern States—New Jersey, New York, and Pennsylvania—have received $3,949,597,227 in defense industries and contracts.

That's $42,289,337 more than was received by 40 States and the District of Columbia.

These three States have an area of exactly 100,000 square miles, which is 3½ percent of the total area of the United States.

The 40 States that received less defense money than the 3 Eastern States have an area of 2,545,471 square miles, which is a fraction over 84 percent of the total area of this country.

These same three Eastern States have a population of 27,539,487, which is 21 percent of the country's population.

The 40 States and the District of Columbia have a population of 89,909,503, which is 64.5 percent of the country's population.

Here is a list of the 40 States that have received less defense money than the 3 Eastern seaboard States: Indiana, Ohio, Connecticut, Missouri, Maryland, Illinois, Texas, Maine, Alabama, South Carolina, Colorado, New Hampshire, Wisconsin, West Virginia, Florida, Kansas, Iowa, Tennessee, North Carolina, Oregon, Rhode Island, Georgia, Kentucky, Louisiana, Delaware, Nebraska, Mississippi, Minnesota, District of Columbia, New Mexico, Oklahoma, Utah, Arkansas, Arizona, Nevada, Ver-

mont, Wyoming, Idaho, Montana, South Dakota, and North Dakota.

RESOURCES ARE IN INTERIOR

One other comparison could be made, but there is neither time nor space for it here. Moreover, the results of such a study are so obvious as to make it unnecessary. I refer to a comparison of the natural resources—the things out of which guns, powder, etc., are made—found in the 48 States involved in the comparisons just made.

New Jersey, we know, has practically nothing in the way of such resources. It is chiefly a parasite State. Raw materials from the South and West are brought into that State, converted into manufactured products, and then shipped back to the South and West with the profit remaining in the East.

New York and Pennsylvania aren't quite in the same category, but almost so. More natural resources are found in a number of the 40 States already referred to than in all 8 of the Eastern States put together.

For instance, it has been said that a third of this country's natural resources used in the production of defense materials is found in the seven Tennessee Valley States. (If my memory is correct that statement was made by the Defense Commission itself in asking Congress for an additional appropriation for the T. V. A. to increase the defense power supply.)

And the bulk of all the remaining two-thirds is found in the great country west of the Mississippi River and east of the Sierras, all of which is included in the 40 States which have fared so poorly thus far.

What is the trouble, and what is the cure?

As for the trouble, I quote from a United Press dispatch from New Orleans: "The Southern Governors' Conference took a slap at Army and Navy officials in the selection of national-defense sites, demanding that civilians be given a major voice in this selection."

The conference charged that Army and Navy officials "frequently make selections without regard to long-range planning."

I think the southern Governors hit the nail on the head.

Now, as to the cure. I imagine Chester Davis' blast at New Orleans had something to do with it. At any rate, a press release from the O. P. M. 3 days after Mr. Davis made his speech began as follows:

"Appointment of a Plant Site Committee to review and approve proposals for location by Government agencies of additional plant or facilities required for national defense, has been authorized by the Office of Production Management, it was announced today."

Elsewhere in the release was found this significant statement:

"In reviewing proposed plant locations from funds hereafter to become available under the new production program, the committee will, insofar as possible, with primary emphasis on expediting defense production and appropriate military factors, facilitate geographic decentralization of defense industries and full employment of all available labor."

Army and Navy officials will continue to suggest site locations, but this new civilian committee will have to approve them.

Maybe the Army and Navy brass hats will take the hint.

[From the Nashville Tennessean]

THE SOUTH'S SHORT END

There's no getting around the figures presented by Chester C. Davis, official of the Defense Advisory Commission, to the Southern Governors' Conference at New Orleans showing that only about 7 percent of all the national-defense contracts let up to March 1 were placed in the South. The unlovely fact has been noted before. It is becoming notorious.

Of course, we of the South understand that where emergency production is required such production must be expected where manufacturing facilities exist. It so happens that by far the greater part of the Nation's plant is located north of the Ohio River. Nevertheless, here is a time when new facilities are being added with a great rush, and it is in the strategic defense areas of the South, with their unlimited resources of manpower and materials, that this new plant should be placed. That this is not happening is something the South should be talking about loud and long.

Said Mr. Davis, "The time has come for the southern people to join together and start on the hard route industrializing themselves. Nothing short of the most vigorous and positive efforts to achieve recognition of your labor reserves and resources will suffice."

That is so true it hurts. It hurts because the South even till now has not discovered a way to stand together and with unity expend vigorous and positive effort in its own behalf. Mr. Davis points out that only in the region served by T. V. A., where for the past 7 years provision for cheap power and cheap water transportation has been made, has there been an appreciable access of new industrial plant. This is recognized here, and this region is duly beholden to the good groundwork of T. V. A. But the truth is the tremendous resources of the South have hardly been tapped, and other sections down here, equally capable of industrial development, are waiting for crumbs to fall from the table. That, says Mr. Davis truly, will be a long wait—unless our people get up and go after the manufacturing facilities they need.

Sugar

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

ARTICLE IN THE SUGAR REVIEW

Mr. WOODRUFF of Michigan. Mr. Speaker, the following statement indicates that at last certain New York financial interests have awakened to the desirability of preserving our great sugar-beet industry.

Today the press gave considerable prominence to a statement attributed to Miss Harriett Elliott, consumer commissioner of the N. D. A. C., respecting sugar. She was quoted as saying, in effect:

(a) That basic factors underlying the sugar situation have not changed adversely since last month when she stated that predictions of sugar shortage, or sugar rationing, and price increases were not warranted by the facts.

(b) Recent advances in refined- and raw-sugar prices, attributed to anticipated shipping shortage, are not justified in view of the basic sugar situation.

(c) That the Consumer Division has been assured by the Maritime Commission that enough tonnage will be available to move in from offshore producing areas sufficient quantities to safeguard normal sugar consumption in this country.

(d) That stocks of sugar readily available to consumers in the United States remain larger than usual; that Cuba has large surplus stocks currently on hand; and that there are more than sufficient supplies available from offshore areas to supplement domestic production.

Miss Elliott also stressed the adequacy of powers available to the Government to prevent the sugar situation from getting out of hand, and indicated that the Consumer Division is proceeding actively to bring these powers into operation to assure full supplies at reasonable prices to consumers.

This statement caused further price unsettlement on the opening of the exchange, profit-taking and hedge-selling carrying prices down to 3 to 4 points by closing time.

* * * * * *

We consider the pause in prices as not only normal but healthy. In the main we endorse the statements of Miss Elliott as true. We do not fully agree with the reported statement that price increases have not been warranted by the facts. There is no denying that the market started off late in 1939 at a very low level, and that freight rates have absorbed a very large part of the subsequent advance. To this extent advances not only have been justified but forced, if we were not to have actual declining f. o. b. values in the face of war conditions, increased demand, improved statistical situation, etc. No reasonable person can quarrel with the sugar trade up to date on the basis of the record.

Last December, when raws were selling at 2.95 cents and refined at 4.40 cents, we stated that "a duty-paid price of 3.15 cents for Louisiana, Puerto Rico, Hawaii, and the Philippines, with a refiner's price of 4.75 cents and a beet price of 4.55 cents would not, after taxes, provide anything more than a reasonable return for most producers." On the basis of recent prices the raw market has advanced 30 points and cane refined 35 points above the levels we mentioned. We did not then envisage such a drastic increase in tonnage rates, which has absorbed all the advance above the prices that we then thought were fully justified. Cuban freight rates, for example, have gone up about 30 points, Philippine rates considerably more, and Puerto Rican rates somewhat less.

At present levels we reiterate that we do not consider the market unjustifiably high, and it may easily be that some at present unforeseen future developments will justify a higher price level. To say that the market has reached the top, or to predict material declines at this point would be foolish, indeed. There are too many intangibles to reckon with: war, tonnage supply, increased wages, and general costs, increased consumption, buyer psychology, rising commodity prices, possibility of inflation to a greater or less degree, etc.

On the other hand, to talk the market higher at this time without justification statistically, or on the mere assumption of higher costs later, is equally foolish. Speculation is thereby encouraged, hoarding increases, and a buying panic can easily result. We would greatly deplore a hysteria that would carry prices up to a point where drastic Government action would be taken. Extraordinarily large quota releases, or a complete suspension of quotas, forced by the action of buyers who insist on deliveries of a 6- to 9-months' supply within 3 months, would not be in the best interest of the industry as a whole. The delicate balance that has been built up among the various producing areas over the past 5 or 6 years would suddenly be upset, with loss or ruin for many. On the termination of the war, or cessation of the emergency, the industry would be faced with even more aggravated

conditions than prevailed after the brief 1939 spree.

Available tonnage, of course, remains the basic factor governing prices. There is no question of the adequacy of supplies of sugar. With normal demand spread out over the year, we believe sufficient tonnage will be made available; but, as pointed out before, the abnormal movement in sugar during the first 3 months has aggravated the situation and contributed to the scarcity of space. Freight operators have been quick to take advantage of the situation, and have, in the opinion of many experienced steamship men, demanded and obtained higher rates than were justified at the time. With a lull in the raw market, some temporary easing in freight might be experienced. There has been much talk of "lack of tonnage," when, as a matter of fact, 100/150,000 tons more offshore sugar has been received in the United States up to the present time than was received in the corresponding period last year. These boats are still in the trade, so that any cessation in the abnormal demand for sugar might easily find boats looking for freight, and the competition lowering rates in this trade—the safest and most desirable perhaps in the world today.

Another factor that may have a very important bearing on subsequent market values, particularly if a quota suspension were forced by runaway prices, is the very active fight now being waged by domestic interests for the removal of restrictions on beet sowings for the coming crop. Under the circumstances, it seems that the Secretary of Agriculture cannot find any justification whatever for denying the plea of the domestic sugar producers who are trying to safeguard the sugar supply of the country and prevent the development of a situation that the Secretary himself now appears to be desirous of avoiding. Continental supplies are not subject to the hazards of ocean transportation, and in limiting such production the administration is in effect saying that the tonnage situation will not become more acute within the next year or 18 months. If the beet-sugar farmers and processors are willing to produce, finance, and indefinitely carry an indeterminate supply of sugar there seems little reason why they should not be permitted to do so. Better an ample supply in the case of need than the taunt of having "killed off all the little pigs in the time of an emergency." It does seem a trifle inconsistent that one department limits production within the United States, another department is forced to warn the public that there is no scarcity, and still another department through financial aid encourages Cuba to produce 400,000 tons for which there is now no apparent demand.

National Defense and the Air Lines

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

STATEMENT BY C. R. SMITH, PRESIDENT OF THE AMERICAN AIRLINES, INC.

Mr. RANDOLPH. Mr. Speaker, recently I placed in the Appendix of the RECORD certain timely comment contained in a well-written and thought-provoking newspaper advertisement, carried over the signature of C. R. Smith, president of American Airlines, Inc. I am having printed today another of these advertisements.

This afternoon on the House floor we heard the gentleman from Illinois [Mr. DIRKSEN] tell the membership of the increasing importance of aviation. What he said was true. In this time of national-defense plans it is well to value the part our air-transport system plays in the preparedness program. In this connection I include the following presentation of the subject by Mr. Smith:

National defense overshadows all other responsibilities. All else may be futile without the attainment of that objective.

The welfare of the individual citizen or the individual business is not dissoluble from the welfare of the Nation.

We must have combat air power. You recognize the need for that. But victory cannot come from supremacy at the military front alone.

Right here, in the arsenal of democracy, an important battle is being waged—the battle of the home front: Production. Men, metals, and machinery are of urgent importance. But more important is time.

The tempo of national defense is attuned to the speed of the airplane. An increasing number of persons engaged in national-defense undertakings must schedule their work according to the time-saving advantages of air transportation.

It is self-evident that the importance of air transportation increases in ratio to the need for it. Men must travel by air, delivery of matériel must be expedited by air express, communication must be accelerated by air mail.

It follows logically that the air lines will receive the aid of the Government—in personnel, aircraft, and matériel—not only to maintain the high standards of yesterday but actually to exceed them.

The effective operation of the air lines is a "must" in our Government today. Resources have been charted, requirements of the Army, the Navy, and the air lines have been weighed and proper allocation is being provided for the balance necessary for maximum effectiveness in this period of crisis. All three will be maintained at top-notch efficiency.

With personal pride you look upon the Army and the Navy as your Army and your Navy. Now it's your air lines, too.

By the same token, your air lines have the compelling necessity to deserve an even greater public confidence.

There will be a world after the war and there will be generations after our own. We cannot plan for today alone.

Priceless as combat planes are for defense, they protect but do not create national wealth.

But the transport planes of the air lines do aid in the creation of national wealth, by expediting modern commerce between cities and between nations.

The accelerated tempo of today will be carried over to the period which will follow. Military warfare will be replaced by economic rivalry.

The airplane is dominating the military effort of today; it will dominate the economic effort of tomorrow. The "old days" of slower tempo have gone over the horizon and they will not come back to us.

The pressure of war has hastened immeasurably the design of more effective aircraft. Production has been increased manyfold. Pilots, mechanics, and other skilled technicians are being trained by increasing thousands.

We shall not want, after the war is over, to close the doors of our engine and airplane factories, nor to lose the experience of those men skilled in the design, construction, and operation of aircraft. These things we have worked for, bought and paid for. We have the requirement that they continue to be utilized in the national interest.

The world of tomorrow will be a world of the airplane. Distances have forever lost their old meanings. Africa will be our next-door neighbor. Europe will be but hours away.

First things first. National defense overshadows all other requirements now. But in our responsibility to concentrate upon the requirements of today, let us permit some measure of time for the plans of tomorrow.

After the war is over, the air lines of the United States must continue to lead the world in utility and effectiveness and the American flag must fly over the oceans of the earth.

It is largely to aviation that we must look for our security and our leadership in world affairs from now on.

Why Should God Bless America?

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

ARTICLE FROM THE METHODIST WOMAN

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article from the March issue of the Methodist Woman. This article on Why Should God Bless America? was written by Dr. Peter Marshall, minister of the New York Avenue Presbyterian Church, of Washington, D. C. The article is splendid, and I trust that the entire membership of the Congress will take time to read this sermon:

[From the Methodist Woman of March 1941]

WHY SHOULD GOD BLESS AMERICA?

(By Dr. Peter Marshall)

Why should God bless America? Why should we be blessed of God more than Germany, or Poland, or France, or Great Britain, or Denmark, or China? Have we any racial superiority, or rare intelligence, or moral excellence? Are we more deserving in the sight of God? Are we better than other nations? Are our morals higher?

Last September the Nation was called to "pray to Almighty God for His blessing on our country and for the establishment of a just and permanent peace among all the nations of the world." The President urged "the people of the United States of all creeds and denominations to pray on that day in their churches or at their homes, on the high seas, or wherever they may be, beseeching the Ruler of the Universe to bless our Republic, to make us reverently grateful for our heritage and firm in its defense, and to grant to

this land and to the troubled world a righteous, enduring peace."

Now, it was a splendid proclamation, and we are glad the President issued it. But we could wish that in it the President had called us to acknowledge our sins, national and individual, had urged us to repent and to return to a humility we have lost. We wish the President had stated openly that we, too, have our shortcomings and that we, like other nations, have been unworthy of God's blessings.

Ambassador Bullitt sounded a note that is urgently needed today in his great speech at Philadelphia on August 18: "When are we going to wake up? When are we going to tell our Government that we want to defend our homes and our children and our liberties, whatever the cost in money or blood? When are we going to give the lie to those who say that the people of the United States no longer care about their liberties, that they look upon the United States just as a trough into which to get their snouts and not as the greatest adventure in human freedom that this earth has known? When are we going to let the world know that, in spite of all the efforts of all the propagandists who call the propaganda 'debunking' and try to teach us to fear even truth, we still know that when anyone tries to debunk the Ten Commandments and the Sermon on the Mount he prepares for himself hell in this world and in the next? When are we going to let legislators in Washington know that we don't want any more politicians who are afraid of the next election and scared to ask us to make the sacrifices we know are necessary to preserve our liberties and our Declaration of Independence and our Constitution? When are we going to tell them that we want to know what are our duties—not what are our privileges? When are we going to say to them that we don't want to hear any longer about what we can get from our country, but we do want to hear what we can give to our country? When are we going to stand before God and say that we know a human being is worthy of freedom only when he serves the ideal in which he believes?"

We are enjoying the greatest freedom the world has ever known—a freedom that staggers all who will consider it, for we are free in these days to ignore the very things that others died to provide. We are free to neglect the liberties we have inherited, and surely there can be no greater freedom than that.

MUCH IS WRONG IN AMERICA

I am one of those who believe that there are some things worth fighting for, and worth dying for, if need be. The trouble with our age is not so much that it cannot believe there is anything worth dying for, but that it is not so sure that there is anything worth living for.

As a Christian—and a Christian minister—I find myself on the horns of a terrible dilemma. We all hate and abhor war, we detest it, we denounce it. It is worthless and contrary to all the principles and ethics of Christ. Nothing we can say about war is too condemnatory, no language is too strong. And yet, at the same time, I feel that there are certain qualities, certain principles, certain heritages, certain liberties, for which man should be willing to fight and even dare to die. I cannot reconcile these two positions. I will not even try.

I only know that with all that is wrong with our beloved land, we must show our love for her in a deeper way. Much we know is wrong with America, seriously, deeply, and gravely wrong. Her declining faith, her forsaken altars, her armies of criminals, the unchecked ravages of the liquor traffic, the oft-lewd manuscript of her literature, the corrupt government of her cities, the hosts of the jobless in spite of unparalleled riches and resources—all this is wrong, deeply and dangerously wrong.

But there is so much that is right in America, so much that is good, and true, and fine.

But our Republic, if it is to endure—our democracy, if it is to survive—must be willing to make some voluntary sacrifice and to bear some self-assumed disciplines. It may mean doing without some luxuries, or even for the time being curtailing our supply of life's necessities. We must show the world that the genius of a God-founded democracy is the desire of its people to give rather than to get, to seek supremely the public good rather than private gain. Liberty's greatest enemy today is the old enemy, human greed and selfishness.

FRANCE PAID A BITTER FEE

As France slowly and painfully tries to pick up the pieces of her shattered national life, perhaps the most remarkable change her new government is ordaining is the introduction of a puritan way of life. Cabinet officers have been appointed whose first and principal duty is to attack the evils of alcoholism, marital laxity, and divorce, lewdness in the theater, commercialized vice, and all forms of self-indulgence. Hard work, sobriety, moral earnestness, and religious observances are being preached as the necessary means to a revival of French strength and dignity. Especially is the new order to be applied to youth. There is more than regimentation for a Fascist society in all this. Behind it lies the recognition born of catastrophe, that moral laxity produces a sort of softness which is as suicidal for nations as for men. France had to pay a bitter fee to learn this lesson. We in America must learn it before it is too late, before we, too, pay in tears and humiliation.

John Curran, in 1790, said: "It is the common fate of the indolent to see their rights become the prey to the active. The condition upon which God hath given liberty to man is eternal vigilance; which condition, if he break, servitude is at once the consequence of his crime and the punishment of his guilt."

A columnist in our daily press wrote:

"America needs a general disposition to rate the Ten Commandments as more important than any 11 radio talks.

"America needs immediate agreement on the meaning of free speech with a view to determining if it means that a bunch of Moscow or Berlin agents enjoying the liberties of American life must be permitted to work over the radio for the destruction of the American system.

"America needs a drive to convince the youth of America that the defense problem would be helped immeasurably if they had the same intense love for the Constitution and the American system as the Nazi youths have for Hitler and the Nazi system.

"America needs an extension of the drive to awaken voters to the high importance of selecting Representatives, Senators, and other public officeholders on a basis of character, courage, high purpose, and personal integrity; and not on a matchless record for muddleheadedness, a loud voice, a fair radio style, and an aversion to study.

"America needs more faith in prayer than in telegrams to politicians, and a willingness to give at least as much time to church as to any double-feature movie.

"America needs a wider appreciation of the relative importance of an altar in the home as compared with a de luxe radio, portable bar, and a rumpus room."

The current philosophy of indifference to what is happening abroad is too shallow and too stupid to be American. It is too selfish to be Christian. It is not the voice of this great Republic, but simply the superficial, wise-cracking selfishness of the cynic.

Some of our intellectuals in their concern for the fate of democracy are calling the Nation back to God. Many of our newspaper columnists are turning over new leaves in their attitude toward religion. They declare that the Nation can be saved only by a return to religious faith.

A REPUBLIC UNDER GOD

The idea may be abroad in some quarters that democracy is the thing that must be preserved, and that God is brought in as its servant. We must not get the cart before the horse. The plea of the church today is not that the people shall call upon God to return to our democracy and bless it, but rather that we shall together cause our democracy to return to God and be blessed.

Let us remember that we are a republic under God. Let us remember that on each of our coins we have stamped a statement which must not be permitted to become a lie or an infamous blasphemy. "In God we trust"—so speak the coins that rattle in our pockets. What does it mean to trust in God? Certainly no conception of trust in God can make any sense which assumes that He will prosper our ways or bless us until our ways begin to be His ways and we begin to keep the conditions He has laid down for national blessing.

And thus I come to my text, II Chronicles vii: 14: "If my people, which are called by my name, shall humble themselves, and pray, and seek my face, and turn from their wicked ways; then will I hear from heaven, and will forgive their sins and will heal their land." These are the conditions of God's blessing.

And these conditions were ignored by the President in his call to prayer to seek God's blessings upon this land. He did not call upon America to turn from its wicked ways, nor has the Nation shown any such inclination. We were admonished by the President to ask of God "to grant to this land and to the troubled world a righteous and enduring peace." Can we do that as a nation with the blood of China on our hands? Can we ask for peace for ourselves while we continue to supply the ingredients of war to Japan, as we have been doing for the past 3 years, in its pitiless assault upon a defenseless nation whose friend we have advertised ourselves to be?

I wonder if the President would have changed the wording of his proclamation had he read the words of Isaiah in the first chapter. "Hear ye the word of the Lord, ye rulers; give ear unto the law of our God, ye people. * * * When ye spread forth your hands I will hide mine eyes; when ye make many prayers I will not hear; your hands are full of blood. Wash you, make you clean; put away the evil of your doing from before mine eyes. * * * Come now, and let us reason together, saith the Lord; though your sins be as scarlet, they shall be white as snow; though they be red like crimson, they shall be as wool. If ye be willing and obedient, ye shall eat the good of the land; but if ye refuse and rebel, ye shall be devoured with the sword; for the mouth of the Lord hath spoken it."

PROPHETIC VISION OF LINCOLN

The great heart of Abraham Lincoln expressed itself on this subject with saintly and prophetic vision:

"It is the duty of nations as well as of men to own their dependence upon the overruling power of God; to confess their sins and transgressions in humble sorrow, yet with assured hope that genuine repentance will lead to mercy and pardon; and to recognize the sublime truth announced in the

Holy Scriptures and proven by all history, and these nations only are blessed.

"And inasmuch as we know that by His divine law nations, like individuals, are subjected to punishments and chastisements in this world, may we not justify fear that the awful calamity of civil war which now desolates the land may be but a punishment inflicted upon us for our presumptuous sins, to the needful end of our national reformation as a whole people? We have been recipients of the choicest bounties of heaven. We have been preserved these many years in peace and prosperity. We have grown in numbers, wealth, and power as no other nation has ever grown; but we have forgotten God. We have forgotten the gracious hand that preserved us in peace, and multiplied and enriched and strengthened us; and we have vainly imagined, in the deceitfulness of our hearts, that all these blessings were produced by some superior virtue and wisdom of our own. Intoxicated with unbroken success, we have become too self-sufficient to feel the necessity of redeeming and preserving grace, too proud to pray to the God that made us.

"It behooves us, then, to humble ourselves before the offended Power, to confess our national sins, and to pray for clemency and forgiveness."

If that were true in 1861, how much more true is it now? We can sing God Bless America until we are blue in the face, but unless we do what God has indicated, His blessings will be withheld.

HUMILITY, PRAYER, AND FAITH

The path of humility is not familiar to the American people. Humility itself is a strange virtue to which we are all unaccustomed. We have far too long been riding on balloon tires of an inflated ego.

Nothing can more quickly humiliate us than for us to reflect as we sit in this holy place on our own personal sins, to meditate upon our own shortcomings, to reflect upon the meanness of our own character, and to remember all the things that are wrong in our own city and throughout the land.

The second condition is that God's people must pray. The art of prayer has almost become one of the church's lost secrets. The impotence of the church today is expressed by the fact that the church has ceased to pray. We must not wait for Presidential proclamations to have days of prayer. The conditions must be observed by God's people everywhere—the Jew and the Gentile alike, the Catholic and the Protestant, the rich and the poor—we must all pray.

And the third condition is that we shall seek God's face. And that means a return to God, an effort to find God's will for our lives, His guidance for our conduct, His standards for our ethics, and His help in order that we may walk in His way.

We must get rid of the idea that we can adopt a confession of faith and repeat a creed and then go out and do as we please. Let us not fool ourselves. We have to turn from our wicked ways.

We may as well confess that we have wicked ways, that we do things that we know perfectly well we ought not to be doing, that we say things that we have no right to say, that our dispositions are not those of children of God. We cannot fool God * * * let us not be deluded into thinking we can fool ourselves.

But God says: "If my people, which are called by my name, shall humble themselves, and pray, and seek my face, and turn from their wicked ways: then will I hear from heaven, and will forgive their sin, and will heal their land."

Jackson Day Dinner Address

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 31), 1941

ADDRESS BY HON. TOM CONNALLY, OF TEXAS, AT RICHMOND, VA.

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an exceedingly able speech delivered by the junior Senator from Texas [Mr. CONNALLY] on the occasion of the Jackson Day dinner at Richnmond, Va., on March 29.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am profoundly grateful to Senator BYRD for his generous and flattering words of presentation to this distinguished gathering of Virginia Democrats. It is always a matter of pride to speak in the great old Commonwealth of Virginia—a Commonwealth with glorious history and traditions—the State of Washington, Patrick Henry, James Madison, James Monroe, and Thomas Jefferson, political philosopher and founder of our party. It gave many other great and illustrious statesmen and soldiers to the service of our country. I am happy to break bread with and to hear the utterances of your distinguished and able Senators CARTER GLASS and HARRY BYRD, and to sit at the same board with many of the Virginia Members of the House of Representatives. With an experience of more than 20 years in the Congress, I can say that no State in the Union is represented by men of finer conception of public service, or of superior quality to the representation of Virginia in the House and Senate of the United States.

Annual tribute to the memory of Andrew Jackson has, by the common law of our party, become the rallying point for the forces and principles of our party and a time of rededication of Democrats to our precepts and fundamental policies.

Andrew Jackson was the man of action. He was a militant and aggressive leader. While embracing the theories and principles of Jefferson, he gave to their enforcement the rugged and aggressive qualities of the frontier. With a fundamental concept and understanding of the principles of democracy and free government, his life and experience on the frontier in the establishment and maintenance of civil law and order in his own State, and his heroic conduct in maintaining the authority of the United States over turbulent and lawless Indian tribes and against the conspirators and plotters of foreign nations on our southern frontier, climaxed by his dazzling military triumph at the Battle of New Orleans, he was prepared for that remarkable political career in the United States Senate and in the Presidency, which marked an era in the history of the United States, brought into all branches of the Government a vivid and vibrant democratic concept and left indelibly upon the pages of our history the heroic record and the towering figure of Andrew Jackson. We honor him tonight as a great Democrat, as a symbol of democracy, as an outstanding President of the United States, and as a heroic, courageous, and faithful servant of the great masses, not alone of his own generation but of all those who have followed and who have been served by the stimulation and vitality which he gave to the principles of democracy and free government under our constitutional system.

We gather, however, tonight in no narrow partisan sense. While our party, in the recent national elections, achieved a substantial victory and again elected our great President, Franklin D. Roosevelt, and is now in control of both the executive and legislative departments of the Government, we meet in no spirit of selfish exultation.

By the force of events, our party is charged with a high responsibility, not alone with respect to normal domestic problems, but at this fateful hour in the world's history with titanic problems in our foreign relations and in the tasks of democracy in the larger and broader sense everywhere in the world. These are heavy responsibilities. They affect something more than our temporary comforts of a day. They reach down below issues of economic policies at home and they tower above routine governmental transactions in times of calmness and peace.

The United States of America, through no spirit of boastful pride, may well claim to be the preeminent champion of democracy in the modern world. When we speak of democracy, we have in mind a concept of constitutional government by freemen. We have in mind a governmental structure, created by freemen and under their own sanctions, guaranteeing its fundamental principles, rights, and privileges set forth not in letters of sand but in the clear and luminous language of the Constitution itself, preserving and guaranteeing to every citizen through the process of courts and the judicial system created to serve the humblest citizen and his rights as well as those in places of power and authority.

Democracy is not license. Democracy is not the rule of the mob. Neither is it government by an oligarchy of industrial or commercial or moneyed groups. True democracy is ordered liberty under law. The processes of democracy are not automatic nor self-propelling. The preservation and implementation of democracy under our Government or under any government requires the constant and unremitting endeavors of our people and of those in the Nation's councils who are devoted to its maintenance. Democratic principles under our Government or under any other government may be abused or improperly employed by selfish groups who may attain power. However, the people always have a remedy, if their efforts are properly directed under capable leadership. It is the duty, the lofty duty of our party and of all of those of our people who believe in a broad and constructive democracy, to ever remain alert and watchful that its principles may be applied in the constant and never-ending struggle over governmental policies. That struggle must go on during all the years. That is a part of the history of democracy—a long, toilsome effort throughout the centuries for the common man to attain liberty and to have voice in the government that shall rule over him. That struggle has not yet ended. It cannot end and must go on as long as man desires to be free. That is the supreme challenge to our party. The necessity to maintain the contest is the justification for the existence of the Democratic Party, and its success in such a contest will be its everlasting glory.

Democracy cannot be purchased in a department store. There is no modern gadget or labor-saving device which embodies its

principles and relieves us of the responsibility for its operation. Democracy and free government in the United States were not ready-made. They cost our people blood and tears and sacrifices and suffering through the long years. They cost us the American Revolution and the loss of the patriots who lost their lives or shed their blood. They cost us the trying days under the Articles of Confederation, when the individual States, harassed and annoyed with their domestic and international problems, were forced to find a way out of their difficulties. They cost us a struggle over the adoption of the Constitution of the United States. Here were the forces of democracy at work. Here were men striving toward free government and ordered liberty over a constitutional struggle of our own making, arguing and contending and giving utterance to their concepts respecting the problems which faced them.

Democracy and free government cost us the War of 1812. That war brought us face to face with foreign problems and foreign relations. We had become a nation. No longer were we 13 weak and wavering Commonwealths. The War of 1812, with its sacrifices and sufferings, had a part in stiffening the national fabric and in congealing the divergent and discordant factions among our people.

Democracy must be earned and deserved. America, during 150 years of national existence, and even during the preceding 150 years of colonial history, in which the thirst for freedom and democracy was being surely, if slowly, generated and stimulated, has earned and deserved democracy and constitutionalism. They are ours. We have paid for them in blood and treasure. We shall surrender them neither to domestic miners and sappers nor to any attack by foreign foes.

The existence of democracy and free government anywhere in the world is now under attack by the most brutal and ruthless group of dictators that have cursed the world and stained its soil with the blood of its innocent victims since Genghis Khan and his Mongol hosts swept out of the Gobi Desert in the thirteenth century, and by conquest and pillage, by fire and sword, ravaged and destroyed civilized lands and crushed their people under the heel of barbaric invasion. Democracy is threatened everywhere. For the moment it is assailed by armies in other parts of the earth, but the flaming dreams of the conquerors reach out to our own land and other lands in the western world—to all lands where free government dares to exist. Hitler and Mussolini have subjugated peaceful and neutral nations in Europe, and scourging their enslaved people with the lash of the master, have proclaimed their intention to establish a "new world order." The United States is a part of the world. It is within the scope of their plans and purposes. This compact of aggression and conquest is a bayonet thrust at the security of the United States and its people.

Great Britain, with heroic gallantry and with blood dripping from her wounds, is standing, sword in hand, upon the ramparts of her own freedom and upon the fortresses of her own life, seeking to hold back this tidal wave of conquest. In resisting the aggressors she is defending the right to free government in behalf of civilization.

Little Greece, with a courage as sublime as that of the Greeks at Marathon and recalling the classic martyrdom at Thermopylae, has aroused the admiration of an amazed world by her granitelike resistance to invasion and conquest.

In the face of the arrogant decree of the dictators that free government and democracy will be destroyed wherever the armies of Hitler and Mussolini can march, wherever their navies can float, and wherever their swarming fleets of the skies can fly, the United States and Americans have determined that we shall give of our substance and of our arms and of our equipment and of our cannon and of our machinery of war, to the brave nations, the brave peoples, who scorning the demands of the dictators, dare to fight for their lives and the life of democracy in the world.

Evidencing that determination, the lend-lease bill, to provide for leasing, lending, or giving to the countries resisting aggression and whose defense is vital to the defense of the United States, has been enacted. Already seven billions of the Nation's treasure has been pledged to carry its terms into execution.

The pages of history reveal no more fundamental struggle in the history of mankind than that which faces the world today. Democracy and free government must and shall not be butchered by the barbarism and savagery of Hitler and Mussolini who plot the assassination of liberty throughout the world

For our own country and people, our task is gigantic. Never have we faced a similar challenge. We are standing at a momentous period in the fate of the human race. All the lights of history are beating down upon us, all the mighty upheavals of the centuries, all the stirring chapters of man's groping and struggling toward liberty and self-rule come ringing down to us through the years with a commanding challenge. The blood of our fathers commands us to hold the line. We shall, by God's help, hold the line.

Our sacrifices and our efforts in this supreme task are accompanied with difficulties and with problems.

The staggering sums which we have appropriated within recent years to build a two-ocean navy, to expand and maintain the Army, to provide equipment and aircraft and all of the enginery of war for national defense, and the sums which we shall now expend in the campaign to aid Britain, will require, not alone sacrifice in service by our people, but will demand much heavier and more burdensome taxes. The Congress will be compelled to levy very substantial increases in tax rates throughout the entire tax structure, but it is believed that our people are willing to bear these added burdens, are willing to shoulder these new and heavy responsibilities in order that America, in order that our country may save, not only itself, but the world, in the most tragic hour in modern times.

The expenditure of large sums of Government money for national defense and for armament and equipment must be administered without scandal and without waste. At a time when sacrifice is demanded of every citizen, we must not tolerate swollen war profits by industry or by large financial interests who have and will secure Government contracts. In addition to care and prudence in the making of such contracts, taxation must be employed to guarantee that in the hour of the Nation's peril, no interest shall make an undue profit at the expense of the Nation's need. If industry extorts an undue profit because of speed and the Nation's need, it must be recaptured by taxation.

Industry owes a duty to the Nation, just as every citizen owes a duty to the Nation. It must not shirk. It must not be permitted to shirk. When we recall Andrew Jackson's struggle with the Bank of the United States, we know that he would not permit industry to shirk or exact unfair profits.

Men who work in building Army and Navy camps, and Army and Navy plants for the production of munitions and arms, also owe a duty to the Nation. Men who work in national-defense industries owe a duty to the Nation. The program of production of war supplies and munitions has already been delayed and hampered by strikes and labor disputes. Strikes in national-defense plants must stop. I hope they may stop through voluntary action, but stop they must, if necessary through governmental action. Labor, of course, is entitled to a fair wage and fair working conditions. Governmental agencies have been provided to secure these rights. Labor has no right, however, to strike against the Government of the United States in the hour of the Nation's peril. We know what Andrew Jackson did at New Orleans to control those who hindered his operations.

As one who has for a lifetime sympathized with labor organizations, I solemnly warn organized labor that strikes and disturbances that delay the production of national-defense materials will surely and inexorably result to the disadvantage of labor unionism and the advances which it has made through the years.

It is all right to belong to a union, but in time of national emergency there is one paramount union, there is one supreme union and that is the union of these 48 States—the United States of America. That Union must rule or democracy must perish.

The United States owes to democracy and free government her glorious past and what we hope to be her more glorious future. Its conception gave us liberty. It gave us the Constitution of the United States. It gave us that great document, the Bill of Rights, which contains those fundamental privileges and guaranties that distinguish American Government. It gave us trial by jury, so that no potentate, no dictator, may consign a citizen of the United States to prison until his own countrymen and his own peers pass upon his guilt in a court of law. It gave us the right to free speech—not simply the right to think but the right to utter those thoughts without the censorship of any monarch or master. It gave us freedom of the press—freedom to print the truth, without the supervision of any bureaucrat or of any master. It gave us the right of free worship—the priceless privilege of erecting our own altars, irrespective of any ecclesiastical authority. We owe a tremendous debt to democracy and free government.

Now that its life is challenged throughout the world, we trust that with our aid the fortitude and the fighting spirit of Great Britain and Greece and other democracies under attack may, with God's sanction, hurl back the wild beasts that would ravage and destroy the institutions of liberty and the principles of democracy throughout the earth. The great God of battles will not permit these impious vandals to pollute and profane the altars of freedom and the sanctuaries of democracy.

4–H Clubs—Democracy at Work

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, every Member of Congress should read an article that appeared in last week's Saturday Evening Post, and which I am inserting as a part of my remarks, on the subject of the 4–H Clubs of America—Democracy at Work.

Those young people "down on the farm" are not only being educated in the academy of common sense but they are training themselves for life. Unlike the overeducated and undertrained "parlor pinks" with which we are so often annoyed, they realize that it is much more decent to have dirt on your hands than it is to have it on your mind.

They are the people who fight the Nation's battles in times of war and sustain its institutions in times of peace.

They are not afraid of work. They appreciate the dignity of honest toil.

In our fight for rural electrification, we have had the enthusiastic support of the 4-H boys and girls in every section of the country. They know what it means and they know how to apply it.

They are helping to electrify their homes and to equip them with the necessary appliances, such as electric irons, fans, radios, vacuum cleaners, washing machines, refrigerators, ranges, water pumps, feed grinders, and hot beds, and to provide their communities with cold-storage facilities.

As this article points out, they are improving their homes and beautifying their surroundings, making them more pleasant and more attractive places in which to live.

They are really rebuilding America in the American way. There are no Communists among them. They are all Americans who speak and think American. They believe in God and their country, and exemplify their beliefs in a thousand ways.

Every American should be proud of them and of the record they are making. It is to such people as these that we must look for the future safety and progress of our country. [Applause.]

I am inserting at this point the article to which I referred:

[From the Saturday Evening Post of March 29, 1941]

HERE'S HOW THEY KEEP 'EM DOWN ON THE FARM

(By Robert H. Reed)

Once a year 1,500 farm boys and girls who belong to the 4-H Clubs—one of the few youth groups on earth whose members are willing to sweat in productive labor—meet in Chicago for the annual club congress. They represent 1,500,000 boys and girls back on the farm in all the 48 States.

Held in December in conjunction with the International Livestock Exposition, the congress gives the boys a chance to show their project calves, pigs, and lambs in competition with one another and with the best that America's stockmen and agricultural colleges can produce. They match judging skill on animals and meats. The girls bring their jars of fruits, vegetables, and meats; they model the dresses they have designed and sewed; they demonstrate their skill in cooking, baking, and home decoration.

Health champions are crowned. Leadership and achievement awards are made. College scholarships by the dozen are handed out to competitive winners.

Here is the harvest of their fat things and the pay-off on the year's club work. When Federal and State leaders totted up the 1940 records they found that the 4-H Club boys and girls had produced an estimated $30,000,000 worth of farm products during the year. The 1,500 who attended the congress in Chicago had bank accounts averaging over $350.

The middle-aged fugitives from a walking plow who now inhabit the canyon walls of the cities probably will hoot in disbelief the statement that the 4-H Club youngsters are finding adventure in those same drudging daily tasks they themselves fled from years ago.

But to substantiate it, there is the testimony of the million and a half who are carrying projects. The phenomenal growth of the clubs verifies it.

The skeptics should know Fred Sumners, of Alabama, who has just turned out of his teens: "In November of 1936 the assistant county agent came to Tallassee to organize a 4-H Club. The work was new in this section of Elmore County.

"For the first year I chose as my one project 1½ acres of cotton and, following the cultural directions of the club leader, I made a yield of 750 pounds of lint, which nearly doubled that made by my father.

"Before I became a 4-H Club member we did not have any registered livestock. We had grade hogs and cows and home-raised chickens. I brought home the first purebred animals our farm had ever seen. My parents now see the advantage of purebred livestock. They have cooperated with me in changing our farm to one that has only purebred pigs and chickens, and we are changing to purebred Jerseys as fast as possible. Ours was once principally a cotton farm, operating at a loss; now we have a successful, profitable farm.

"For my projects"—this is 4 years later—"I have selected hogs, beef cattle, pasture, potatoes, dairy cows, corn, cotton, orchard, garden, and chickens."

Casually considered, this southern boy has related nothing more than a minor success story in a cotton patch. But he's done more than that, for he can be multiplied thousands of times across the country.

These 4-H Clubs, starting humbly some 40 years ago on the primitively simple theory that the best way to learn a thing is to do it, have now grown into a benign colossus that is rapidly taking control of American agriculture. With this cheering result: In making the conquest of the farm, the boys and girls themselves have become contented captives.

There may be a bit of mystery to the city dweller about this unique school of citizenship which has sprung up and thrived beyond the city limits—a school that has no tuition, no classrooms, no textbooks, no compulsion, little precept, and lots of practice. It deserves a close examination.

The H's denote the objective of training the head, the heart, the hand, and the health. Any rural youngster between the ages of 10 and 21 may join. There is no compulsion about joining and there is no penalty for dropping out. There is the ratio of 3 girls to 2 boys in the million and a half membership. They are grouped into 80,000 individual clubs, every farm county in the United States having one or more clubs. Hawaii and Alaska have 4-H clubbers, and Canada is following the pattern set in the States.

Sponsoring the movement is a cooperative set-up of the Extension Service of the United States Department of Agriculture, the 48 State agricultural colleges, and the 3,000 county farm agents. Funds for the work have been provided by acts of Congress. The Smith-Lever Act, in 1914, when there were fewer than 100,000 members, gave impetus to the movement, as did the Capper-Ketcham Act in 1928 and the Bankhead-Jones Act of 1935. These acts have made possible the hiring of club leaders in almost all of the counties where farming is a major enterprise. Helping these paid leaders are 150,000 volunteer leaders, mostly graduates of the "school." The clubs have no formal connection with the public-school system; their individual campuses are the home and the farmyard. In the past quarter century more than 8,000,000 farm boys and girls have been members. These are the ones who are moving into the driver's seat. Today about 60 percent of the strictly farm youngsters are taking a hand in the work.

PICKING THE PROJECT

The business end of the 4-H Club is the "project." There are more than 50 of these, and a boy or girl may undertake 1 or a dozen. The leadership lays only a light disciplinary finger on the members. A boy may decide to raise a farm animal, he may grow an acre of corn or potatoes, he may plant a garden or an orchard, he may wire for electricity his parents' home and farm buildings. He has all the research of the United States Department of Agriculture and the State agricutural colleges right at his elbow, through the county agent and the county club leader.

The boy is strictly on his own with his project. If he wants to take up a livestock project, he must pay for the animal, even to the point of signing a note to his father or to the bank. Rural bankers, incidentally, rate the clubbers as an A-1 risk. If the animal dies, it is the boy's hard luck—a second project often brings him out of the hole. The boy must do all the work on the project himself, keep a complete record, and report regularly to his club leader.

THE INCENTIVE

But—and this may explain the popularity and success of the 4-H Clubs—when the accounts are balanced up, the boy gets and keeps the profits. It is no longer "son's pig and dad's hog."

Last winter, during the international, a State club leader was speaking of this point. "Let's ask the first club boy we come across."

He happened to be a tall, slender boy of about 15, whose freckles overlaid a ruddy outdoor complexion. He was studying a meat display in the huge exposition building. On his coat lapel was the 4-H Club emblem—a four-leaf clover with an "H" on each leaf.

"Son," the club leader addressed him, "would you mind telling us about your club work? Have you made some money out of it?"

"Suh"—he was obviously from somewhere down South—"I have $700 in the bank, and I'd have more, but I had hard luck with my hawgs. They got the cholera."

Kenneth Disch, 15, of Evansville, Wis., who won the junior championship at Chicago with his trio of lambs, has been in club work for 5 years. He is frankly proud of the results. "This year I made $410 and won a lot of additional prizes. In my 5 years of club work I have earned about $1,500 in cash. I now have $311 in the bank, own a cow, three pairs of silver foxes, a riding horse and saddle, sheep, and have $100 out of the bank."

Kenneth is frank about another matter too. "I don't know if I will go on to college, as I don't like school."

The distaff side of the 4-H Clubs more than holds its own. The girls are inclined to undertake more projects, stay in club work longer, and, as noted, they hold the bulge in numbers. Their long suits are cooking, canning, baking, sewing, home decoration and the purely feminine pursuits, but—to the slight annoyance of the boy, members—some of the girls, possibly with a touch

of the tomboy, like to feed out and show farm animals. And some of them have made show history.

On Wednesday afternoon of the last international in the arena of the show building, a crowd of several thousand farm folks sat with their eyes fixed intently on a tall sun-and-wind-burned man who rocked back on his heels, wrinkled his brow, as he studied the breadth and conformation of a row of butterfat beef animals before him.

Finally he laid a hand upon a white-faced Hereford steer, as marceled and polished as a debutante at her coming-out party. A little Illinois farm girl, dressed in high-laced boots, a plaid skirt and a sweat shirt, looked up at him again to make sure she hadn't misunderstood.

The tall man smiled and nodded reassuringly, and the girl burst into tears and the crowd into an ecstatic roar. That nod meant that this supreme court of stockdom had decided that her pet, Sargo, was the grand champion, the finest beef animal of the international. Evelyn Asay, 18-year-old daughter of an Illinois tenant farmer, had won the show's most coveted honor over the country's greatest stockmen and agricultural colleges, who are, presumably, incomparable as molders of the animal form.

A day or two later Evelyn's Sargo sold at auction for $3,498, which dried the last of her tears. Added to her other 1940 show winnings, this brought a club income of $4,333 to this petite Cinderella.

The auction price of $3,498—which is $3.30 a pound, and an uptown price for beefsteak even from a grand champion—is not a record for the international. Back in 1929 a coal-black steer, fitted and shown by a 4-H Club boy, sold for $8.25 a pound, which is the all-time record. Evelyn Asay is the second club girl to win this top honor; Irene Brown, an Indiana girl, stormed the walls into man's domain in 1938 to win the grand championship with her sleek black animal. In 1939 a Texas club boy carried off the honors. The 4-H clubs have copped the grand championship six times.

Evelyn is the daughter of Donald Asay, who rents and operates a 240-acre farm near Mount Carroll, Ill., and specializes in feeding cattle for the Chicago market. Evelyn wanted to go to the Frances Shimer Junior College in Mount Carroll; then she hoped to go to college and prepare herself as a primary teacher. She didn't ask her family to finance this education, for she knew a way to do it for herself.

In her neighborhood there is the Prairie Edge 4-H Club. She joined and decided that she would raise a beef animal as her project. When a shipment of 150 Hereford calves came to the Asay farm from the Colorado range, Evelyn made her selection and paid her father $50 she had scrupulously saved for college tuition.

A BOVINE GLAMOUR BOY

"I picked the smallest calf in the lot," she said, "but I thought he was the smoothest." From then on through the next year the calf was the club girl's full responsibility. She was required, under club rules, to feed and water the animal. This meant that she had to get up at 6 o'clock in the morning to do her chores before starting off to school, and to work long after dark each evening. But Sargo thrived under her ministrations and begin to win county and State honors; Evelyn kept pointing him for the international, the biggest stock show in the country.

Sargo almost didn't make it. Last November the 150 tons of hay that stuffed the capacious Asay livestock barn began to heat, an almost certain result when the hay is put into the mow with a high moisture content. The family examined it carefully and decided to play safe. They moved out the livestock; Evelyn led Sargo to a dilapidated old chicken house. "It was a terrible place," she confesses, "but Sargo survived."

The barn caught fire that night, destroying the 150 tons of hay and 2,000 bushels of steer-fattening grain. But Sargo was born to a more distinguished fate. He missed the fire and survived a long ride to Chicago in an open truck, heavily swathed in blankets to protect him from the winter wind. That, plus a series of knock-down contests with several hundred other butterball beef animals, was Sargo's career up to the final victory—17 months over all. Somewhat like the mule, Sargo had pride of ancestry, but no hope of posterity, and his only destiny, ordinarily, would have been the dinner table. But again fate was good to Sargo. An industrial firm—the Firestone Tire & Rubber Co.—outbid all others and took the grand champion on a tour of the country to show club boys and their elders what perfection is in beef cattle.

The determination of the 4-H Club boys not to waste time with scrub stock, their insistence on good blood, is paying off. Harvey Johnson, of Arizona, who has been in club work for several years, has built up a herd of registered Ayrshire dairy cattle to a point where, this past year, he excelled his father, who is regarded as one of the best dairy-cattle breeders in the State. At the State fair the son bested his father in a battle for blue ribbons. This club boy, checking up on his career, found that he had sold $4,908 worth of products, had won $349 in prize money, and had an inventory of stock worth $13,625—a total for club work of $18,882. Boys who almost duplicate this phenomenal record can be numbered in the thousands.

They are, of course, the headline makers of the 4-H Clubs. A better evaluation of club work on farming might be made on the thousands of farms, some of them isolated and poverty-ridden, where a youngster of thirteen or fourteen is struggling through a project, trying to raise a calf or lamb, the family watching with mild curiosity at first and with increasing interest as the boy turns his profits into pure-bred stock and demonstrates its superiority.

Almost beyond belief is what can be done by a sturdy little farm girl with her sleeves rolled up. In the Barber home, in South Carolina, the family of twelve is fed the year around with the meats, vegetables, and fruits canned by club daughter Catharine Elizabeth. It is an exception rather than the rule where 4-H Club girls don't handle most of the food problems in their homes. The five girls who won the $200 college scholarships in 1940 put up the almost incredible amount of 26,380 pints of food in their collective club years, and these five girls illustrate how evenly club work has developed over the country. Mildred Maassen, 18, is from Oregon; Dorothea Nixon, 18, from Massachusetts; Marie Fletcher, 17, from Florida; Virginia Pollard, 17, from Nebraska; and Ruth Childress, 17, from Louisiana.

The achievement girl—and "achievement" is a gross understatement—was Nawatha Krebbs, of Eufaula, Okla., who completed 59 projects in her 7 years of club work. She raised 1,441 chickens, prepared 127 recipes, 2,263 lunches. She canned 4,737 quarts of food and taught 27 women of her neighborhood how to can. She sewed 160 garments, made 68 flower boxes, planted and cared for 42 trees and shrubs, had a flower garden each year. She made over and painted much of the furniture in her home, made the curtains and slip covers; helped to remodel the windows of her home and rebuild the floors. She raised 5,515 pounds of vegetables and fruit. During her 3 years of leadership she supervised the work of 55 members in a club which was judged the model for her county.

Outside of this club work, Nawatha had little to do from 13 on except to keep at the head of her class in school. Nawatha's project work is valued at $3,484.

Many of the club leaders, themselves a modest and self-effacing lot, feel that the spotlight and the publicity are taken up too much by these spectacular champions, though the club leaders do not belittle their ambition and accomplishments. They feel that a look should be given to the foot soldiers in the ranks, ones whose bank accounts are nothing to boast of, ones like Eloise Hinson, 16 years old, of Alamo, Ga.

A YOUTH MOVEMENT FOR SELF-HELP

Alamo is just a dot on the Georgia map, and the road that runs out of it might be Tobacco Road. Somewhere along that road, 3 years ago, this new 4-H Club member faced a problem. The home was an old log house. Close by were the sheds and the barn—not the big red barn of memory. It was a tumbledown affair like the house. The home stood in a barren field, with no fences around it.

So Eloise chose as her project home beautification. Her first step was to level the yard, to have it spaded deeply, fertilized and seeded to grass. A fence was built around the home, this demoniacal clubber driving her family as hard as she drove herself. Then she went into a frenzy of planting. Pecan, peach, apple, pear, fig, and other trees—81 in all—as well as grapevines, climbing roses, annual and perennial flowers. The barn and woodpile were moved back out of sight, according to her plans.

A club leader, telling of this girl's project in Chicago, quietly refused to put a cash valuation on Eloise's 4-H Club work.

Club work definitely has been a mental stimulant to the youngsters. Besides the development of extracurricular activities, such as dramatics, music, nature study, community service, tours, summer camps, it has pointed a larger number of farm boys and girls toward college.

Iowa State's distinguished dean of agriculture, H. H. Kildee, estimates that 80 percent of the agricultural students at his college have been 4-H Club members.

"I have observed," said Dean Kildee, "that most of them have set up objectives and goals for their life work, and that they come to college with a determination to make good. A study which we have been conducting for several years shows that former 4-H Club members rank higher in initiative, leadership ability, grades, participation in worth-while activities, and in success after graduation than those who have not had the benefits of 4-H Club experience."

The farms, as could be expected, are losing a few of these 4-H Club graduates. Many of them are studying engineering, which may eventually lead them to the city. The Soil Conservation and Forest Services beckon to some of them. One delegate to the recent Club Congress is aiming at the Harvard Medical School, and at 14 he confidently expects 4-H Club work to pay all the bill.

Baseball reached out and plucked from a dairy farm one of the 4-H Club's prize-winning members—Charlie Keller, the hard-hitting outfielder of the New York Yankees. Keller, however, is only on leave from agriculture, for his savings are going into a Maryland dairy farm.

Elizabeth Karr, who was good enough at feeding beef animals to show at the International, and who is shown on page 16, combing the forelock of her Hereford steer, has her eyes on the clouds. Immediately

after the International she turned the rest of her livestock over to her father on a partnership basis, and went into nurse training. She wants to be an air stewardess on the completion of her training.

But the overwhelming majority are staying on the farm, thus solving themselves one of agriculture's greatest problems. The stream of rural youth to the city, which used to run creek-bank full whenever farming was in the doldrums, seems definitely to be choked off at the source.

The physical effect of the 4-H Clubs on farms is tremendous. This work means better livestock, better methods of production, better living. And historians may note another change with the coming of the clubs.

In the late 80's and early 90's, which today are reckoned as eventful rather than gay years in the buffalo-grass regions of the West, Mary Elizabeth Lease, La Pasionaria of the Populist movement, could always bring her grim-faced Jayhawker audiences to a bubbling boil with the flaming preachment that "farmers should raise more hell and less corn."

Whatever the other attainments of "Mary Yellin'," as she came to be known, for she had a powerful voice, her memory is greenest for this one line. And if that gives the lady a somewhat slippery hold on fame, she did have the satisfaction of knowing that her idea took root and flourished. In her day and in the 40-odd years that have passed since she first hauled out the great red dragon of Wall Street for a public horsewhipping, there have been numerous small but noisy farm groups intent on not raising corn.

Her devotees, however, are dwindling, and it seems likely they will go the way of the old sod houses that once housed them, for these 4-H clubbers who are taking over are fiercely devoted to raising more and better corn and kindred farm products, and not at all interested in raising old Harry.

The 4-H Clubs form a spirited little democracy at work—hard work!

Distinguished Soldiers of Connecticut

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

TRIBUTE TO GEN. JAMES A. HAGGERTY

Mr. KOPPLEMANN. Mr. Speaker, the State of Connecticut has had distinguished soldiers in its history. On Sunday, March 2, the Yankee Division honored one of the outstanding heroes of its glorious war annals—Brig. Gen. James A. Haggerty, who was born in Hartford and moved to New Haven where he gave unstintedly of his time and services to that city. I am happy to say that my colleague the Honorable JAMES A. SHANLEY was a member of the One Hundred and Second Infantry Connecticut National Guard from 1928 when he surrendered a captaincy in the Field Artillery Reserve to enter the National Guard as a private. He was adjutant of the First Battalion at the time of his election to Congress in 1934.

I include, as part of my remarks, a tribute to Gen. James A. Haggerty at the unveiling of his memorial tablet in Goffe Street Armory, New Haven, Conn., March 2, 1941, by Capt. Philip H. English. Also two sermons delivered on the same day.

TRIBUTE TO GEN. JAMES A. HAGGERTY AT THE UNVEILING OF HIS MEMORIAL TABLET, GOFFE STREET ARMORY, NEW HAVEN, MARCH 2, 1941

(By Capt. Philip H. English)

Mrs. Haggerty, honored guests, members of veteran and active service organizations, and citizens of Connecticut, to present the career of a beloved leader in a few brief moments is a difficult task. I am forced to limit my tribute to those deeds which brought him his greatest honors.

James A. Haggerty was born in Hartford, Conn., May 10, 1880. An orphan at the age of 6, young Jim made his home with relatives in New Haven, where he graduated from our New Haven High School in 1894. His entire business life was connected with building and contracting operations, which resulted in his later erecting some of our outstanding public structures, notably the children's community center, the Spireworth School, and that impressive church—St. Brendan's. His civilian record was marked by friendliness to his associates, by strict integrity, and by his ability to carry every undertaking through to successful accomplishment. These characteristics made him an outstanding military leader.

His desire to serve his State aroused by the events of the Spanish War, Jim enlisted in C Company, Second Connecticut Infantry, on March 1, 1899. He advanced rapidly through noncommissioned ranks to become a lieutenant in 1903 and to earn his captain's bars in 1906.

Ten years later came the sudden call to Federal duty on the Mexican border at Nogales, Ariz. At this time occurred the greatest disappointment of his career. After 16 years of patient preparation for active duty, Jim was told by the doctors that his blood pressure was too high. On July 21, 1916, when his fine company was on duty on distant mountain and desert, Captain Jim became again Mr. Haggerty.

Far from discouraged by this hard blow, Jim listened to the rumblings in war-stricken Europe, while hopefully awaiting another chance to join his beloved regiment on its return to New Haven.

On January 26, 1917, Pvt. James Haggerty answered roll call as the most recent recruit in Headquarters Company, Second Connecticut Infantry. Time forbids details of rapid promotions which allowed him to sail for France in the autumn of 1917 as a first lieutenant in Company G, One Hundred and Second United States Infantry Regiment, A. E. F.

At Seicheprey, in the morning mists of April 20, 1918, this gallant regiment repulsed a vicious raid by 3,000 German storm troops and suffered heavy losses from the concentrated fire of 200 enemy guns. Found by a friend caring for many wounded in this battered sector, Lieutenant Haggerty remarked scornfully, "High blood pressure! Bosh!" In May 1918 I was glad to have the chance to give him a set of captain's bars which I had purchased in anticipation of his well-earned promotion.

Moving to the Second Battle of the Marne, we find C Company, under Captain Haggerty's able direction, taking a leading part in the historic American counterattack in the rolling hills east of Belleau Wood. The Yankee Division was the southern spearhead in this surprise attack, which was to throw the German forces into a retreat, terminated only by the November armistice.

On July 22, 1918, Jim's troops formed with D Company the leading waves in a desperate advance to pierce concealed enemy defenses at Epieds and Trugny. Many present today saw him calmly deploy his men at dawn and lead them off through a storm of machine-gun fire to storm these red-roofed villages. We recall the flash of those bright bayonets as 900 men and 21 officers of the first battalion by heroic effort overcame a veteran enemy's strong position. Three days later the effective strength of this group numbered 162 men and 3 officers, including the acting battalion commander, Captain Haggerty. Deep in the shell-torn LaFere Woods they continued the pursuit of the Kaiser's forces. Under inspired leadership neither wounds nor death could halt these dauntless troops.

Two personal citations rewarded such leadership. The first from General Edwards read as follows:

"The division commander takes pleasure in citing in orders Capt. J. A. Haggerty for marked gallantry and meritorious service in the capture of Torcy, Belleau, Givry, Bouresches Woods, Hill 190 overlooking Chateau Thierry, Etrepilly, Epieds, Trugny, and LaFere Woods to the Jaulgonne-Fere en Tardenois Road during the advance of this division against the enemy from July 18 to 25, 1918, in the second Battle of the Marne."

A second citation signed by General Pershing, Commander in Chief, A. E. F., read: "Capt. James A. Haggerty, Company C, One Hundred and Second United States Infantry, for distinguished and exceptional gallantry at Chateau Thierry, on the 20th of July, 1918, in the operations of the American Expeditionary Force, in testimony thereof and as an expression of appreciation for his valor, I award this citation."

Another promotion and a change of duty soon returned Major Haggerty to the United States for assignment to the Twelfth Division of the Regular Army at Camp Devens, Mass. The armistice was signed just as this command was to sail for France. He terminated his war duties by assuming the direction of the convalescent center at Camp Devens, where he brought comfort and cheer to many thousand sick and wounded soldiers homeward bound from France.

Following important duties in organizing our present National Guard, Jim Haggerty became a colonel on January 1, 1922, and took command of a new One Hundred and Second Infantry Regiment in February 1924. In 1925 he was appointed brigadier general in command of the Eighty-fifth Brigade. He led the Forty-third Division during the Pine Camp maneuvers in 1935. On July 15, 1940, while discussing coming battle practice with his staff associates, he died suddenly at Hartford.

Of Jim's character his close friend, our former chaplain, Daniel Strickland, has recently written the following lines:

"The outstanding force in his career was determined persistence. He never preached any sermons on morale, but by sheer example and cheerfulness held his officers and men to a very high level of endurance. Excellent tactical judgment gave him faultless skill in estimating a situation. He had the ability, above any officer I have known, to mix freely with his men and to maintain their respect."

May this bronze memorial serve to keep his spirit alive and active as a guiding beacon to the regiments of the future. Wherever they go he is with them. His spirit is marching on.

[Sermon of the Reverend Father Martin F. Doran, former chaplain of the One Hundred and Second Infantry, March 2, 1941]

DEPARTURE OF THE ONE HUNDRED AND SECOND INFANTRY

"The just man liveth by faith," Romans 1:17.

In the great economy of the world today trouble and adversity have a large place.

God made man in a perfected state; a mind of vast intelligence, a soul shining in the supernatural of divine grace, and power of his own free will to direct his actions for good or for evil. Man destroyed his perfected nature, and through the malice of sin has bequeathed to us his progeny, trouble, adversity, evil, sin, and death. By the measurement of years in which man has progressed so, too, commensurate with those years has been the heritage of trouble, ill-will toward fellow men, and the hatred and denial of Almighty God. Let St. Paul express it for us: "For professing themselves to be wise, they became fools. And they changed the glory of the incorruptible God into the likeness of the image of corruptible man, and of birds, and of four-footed creatures, and of creeping things. Wherefore God gave them up to the desires of their hearts, unto uncleanness, to dishonor their own bodies among themselves. Who changed the truth of God into a lie; and worshipped and served the creature rather than the Creator who is blessed forever."

A sordid world indeed had man made for himself, desolate with desolation had man been left to himself, but God's love for man resplendent from the cross on Calvary's hill has kept alive that spark of faith, has rested man's destiny securely on the virtue of hope, and nurtured a doctrine of love for God and for fellow man that has been the astonishment of the world. "Greater love than this no man hath that he lay down his life for his friend."

That doctrine of divine love, purchased by the sacrifice of Calvary's cross, has found its way into the hearts of millions of people and borne fruit in the faith of God and of justice toward men. The world of that day had turned from God and it was bargained for and bought through the sufferings, self-effacement, and death of Jesus Christ. As then, so now, the world today has gone out from God; let St. Paul again express it for us: "There is none that understandeth, there is none that seeketh after God. All have turned out of the way. Their throat is an open sepulcher; with their tongues they have dealt deceitfully; the venom of asps is under their lips. Whose mouth is full of cursing and bitterness. Their feet swift to shed blood; destruction and misery in their ways. And the way of peace they have not known. There is no fear of God before their eyes." Nineteen hundred years ago St. Paul wrote this condemnation of tyranny, tyrants, and of the incredulous of God. Man of no faith, man of evil works, man a law unto himself.

But all is not lost. Thanks be to God, to all this heathenish savagery there is the counterbalancing of the force and of the power and of the influence of religion. There are men and women today inclined to the principles of religion; men and women who respect the laws of morality; men and women who direct their lives on a basis of justice and of equality; men and women who love peace and tranquillity; men and women who have faith in God and by that faith direct the actions of their lives to a supernatural end.

On such a faith was founded this glorious Commonwealth of the State of Connecticut. On the seal of this great State its escutcheon bears proof of faith in God and confidential hope in His Divine Providence; for we read, "He who brought us over safely shall sustain us." Religion, faith in God, have been the cornerstone of this Commonwealth, carrying that light from generation to generation by good and noble deeds, by honesty and integrity of individual lives, until every mile of this great State gives monumental testimony in churches, synagogues, houses of worship, to a faith and trust in the living God. That faith in God has engendered itself into the lives of its citizens a love of righteousness that has produced in every decade men and women of heroic devotion, self-sacrifice, personal suffering, and to insure its unity and preservation have made the supreme sacrifice of death.

And not least in its great lineage stands forth, the illustrious regiment of the One Hundred and Second Infantry. Its past entombed with its great dead enriches the glories of our State written in the valor, and courage, and sacrifice of noble deeds. Truly its past lies dead, and its great men of the past are dead but their spirit and tradition have been enthroned upon love and influence, that know no death and that furrowed deeply into the minds and hearts and souls and lives of succeeding generations who have caught up, where they laid down. In panorama before my eyes this morning I see glorious figures of the living and of the dead; men who have standardized the traditions of the One Hundred and Second Regiment; Shanley, Isbell, Parker, Haggerty, Field, Oberlin, O'Connell, Strickland. These were men of strength and bravery, men of ideals, men of troubles and temptations that chisel out character, men of religion, our standard bearers, "For God and for Country."

And in this vision of the heroic dead, if I may be permitted, I see one who has climbed the ladder of success from an obscure private to an honored general; and that by persistent toil, by devotion to duty, by intelligent application, capable, kind, patient, understanding, never disconcerted, one who loved army detail more than all else in life, deeply religious in his love of God, severely subservient to civil authority, a man whom we all love, a man who knew how to be and was himself a gentleman; my tribute to the sweet memory of Gen. Jim Haggerty. And if he has left his footprints on the sands of time I see also another who followed so closely the ideals and traditions of this great regiment; a true soldier of the highest intelligence, a capable disciplinarian who knew how to teach because he first had learned to serve, who knew the weaknesses of man and could advise and sympathize yet never an offender himself; a genius of military tactics, yet humbly refusing the coveted position to command; who loved conversation of God and the infinity of His guiding providence; a true soldier, a loyal friend, the perfect gentleman—Maj. Fred Oberlin.

May I echo back over the long vista of time to these glorious dead that the lessons you men have taught have not been wasted on the desert air, but have been recognized by your successors and that torch of light, and of fidelity, and of courage, is securely grasped and selfishly guarded by the officers and the personnel of the One Hundred and Second of today. And knowing this no mother, sister, or sweetheart need to crush their hearts with moments of anxiety, fear, and worry, because your boys are in safekeeping under the protection of a paternal and efficient officers' corps; and the heavenly protection of Our Blessed Father smiling sweetly down upon them and lovingly guarding your chosen and dear ones.

I know whereof I speak, and I know the care that is first sought for the boys to insure their safety, their comfort, and their health. I know of no other regiment that has the men in superior positions of the heart and of the unselfish spirit as battalion commanders Houley, Horrigan, Linddauer; and no regiment the country over that can boast of the executive Quinn, that inexhaustible force of power, and of goodness, and of energy, and of intelligent capabilities. These illustrious men both living and dead have well merited their honored places in the history of the State of Connecticut; by example given, by tradition set, by deeds accomplished; and if these be requisites whereby a successor may be chosen, then the lot has been well cast upon the commanding officer whom we all revere, a man extremely capable, a born leader, a refined gentleman—Col. Earnest L. Novey.

Thus, the tradition of this great regiment carries on, and you, by choice selection, are a vital and integral part which in simple interpretation, connotes honor with responsibility, credit for service well done, protection for adherence to obedience, security in your allegiance toward God, compensation in your justice toward men.

In a few short weeks these walls of the old drill shed will echo and reecho once again to the strains of the One Hundred and Second March: The steady rhythmic pulsation of boots, boots, boots marching up and down, and you shall go forth with strength and courage, light-hearted and gay, the blood of youth coursing warmly in your veins to serve—to serve God and country. And God's blessings will be with you and the prayers of all will keep you. Your physical wants will be amply supplied, your spiritual care entrusted to capable hands of devoted chaplains; that will be your staff, for through these men you will find a dependence upon God that will rectify your lives in accordance with the teachings of Saint Paul, that "Just men live by faith." But you will come back again, every one, none shall be left behind, and if tears and sadness enshroud the hearts of your beloved ones who bid you today a fond farewell, it is only nature which demands the price of sorrowing for the love it gives. You shall find duty not always too pleasant, and if the post you guard in the midnight silence appears to have been transplanted to the nearest graveyard and rows of the sheltered sleeping take on the aspect of giants of other days, waiting, as it would appear, momentarily to engulf you; and your step becomes slow and weary and your heart pounds and the tick of your watch in that awful silence beats like the sepulchral tom-toms of the forest jungle; dread, despair, fear never, for your mother walks by your side, your buddies without number are your support, and the spirit and tradition of that galaxy of noble men shall light your way, and the God who bore you shall raise you up.

You are entering into a combat that is not a fight against flesh and blood, but against the powers and principalities of an unseen world and your success shall be measured only insofar as you return the life and living of our great democracy to a more enlightened service of God, and to a greater dependence upon his providential care. For already I have seen stepping forth from the Book of Revelations four horsemen; and one rides a red horse, significant of war personified today by a man who would conquer the world and he must fail because he needs no god; and the second horse is black, significant of death, and that rider must fail because he has ridden death into the lives of

innocent people, brushing aside the doctrines of God; and the third horse is pale in color, significant of famine and pestilence, ridden by an incarnate fiend who too must fail because he has ridden out the lives of millions of suffering and starving people and has blotted out the name of God; and the fourth horse is white and pure, and riding him is the Prince of Peace, who came to love and to die for man that he might bring concord and peace among all nations and righteousness into the hearts of men. I would exhort you to model your lives and I would pray that our great Nation follow closely him who is the rider of the white horse; for today he is the white father, Pius XII, glorious reigning, whose guidance I am so willing to make the standard of my life and whose way of peace and love of humanity I would ask our Nation to adopt, if not the doctrines of his teachings at least his leadership for justice, for civilization, that may honor God and respect man. That is your contest, that is your struggle, that is your reward of honor.

May God bless you every one and watch every step of the way and bring you back safely and permanently to the ones you love and to the ones who love you.

[Extracts from a sermon preached at the field service before the One Hundred and Second Infantry Reserve Sunday, March 2, 1941, at the Goffe Street Armory on the occasion of their last field service before departure for a year's training at Camp Blanding, Fla., by Capt. William H. Nicolas, chaplain, One Hundred and Second Infantry Reserve]

"There is no discharge in war." It may seem odd that a chaplain should choose for a text in times like these words which on the surface seem to be quite contrary to our present and past experiences. If they meant actual combat with armed forces of another nation, it would not be true, for we know that members of our families have been honorably discharged after valiant service in past wars, but the man who wrote these words, often calling himself the Preacher, was wiser than most of us think. He speaks of the continuing triumph of righteousness over evil, and it is here that he gives the watchword for the day because there is no discharge in the war of right against wrong, of righteousness against the powers of darkness. We realize today that we are in actual combat against those forces that would destroy us. They are not always personified in the mind, or in a name, or in a nation, but many times in a philosophy, the way of life that would take from us the things that we hold dear and substitute in their stead things that would allow our conquerors to own us body and soul.

Perhaps unconsciously we are afraid of these things even though they may not come beyond the periphery of our consciousness, and under the sway of this fear we seek absorption into our background. We are apt to become ancestor worshippers thinking thus to protect ourselves. Nature provides very well for the lower animals that they might be absorbed into their background, protecting them from their natural enemies and foes. Travelers in jungle lands and waste places bring us tales of animals peculiarly colored to blend into the background and many times cannot be seen because of their protective coloring. The polar bear on arctic ice blends his white fur with the whiteness of the ice and cannot be seen by his enemies. Even the brown rabbit in the New England woods is colored the same as the leaves and the bushes in which he hides and we have thought that by looking like and pronouncing the names of Washington, and Lincoln, and Grant, and Lee, and all the rest of the founding fathers that we too might be protected from the things that would do us harm, but we have come face to face with the realization that these things are not so. We face a vital challenge, with eternal vigilance which still is the price of freedom. Born in travail, nurtured in trial, reared in tempest, and grown into manhood's estate through tribulation, we realize the path of liberty and freedom is never an easy one. One is reminded of the delightful story so often told to children of Brer Rabbit and Brer Fox and it seems to speak to us today. Brer Fox had captured the rabbit and intended to eat him but before eating him intended to torture him and thinking up nothing bad enough himself sought to make the rabbit name his own torture. So the rabbit said his skin was tender and his flesh was soft and his eyes were delicate and he thought of nothing worse than to be thrown into a briar patch. This the fox did. No sooner was the rabbit thrown into the briar patch when he shouted with glee and joy, "Brer Fox, I was born in the briar patch! I was reared among thorns! I have lived among the hard places and now I am free!" We were born in the briar patch. We were reared among thorns. Plymouth and Jamestown, Massachusetts and Virginia, Connecticut, and all the early colonies were not flowery beds of ease. The founding fathers were men who were strong and true, whose hearts were firm and who were not afraid of hardship. With such ancestry as this, we face today the obligation of carrying on despite any external hardships that we may be called upon to suffer.

Amid all the hubbub of preparation for national defense there comes to the thoughtful mind the question as to whether we are preparing too late. We are not pessimistic on the actual preparation of armaments and armed men because our men are responding so favorably—manufacturer and soldier alike, engineer and enlisted man, capitalist and officer—to bring forward to a speedy consummation the full protection of our land, but if we depend upon this external preparation in armament alone then we are not prepared at all. The billions of dollars expended by France on its Maginot Line and all the rest of its fortifications was to no avail. Instead of the cement and steel which made the Maginot Line, France would have been protected just as adequately if her boundaries had been smeared with butter, because she had not made the moral preparation that was necessary. We are minded of the story of Father Damien, the great apostle, to the lepers and his marvelous work among these people inflicted with this dread disease. He, together with his helpers, had seen many a man lose an arm, a leg, or an ear, and realized that the most pathetic thing about the dread disease was the fact that there was no pain connected with it. Ordinarily, we would say that we would be thankful that there was no pain, but pain is a symptom, the result of something that is wrong, letting us know there is something wrong. Many of the men who went with Father Damien had been stricken with this dread disease and lost arms and legs, and had even died, and yet he was spared, not even having skin lesions. Until one day while working in the kitchen a cauldron of boiling hot water was spilled over his legs and his feet and he felt no pain. He knew then that he was inflicted with this dread disease, but it was too late. Today many of us have no feeling of pain, no feeling of sympathy, not even a feeling of creature horror at the wrongs and evils that are being committed in the world against men and against civilizations, and it may be that with some of us it is too late. Yet we realize that the entire process of becoming and being free men is one that requires the efforts of the leaders and the cooperation of the masses if it is to become a truth in our lives.

We have taken our liberty and our freedom too lightly and all too much for granted. We think of St. Paul, himself a Jew, educated among the rabbis, trained in Hellenic philosophy, a Roman citizen by virtue of his father's citizenship before him, entitled to trial before the Caesars because of his citizenship, at one time talking with a Roman centurion who was his guard. This centurion was born a slave and was proud of the fact that through diligence in business, through energetic efforts, he was able to amass sufficient funds to purchase his freedom and become a free man and to St. Paul he said with pride, "With a great price obtained I this freedom." And St. Paul answered him, "But I was born free." We have looked with sorrow upon the masses of men in distant lands and have realized that they have been born in bondage and many of them have been taken into bondage when they reached maturity and we have said to ourselves and to our neighbors, sometimes with a false pride, "But we were born free." This was true yesterday and last month and perhaps even this morning, but from now on we cannot say it. We have to say what the centurion said, "With a great price obtained I this freedom." The price of sweat, blood and sacrifice, preparation, pain and sorrow. For in our hearts we realize that this thing we have grown to call the American way, this philosophy of freedom, this power of liberty, is so vital and so valuable that we are willing to give our all that those who come after us might enjoy the fruits of this freedom which we now have. It is then we realize what this ancient writer speaks to us as clearly as on the day he did years ago, that in the war against the forces of darkness there is no discharge.

Our Flag

EXTENSION OF REMARKS

OF

HON. JACOB E. DAVIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

POEM BY A CONSTITUENT

Mr. DAVIS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following verse written by a constituent, Col. Roger Wood, of Leesburg, Highland County, Ohio:

OUR FLAG

Symbol of freedom
Battle scarred
Hallo'ed by heroes' blood
Who gave their all
That you might wave
Triumphant.
Your crimson stripes
Emblematic of
The courage of those
Who have ever rallied
To your defense;
A challenge to those
Traitors who would
Betray their heritage.
Your blue field
And white stars
Typify a Nation
United and fearless
Ready and willing
To fulfill its destiny.

Your heaven-bleached bars
Of virginal purity
Signify the
White-hot fires
Of inspired patriotism
And a reverence to
The Living God.

Flag of our pioneer forefathers,
Flag of our valiant Army,
Flag of our naval brave,
Flag of our martyred Presidents,
Flag of the mothers who bore us,
Flag of the Nation's dead—
We proudly stand and salute you
And renew our allegiance pledge.

St. Lawrence Waterway Enemies Caught in Their Own Trap

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

EDITORIAL FROM THE ST. PAUL DISPATCH

Mr. PITTENGER. Mr. Speaker, this morning I inserted in the RECORD a news item which gives the facts in regard to propaganda now under way for the purpose of defeating the St. Lawrence Waterway project. It speaks for itself.

In an editorial in the St. Paul Dispatch for April 1, 1941, the enemies of the St. Lawrence Waterway project are given an opportunity for a lot of explanation. This editorial, with great force, indicates that they are caught in their own trap. It is as follows:

[From the St. Paul Dispatch of April 1, 1941]

THE BLUNDER OF 1934

While opponents of the St. Lawrence Waterway are arguing against the improvement on the grounds that it has no value, they belie their own words by the tremendous lobby that they have set up in Washington to defeat the legislation soon to be placed before Congress to start the project on its way.

So impressive a phalanx of special and selfish interests has rarely been brought together at Washington for the defeat of the national welfare as has been done to form this lobby. Every commercial and port interest that makes a rich living by levying various glorified toll charges against the landlocked Middle States is represented. The Pioneer Press has printed the names of just some of the organizations which are represented in this formidable lobby, and it makes a list of solid type more than a half column long. The composition of this lobby is itself the answer to the argument that the seaway would be an economic dud.

They are much the same interests that fought the previous seaway proposal in 1934, except that this time to defeat the improvement they will have to muster a majority in at least one branch of Congress, whereas they only needed one more than a third of the Senate when it was presented in the form of a treaty for ratification. Had national instead of selfish interests prevailed in 1934, the waterway would be in operation now, needed power would be available for defense industries on both sides of the boundary, and the shipyards of the Great Lakes would be available for turning out vitally important vessels that cannot be built with existing coastal facilities.

The men who defeated the seaway in 1934 are the last who have a right to come forward now and argue that it is too late to do what should have been done 7 years ago. The fact is that if the seaway were to be started this year it will be completed before many of the most important warships on the present program. The ships could be under construction simultaneously with the seaway.

This country and Canada, moreover, must look ahead to the possibility of a naval race in the future that will require every shipbuilding asset that the two of them can find. If the outcome of the war should be such that North America must try to match the shipbuilding capacity of all Europe and Asia, we shall need the seaway desperately. Will we then look back and say to one another, "Would that we had started the seaway in 1941, for now it is too late." It is the duty of Congress to provide so that in future years we shall not have a blunder of that kind to regret a second time.

Building and Construction Trades Department of American Federation of Labor Determined to Cooperate in Defense Program

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

RESOLUTIONS ADOPTED BY BUILDING AND CONSTRUCTION TRADES DEPARTMENT OF AMERICAN FEDERATION OF LABOR

Mr. SHAFER of Michigan. Mr. Speaker, as evidence of good faith and a determination to cooperate in the national-defense program, the executive council of the building and construction trades department of the American Federation has adopted two resolutions which I believe should be brought to the attention of all Members of Congress. I ask unanimous consent to include these resolutions in my remarks:

Resolution 1

Whereas our Federal Government has embarked on an extensive program of national defense; and

Whereas world conditions of today are of such a serious nature that the rapid and uninterrupted completion of the national-defense program is absolutely essential for the preservation of our democratic system of government: Therefore be it

Resolved, That the Building and Construction Trades Department of the American Federation of Labor, its officers and members solemnly pledge themselves that there will not be any stoppage of work on account of jurisdictional disputes between any of the building and construction trades on any building or construction project essential to the speedy and successful completion of the national-defense program; and be it further

Resolved, That copies of these resolutions as adopted be sent to the President of the United States, Vice President of the United States, the Speaker of the House, Secretary of War, Secretary of Navy, Secretary of Labor, both chairmen of the Office of Production Management and the Defense Mediation Board.

Resolution 2

Whereas there have been many newspaper articles of criticism and condemnation directed at the building and construction trades organizations of the American Federation of Labor in relation to the collections of permit moneys, privilege dues, and initiation fees on defense construction projects; and

Whereas this volume of unfair and unjust propaganda is a reflection on the integrity of the building and construction trades department of the American Federation of Labor and has been the cause of creating doubt as to the integrity of our organizations in the minds of the general public, Government officials, and many Members of Congress: Be it

Resolved, That in the event of any of our building and construction trades employers who are recognized as being fair to organized labor secure contracts for the building and construction of defense projects; be it further

Resolved, That where any and all of the building and construction trades organizations are unable to supply a full force of building tradesmen to man such projects, each and every organization affiliated with this department agrees that such union employer shall be privileged to employ other than members of the various building and construction trades affiliated with this department until such time as the various organizations affiliated with the department are able to replace these nonunion men with members of their organizations, or until such nonunion men are requested to become members of their respective unions; and be it further

Resolved, That where such conditions exist no permit or privilege moneys shall be collected under any circumstances. No initiation fees or other union obligations shall be collected from these nonunion men except where they can qualify for membership and have been requested to become members of their respective organizations and have been accepted; be it further

Resolved, That when such applications are received that the initiation fee shall be the minimum possible in view of the benefits received in such organizations, and that reasonable time will be granted for the payment of such initiation fees.

Editorial Interpretations of Current Events

EXTENSION OF REMARKS
OF
HON. HERMAN P. KOPPLEMANN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

EDITORIAL FROM THE AMERICAN HEBREW

Mr. KOPPLEMAN. Mr. Speaker, under leave given me to extend my remarks, I wish to insert in the Appendix an editorial from the American Hebrew of February 21, 1941:

[From the American Hebrew of February 21, 1941]

INVICTUS

It is midnight in Washington. The President has spoken and the people have given utterance to their desire. A Congress riven by divisive opinion succeeded at last in writing the will of the Nation into law.

Let us try and think clearly. The barbaric hakenkreuz floats over proud and lovely

Paris; since the 15th of June the steel-helmeted columns of Hitler's armies have rumbled down the Champs Elysees; the savage sons of the Nazi gospel in their robot attire look upon the gracious and beautiful capital even as Alaric's Visigoths once looked on Rome.

But Paris is not alone in her travail. Prostrate alongside her lie Vienna, bleeding and silent as death; Warsaw, her life snuffed out; Prague, the hollow shell of a city; Bucharest, now resounding to the marching goose-step of hatred on the move; Brussels, Amsterdam, Copenhagen, Riga, Kaunas, Tallinn—yes; and Rome—all have become memories and, to millions who are in chains, symbols of hope.

It is midnight in Washington; not midnight for America, for we are the children of liberty and we are the men of the future. It is midnight, but the lights are burning in the White House and the men who guard our freedom are vigilant. Midnight—and the sentry counts his paces to and fro before the military encampment: Upton, McCoy, Eldridge, Beauregard, Dodge, Battle Creek, Tobyhanna, Pine, Plattsburg, Dix, MacArthur, McClellan, McDowell.

Midnight—and the silence that shrouds Europe is broken by the dull, sickening thud of bombs dropping over the cliffs and shores and cities of England; the crackle of anti-aircraft guns; the terrible roar of battleships going into action; the small, still voice of a man weeping over the shattered bodies of his loved ones.

So Paris has died, and in the Place de la Concorde and the Rondpoint, before the Opera, on the Seine quays, and in the gardens of Tuileries the barbarians celebrate their triumph. But across the Channel the common people of England are manning their guns and stand ready at their parapets to fight and to die so that liberty may live and conquer.

From the "arsenal of democracy" has been unleashed a power that will sound the knell for the force that holds Europe in subjection. Munitions-laden ships are ploughing through the sea on their way to England—already the British feel the weight of the help from America.

So it is midnight in Washington, and a soundless cry of hope pierces the still ether from the Continent in chains, and the tyrant knows that the game is soon up.

The Aims of the National Aeronautic Association

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

STATEMENT BY THE NATIONAL AERONAUTICAL ASSOCIATION

Mr. RANDOLPH. Mr. Speaker, there are many worth-while groups working for the advancement of aviation in this country at the present time. In the forefront we find the National Aeronautic Association. I herewith include a statement of the aims of that organization as set forth in the Washington Newsletter of Friday, March 28, 1941:

Frequently it is asked by those not fully familiar with the National Aeronautic Association: What is the N. A. A.? Does it represent the aircraft manufacturers? The air lines? The private flyers? What are its aims? Is N. A. A. proadministration or anti-administration? Who are its members? Who fixes its policies?

In a few words, N. A. A. is a nonprofit, nonpartisan membership organization founded in 1922 to encourage the advancement of all phases of aviation. With diversified membership in all parts of the country and in all branches of aviation, its policies follow the purposes which are common to all and are not dominated by the interests of any individual or group.

N. A. A.'s general aims, which have been set in its constitution and bylaws, are focused upon public education and upon cooperation both with aviation groups and with the aviation activities of nonaviation groups. The bylaws direct N. A. A. to encourage such development as air transport, airports, education, research, private flying, youth activities, and air defense.

At the national conventions and forums of N. A. A. more specific aims are stated by resolutions in the shaping of which the entire membership is free to participate. Resolutions adopted at the Denver air congress last July placed stress on such subjects as air defense, air reserves, airports, the strengthening of the C. A. A. organization, and air-safety measures such as improved weather-reporting services and airport zoning.

Between conventions, the supervision of N. A. A.'s affairs, within the field set by its bylaws and resolutions, is in the hands of a board of 21 directors and 6 N. A. A. officers representing all regions and aviation activities. The board meets quarterly and an executive committee appointed from this group meets monthly.

The national headquarters of N. A. A. carries out the instructions of the directors and acts as a central clearing house to circulate information on national matters affecting aviation, working as a service unit for the entire membership.

To secure cooperation of many able leaders in aviation there is an N. A. A. national council acting in an advisory capacity. N. A. A. has a national counselor in each State and Territory and 18 counselors at large. Local chapters are an important supplement to individual membership and facilitate community action.

Provision is made for affiliation with N. A. A. of other groups whose chief purpose is the general development of aviation or some related phase. N. A. A., moreover, is the American representative of the Federation Aeronautique Internationale, the governing body for sporting aviation throughout the world.

N. A. A. is strictly nonpartisan, recognizing no party lines. It seeks full cooperation with established organizations and agencies in the aviation field. In this way the guiding purpose of N. A. A. is to promote solidarity in the public interest throughout the ranks of aviation.

Denies Being a Member of Communist Party

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

LETTER FROM ALLAN S. HAYWOOD, DIRECTOR OF ORGANIZATION OF THE C. I. O.

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., April 2, 1941.

Hon. NOAH M. MASON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MASON: Congressman DIES has used the CONGRESSIONAL RECORD to make false charges against me. These charges were made without any notice and without first affording me an opportunity to answer.

I am not, and never have been, a card-holding member of the Communist Party, or a fellow traveler, nor have I ever followed the party line by supporting the party's front organizations, or in any other way. My cousin was killed in a Hitler bombing raid over England. My nephew is in the Royal Air Force fighting for England. I am opposed to dictatorships and to those who condone their aggression.

The only membership I have is in the United Mine Workers of America. I have worked in the coal mines for 16 years, and have been an officer of the mine workers for 23 years. The only principles I follow are the principles of this country. The only organizations I have ever supported are the trade-union organizations of the American workers.

Congressman DIES has made equally false charges against a man who cannot speak for himself, in accusing William J. Carney of being a Communist and fellow traveler. Mr. Carney is dead. As a dear friend of Mr. Carney during his lifetime, I deny Mr. DIES' false charges. Bill Carney was a devout Catholic whose only faith was in his religion, and who gave his life working for the cause of American labor unions.

I would appreciate it if you would have this letter inserted in the CONGRESSIONAL RECORD.

Sincerely yours,

ALLAN S. HAYWOOD,
Director of Organization.

The Central Valley Project of California

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

STATISTICS COMPILED BY THE BUREAU OF RECLAMATION

Mr. THOMAS F. FORD. Mr. Speaker, the facts and figures herein presented were supplied by the Bureau of Reclamation of the United States Department of the Interior:

Under the intriguing title "We Are Moving the Rain,"[1] a writer in a nationally circulated magazine a year ago described major features of what is one of the greatest reclamation dramas in the history of water conservation and irrigation.

Centering on the Central Valley project in central California, he dealt with the plans and the progress the Bureau of Reclamation is making to rescue threatened areas from the paralysis of aridity and salinity and from the menace of floods. Today he would doubtless have placed emphasis on what the project will do toward averting a threatened shortage of hydroelectric power in an area

[1] Magner White, Saturday Evening Post, April 27, 1940.

where national-defense industries are striving to meet the country's needs in ships, processed minerals, airplanes, and other arms.

In the regions to be served by the project are one and a quarter million persons on irrigated farms faced by deficiencies in water supplies and in 83 cities and towns dependent on these farms. Almost directly affected are three-fourths of the population of the entire State of California and what affects 5,000,000 people in California concerns the country at large.

The Central Valley project has been described as a major maintenance job on the water and power resources of one of the Nation's most important agricultural areas. Primarily it involves the conservation and regulation of the waters of the Sacramento and San Joaquin Rivers for the following purposes:

(1) Improvement on an all-year basis of inland navigation on the Sacramento River, on which steamboats formerly were able to ply.

(2) Increased flood protection, required to combat the ravages of spring floods from the melting snows of the Sierra Nevadas.

(3) Supplemental irrigation for producing crop lands now largely dependent on underground water and threatened with reversion to the desert by lowering water tables. This will be accomplished largely through diversion of the surplus waters of the Sacramento to the San Joaquin Valley where a critical deficiency in rainfall exists.

(4) Salinity control in the Delta region, whereby salt-water intrusion from San Francisco Bay will be repelled and the destruction of the fertility of rich lands will be halted.

(5) Improved industrial and domestic water supplies for industrial areas of the upper San Francisco Bay region.

(6) Electric power development, whereby surplus waters of the Sacramento will be put to work to avert serious deficiency in the power supply of San Francisco and northern California, which the Federal Power Commission finds is threatened by 1943.

(7) Facilities for protection of salmon and other fish.

The facilities which are to bring about the accomplishment of these objectives may be described as follows:

Shasta Dam, the key structure on the Sacramento River above Redding, will have a reservoir capable of storing 4,500,000 acre-feet of water and a power plant of five generating units with a total capacity of 375,000 kilowatts designed to generate one and one-half billion kilowatt-hours of electric energy annually.

Keswick Dam, 6 miles below Shasta, for regulation of the stream, protection of fish, and generating power through three units of 25,000 kilowatts each, or a total of 75,000 kilowatts.

Cross channel from the Sacramento River to the San Joaquin through the edge of the common delta near Stockton, Calif.

Contra Costa Canal, 40 miles in length, already in operation, carrying water from the delta to a point near Martinez, to provide irrigation, domestic and industrial supplies for agriculture, homes and factories at and in the vicinity of Pittsburg, Calif., and nearby cities.

The Delta-Mendota pumping canal, 110 miles in length, raising water from the delta to Mendota, west of Fresno, on the San Joaquin River.

Friant Dam and Reservoir of 520,000 acre-feet capacity on the San Joaquin River near the town of Friant, and about 20 miles from Fresno.

Madera Canal, 37 miles in length, from Friant Dam to Ash Slough, near Chowchilla.

Friant-Kern Canal, 160 miles in length, from Friant Dam to the Kern River, near Bakersfield.

Facilities for natural and artificial propagation of salmon.

The power to be generated at Shasta and Keswick Dams will be transmitted through double-circuit line of 300,000 kilowatt capacity to a substation at Antioch, Calif. Plans of the bureau of reclamation contemplate a steam standby and firming plant of an eventual capacity of 200,000 kilowatts at Antioch to insure a ready supply of energy for all purposes. Stub transmission lines will carry power to load centers up and down the valleys.

Progress on the construction of the Central Valley project since the first dirt was turned has been as rapid as available funds would permit. By the end of the current fiscal year practically all of the $73,200,000 of Federal funds provided for the project will have been spent. Consequently, there are grave fears that the $25,000,000 recommended by the Bureau of the Budget for the next fiscal year will not be sufficient to advance the work in accordance with the exigencies of the situation.

The additional power requirements, I understand, will be largely responsible for increasing the over-all costs of the project until recently estimated at $228,010,000. These added features, it is estimated, will raise the over-all costs to something like $261,400,000. The additional outlays will be for the steam standby and firming plant at Antioch to make the Shasta power more valuable; extension of the transmission system, a fifth unit at Shasta Dam, and three units at Keswick Dam not included in previous estimates.

The current Interior Department appropriation bill provides only $25,000,000 for advancing construction of the project.

Since the Federal Treasury has already advanced nearly a third of the ultimate cost of the undertaking, it would seem good business, aside from other considerations, to make the project facilities fully effective as quickly as possible. Return of the Government's investment from irrigation will not begin in earnest until water is carried from the Sacramento to the San Joaquin Valley. The sooner the power facilities are installed the quicker the return from this source will start.

From other standpoints, revolving around social and economic considerations and the national defense, advancement of construction of the project is supported by cogent reasons, which may be summarized thus:

Receding water tables have already forced the abandonment of large acreages in the San Joaquin Valley and retrogression to the desert of other areas is threatened unless the water supply is supplemented as planned by the Central Valley project. More than 800,000 acres in the San Joaquin Valley face an acute irrigation crisis.

In the delta area, the productivity of another 400,000 acres is menaced by intrusion of salt water. Abandonment of large areas has already been forced.

Municipalities in the upper bay region having manufacturing and processing plants with an average annual production of more than $100,000,000, are suffering from saline contamination of their fresh water supplies.

Large acreages, particularly in the Sacramento Valley, are menaced each spring by floods which will be controlled by Shasta Dam.

What the maintenance of agriculture, the backbone of the Central Valley area, means in dollars and cents has been summarized by the Graduate School of Business of Stanford University. A survey by its experts shows that the population of 300,000 on the farms and three times that number in the cities and towns have a wholesale purchasing power worth $700,000,000 principally to the metropolitan areas of San Francisco and my own city of Los Angeles.

And since a substantial part of this wholesale business results in purchases from manufacturing and processing plants east of the Rocky Mountains, there is direct national significance in the maintenance of this purchasing power.

The impact of the heavy migrations of farm families from the Great Plains and other areas has been felt most severely in the Central Valley. The increase of 30 percent in the population over the last decade is indicative of the pressure that has been built up in the area. With agricultural opportunities constricted by water conditions, there is no alternative but for these newcomers to turn to the Federal and State relief rolls.

Conservative estimates are that from 40,000 to 50,000 new families, practically all with a farm background, sought succor in the Central Valley from 1930 to 1940.

Hydroelectric power is the keystone of national-defense industrial activities not only in the Central Valley area but in southern California. The imminence of the shortage in power which the Federal Power Commission has found with respect to northern California, finds confirmation in the increasing demands in the metropolitan area of Los Angeles. But for Boulder Dam on the Colorado River, another project constructed and operated by the Bureau of Reclamation, southern California would in all probability have found itself facing a similar crisis. Although Boulder's power production is years ahead of schedule, it is being hard pressed to meet the demands on its capacity and additional generators are being installed and planned in anticipation of a continued increase.

As it is, Boulder Dam is now supplying more than 50 percent of the power requirements of southern California, central Arizona, and southeastern Nevada. Despite the dire predictions of the spokesmen for the private utilities and other interests which opposed the action of the Federal Government in building Boulder Dam, the project has already demonstrated its immense value to the Nation, to southern California, and especially in stabilizing the municipal power systems of the city of Los Angeles. When water stored in Boulder Dam is carried to the cities of the coastal plain through the aqueduct of the metropolitan water district, Boulder Dam will make an even greater contribution to the community, the State, and the Nation.

The example of Boulder Dam is cited as an answer to any objections that may be raised to acceleration of the power development in connection with the Central Valley project. Power from Boulder, which has been furnished the San Francisco region under an interchange arrangement, will unquestionably be required in southern California where the pressure of population and expansion of national-defense industries are adding to the requirements.

The 20 counties which will be directly benefited, the entire State of California, and the country at large need the Central Valley project and the manifold blessings it will bring. It should be speeded to completion by adequate appropriations for both the power and irrigation features so urgently needed.

Aid to Poland

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

RESOLUTION OF POLISH ARMY VETERANS OF AMERICA

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of

the Polish Army Veterans of America with respect to aid to Poland:

Resolved, That the Polish Army Veterans of America strongly recommend that the President of the United States, under the broad powers granted him in the Lend-Lease Act, do all within his power to obtain the friendly cooperation of Breat Britain in forwarding a plan whereby those in Poland and the other small invaded countries of Europe, now occupied by Germany, may be furnished life-sustaining foodstuffs.

The Polish Army War Veterans urge that in the extension of relief, the following terms and safeguards be adhered to:

1. That an international commission should be set up to manage shipping, to import, safeguard, and distribute the food.

2. That Germany undertake that none of the imports or domestic supplies of these occupied nations should be taken by the Germans.

3. That the equivalent of any supplies already taken by the Germans should be returned by the Germans to these people.

4. That the amount of food and supplies on hand at any time be so limited that, in the event of violation of the agreement and seizure of the food and supplies by Germany, it would not be sufficient to feed the German Army for more than a single day.

5. That Germany relax her blockade against these people so as to permit the commission to import food from Russia and the Balkans if possible.

6. That the belligerents should not attack ships carrying supplies.

7. That no United States shipping be employed.

8. That the entire cost of the purchase and distribution of this food and supplies shall be borne by the Governments of the peoples benefited, without expense to the United States or to its citizens.

9. To assure these guarantees the British would be free to stop the supplies any moment these guarantees were not fulfilled by the Germans.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

RESOLUTION BY THE DETROIT REAL ESTATE BOARD

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION TO THE CONGRESS OF THE UNITED STATES

Whereas a bottleneck of approximately 48 miles in the St. Lawrence River deprives the people of the United States of vital production and transportation facilities in the Great Lakes area; and

Whereas the Detroit industrial area is the largest producer of export merchandise and likewise the State of Michigan produces more goods for export than any other State; and

Whereas the deepening of the St. Lawrence channel as advocated by President Roosevent will enable us to make our full contribution to the present needs of our Nation and to participate in the post-war program of world rehabilitation and stabilization; and

Whereas the people of Michigan and the States adjacent to the Great Lakes possess a natural right to transport their industrial products, agricultural, and mining commodities to the markets of America and the world in the most economical manner; and

Whereas our national defense requires full utilization of the potentialities of our 21 active shipyards on the Great Lakes; and

Whereas the midwestern section of our Nation, which is a part of the Great Lakes region, produces more agricultural commodities and has more industrial production than any other section of the country; and

Whereas the Detroit industrial area and the State of Michigan are a part of the great midwestern section of our country in which 40,000,000 people live; and

Whereas the Great Lakes-St. Lawrence seaway and power project is not only a defense measure but also a means of bringing a new era to the country's most important agricultural and industrial region: Therefore be it

Resolved by the Detroit Real Estate Board Seaway Committee, That we do formally and respectfully requests the Congress of the United States of America to enact legislation enabling the completion of the Great Lakes-St. Lawrence seaway and power project by removing existing barriers; and be it further

Resolved, That a formally attested copy of this resolution be sent to the Senators and Representatives in our National Congress.

Respectfully submitted.

DETROIT REAL ESTATE BOARD.

By its Public Affairs and Seaway Committee.
MARCH 24, 1941.

The Passage of H. R. 99 Would Be Disastrous to the Wage Earners, Consumers, and All Investment in the Field of Pulp and Paper Products

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

LETTER FROM E. W. TINKER, EXECUTIVE SECRETARY OF THE AMERICAN PULP AND PAPER ASSOCIATION

Mr. CULKIN. Mr. Speaker, H. R. 99 introduced by the distinguished gentleman from South Carolina [Mr. FULMER] proposes a new adventure by the Government in the manufacture of pulp and paper products in America. Its passage would scrap the sixth largest manufacturing industry in the United States. It would seriously jeopardize, if not destroy the welfare of 264,000 contented, well-paid wage earners whose annual earnings are in excess of $300,000,000. The industry is an important one in both the North and the South.

The purpose of H. R. 99 is to compel the manufacturers of pulp and paper to use the cotton carry-over in their manufacturing processes. It is to my mind a bold and brazen attempt to handicap and perhaps destroy a great industry which is furnishing an important commodity to the American people at reasonable cost.

I recently received a letter from Mr. E. W. Tinker, executive secretary of the American Pulp and Paper Association which furnishes a fair and impartial discussion of the devastating effect of H. R. 99 on the pulp and paper industry of the United States.

Pursuant to the permission of the House I append the same hereto with the suggestion that the Members of the House take time out to read and ponder it.

Mr. Tinker's letter follows:

AMERICAN PAPER & PULP ASSOCIATION,
New York, March 18, 1941.

Hon. FRANCIS D. CULKIN,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN CULKIN: There has been introduced by Representative HAMPTON FULMER into the first session of the Seventy-seventh Congress H. R. 99, entitled "A bill to provide for forest conservation of timber used in pulp; to provide for the eventual elimination of artificial market control of cotton; to use the surplus carry-over of cotton; to improve the quality of cellulose pulp; to provide a standard of cotton content in pulp; and for other purposes."

The United States paper and pulp industry respectfully submits its position to the effect that this bill is fundamentally unsound in all its aspects and is definitely opposed to the well-being of the consuming public, the paper and pulp industry, and those industries which are dependent upon paper as a material for further processing.

The pulp, paper, and converted paper-products industries when considered together rank in size among the first 6 manufacturing industries in the United States. The annual value of wood pulp, paper, and converted paper products is in excess of $2,000,000,000. There is dependent upon these industries some 264,000 wage earners whose aggregate annual wages are in excess of $300,000,000. The consumers of paper and paper products are distributed through all parts of the United States and through all walks of life. To a great extent the economic and cultural development of a Nation and its people are dependent upon abundant and low-priced paper.

H. R. 99 seeks to substitute a high-cost for a low-cost raw material. The data, separately submitted, show that the bill would increase the cost of raw materials used in paper from 20 to 32 percent. The paper industry operates upon a margin of profit which is extremely small; seldom have the earnings of paper companies reached 5 percent of net worth. The distribution of costs in the paper industry is such that raw materials and manufacturing expense, exclusive of labor cost, average about 60 percent of the net sales dollar. It requires only a small increase in raw-material costs to raise this 60 percent to a figure that would ruin the industry unless the higher costs are immediately passed on to the consumer in the form of increased prices. It is obvious that any such increase in costs as would result from enactment of H. R. 99 could not conceivably be absorbed by an industry but would of necessity be included in the price paid by the consumer.

The paper industry has an unbroken record of increasing efficiency and decreasing prices for its products. The tremendous production and consumption of paper has developed on an economic philosophy predicated upon low prices and progressively increasing efficiency of operation. The average price of paper, for example, was 37 percent lower in 1939 than it was in 1926,

whereas general wholesale commodity prices were reduced only 11 percent during this same period. The growth of paper consumption which has rested to a great extent upon this decreasing trend of paper prices has enabled the paper industry to expand and increase its employment and to make available to the people of the Nation, paper and paper products which have contributed substantially to an increased standard of living. H. R. 99 seeks to reverse this sound economic trend and move backward two or three decades the progress which the paper industry has made.

The geographic location and expansion of the paper and wood-pulp industry has rested largely upon the most feasible combination of the locations of raw materials and markets for the finished products of each individual company. Depending upon the kind and quality of paper made, the companies have established themselves close to urban centers where good markets exist or close to the great forest where abundant raw material supplies are to be found. By no conception of economic or ethical precedent under a democratic form of government can the Federal Government require a paper company or any company to cease using a raw material which is close to its doors in order to purchase a higher priced raw material, supplies of which are distant, for the benefit of one particular region of the United States or of one sectional group, such as the cotton farmer. To do so, would penalize the industry, the consumers and the taxpayers of the entire Nation. Such a measure cannot be based upon a plea of being vested with a public interest for it merely seeks to shift a burden from a minority group to the entire population. Furthermore, the forced utilization of a technically unsuitable and higher priced raw material than that to which the industry is accustomed would be grossly unjust as an unwarranted interference with business judgment to which each businessman is entitled. This proposal would in fact distort the planned distribution of the industry based on sound economic judgment and the experience of 100 years.

The members of the paper and pulp industry in their capacity as private citizens of the United States, and aside from their role as individual businessmen, are opposed to House bill 99 as involving useless expenditures of the taxpayers' money. The proposal, while ostensibly an economic project on the part of the Federal Government, could only result in a great financial loss to the public which would have to be paid for from the Treasury of the United States.

The surplus cotton held by the Federal Government has been acquired and stored at an average cost of at least 12 cents per pound. Data on conversion operations indicate that direct conversion costs from cotton fiber to cotton pulp—and it is proposed by House bill 99 that the Federal Government will undertake this operation—would raise the total cost of the cotton to the Government to at least 15¾ cents per pound. It is proposed to sell this cotton pulp to paper mills at 7¼ cents per pound, involving a direct loss of 8½ cents per pound to the Federal Government. Since House bill 99 proposes that 2,000,000,000 pounds are to be sold annually, the aggregate annual loss of public money would amount to $170,000,000 per year; additionally, a tremendous investment would be required by the Federal Government to erect and equip the necessary plants for converting the new cotton fiber into pulp. This would require an immediate outlay of public funds to the extent of at least $100,000,000. The uncertain nature of such an enterprise renders it extremely unlikely that the investment would ever be amortized.

Aside from the loss to the Federal Government, the increased cost of raw materials to the paper industry would amount to at least $160,000,000 per year. Thus, there would be passed on to the taxpayer and the consumer a total burden of some $330,000,000 per year. The fact that large sums of public money have already been expended to subsidize the cotton grower offers no logical reason for pouring additional public funds into the processing of surplus cotton for a purpose which is economically and technically unsound, particularly during the national-defense program.

It should be recognized that the paper industry of the United States, or in fact of any country of the world, has never found it technically feasible to process cotton into paper. Aside from the high-cost aspect, new cotton fiber, by virtue of its technical properties, is not suitable, under processes currently used or known, for use as a raw material in the manufacture of most papers. During the year 1940 the rag-content paper mills, constituting some one-half of 1 percent of the total capacity of the paper industry, undertook the subsidized experimental manufacture of paper using new cotton as a raw material. This was the first known major attempt of the paper industry to use new cotton for this purpose even in those papers which are normally made from cotton rags. Even the rag-content paper mills, with long experience in the processing of cotton rags, could not undertake the manufacture of expensive grades of paper from new cotton except experimentally and with cotton on a subsidized price basis from the Federal Government. The Surplus Marketing Division of the Department of Agriculture is well acquainted with this program, which was based on voluntary cooperation of this branch of the paper industry with the Federal Government. The rag-content paper mills possess the only equipment in the paper and pulp industry which is remotely adaptable to the processing of cotton fiber.

The remaining portion, or 99½ percent of the productive capacity of the paper and pulp industry, includes equipment for the processing of wood and other fibers. This equipment is in no way adaptable to the processing of new cotton for use in the manufacture of paper. Nor is it likely that even the equipment in the rag content paper mills would be available since it necessarily exists for the production of the regular grades of rag pulp necessary to the business. Serious and unwarranted problems would be faced in the further processing of cotton pulp into paper. Paper-manufacturing equipment, such as beaters, refiners, and paper machines, have been developed for the processing of certain specific fibers into paper. New and different fibers cannot be arbitrarily substituted without serious disruption and dislocation of the manufacturing process and in many instances complete shut-down of the paper mills.

Wood and other fibers move through the entire cycle of pulp and paper manufacture in from 6 to 12 hours. Cotton fiber would require at least 24 hours, and in many instances a longer period to complete the cycle. It is obvious that the use of cotton fiber would constitute a serious bottle neck in the mass-production methods in use in the paper mills today.

The bill would be particularly serious to the paper-consuming industries. The effect upon such industries as printing and publishing, business machines, cigarette manufacturers, etc., would be serious in all cases, and disastrous in particular instances, for it is doubtful that satisfactory papers to meet the requirements of these industries could be made for many years to come if the use of cotton fiber was compulsory. Rigid specifications covering the physical and chemical qualities of paper for use by the paper consumers have become firmly established. Such equipment as high-speed printing presses, business machines, and a multitude of other paper-products machines have been built and geared to these rigid specifications and quality of paper. The addition of a new and different fibrous raw material to the paper would, of necessity, affect these rigid specifications, the uniformity of which are so vital to the consuming industries. It is extremely unlikely that many industrial consumers would refuse to accept any paper which varies from or falls below the accepted standards to which they are accustomed. In many instances they would be forced to do so because their equipment would not be usable.

The program proposed by H. R. 99 would require the use of large quantities of vital materials and equipment. Imposing tonnages of steel plates and girders for the erection of the mills would be immediately necessary. Electric generating equipment, steam equipment, and machinery would have to be provided for. Even more important, a substantial part of the labor and technical force required for national-defense work and construction would be needed for the erection and operation of these plants. It is extremely unlikely that either the material or the personnel could be obtained for unnecessary construction for the duration of the national-defense program.

On the economic side of the picture there can be no justification for unnecessarily increasing the costs of a non-durable-goods industry at the present time. Furthermore, with the tremendous volume of paper required under the national-defense program, the industry must be left unhampered to meet all defense and civil needs for its products.

In the field of foreign commerce, the American manufacturer of paper has difficulty, under normal conditions, competing with the paper manufacturers of other countries in common world markets. This is because both raw material and labor costs are, in general, lower in other countries than they are in the United States. The American paper industry has made a determined effort to capture and maintain foreign markets, particularly those of South America. A forced use of new cotton in paper would vitiate any possibility of the American manufacturer competing in foreign markets, for it is a practical impossibility for the manufacturer to produce paper for his export orders separately from domestic orders.

H. R. 99 provides that there should be levied upon the paper mills, as an alternative if no new cotton is used, a processing tax ranging from 50 percent down to 12 percent of the value of pulp included in the respective papers.

It should be recognized that such a tax would increase the cost of paper making tremendously and consequently the cost to the consumer. Nearly all paper made would be subject to section 5 (a) (2) of H. R. 99, or 50 percent of the value of pulp ranging between $5 and $119 per ton, minus one-third of 1 percent for each dollar by which such value exceeds $5 per ton. Since most wood pulps average about $65 per ton in value, the tax would amount to 50 percent (sixty multiplied by one-third), or 30 percent, or $21.66 per ton. This would raise the cost of this material by over 33 percent.

H. R. 99 offers a strange process of reasoning. It involves the expenditure of more public funds to consume the surplus cotton than would be required to purchase and burn it; it proposes the practical wrecking of a vast industry for the benefit of a sectional problem; it anticipates the solution of technical problems not solved over the past 100 years; and, most important, it liquidates by Government fiat the democratic processes that have been the mainspring of American business enterprise since its inception.

Very truly yours,

E. W. TINKER,
Executive Secretary.

Feeder Air Lines

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

ARTICLE BY KEITH KAHLE

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks, I ask unanimous consent to include a very complete article on feeder air lines, written by Mr. Keith Kahle, western representative of the Southwest Feeder Air Lines, Inc., of Oklahoma City, and published in the magazine Oklahoma. For a number of years Mr. Kahle has been editor of the aviation magazine, Taxi Strip, and has been active in aviation affairs of the Southwest.

[From the Oklahoma magazine of February 20, 1941]

FEEDER AIR LINES WILL BE THE NEXT GREAT STEP FORWARD IN TRANSPORT BY AIR

(By Keith Kahle)

Magic is the term "feeder air lines." Its aureole for the past 6 years has laid over the Nation like the delightful smoke of a pipe around your desk. Feeder air lines is the one gem in aviation that businessmen remember. From its glow they would like to warm their hands from the service it offers in a business way. It is the one thing that business remembers from all of aviation's "hellabaloo"—it is the one thing that business in smaller cities and towns desire from aviation. It is very concrete; it is lasting. It will help business directly and indirectly.

For 6 years I have studied, read, worked, heard, and thought about feeder air lines and the future they hold for business from the public-service standpoint. For 2 years I have been sold on the idea that feeder air lines are fundamentally right and sound.

I am of the firm opinion that feeder air lines will be to air transportation exactly what bus lines are to surface transportation today.

It is immensely pathetic to hear some state that feeder air lines are years away. Every indication at Washington—where the ball is—every rumble, every sign points to the fact that feeder air lines are very near at hand.

There are a lot of definitions for feeder air lines—but in plain English, without any lace, most expert thinking is along the following lines: A short air-route operation which gives air-mail, passenger, and express service or air-mail and express service to cities and towns not now enjoying scheduled trunk-line service by a domestic carrier; that such a short air-route operation offers a morning dispatching schedule to the cities and towns along the route and an afternoon pick-up schedule. Both will originate and terminate at an air-terminal point having scheduled trunk-line service.

Hence the word "feeder"—meaning to furnish mail, passengers, and express to trunk lines.

Only a handful of companies over the Nation have as yet been formed for the express purpose of offering feeder air-line service. Only one of these companies, All American Aviation, Inc., has had its case heard before the Civil Aeronautics Board. The company was successful.

PLANNING THE ROUTES

All new air-line routes—trunk line or feeder—are determined and laid out on the basis of their value to the public from a convenience and necessity standpoint.

New techniques are being developed in laying out feeder air-line routes. Ideas that will flash out front are in the making.

Indications are already out as to whether the route should be a circle route, a straight line, or zigzag route; such points are vital to those planning feeder air lines and following through on their efforts. This information, for some reason, never seems to find its way to the Southwest and Midwest in a noticeable fashion.

From the reams of Government figures that are available to everyone, routes can be determined or found by careful study and planning. The Government demands exactness in showing the need for new routes.

The convenience and necessity of new routes have their edges sharply defined. Such data take endless hours of work and study to compile and put into statistical picture form. It is on this unromantic work that feeder air lines are awarded. Cold facts and no hay.

Airport facilities should not be what some local group of businessmen's committee desires. They should be what the air carriers and the commercial fliers need, all subject to check by the airport section of the Civil Aeronautics Authority. Too little regard is given to this vital matter. As a result, many of the smaller and bigger airports today are sloppy jobs due to the trembling, uncertain hands of poor early planning.

PORTS ARE ESSENTIAL

The "hot" communities that are supporting new air-line routes in a short time will have a feeder source of income to their business that will mean more black ink on private ledgers.

The need of more airports from a commercial and national-defense standpoint can well be understood when a businessman chills over the fact that in Poland all airports were wiped out by one 2-hour bombing flight. As a result, Poland's air force and air lines were paralyzed on the ground.

An airport for feeder air-line operation will not necessarily require concrete runways, but instead the field should be well sodded and well drained.

SOME OPERATING ANGLES

The modern version of the actual operation of feeder air lines now is going in two ways, with a third in the offing.

The feeder lines of all American aviation in the East are now being operated with single-motored high-wing monoplanes equipped with a pick-up device. This patented device is mounted within the fuselage of the plane. It is a winch, bolted over a hole in the bottom of the plane, which allows a steel cable with a hook on the end of it to move in and out freely. The cable breaks at a pull of slightly over 1,000 pounds. On the ground, at the point of pick-up, is the station consisting of two poles about 40 feet high and some 60 feet apart. Stretched between these poles is rope from which hangs a mail bag. The plane flies low over the station, and the suspended unreeled hook on the cable catches the rope. Rope, mail bag, and all are reeled up into the plane. The mail is dispatched by simply dropping a pouch out of the plane at low altitude—about 100 feet. The plane is flying at 100 miles an hour when the pick-up is made. The entire operation, of course, is made from a plane in flight. In an official year-end report of the C. A. A. one finds these remarks: "An important development in the air-mail field during 1940 was the approval of pick-up and delivery service which is being carried on over five routes in the States of New York, Pennsylvania, New Jersey, Delaware, and West Virginia. Through the operation of this service small cities which do not have airports sufficiently large to accommodate air liners or other facilities for huge passenger-carrying aircraft are afforded the advantage of air-mail service." It is important to note the word "important" in this official report.

Another method of operation is that of using dual-motored lightweight airplanes. Such operation is dependent entirely on suitable airports for its operation. The method will offer mail, passengers, and express service. Feeder air lines are eventually going to have to offer passenger service, and wherever possible they should start operating as such.

The third type of feeder operation, which has yet to develop, will be a combination of the above two. That is a dual-motored airplane carrying mail, passengers, and express fitted with a pick-up device. Such a combination will offer mail, passengers, and express service to those cities that have suitable airports for landing, and mail and express pick-up service to those points without airports.

The difficulty with this operation is one of passenger psychology. It is an unknown quantity as to how passengers will react to a plane swooping down low over a pick-up station and receiving mail.

SOLVING PERSONNEL PROBLEM

There is much bogey-beat wailing these days over the question, "Where will feeder air lines get personnel?" Acute observers of aviation know that the files of every existing air line and every new air line in the Nation are full of applications, from qualified men and women wanting various jobs, from pilots on up and down. Manpower is available now. To say what will be the condition in 6 months is like predicting how the market will close tomorrow afternoon. But, the American way has always found an answer to such matters.

WOULD AID DEFENSE

Although the expression "national defense" has not been defined in an official way, one may use the expression "national defense," too, in thinking of feeder air lines' value to the armed forces.

The Army considers only 60,000 miles of our highways can be accepted as of military value. This is only a drop in the bucket compared to our total mileage of 3,000,000. Of this 60,000 miles, only 26,000 miles is marked for priority development.

But the matter of the Army getting from point to point still remains vital.

Germany has shown that troops, guns, and supplies can be moved in large and small numbers by air. Aviation writers in this country have been "telling them that down at the office," about this for years—but it took a warring nation to convince a bruised world of this fact. To move manpower and supplies takes all types of planes—from the "big berthas" of the airways down to the "puddle jumpers"—the latter blessed with the ability to get in and out of small fields with vital supplies and manpower.

Since the Army has only 26,000 miles of roads marked for priority development, it is simple main-line thinking, from the layman's viewpoint, that they have some other things in mind for transportation and communication.

Of course, no one is foolish enough to say that feeder air lines will be a cure-all answer to this problem, but aviation observers point out that feeder air lines are definitely an aid to the national defense set-up.

Feeder air lines could aid the Army in case they had to mobilize at El Paso, Miami, Buffalo, Seattle, Brownsville, Los Angeles, etc. Planes of feeder lines could carry key officers, medical supplies, small arms, ammunition,

general supplies, confidential reports—they would be the homing pigeons of the Army. Feeder planes are small targets.

Feeder air lines can provide a means whereby the military air arms of the Government can keep a great mass of pilots and ground men in training—not measured in hundreds, but in thousands. European countries used gliders to keep their pilots in training—the American way might well be feeder airplanes.

RATE OF PAY

Feeder air lines must be a profitable business to the commercial operator. It is so written in the law. In simple words, the law provides that any domestic air carrier, holding a certificate of convenience and necessity for any air route, must show a fair and reasonable profit on capital investment. That is iron-clad law. A rate of mail pay is awarded the carrier to insure this. Any fixed base operator knows that the type of planes now being used on feeder routes, or contemplated to be used, can be operated for a very small amount, on a per-mile basis, as compared to the cost of operating the big air liners of today.

To show the heartening progress being made by air lines, here are some facts worth table-top tapping: On January 1, 1939, there were 81,000 miles of air-line operation in the Nation. Today this has been increased to 92,600 miles. Air-line revenue-passenger miles, and those are the ones the stockholders study, increased 31 percent during 1940.

Such gains are solid. On January 8, 1941, President Roosevelt sent his Budget to Congress. This document included $21,280,327 for a "moderate expansion of the Air Mail Service." Such is an increase over that requested last year. It definitely indicates that this Nation's air lines will continue to expand their route miles.

There are many good feeder routes open for development. The surface has not even been ruffled.

WHAT CAN BE DONE

What can your community do to get feeder air-line service? My suggestions are not complex—very homespun in their simplicity.

1. Stop talking around the luncheon table and go get the job done. Action is needed—not words.

2. Assemble all the facts possible regarding your community's desire for feeder service and show why such is needed. Kill all "general statements" as they are so much wasted words, paper, time, and energy. Let the route win or lose on factual information. Make a survey of business firms and determine, as far as possible, how much air mail, passengers, and express local firms will put on a feeder route once the service is installed. For example, on one new feeder route that I know of, a certain firm has stated that they will furnish one and one-half passengers per week to the route. They will send 2 pounds of air mail daily. Such information is vital—it shows facts—that the service is needed. The Government must have facts.

3. Be sure to get this data in the right hands of every existing and new air-line company in the Nation. Submit such to the Post Office Department and to the Civil Aeronautics Board.

4. Confer with nearby communities that would be on a proposed route and assemble facts on the needs of the route as well as your own community's individual needs.

5. Provide an airport or assure the prospective commercial operators and the Government that such will be built if feeder service is provided.

6. The work should be done by a man who knows his stuff. The man should be well versed in economic studies, their build-up, assembling, presentation, and should have a working knowledge of air transportation.

Feeder air lines have a great service to give businessmen—it is up to the businessmen to see that they get this service.

Are We Following France?

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. DONDERO. Mr. Speaker, the United States is now engaged in a program to defend itself against enemies from abroad.

With a wave of strikes in the defense industries of the Nation affecting most seriously the effort of our Government and people to produce the weapons of defense which becomes more apparent day by day that the greatest danger to our Nation and our country is the enemies who are within our own borders.

France is a prostrate nation. She is on her knees. Her people have been bowed with the humility of defeat. The dagger that struck her in the back was the enemies that lived within her own borders. Communists and labor racketeers influenced by them are seriously threatening the peace, tranquillity, and every effort on the part of our Government to maintain itself at home and abroad.

Every indication here points to the fact that step by step we are following in the footsteps of France unless the President takes a determined and definite stand to overwhelm and control the subversive elements in our midst. This mighty Republic, with the hope it has held out to the distressed people of the world, may suffer the same fate as the Republic of France. Eternal vigilance is still the price of freedom.

We have read in the public press of the modified sit-down strike designated by certain union leaders as a slow-down strike, in the seizure of the River Rouge plant of the Ford Motor Co.

We have all read, Mr. Speaker, the last few days in the public press of the stoning of the chief executive of the State of Wisconsin and the closing of the Allis-Chalmers plant, after it was reopened upon the insistence of our national-defense directors.

As further proof of my statement that Communists in labor unions are deliberately sabotaging our national-defense efforts, I cite the testimony taken before the Smith investigating committee, to the effect that Communists in labor unions were protected by the National Labor Relations Board.

The records of the Labor Board prove that trial examiners refused to permit attorneys to question Communists about their party activities and beliefs.

As further positive proof, last week the attorney for the Ford Motor Co., appearing at a hearing before the National Labor Relations Board in Detroit, requested subpenas of certain individuals for the purpose of proving that they were active in the Communist movement and that the purpose of their so-called labor efforts against Ford were in furtherance of the Communists world mass revolution, which is to control vital facilities of industry, commerce, and transportation. The subpenas for these men were not issued by the Labor Board.

The Ford Motor Co. is engaged in the national-defense effort. As further proof that Communists in labor unions are deliberately sabotaging the national-defense effort, I cite the present strike in the Ford plant, started despite the fact that the National Labor Relations Board only last week conducted a hearing regarding plans for an election in the River Rouge Plant at the request of the C. I. O. I cite also the fact that the Ford River Rouge plant was seized, roads leading to it blocked, and workers attempting to go to their jobs were assaulted.

If this is not an attempt to sabotage, why was the strike called now? Why did they not await the decision of the Labor Board? If this is not an attempt to sabotage, why did they not await the action of the Government's constituted authority?

Now, Mr. Speaker, permit me to point to you the parallel situation in France. For months after the fall of France the American people had the wool pulled over their eyes by stories of treachery among French generals and weird, sensational stories of bridges being deliberately jammed with civilians who blocked soldiers. The tragic thing about all that propaganda was that it covered up the real story.

And the real story is that Moscow did even more to beat France than did Hitler.

At last the President, in his Jackson Day speech, put the blame where it belongs when he said:

> We have seen how the workers of France were betrayed by their so-called champions, the Communists. For no matter what Communist lips have to say their actions have proved that in their hearts they care nothing for the real rights of labor.

What really did happen in France?

Instead of a general statement about Communists selling the workers of France down the river, I am going to give you, chapter and verse, the details of what actually happened.

During the world depression in the early 1930's the voting tide swung leftward in France, and Socialist Leon Blum became Prime Minister in 1936.

The Communist's first move there was political. Their second was industrial.

On the eve of taking office, Blum made this pledge to the Socialist Party—

> Capitalism is doomed; we are now going to try to assure passage from a capitalist to a Socialist state. The time has passed when it is no longer possible for the middle-class bourgeois to save their society.

Although Leon Blum was a Socialist and not a Communist, he, too, had smart

ideas about political subterfuge. When he came into office he told his brother Socialists that—

For the present we must work within the capitalist regime, while you, through propaganda, work to prepare men's minds for the coming of that Socialist system which is our aim.

With Germany stepping up mass tank and airplane production, Mr. Blum did not have time to listen to the French military experts. He was too busy thinking about textbook socialism, and so he brushed aside French military with this statement—

The peace we want is a disarmed peace. We shall do everything possible to make out of this victory of the popular front the first victory of socialism.

At that point the 72 Communist deputies went to work on Mr. Blum; and to get their votes he had to fall in with their plans.

It was the Communists who invented the sit-down strike. In France they called it the stay-in strike. In both cases it was a subtle step in the Communist program to sabotage productive facilities.

Coudron Aircraft Factory was the first to have a sit-down strike. It spread to Renault Motors, where the workers hoisted the Red flag and locked out 3,000 other workers who wanted to go in to their jobs.

What is happening here today? One of the first moves of the extremists who seized the Ford Motor Co. River Rouge plant was physically to drive workers from their places and then block off, with barricades of automobiles, the roads leading into the plant. Workers who wanted to work were beaten.

At the Michelin tire plant in France 7,000 Communists and Communist-inspired workers struck in protest against the dismissal of a "red" agitator, who spent full time agitating and no time working.

According to press dispatches, the labor leaders gave the alleged dismissal of agitators as a cause of the strike at the Ford Motor Co. River Rouge plant.

It is significant that Prime Minister Blum made no move against these Communists holding the Michelin plant; but when rightist workers forced the Communists out of the Claremont-Ferrand plant he sent troops to evict the rightists and leave the Communists in control. This continued to be his policy as the left wing took over industry.

While German factories continued to hum, the French strike spread to the aviation works at Villa Coubay, the Farmand airplane factory at Boulogne, the Bregnet and Block aviation plants, the Ferrodo, Lockheed, and Gnome and Rhone aviation plants.

Barricades were thrown up around the Hotchkiss motor works.

The Communist workers took over the important metallurgical works at Marseilles and the French unit of the Goodrich Rubber Co.

Ten thousand workers demonstrated in support of the Communists outside the Valenciennes metal factories. If workers had no strike in their own factory, the Communists inspired them to stop production in what were called sympathetic strikes.

On Saturday, March 29, 1941, handbills were passed out in Chicago to C. I. O. workers not employed at the Harvester plant to assemble in such numbers at the Harvester plant that it could not reopen.

In the meantime the French radicals had gone after the navy and the merchant marine at the great Mediterranean naval base in Toulon. The Communists drove the citizens indoors, then marched through the streets singing the Internationale. They stormed the naval works and left more than 200 casualties in the streets.

In western France they stormed the naval arsenal at Brest. The arsenal had to close down, but the guards were successful in defending the mighty battleship *Dunkerque*, then under construction. A strike tied up the great liners *Normandie*, *Paris*, and *Ile de France*, the methods being not unlike those employed by Harry Bridges on our own west coast. At St. Nazaire—a port modernized during the World War by millions of American dollars—five navy yards were flying the red flag as employees occupied the plants.

In our own country Marcel Scherer, a Communist, has attempted—with how much success, I do not know—to get his C. I. O. union into our navy yards and control that union. He is the organizer of the Federation of Architects, Engineers, Chemists, and Technicians. In a letter sent to the Secretary of the Navy, then Mr. Charles Edison, and in a telegram sent to Mr. Roosevelt, on April 10, 1940, this organization defended its claim to the right of collective bargaining in American navy yards. Scherer joined the Communist Party while he was at City College in New York in 1931 and was Communist candidate for alderman in Brooklyn.

In Marseilles, Communist sailors struck and tied up and seized 60 French merchant vessels. Everywhere on wharves and warehouses flew the blood-red flag of the Communist Internationale.

When patriotic Frenchmen began to hoist the flag of France in opposition, the Blum government tried to avoid conflict by forbidding stores to sell the national emblem.

Leon Jauhaux, head of the French Confederation of Workers, was a patriot who never wanted strikes to go to a length where they would hurt his country.

He did what some of our own labor leaders and politicians have been tempted to do in order to get a vote majority for themselves—to accept the cooperation of Communists and their sympathizers. They think they can use "reds" while they need them, and then put them on the sidelines.

It did not work in France. It will not work here.

But there is still time for the people of the United States to take heed of the mistake of France.

The first thing we need to do is to ferret out these Communists in the labor movement. We must not be hindered in this by governmental agencies. We must let the workers themselves understand the true conditions.

We must let the workers know we are not going to permit these Communists to threaten them into submission and at the same time sabotage a defense program on which America depend: and on which we are sacrificing billions of dollars.

Congress Must Act Now

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. ROBERTSON of North Dakota. Mr. Speaker, instead of getting better, the strike situation is growing steadily and alarmingly worse. Every day the newspapers record in glaring headlines the story of riots and stonings and work stoppages in our defense-production machinery, and all this time the President sits idly by, without lifting a hand to put an end to these violations of law and order—the same President who, in a public address but a few short weeks ago, declared that the United States defense program was not a "part time job"—that "the concepts of business-as-usual must be forgotten," in our all-out effort to become the arsenal of democracies fighting the aggressor.

The tide of public opinion is rising in all parts of the country against these labor leaders who have deliberately set out to sabotage our defense machinery by unjustified strikes. Since the President has refused to take executive action in this grave crisis, it remains for Congress to step in and do the job. The people expect Congress to do that job with vigor and dispatch. Half-way measures will no longer be tolerated.

This Congress has given the President everything he has asked for in national defense. We have appropriated billions of dollars to set this vast program into motion. The die is cast. Our course is set, there can be no turning back. We must go forward in the spirit voiced by Stephen Decatur when he said:

My country, may she always be right, but my country, right or wrong.

We have supported the President in good faith and we have the right to expect that he will keep faith with us, and with the people of this Nation in seeing to it that the effectiveness and the progress of this program shall not be destroyed by industrial strikes called on flimsy pretexts and without just cause. The time has come to end strife within our borders. The time is past when we can afford to play politics with patriotism. Strikes in defense industries have no place in America at this grave hour.

After this Congress has done everything it has been asked to do, after mil-

lions of our boys have been called to sacrifice a year of their lives in military training camps, it is indeed a sad commentary upon our intelligence that we permit a handful of irresponsible agitators to block our defense preparations. The President proclaims this America as the arsenal of democracies. He speaks in strong words to all the world, but he has failed to rise above politics at home. He has spoken out in vigorous language against appeasers abroad; yet he is trying to appease a labor despotism here at home.

I have no quarrel with labor. I want it to have a square deal, and I am willing to fight to see that it gets a square deal, but certainly if any economic group in this country owes allegiance to this administration, it is organized labor. I believe that the rank and file of organized labor is willing to pledge that allegiance; is anxious and willing to go to work in this great patriotic effort which calls for the united strength of all of us. Why then have not we, as Members of Congress, met this situation on the same emergency basis that we have dealt with other situations. Are we afraid to do the right thing in this hour of danger? Are we afraid to really serve the whole people of the United States, the best interests of this Nation, or are we content to temporize and play politics?

This Congress has called our American youth into military service. It has called upon American industry to expand its plant and increase its production. It has permitted the farmers of America to continue to produce foods at prices less than 70 percent of parity. These sacrifices and many more are being made, gladly and patriotically. How then can we countenance a disruption caused by all these strikes and walk-outs, many of which cannot be justified even by the staunchest friends of union labor? We have no time for quarreling and bickering at home while we prepare to defend from abroad. Remember the story of Nero and Rome. Remember the story of France—a France torn by dissension and strife, fiddling while Hitler armed.

The President can end these strikes in 5 minutes if he will only give the word. He has refused to interfere, and it is now the plain duty of Congress to take immediate action. When I say action, I mean more than mere investigation. I mean more than the mere adoption of a resolution, such as was discussed on this floor yesterday, to start an investigation into defense industries. We already have too many investigatory bodies and mediation boards and conciliation boards, who confine their efforts merely to holding one conference after another with the result that strikes continue and nothing is done.

Yes, Mr. Speaker, the time is past for temporizing. The American people demand that unjustified strikes in defense industries be outlawed. They ask us as Members of this Congress to do our plain duty in seeing to it that the program of defense is not halted; in recognizing that this is a real emergency and not a part-time job, but a job that calls for the united effort of every liberty-loving American.

Elimination of Slums—Expansion of U. S. H. A. Program Would Contribute Immeasurably to the Strength of Our Democracy

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. HARRINGTON. Mr. Speaker, for many decades the evil of slums and blighted areas has been recognized as one of the most troublesome of all social problems. Both in time of depression and time of prosperity, in time of peace and in time of war, bad housing has always been with us and has always brought in its train a long series of concomitant evils—disease, crime, fire hazards, shattered realty values, and broken morale.

Until recently, however, there was no systematic approach to a solution of the problem. Social reformers and welfare workers groped in the dark. City and State governments tried to prevent new slums from coming into existence by setting up legal standards for new construction, known as building codes. A few philanthropists built model tenements and garden developments, some of which were themselves little better than slum housing and most of which were too expensive for slum families to live in.

But today we have found out how to solve this problem. Through the program of the United States Housing Authority we have learned how to clear slums, how to build good homes at low costs, and how to achieve rents that families in the lowest income groups can afford to pay.

Today more than 500 slum-clearance and low-rent housing projects are already under way or completed and more than 200,000 men, women, and children are already living in public housing. These may sound like big figures. In a way they are big figures, for the United States Housing Authority and the local housing authorities set up to build projects with United States Housing Authority funds have been progressing at a fast rate of speed. But, compared to the total housing need in this country today, they are very small figures indeed. I have been told that when all the families have moved into all the slum-clearance projects now being built under the present United States Housing program, considerably more than 90 percent of our slums will still be standing.

Speaking as a citizen of the State of Iowa, I am especially conscious of the urgent need for expansion of the U. S. H. A. program. At the present moment we have no State enabling legislation in Iowa, and our cities and towns are not yet permitted to set up local housing authorities legally empowered to participate in the U. S. H. A. program. But that does not mean that we will not soon have such legislation. Our State legislature is meeting this year, and I am confident that the necessary enabling laws will be enacted.

There are many people, nevertheless, who feel that enacting these laws will not help us one bit. They are discouraged by the fact that no new authorizations for the U. S. H. A. have yet been approved by Congress. Of course, the U. S. H. A. still has a small amount of money left. I have been informed by U. S. H. A. officials that savings brought about by reduction in interest costs have yielded a few million dollars that may be allotted to local housing authorities in those States that enact housing legislation this year. Yet there is no assurance that much of this money, if any at all, will be available for Iowa cities. And even if it were all earmarked for Iowa, I know that it would not be enough. It is therefore especially important to the people of Iowa that this Congress expand the U. S. H. A.'s lending powers, so that the cities and towns in Iowa can take part in this great rebuilding of the Nation.

Let no one think that Iowa does not need Federal aid for slum clearance and low-rent housing. The Eastern and Southern States are not the only ones that suffer from slum conditions. Let me quote a few lines from The Forgotten House, a booklet issued by the Iowa State Planning Board:

> Although Iowa slums are not characterized by jungles of congested tenements and perhaps are not as impressive in their magnitude or appearance as the slums in the larger eastern cities, there is a problem of overcrowding fully as serious a menace as in the tenements of the metropolitan centers. * * * Some of the social and physical conditions resulting from the gross overcrowding and "doubling up" which occur in the miserable shacks of Iowa's slums are beyond description.

And this is only part of the story. Aside from the overcrowding there is a large amount of sheer physical deterioration and complete absence of sanitary facilities.

The effects of such conditions are obvious: Higher rates of sickness and disease, more crime, more fires, damaged realty values, decreased revenue from local taxes, and increased local expenditures.

The State planning board has measured these effects. In Dubuque—to take but one example—approximately 10 percent of the population live in areas of slum and blight. Yet, between 1924 and 1934, 70 percent of Dubuque's juvenile delinquents came from these areas, as well as 60 percent of all persons convicted of major crimes. Over 30 percent of all fires and 25 percent of all communicable diseases were reported from the same areas.

Naturally, low-rent housing projects alone would not completely wipe out crime, disease, and other social evils that are so accentuated in the slum areas. But they would tend to relieve conditions considerably. Moreover, they would provide a valuable stimulus to business and industry. Without competing in any way

with private enterprise, they would mean new contracts for the businessmen and new jobs for the workingmen of Iowa.

In conclusion, I would like to go on record as stating my firm conviction that the elimination of slum conditions in this country is a vital element in national defense. People who live in broken-down, unhealthful homes and run-down, unwholesome neighborhoods cannot possibly give their best to the country. Bad environment injures both morale and physique. On the other hand, no one will leap more quickly and energetically to the defense of his country and his country's institutions than he who lives in a home that is really worth defending. For this reason I believe that an expansion of the U. S. H. A. program would contribute immeasurably to the strength of our democracy.

Safety of Life at Sea

EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. CONNERY. Mr. Speaker, every Member of the Congress is sincerely interested in protecting the lives of those who travel aboard ships. We all realize that in case of a fire at sea there is no fire department handy, and the possibilities of the loss of life are great.

Following the *Morro Castle* disaster and the exhaustive investigation made of that disaster, the Congress enacted a law making it mandatory for the installation of automatic-sprinkler systems aboard passenger-carrying ships.

The report on the *Morro Castle* disaster specifically stated that "in this particular case the proper functioning of the automatic-sprinkler system might have saved the vessel." There was no automatic-sprinkler system aboard the *Morro Castle*.

This subject of the safety of life aboard passenger-carrying vessels is especially pertinent at this time in view of the fact that only a few days ago it was disclosed that the Government has taken over the steamship *Manhattan* and is converting that ship into a troop ship.

Naturally, every member of the Congress seeks to protect the lives of those American boys who may travel aboard troop ships. We are all familiar with the possibilities, yes, the dangers of sabotage.

What will the American people say if and when, which we all hope will not happen, we have another *Morro Castle* disaster?

While the Congress has done its duty it will interest members of the House to learn that our efforts to protect the lives of those who travel aboard ships at sea has been sabotaged by the brass hats we have unfortunately entrusted with discretionary authority. The legislation which the Congress enacted unanimously, without a dissenting vote, reads in part as follows:

> Every passenger vessel with berthed or stateroom accommodation for 50 or more passengers shall be equipped with an automatic sprinkler system. All enclosed portions of such vessel accessible to passengers or crew shall be protected by an automatic sprinkler system. * * * *Provided*, That if after investigation the Bureau of Navigation and Steamboat Inspection finds in the case of a particular vessel the application of this act unnecessary properly to protect life on such vessel an exception may be made.

You will note that this legislation made mandatory the installation of automatic sprinkler systems, except in those particular cases where a governmental agency finds "in the case of a particular vessel the application of this act is unecessary properly to protect life on such vessel."

I find, on page 513 of the independent offices appropriation bill, the following testimony by the Chairman of the Maritime Commission, in answer to a query from our colleague the gentleman from Massachusetts [Mr. WIGGLESWORTH]:

> Mr. LAND. All new construction with which the Maritime Commission has had anything to do are considered fireproof by the Bureau of Navigation and Steamboat Inspection.
>
> Mr. WIGGLESWORTH. Is it a fact that the Bureau of Marine Inspection and Navigation has O. K.'d all ships built as being fireproof?
>
> Mr. LAND. It is a fact that we not only comply with the American Shipping Bureau's specifications but also the regulations of the Bureau of Marine Inspection and Navigation. We also comply practically with Senate 184.

You will note that Chairman Land states that "we also practically comply with Senate 184," which is the legislation specifically making it mandatory for the installation of automatic-sprinkler systems aboard passenger-carrying ships.

I note on page 171 of the hearings on the appropriation for the Department of Commerce, released yesterday, that Commander Field, Commissioner of the Bureau of Marine Inspection and Navigation, stated in response to our colleague from Iowa [Mr. HARRINGTON]:

> I have made the statement that there is no such thing as a fireproof vessel. If you put this new vessel out there and do not put anything in it, it is fireproof; but, as soon as you put stores and your furniture and the passengers' luggage in it then you have got things that will burn.

We are more concerned about protecting lives than we are about protecting stores, furniture, and passengers' luggage. Congress enacted legislation seeking to protect lives aboard ships. Despite Commander Field's admission of possible fires aboard passenger-carrying ships, the intent of Congress is openly ignored.

Continuing further, Mr. HARRINGTON asked:

> Wasn't there some discussion—it might have been prior to that time that you were director—relative to the sprinkling systems on these vessels?
>
> Commander FIELD. Yes; there was an act passed, I forget now the title of that act, but it was along in 1936, which requires that on all passenger vessels with stateroom accommodations for 50 or more passengers there shall be maintained a sprinkler system.
>
> Mr. HARRINGTON. Fifty passengers, I believe.
>
> Commander FIELD. Yes; the sprinkler system should be provided, and they put a proviso in there, which in my opinion was an unfortunate proviso, that if the Director of the Bureau should find in the case of a particular vessel that the sprinkler system was not necessary properly to protect life that an exception might be made. If I remember correctly, some 110 vessels were excepted due to other things which had been provided.
>
> Mr. HARRINGTON. I had particular reference to that because 110 were older vessels.
>
> Commander FIELD. Yes; they were in existence at that time. Many of them have now passed out of service.
>
> Mr. HARRINGTON. But any new vessels that have been constructed since that time have been built fireproof insofar as you can fireproof them?
>
> Commander FIELD. Yes; and the result is that in the construction of these new vessels nobody ever thought of putting in a sprinkler system. It was not regarded by the designers or the inspection service or anybody in the profession as being desirable or necessary. To be perfectly frank, I think the British rely more on the sprinkling system than we do.

The above will indicate, first, that the intent and purpose of the legislation which the Congress enacted for the purpose of protecting the lives of those who travel aboard ships at sea and which the Commissioner of the Bureau of Marine Inspection and Navigation openly admits is mandatory has been set aside because shipbuilders and designers who opposed this legislation before the Committee on Merchant Marine and Fisheries do not regard it as desirable. Of course, we might add that undoubtedly some of these persons would like to look upon Congress as only a necessary agency through which the moneys are to be appropriated with which to pay salaries and make possible exorbitant profits out of vessels constructed.

You will note that Commander Field makes reference to the fact that the British rely more on the sprinkling system than we do.

Is it possible that the fact has been overlooked that the British operate or did operate the largest fleet of oceangoing vessels of any nation in the world? Is there no significance in that as a result of the vast experience they have had they have found the installation of automatic sprinkler systems of great value in protecting the lives of those who travel at sea?

Is it not significant that the Commissioner, who the Congress has entrusted with discretionary authority, states to the Congress, through the Appropriations Committee, that the placing of such discretionary authority was unfortunate?

Naturally, the Congress, unable to foresee the future and wishing to be fair, provided such discretionary authority in the belief, as was plainly intended, that such exception would be made only in case there was developed a vessel that was fireproof and wherein the installation of such system was wholly unnecessary.

The other devices on which the commander relies for the safety of those who travel aboard ships at sea, I understand, were on the *Morro Castle* and yet did not protect the lives of those aboard that ship.

Surely such an admission on the part of the head of a Government bureau that the placing of discretionary authority in administrative agencies is unfortunate is a reflection on the Congress.

I realize that because of the rules of the House we cannot legislate on an appropriation bill. However, I do believe that the chairman and the members of the Merchant Marine and Fisheries Committee, which committee unanimously recommended the enactment of the mandatory installation of automatic sprinklers aboard passenger-carrying ships after extensive hearings, should take cognizance of the violation of the plain intent of the Congress.

We enacted legislation which we have every reason to believe would protect the lives of those who travel aboard ships at sea. Those entrusted with the enforcement of this legislation, unable to influence the Congress at public hearings held by the committee, now tell us that because we unfortunately entrusted them with discretionary authority their will and not the will or intent of Congress will prevail.

Strikes in Defense Industries

EXTENSION OF REMARKS

OF

HON. JOHN S. GIBSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. GIBSON. Mr. Speaker and ladies and gentlemen of the House, I am wondering where the courage of we Americans has found its place of peace so dear that it resists not the great threat that has arisen as a monster among us. At a time when our national life and honor is in the balance, we sit idly by and let Communists and those of communistic ideals place their poison fingers about the throat of the Republic we love so dearly, and we only cry aloud, but dare not act.

I refer to the so-called strikes that are running mad in our country today and delaying our defense program, when we admit that time is the determining factor in the preservation of our way of life. Yet we have permitted these strikes to cause the loss of 1,000,000 working days in January of this year alone in industries given wholly to the manufacture of articles necessary to defend the lives and homes of our mothers and babes, as well as the right to live in a free democracy.

We appropriate billions of the taxpayers' money for defense, millions for the Dies committee to investigate subversive and communistic activities. Yet as servants of our people and our commonwealth we stand childishly by and let those of avowed communistic faith shut down our industries and destroy our property before our very faces and accept it as weaklings, I should say unworthy of the heritage of true Americanism if we do not rise equal to the demand upon us, and crush these enemies for all time to come. Do not misunderstand me, I favor full defense preparation and appropriations, and the Dies committee, I think it is doing great work, and the American public will remain in lasting gratitude to its able chairman, Hon. MARTIN DIES, and its full membership; but please tell me why we should spend millions to go bear hunting and then let the bears eat our arms and ammunition at our very door before we leave our home; are we working to an end or merely shadow boxing? If the latter, for God's sake let us quit appropriating the public's money. Will we accept the challenge thrust at our national security and honor or sleep peacefully on until our system of life has been burnt from out our very hands? We must answer our own questions.

We must be fair and we must be positive. There is no means by which the administration can shift the responsibility of this great threat and national disgrace, it is clearly in its lap. Our great leader has stated that no legislation was needed to properly handle these strikes. If this be true why in the name of peace and safety have they been permitted to continue, why were they not stopped at once? Has it forcefully presented itself to you that in sections of this great Commonwealth we are today permitting warfare to be waged on a big scale and forces denying to citizens the right to manufacture defense articles are engaging in bloody battles with the peace officers of certain States in direct defiance of America's right to defend herself from the forces of dictators abroad? If we permit this to continue, we must admit that we have become soft and can never boast again of the courage of a true American.

Picture thousands of mothers crying after their sons who constitute the noblest youth of our great country as they gladly send their sons away to fight in the shadows of death for $21 per month to defend not only their homes but the very life of our democracy; as we permit others in civilian life to strike for more money when they make this sum in 2 days in the safety of life and the love of home and friends. Suppose these young sons should strike, I ask you what would be their fate? Are we still Americans?

We are sought to be pacified by the advice that a Mediation Board has been appointed to adjust these matters. I know those enemies of freedom of life laugh aloud when they find that Philip Murray, the successor to John L. Lewis, is one member of this Board. We must admit that John L. Lewis is the greatest single threat to the flower of American liberty, a short study of his past record is all that is necessary to convince anyone of this fact. It is but natural that this party will follow the distorted ideas and poison dictates of Lewis. How long can we expect the American public to pour the earnings of their investments and labor into the Government Treasury to be squandered in waste as the result of the work of these enemies of free government, and in the very face of a pretext so obviously a gesture.

I am proceeding to make a statement, which I am happy will be recorded in the proceedings of this great body and which I predict will live when I have witnessed the last sunset of life. I say to you that Hitler is no greater threat to the eternal peace, love, and tranquillity of American life and liberty than John L. Lewis. If we remain reposed in that state of blindness we have slumbered in so long, spending billions and the blood of our noblest youth to crush dictators abroad and leave his hands clutched at the throat of our democracy, then my words will come true, and my children and yours will be witnesses to this fact, if, in fact, it does not come while we are yet on the stage of life.

Let us be fair to all. It is possible that industry has had its faults and that labor generally has had its, but the greatest responsibility must rest on the shoulders of those leaders who would destroy our way of life and who have become fat at the expense of American labor. It is our duty to place the fault and crush it at its source, regardless of where it may rest.

I want to go on record as congratulating the American Federation of Labor for its true patriotism, as exemplified by resolutions recently adopted by that organization, in which it incorporated just, fair, and reasonable restrictions on strikes. If one is fair to labor he must admit that the provisions of those resolutions are all that could be demanded of labor, which is surely and truly entitled to unite for its own protection. It has been seen in the past that you cannot turn industry loose on labor, and I do not advocate that. I worked for 7 long years, and truly they were long, in a railroad shop with the various craftsmen, and I always found them reasonable in their demands and just in their convictions. Truly, the American Federation of Labor has through the years championed the cause of the American working public, and I have found it to adhere to true American principles of government. We have permitted the C. I. O. to go so far until it has been hard for the American Federation of Labor to stay within reasonable bounds and yet maintain its membership and standing with the various crafts, not at its fault, but at the fault of those representing our people. We have permitted the C. I. O., under the leadership of John L. Lewis, to demoralize the progress of our commercial life, and to place on it and the American workingman shackles that will be hard to free ourselves from.

I have been closely associated with the membership of the American Federation of Labor of my section of Georgia and let it be said to their credit that there is no class of Americans living that are truer in their loyalty and patriotism to our Government, and this I say without fear of contradiction by anyone who is informed. They will go as far as you or I to defend our flag and all the purity for which it stands.

I place the responsibility for the deplorable conditions that exist in our defense program today in the breast of those leaders of the C. I. O. who would

destroy American democracy, and are being permitted day by day, month by month, and year by year, to eat the very marrow from the backbone, and the sinews from the body of our beloved democracy, wrought by the blood and brains of those patriots who formed the cradle of American liberty in our Nation's child hour, and who, through their strong characters and noble hearts, planted the seed that grew into the most beloved land ever occupied by a peace-loving people. Their spirits must stand trembling behind the golden gates today when they see the foundation rock of American life gradually converted into crumbling sand by the avowed enemies of our form of government, led by John L. Lewis, who for years has been given the green light. May the God who gave us this great land now give us courage and wisdom with which to save it and the rights of its people.

Pius L. Schwert

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. BEITER. Mr. Speaker, I wish to take this occasion to pay tribute to the memory of my late colleague and good friend the Honorable PIUS L. SCHWERT. His untimely death has brought sorrow to all those who knew him.

PIUS L. SCHWERT took his seat as a Member of the House of Representatives in the Congress of the United States from the Forty-second District of New York on the 3d day of January 1939. He served only a short time in these Halls, but during this period won for himself a place of distinction with his colleagues. His fidelity to his trust and to the commission with which the people of his district had entrusted him caused him to ignore the warnings of his physician to take a rest from the active and exacting work of his office. There is no doubt but that his devotion to his duty hastened his death.

Born and raised in the district which he represented in Congress, PIUS SCHWERT was but 48 years of age at the time he was stricken. He had been actively engaged in the banking business for many years, and served as county clerk in Erie County, N. Y., from 1933 until he was elected to Congress in 1938. He served in the United States Navy as a yeoman and later as an ensign during the World War.

Congressman SCHWERT sought tirelessly to promote the general good. With sympathetic spirit he tried to bring aid to those who came to him in their distress. To guide those who sought his counsel, he explored every available avenue of knowledge. For 20 years I have known him intimately, and I know he met each task of life as a brave soldier meets his duty on the battlefield.

To many of us who sat with him here on the floor of the House in daily session, "PI" SCHWERT was a warm friend as well as a brilliant statesman. He took an interest in the problems of the unemployed and served as an active member of the unofficial committee of the House formed to study this important subject. He was concerned about the needy aged and often discussed with me the need for additional legislation to provide for this group. His heart cried out for all those who had met adversity. He learned to know his constituents and to understand their psychology. He made it his business to learn their problems and to share them.

He enjoyed the good will and the close friendship of the postal employees of the country for his untiring efforts in their behalf. As a member of the Committee on the Post Office and Post Roads he was always interested in the affairs of the Post Office Department and the postal workers throughout the State and the Nation looked to him for leadership. He never let them down.

PIUS SCHWERT will be remembered, too, by many thousands of baseball fans who knew him as a big-league ball player in the days of his youth. He loved to attend the games held here in Washington, and although he could not often find the time he did plan each year to appear at the ball park for the opening game. He was interested in the youth of the Nation and in outdoor activities of all kinds. His influence will continue to be felt in many circles and most of all by the youth he has befriended.

"PI" SCHWERT is no longer with us, but his kindliness, his faith, his unfailing friendship, will always be remembered. We will remember him as a plain, simple man with fine ideals and a rare courtesy. And as one who always looked upon his fellow man with tolerance and affectionate regard.

We mourn with his beloved widow and tender to her our deep sympathy.

Newspapers and Defense

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

STATEMENT BY A GROUP OF NEWSPAPER REPRESENTATIVES

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement issued by a group of newspaper executives representing national, regional, and State associations at a meeting held in New York at the call of the directors of the American Newspaper Publishers Association, as follows:

1. That the newspapers recognize their primary obligation to further national defense in every possible manner.

2. That the newspapers also recognize their essential duty to furnish complete and accurate information compatible with military necessities.

3. That the newspapers in the performance of these obligations bespeak the cordial consideration and cooperation of Federal and State authorities concerned with national defense.

Those present:

American Newspaper Publishers Association: Walter M. Dear, David W. Howe, Linwood I. Noyes.

American Society of Newspaper Editors: M. V. Atwood, N. R. Howard.

National Editorial Association: R. B. Howard, Howard Palmer.

Inland Daily Press Association: Clinton F. Karstaedt.

New England Daily Newspaper Association: Wm. Dwight, Frank E. Phillips.

Pacific Northwest Newspaper Association: Don J. Sterling.

Southern Newspaper Publishers Association: Enoch Brown, Jr., George C Biggers.

New Jersey Press Association: Hugh N. Boyd.

New York State Publishers Association: Henry M. James, James E. Stiles.

Ohio Newspaper Association: Roy D. Moore.

Pennsylvania Newspaper Publishers Association: John E. Person, Wm. N. Hardy.

Opposition to St. Lawrence Seaway Project Exposed

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. PITTENGER. Mr. Speaker, friends of the St. Lawrence seaway project have taken too much for granted. They have repeatedly been advised that the opposition in Congress to the completion of the St. Lawrence seaway project has been both powerful and active. Every selfish interest which puts its own advantage ahead of the public welfare has been tireless for weeks in devising ways and means to prevent ratification by Congress of the agreement between the United States and Canada. The method of operation is effectively described by Mr. Alfred D. Stedman, prominent Washington newspaperman. In his column in the St. Paul Pioneer Press for Tuesday, April 1, he describes the fight against the seaway as follows:

[From the St. Paul Pioneer Press of April 1, 1941]

GIANT LOBBY SET UP TO FIGHT SEAWAY—POWERFUL OPPOSITION ENDANGERS PROJECT, BACKERS REPORT

(By Alfred D. Stedman, Pioneer Press staff writer)

WASHINGTON.—One of the greatest legislative organizations ever formed has been set

up by eastern railroad, shipping, harbor, and financial interests to fight enactment of St. Lawrence seaway legislation, which is scheduled to be recommended to Congress by President Roosevelt in a few days.

Described as a giant lobby by backers of the St. Lawrence waterway, the organization calling itself the National St. Lawrence Project Conference has set up offices in Washington and has launched an attack on the project among Members of Congress. According to its officers, it is growing every day.

The Association of American Railroads, the New York State Chamber of Commerce, New England harbor interests, lake carriers, eastern coal interests, and more than fourscore other commercial organizations having a direct competitive interest in blocking the waterway are affiliates of the organization. They are largely centered in the East, but a smattering are included from the Midwest and South.

Federal officials supporting the seaway said Monday that the fight against the St. Lawrence project will be even more terrific than those waged by the utilities against the Tennessee Valley project, Boulder Dam, or Grand Coulee Dam.

While the administration hopes to win, the result in the face of the opposition of such a powerful aggregation of hostile interests is in doubt, officials admitted.

OFFICES OPENED

The anti-St. Lawrence conference is headed by Frank S. Davis, manager of the Maritime Association of the Boston Chamber of Commerce, as chairman.

The Washington offices were opened at 808 Seventeenth Street, in charge of Thomas J. McGrath, Washington attorney formerly of St. Paul, member of the Minnesota House of Representatives for three terms and later counsel for the railway trainmen.

While proponents of the St. Lawrence seaway allege that the opposition organization is also backed by the electrical utilities, which have fought all the other great regional power projects sponsored by the New Deal, its officers deny any hydroelectric support. The organization has a board of directors of 20 men, but their names have not been announced.

While efforts are being made in Minnesota, Wisconsin, and other States to revive the Great Lakes-St. Lawrence Tidewater Association, which for years conducted a vigorous fight for the seaway project, Congress is being circularized with literature that sets forth the disadvantages of the project to those interests which would be competitively affected by affording Minnesota and other interior States a direct water transportation link with the ocean.

FACILITIES NEEDED

The facilities of the 22 active shipyard firms and 22 inactive shipyards on the Great Lakes would have been fully available to build naval craft now if the seaway treaty had been ratified instead of being defeated in 1934 under pressure from the same interests.

If the seaway is completed, all but the biggest liners, all freighters, and every warship up to and including the new battle cruisers of about 25,000 tons can be constructed on the Great Lakes and be floated to the ocean.

The Great Lakes shipyards facilities are so desperately needed by the Government now that 10 large submarines are being built at Manitowoc, Wis., and, with great expenditure of time and money, will be floated practically dismantled through the Chicago drainage canal, down the Illinois River and to the Gulf of Mexico.

With the war becoming a battle of ships, the 1934 defeat of the seaway treaty depriving the Government of anything like full use of Great Lakes shipbuilding facilities may already have jeopardized the national safety, administration spokesmen say.

The present fight against the seaway legislation is being waged on the ground that it cannot be completed in time to help the national-defense program.

CHARGES DENIED

Administration spokesmen contend that, with completion possible within 3 years, almost half of the defense program will remain to be completed after that. Moreover, they assert construction of warships could be started at once, and the seaway could be completed by the time the ships are ready to float to sea.

Charges by seaway foes that the project would divert men and materials needed for defense were categorically denied Monday by Adolf A. Berle, Assistant Secretary of State.

Berle said there is no shortage of the materials required and there is an abundance of the type of labor needed.

Midwest organizations joining with eastern interests to fight the seaway include the Mississippi Valley Association, and the American National Livestock Association whose leader, C. J. Abbot of Hyannis, Nebr., is vice chairman of the antiseaway organization.

Mr. Speaker, in connection with the foregoing newspaper item, there also appears in the Pioneer Press a story which lists the various organizations that are reported to be in opposition to ratification of the agreement between the United States and Canada. This list is as follows:

LIST OF ORGANIZATIONS OPPOSED TO SEAWAY

WASHINGTON.—The following organizations, representative of business, transportation, shipping, and production, are among the members of the National St. Lawrence Project Conference, which is fighting legislation for the St. Lawrence seaway:

Allegheny Regional Advisory Board, Akron Chamber of Commerce, Altoona (Pa.) Chamber of Commerce, American Mining Congress, American National Livestock Association, American Shortline Railroad Association, Anthracite Institute, Association of American Railroads, Atlantic States Shippers Advisory Board, Atlantic Deeper Waterways Association, Aurora (Ill.) Chamber of Commerce, Beaver Falls (Pa.) Board of Trade, Bluefield (W. Va.) Chamber of Commerce, Borough of Queens Chamber of Commerce, Boston Chamber of Commerce, Boston Grain and Flour Exchange, Bridgeport (Conn.) Chamber of Commerce, Brooklyn Chamber of Commerce, Bronx Chamber of Commerce, Buffalo Chamber of Commerce, Butler (Pa.) Chamber of Commerce, Charlotte (N. C.) Chamber of Commerce, Chelsea (Mass.) Chamber of Commerce, Cleveland Chamber of Commerce, Central Mercantile Association of New York, Dayton Chamber of Commerce, Elmira (N. Y.) Chamber of Commerce, Gloucester (Mass.) Chamber of Commerce, Hampton Roads Maritime Exchange, Illinois Chamber of Commerce, Inland Water Petroleum Carriers' Association, International Longshoremen's Association, Johnstown (Pa.) Chamber of Commerce, Lake Carriers' Association, Lima (Ohio) Chamber of Commerce, Lockport (N. Y.) C.) Port Traffic Association.

Boy Scouts of America

EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. BLACKNEY. Mr. Speaker, for many years I have been greatly interested in the activities of the Boy Scouts of America. This organization has proven so wholesome and so constructive that it has become an integral feature in the boy life of America.

Emerson, in his delightful essay on self reliance, says:

> Every true man is a cause, a country, and an age; requires infinite spaces and numbers and time to accomplish his destiny, and mankind seems to follow in his footsteps like a train of clients. A man, Caesar, is born and for ages after we have the Roman Empire. Christ is born, and millions of minds so grow and cleave to his genius that he is confounded with virtue and the possible of man. An institution is the lengthened shadow of one man.

If Emerson is right, and I firmly believe he is, then the Boy Scout organization of America is the lengthened shadow of William D. Boyce, just the same as the Boy Scout organization of the world is the lengthened shadow of Robert Stephenson Smyth Baden-Powell. Lord Baden-Powell was born in England February 22, 1857, and from his earliest childhood loved the woods and the out-of-doors. During his school days he practiced many of the arts of scouting, and began to inculcate in the minds of others around him his love of nature.

When Lord Baden-Powell died on January 8, 1941, at the age of 83, universal sorrow was manifested throughout the

world of Scoutdom. President Head and Dr. West, president and Chief Scout Executive of the Boy Scouts of America, sent the following cable on January 8 to John Skinner Wilson, director of the Boy Scouts International Bureau in London:

The Boy Scouts of America, on behalf of the more than 9,000,000 present and former members, expresses grief in the passing of Lord Baden-Powell. His genius and leadership in the creation of the British Boy Scouts Association served as the foundation for the development and spreading of Scouting throughout the world. His many visits to America as well as his inspiring messages at our various conferences and jamborees and in our regular scouting publications have contributed vitally to the development and extension of the effectiveness of scouting here in America. We join with brother Scouts through the world in paying tribute and acknowledging our gratitude to this great world leader, who since the organization of International Scouting has been recognized as the Chief Scout of the world.

When William D. Boyce, Chicago publisher and big-game hunter, was in London many years ago, an English Scout said to Mr. Boyce:

May I be of service to you, sir?

Those words uttered by that English Scout really marked the first step in the development of the Boy Scouts of America, because on his return to America, William D. Boyce immediately took necessary steps to legally incorporate the Boy Scouts of America.

It was my privilege on the 15th day of March to have the pleasure of addressing the 6th Annual John Philip Sousa Memorial Service, held in Washington, D. C. Among the relatives of John Philip Sousa who were present at the service, were Mrs. Hamilton Abert, daughter, of Port Washington, Long Island, and Osmond Varela, a nephew, of Washington, D. C. Senator ARTHUR CAPPER of Kansas, a friend of John Philip Sousa, and who introduced in the Senate a bill providing for the construction of the Sousa Memorial Bridge, and also the naming of the bridge, was present. Troop No. 10, of Washington, D. C., with their Scoutmaster, L. L. Sherfey, had charge of the service.

This memorial service originated with Lawrence J. Bach, who is the real founder of the Sousa Scout Memorial Service, the first of its kind ever to be held in the National Capital. Mr. Bach first became acquainted with John Philip Sousa at the time Mr. Sousa presented to Boy Scout Troop No. 2, Detroit, Mich., a troop flag. This presentation made such an impression upon the mind of Mr. Bach that he formulated the plans for an annual observance of John Philip Sousa's death.

It is very fitting that the Boy Scouts should pay tribute to the internationally known bandmaster, composer, and musician. Just as long as America continues to exist as a free country, just that long will we always be thrilled by his famous march Stars and Stripes Forever. The Boy Scouts of America are doing a wonderful work in building up the physical, mental, and moral qualities in boyhood. They are also doing a wonderful good when they establish memorials to great Americans, such as that established for John Philip Sousa.

The U. S. S. "Washington"—New Battleship Named After the State of Washington

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

LETTER FROM REAR ADMIRAL S. M. ROBINSON, UNITED STATES NAVY

Mr. SMITH of Washington. Mr. Speaker, I recently received several inquiries from public-school officials in my district in regard to the new battleship *Washington* named after our State, and which is to be commissioned for service in the near future. Our people take a justifiable pride in the fact that this new vessel named after our State will share the honors as our newest and largest battleship at present with the United States Fleet, the equal of any in the world.

By unanimous consent of my colleagues, I desire to place in the RECORD at this point a communication which I received from Rear Admiral S. M. Robinson, United States Navy, dated March 20, 1941, which sets forth authentic factual information in regard to the U. S. S. *Washington*, and which is as follows:

NAVY DEPARTMENT,
BUREAU OF SHIPS,
WASHINGTON, D. C., *March 20, 1941.*

Hon. MARTIN F. SMITH,
House of Representatives,
Washington, D. C.

MY DEAR MR. SMITH: In reply to your letter of March 14, 1941, in regard to the battleship *Washington*, the following information is furnished:

The U. S. S. *Washington* was named after the State of Washington and is the sixth ship of the Navy by that name. The last Washington was also a battleship, never completed, which was destroyed in accordance with the terms of the disarmament conference.

The present vessel was launched on June 1, 1940, at the Philadelphia Navy Yard, at which time she was christened U. S. S. *Washington* by Miss Virginia Marshall, a descendant of former Chief Justice Marshall. The ceremony to which you refer is the commissioning at Philadelphia, now scheduled for May 15, 1941, at which time the crew will take her over. Her present final date of completion is July 30, 1941.

Her dimensions are about 729 feet in length with a beam of about 108 feet and, with the U. S. S. *North Carolina* completing about the same time, she will share the honors as our newest and largest battleships at present with the fleet. These ships compare with H. M. S. *King George V*, recently in this country from England. She is classed as a 35,000-ton vessel.

The date of her contract is given as August 1, 1937, and her keel was laid on June 14, 1938. Her contract price for hull and machinery was about $60,000,000. She will be a powerful addition to our fleet.

Trusting that the above information will properly answer your query, I am

Sincerely yours,

S. M. ROBINSON,
Chief of Bureau.

Convoys—The Indirect Route To Direct War!

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. MUNDT. Mr. Speaker, this afternoon I introduced in this House, House Joint Resolution 155, to prohibit the use of ships in the United States Navy or of merchant ships in American registry from being used for convoy purposes to belligerant nations. My reason for introducing this legislation is that it is the universal opinion of all high authority on the subject from the President on down that convoys mean war and on the fateful subject of peace or war the American people and this Congress have the right and the duty to speak in simple, direct manner without resorting to subterfuge of any kind. I hope it can never be said of the United States that its people were one time led to war because neither they nor the people representing them knew what they were doing or had ever had the opportunity for a clear-cut decision on the most important question which any nation can decide. I hope the Hitlerian concept of one-man government has not secured such a firm hold on our Republic that here, too, as in the case of dictatorial countries the peoples' desires are discounted or ignored and the "yours but to do or die" order becomes their cold comfort as individual citizens of a sovereign country.

If we are to avert the double tragedy of war and denial of expression of the popular will in government in the United States it is necessary that public issues be discussed with honest candor and that the Government not be committed to actions which result in something far different from the motives indicated when the actions are inaugurated. It is in this attitude of complete candor and supreme sincerity which we should approach the decision of whether or not to commit this Government to a policy of convoying supply ships to belligerent nations or into war zones where hazard to American life and property would inevitably be enhanced.

ROOSEVELT SAYS "CONVOYS MEAN WAR"

Washington is rife with rumors these days that the President is scheming to promulgate a program of using convoys despite the desire of the country and the Congress to keep out of the war. These rumors would have it—and many of the rumors are undoubtedly instigated by members of the war crowd with whom "the wish is father to the thought"—that President Roosevelt does not plan to come to Congress for the necessary legislative authority to put this country into war by the convoy route, but that he intends to defy public opinion and legislative authority and first involve us in war by using convoys and then demand that Congress legalize the fait accompli.

Personally, Mr. Speaker, I doubt the authenticity of these rumors. I cannot believe that the President has reached the stage where he would usurp the war-making power of Congress completely by making certain our involvement through using the convoy method of thrusting America into a war which its people and its Congress do not want. This would seem especially true since he himself has said, "Convoys mean shooting, and shooting means war."

Thus the President, above all others, knows that if he should order convoys, he would be taking unto himself the specific responsibility for violating his many, many public pledges to keep America out of war, and he would be doing so in the deliberate knowledge that by his own words he has stated that convoys are tantamount to actual, active war. As for me, I refuse to believe that President Roosevelt would so flagrantly betray his public trust and so brazenly repudiate his own specific promises as to do by indirection that which he and his party have repeatedly pledged they would not do by direction; that is, to put America into this war either by the convoy route or some more circuitous method.

The war-making power remains with Congress, and with Congress, therefore, remains the decisions concerning steps which might subject us to attack or compel us to attack others and either alternative means outright, shooting war. Any American President who would use his office to put this country into war by executive action would rival the methods of Hitler and Mussolini and would reduce our constitutional governmental functions to the status of a hideous mockery and a hypocritical sham on the European level.

THOSE WHO SAY "WE ARE ALREADY IN" EITHER DECEIVE THEMSELVES OR ARE ONE WITH THOSE WHO WOULD DECEIVE THE PEOPLE

Mr. Speaker, strangely enough most of those who now advocate the use of convoys are the same people who are shouting "We are already in the war," and thus they would justify additional steps toward war by telling the public that we have gone so far down the road to war that our actual involvement in the fighting is now inevitable. This cunning camaraderie between those who would now start using convoys, those who have urged all preliminary steps leading from strict neutrality to near belligerency, and those who now reiterate "We are already in," is not hard to understand. You can call the roll of one group and find therein the same individuals, the same organizations, the same interventionists as you find in the other two with the sole exception that here and there an "innocent at home" among those who oppose war has been deceived by propagandists into repeating in gullible naïveté the fatalistic fiction "We are already in." A moment's reflection convinces all who think that as General Hammond recently said in his brusque military manner, "There is a hell of a lot of difference between where we are and where we would be if we were actually in a shooting war."

THE WAR CROWD KNOWS THAT WE ARE NOT "ALREADY IN"

While here and there a well-intended opponent of war may carelessly mouth the defeatist doctrine of the disciples of the God of Mars who would "fifth-column" us into war by dulling the senses of America as to its fearful consequences through conditioning it with the phrase "we are already in," a sober second judgment shows the error of such easy generalization. No Americans are being shot, or gassed, or bombed, or captured. No American ships are being sunk, no sailors are being drowned, no cities are being bombed, no transport ships are leaving our harbors with cargoes bound on the one-way voyage to death. No American armed forces are throwing shot or pitching shells into the vitals of opposing armies of human beings. No new generation of Gold Star American mothers are being created as sad memories take the place of pleasant associations with their loved ones and the sorry sequel of innumerable families of widows and orphans is not now being written in the columns of our daily press. No, Mr. Speaker, we are not in the war.

America is not in the war today, and America will not be in the war until we either attack some belligerent or are ourselves attacked. We ourselves hold the future of this country in our own hands insofar as its peace or war is concerned. If we prepare and preserve our own defenses we will not be attacked unless we deliberately send forth our nationals to points where attack becomes inevitable as would be the case with convoys. As for attacking others first, our whole American history is repugnant to the idea that we should provoke a war upon ourselves by moving into the orgy of our own devices as a moth flies hopelessly into the flame. So America is at peace. And while a nation is at peace is the proper time to weigh the costs of war and to evaluate the responsibilities and advantages of peace. On this subject America has spoken many times through letters to the editors, by letters to Congress and the White House, by every poll taken by every fact-finding agency which takes them—from 80 to 90 percent of our people persistently, patriotically, and purposefully register themselves for keeping out of war. It would be a unique and weird popular government of self-determining destiny, indeed, which would thumb its nose at a majority viewpoint like this and push itself into a war which the people so overwhelmingly oppose.

Mr. Speaker, if here and there some ready-speaking fellow gives circulation to the lie that "we are already in the war," let me point out that those who would really have us in the fighting know what less purposeful men may sometimes forget—they know that we are not in the war. While they seek to condition America to the horror of war by assuring it that war has already come, with the hope that the final, fatal step from actual peace to active war might in that way be more easily taken and more quickly made, since its shocking consequences would seem that much less severe, they see very clearly that we still remain at peace, that we are not "in," and so they continue to crusade for further steps to take us past the breaking point. Unwilling to oppose head-on the vast majority in the country and the Congress who oppose war, they choose the less honest method of urging the use of convoys, the sending of pilots, the repetition of incident-producing acts, the accumulation of provocative steps until, at last, they know that either we shall be attacked or we shall attack somebody, and then, and only then, will their crusade be ended and will America be really in another foreign war which for a quarter of a century it has vowed and protested would never be its state again. And so the torrents of propaganda flow on, and, first by one act and then by another, those who would have us in the war suggest indirect methods for putting us where the people have resolved we shall never again go by our own direction. It is to the eternal credit of the common people of America that they have thus far withstood the greatest campaign of propaganda ever devised to put a peaceful people in a fighting war. If this stamina to hold out against the siren calls of highly financed propaganda continues and America averts the calamity of war, historians will point to 1941 as the year when America became of age and finally showed the world that government of, by, and for the people can be depended upon to sustain and exert itself against an avalanche of prejudicial propaganda, and that here, at least, democracy has proved its claim of being the supreme goal in the art of government. Will America meet this test? The next 90 days may provide the answer, and the decision with regard to convoys may provide the acid test.

CONVOYS NOT NECESSARY FOR MATERIAL AID

It should be remembered, Mr. Speaker, that aid to Britain is in conformity with our prevailing national policy of providing her and her associates material aid in the gallant fight which is being waged against the dictatorial forces. Such material aid—unless it is proposed to send American boys in another expeditionary force—can be provided in a legal way under existing law and in a manner to avoid our involvement in the war; it can be provided by the simple, legal expedient of transferring to British, or

Greek, or Chinese registry such ships as we can spare—merchant ships or fighting units—and permitting these vessels to convoy or convey materials to belligerent harbors and through blockaded waters. Thus, ship for ship, and fighting unit for fighting unit, America can aid as much by the system of transferring to foreign registry the available bottoms for foreign service which we have as America can aid if we were to man such ships with our own men, sail them under our own flag, and thus throw ourselves voluntarily into the most devastating war of history. I say, Mr. Speaker, we can get our products from our harbors to foreign harbors as readily by one policy as the other unless, of course—and here is the crux of the whole problem—unless we propose to go to war. Unless we propose again to send our American boys to foreign graves and to accompany our convoys with transports of troops, one method of using American ships is as helpful to Britain as the other. It is only those who would take America into war by the trickery of proposing convoys rather than the candid, courageous method of asking for a yes or no vote on a declaration of war, who insist on convoys with American men instead of conveying our available ships by transfer to our foreign friends. The difference between these two programs is the total all-out difference between war and peace. It is the difference between going to war and remaining at peace. It is the difference between sending men which even Churchill recently stated "We do not need, and we shall not request," and the matter of following our adopted policy of supplying materials.

THE REAL QUESTION

Yes, Mr. Speaker, when America answers the question and I repeat, sir, it is a question for the people and the Congress of America to answer and not one for the President to solve by a solution dictated from the White House, when America answers the question of whether or not to convoy, I say, America answers the question of whether or not to send its sons to die on foreign battlefields. It answers the question, too, of whether to send transports of troops to Europe as I can think of no more cowardly or dishonest Government action than that which would single out a few American sailors to sacrifice on convoys in belligerent waters unless and until this country is ready to place the full force of its armed might to keep them from becoming senseless and useless sacrifices in the watery wastes of ocean waters. If we were at war, we would convoy our ships to protect our sailors and soldiers—I simply cannot understand the selfish complacency of groups and individuals who urge a Nation at peace to send convoys when it knows that in so doing it is sending innocent and dutiful sailors and marines to sacrifice their lives in support of a program which is not war and which would not be peace. America will never countenance such a ghastly misuse of the sovereign power of government and that is why every man who thinks knows in his heart and—if he is candid with himself and his associates—voices from his lips the simple fact that convoys mean war. I repeat, that must be why the President pointed out so vividly the glaring truth when he stated, "convoying means shooting, and shooting means war." And that is why those advocating convoys should in simple honesty and honest candor tell America that in so doing they are advocating that America go to the war. Then we would have a clear-cut issue which all could understand and which Americans through their congressional Representatives are ready and able to decide.

STATEMENTS OF AUTHORITATIVE AMERICANS ON THE SUBJECT OF AMERICAN CONVOYS

Mr. Speaker, under leave granted me by the House I now insert in the RECORD some illuminating statements by well-informed Americans on the important subject of convoys. Before listing individual comments, I shall enclose herewith the official news release prepared by a committee headed by Senator TAFT, of Ohio, reporting a meeting held last Tuesday night and attended by 14 Senators and 56 Members of the House. This meeting met for the sole purpose of considering the best methods for keeping America out of war and since the pressure of other news kept this full statement from appearing in some newspapers I think America will be interested in reading this news story. May I add that further meetings are planned by this group and many others who sent regrets that they could not attend the caucus Tuesday night—the fight to preserve the peace of America and to vindicate the statements of the two major political parties to keep America out of war will go on. It is hoped that all America will awaken to the challenge of the hour and that citizens will urge their Senators and Representatives to attend these no-war, no-convoy meetings, and to support in the Senate and the House the no-convoy bills which have been introduced by Senator TOBEY, by Congressman CURTIS, by your sepaker, and by several others at both ends of the Capitol. I now call your attention to the following official report of the meeting last Tuesday night.

[Press release—Morning papers, April 2, 1941]

Seventy Senators and Congressmen opposed to the involvement of the United States in foreign war met this evening in the Senate caucus room to consider methods of making impossible the use of convoys. Speakers emphasized the statement of President Roosevelt that "convoys mean shooting, and shooting means war." The meeting was bipartisan. All major political parties are pledged to keep America out of foreign wars. Since only Congress can declare war, Congressmen said they do not intend that the President shall involve the country in war indirectly through convoys or otherwise. Various groups are now advocating that the President send to Congress a bill authorizing convoys, but the meeting determined to raise the issue at once by pressing the affirmative resolution of Senator TOBEY and other resolutions introduced in the House which prohibit convoys. The meeting determined that in spite of the defeatist propaganda being promoted that war is now inevitable, those present would press the fight against any active involvement in war which would take American boys to foreign battlefields. Senator WHEELER, of Montana, who presided at the meeting, said, "I appeal to the overwhelming majority in America who are for keeping out of war to make their demands known in Washington, both in Congress and the White House."

Mr. Speaker, the following authoritative statements on the subject of convoys are particularly significant at this crucial time.

The first statement is from William Allen White's now famous letter of December 23, 1940, to Roy Howard. Mr. White, as you recall, was national chairman of the Committee to Defend America by Aiding the Allies until its policy became so belligerent and veered so close to war that he could no longer serve it conscientiously, so he resigned the position.

William Allen White:

The story floating around that I and our committee are in favor of sending convoys with British ships or our own ships is a silly thing, for convoys, unless you shoot, are confetti and it's not time to shoot now or ever.

Still one more charge: It is not true even remotely that we favor repealing that portion of the Neutrality Act which forbids American ships to carry contraband of war into the war zone. That would be leading us to war and our organization and I, personally, are deeply opposed to it.

The next statement comes from Senator GEORGE, of Georgia, chairman of the Senate Foreign Relations Committee, whose rigid respect for honest statement compelled him to make the following statement which is found on page 1892 of the CONGRESSIONAL RECORD of March 6, 1941:

Senator GEORGE. As plainly as I can, I have always stood against convoying vessels by the American Fleet, and will stand against convoying vessels by any unit of the American Fleet until and unless the point shall have come when I shall be willing to vote for war, because, in my judgment, convoying would lead us into actual war.

Not directly on the point of convoys, but since convoys is virtually but a bisyllabic manner of stating war itself, the following quotation from an editorial in the Saturday Evening Post is thought-provoking:

MANDATE FOR WAR FROM THE PEOPLE?

How the people would have voted on the question of taking over war on three continents had it been put to them will never be known. The question was not put to them. We know what the people did vote for. They voted for a President who stood upon his platform saying, "We shall not participate in foreign wars."

Mr. Speaker, these citations of authority could be piled one upon another almost endlessly but I shall add only one more to the list. The really eloquent thing about this matter is the fact that not a single creditable authority of any weight is willing to argue the point and to uphold the view that convoys will not lead to war. Thus the issue is drawn clear. Sending convoys means sending the American ship of state into the bloody oceans of Europe's endless wars.

Congress has already expressed itself in disapproval of convoys so that if he seeks the advice of Congress on this subject, the President already has it. When the lend-lease bill was being debated, some Members feared there might be read into

it some right or power to convoy ships under one or another of its highly comprehensive clauses. For that reason, both Houses adopted an amendment definitely registering their disapproval of the use of American convoys and specifically exempting such authority from any powers conveyed in the bill. I quote the exact language of section 3, subsections (c) and (d) of the Lend Lease Act.

In section 3, subsection (c) of the lend-lease bill, is the following language:

(c) Nothing in this act shall be construed to authorize or to permit the authorization of the entry of any American vessel into a combat area in violation of section 3 of the Neutrality Act of 1939.

Section 3, subsection (d), contains this language:

(d) Nothing in this act shall be construed to authorize or to permit the authorization of convoying vessels by naval vessels of the United States.

Mr. Speaker, fellow Americans, I hope that my resolution specifically prohibiting convoys or some similar legislation will soon be enacted into law. I am sure it speaks the great voice of America. I am certain it is the candid thing to do. Tomorrow the House starts a 10-day recess. As one of those who opposed this recess and voted against taking it at this time, let me say in closing that one reason for my opposition was the fact I felt some action should be taken without delay to prohibit convoys by legislative mandate and also, I might add, because I felt Congress should stay on the job and help iron out the delay being caused to our national-defense program by the unfortunate labor difficulties which are presently plaguing the country.

I am 100 percent for national preparedness and I want it to proceed full speed ahead, but I am equally firm in my opposition to utilizing American convoys as the diabolic device for plunging this country from where it is, squarely into a shooting war in Europe, Asia, and Africa.

Cultural Relations, Our Ideals and Practices

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. RABAUT. Mr. Speaker, among the major accomplishments of this administration in the field of foreign policy has been the constant improvement and strengthening of the relations of the United States with the 20 other American republics to the south of us. During the first few years of what has come to be felicitously termed the "good-neighbor policy," the emphasis was primarily upon removing from our political relations with certain of these republics some of the conditions which have been sources of friction in the past. More recently the attention, both of the Government and of the public in general, has been directed toward the desirability of broadening the basis of mutual understanding and sympathy through approaches along certain nonpolitical lines. I refer particularly to the matter of cultural relations, and to the undertaking in conjunction with the other American republics of certain cooperative projects.

In the summer of 1938 the Department of State, responsive to growing demands, established a Division of Cultural Relations for the purpose of taking charge of the official activities of the Department in this direction. These activities are directed in part at assisting and advising the private initiative in this field. There has been a tremendous growth of interest, particularly in the past few years, on the part of institutions and individuals in this country in making contact with similar institutions and individuals in the other American republics. The Division of Cultural Relations has endeavored to guide and direct such activities into the most fruitful channels.

The Division of Cultural Relations has also engaged upon a certain number of activities of its own. Distinguished intellectual leaders have been brought from the other American republics to the United States for the purpose of meeting with and consulting with officials of this Government and private individuals and institutions. Similarly, some of our own leaders have been able to make extensive and highly valuable visits to the south. The exchange of students and professors is growing from year to year, with the result that there is a steadily increasing group both in the United States and in the other American republics having detailed knowledge of and appreciation for the cultural life of the continent as a whole.

The Division of Cultural Relations has promoted an exchange of educational motion pictures and is endeavoring to stimulate the production for exhibition in the other American republics the type of motion pictures that will accurately picture the life of Americans and its ideals. The cooperation of American companies engaged in radio broadcasting has been enlisted and progress has been made toward the development of radio programs which will not only be of interest to the people of the other American republics but which will bring to the masses of these people an understanding of the American way of life and of our genuine feeling of friendliness toward them.

The Division of Cultural Relations has also endeavored to promote the establishment of more and more generous scholarships and fellowships by our private institutions. Gratifying results have been obtained in this direction. Progress has also been made in encouraging greater attention to the study of Spanish and Portuguese which are the languages used in the other American republics. It is possible to report that the study of English has been at the same time intensified in the other American republics. In many of our universities and colleges special institutes and summer schools have been held devoted to subjects of inter-American interest.

At about the same time the Division of Cultural Relations was established, that is to say in the summer of 1938, there was established at the initiative of the President, the Interdepartmental Committee on Cooperation With the American Republics. This is a body upon which some 17 or 18 United States Government agencies are represented. Its obvious objective, as its name indicates, is to examine the subject of cooperation with our neighbors and to work out a definitive program of projects which is then submitted to Congress with requests for the necessary appropriations.

These projects cover a range of mutual interests carefully selected from this Government's broad range of activities and facilities, and the Congress has implemented the work of the interdepartmental committee by the passage of legislation which authorizes the detail of officials of this Government to assist the governments of the other American republics when requests for such assistance may be received, and also to authorize appropriations to make use of the facilities of the different services of this Government whenever it appears that by so doing substantial and welcome assistance can be rendered to any of our sister American republics to the south.

The projects now submitted for your approval cover the same general fields of economic, scientific, and cultural endeavor as those which are already being carried forward successfully on the basis of appropriations granted for the present fiscal year. Included in this program are fellowships for public-health experts, surveys of strategic minerals, studies for the conservation of flora and fauna, tidal investigations, cooperation in the fields of maternal and child health, and the social and economic welfare of working women, and a number of others having similar objectives.

Generally speaking, the majority of these projects will, if approved, mean that to a greater or lesser degree officials of our Government will be working in close collaboration with officials of the governments of the other American republics in fields of mutual interest. The projects themselves will lead to specific advantages, but I would like to stress at this moment my own belief in the long- and short-range value which this personal association has for the cause of international understanding. Our whole experience over the past 8 years, during which time numerous inter-American conferences have been held, leads to the conviction that particularly in the case of the countries with which we are now concerned, personal friendship and sympathy based upon first-hand knowledge is invaluable.

And in leaving this phase of the program may I add that the projects and undertakings that have been approved and for which funds are recommended in each instance involve a mutuality of interest between this country and the other American republics and that the amounts recommended have been restricted to those amounts which are not

only modest, but which experience has shown may be successfully and effectively employed under present circumstances. We probably all agree that many of these steps should have been taken years ago, but we are not allowing this to tempt us into an overzealous and hastily conceived plan. On the contrary, we are undertaking only what can be done well and with due regard to the viewpoint and the wishes of the people of the other American republics.

The time is past when there is any further controversy with regard to the correctness of the so-called good-neighbor policy. It may now be regarded as a permanent and accepted policy of this Government. Not only is this true, but there is a general realization throughout this country that the time has come when this policy must be developed in a concrete rather than in an abstract form. The activities for which funds are recommended for the Division of Cultural Relations and for the cooperative projects which I have described, represent a truly American approach to the carrying out of this policy. They are in keeping with all the ideals and practices of this Government. I mean by this that we are offering to the American republics, not a program based upon propaganda for the purely selfish interests of the United States, but a program which is adapted to the needs of solidarity in this hemisphere based on mutual respect and mutual helpfulness in the light of our respective resources and facilities.

Jackson Day Dinner Address

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

ADDRESS BY HON. THEODORE G. BILBO, OF MISSISSIPPI

Mr. BILBO. Mr. President, I ask upnanimous consent to insert in the Appendix of the RECORD a speech delivered by me at the Jackson Day Dinner at Minneapolis, Minn., on the 29th of March.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, ladies and gentlemen, fellow Democrats, fellow Americans, it is a grand and glorious privilege to be here with you tonight as we celebrate another Democratic victory, an epochal victory, the greatest victory any political party has ever had occasion to celebrate. I most heartily join you in this victory-day dinner and in the deferred observance of another Jackson Day anniversary to pay homage to the memory of Andrew Jackson, the invincible Old Hickory, who translated into reality the Democratic Party conceived by Thomas Jefferson, the Sage of Monticello.

I was very happy when I received your invitation to participate with you tonight. I have always held a deep and abiding admiration for your section of our country. That feeling of esteem was enhanced when I made a series of speeches in the Northwest for the Democratic Party during the recent Presidential campaign. The close association enjoyed with the splendid people of this region gave me a marvelous opportunity to know more about your people, and it was pleasant. I regretted that my itinerary did not bring me into this immediate vicinity; so I am delighted to be one with you tonight as the stalwarts of Minnesota Democrats assemble for your annual round-up in commemoration of Democratic ideals.

As a Mississippi Democrat, from the land of the deep South, where not to be a Democrat is to be ashamed of yourself, I bring warm greetings to Minnesota, land of beautiful lakes and rivers; to beautiful Minnesota, the always bright and shining star of the North. I am inspired by the beauty of your country and the progressiveness of your citizens. My heart is warmed by the gracious hospitality accorded me here in Minneapolis, where "the Falls of Minnehaha flash and gleam among the oak trees, laugh, and leap into the valley."

As a son of the deep South, where my people have lived through many generations, I was made very happy to be your invited guest tonight. Your invitation had a profound and significant meaning to me—to me it is proof conclusive that in the minds and hearts of the good people of the North there no longer lingers any feeling, resentment, or prejudice against my people of the South on account of the unpleasant and ever-to-be-regretted differences of the years long ago. It is sincere proof to me that since the sons of the Blue and the sons of the Gray in the War of 1898 and the World War fought side by side in the defense of Old Glory and our common country that the commingling of their blood on many a battlefield has cemented us into one great brotherhood. There is no longer a North, a South, East, or West. Thank God, we are all Americans now, united forever. United we will stand, no matter what the future may hold for our country.

You know there are close ties of common interests binding your State and mine. Both States bear Indian names or alliterative similarity. The pioneers of Mississippi hewed their way through long-leaf yellow-pine forests. Your rugged pioneering fathers carved a civilization out of a white-pine forest. Your white pines and our yellow pines have furnished important industrial enterprises to our respective States. Your wheat and corn farmers have been faced with problems akin to those of Mississippi's cotton farmers. Your farmers, like ours, have participated largely in the New Deal program for the restoration and extension of farm prosperity. A long time ago someone said that if you scratch a Wisconsin farmer you find a Georgia planter. I think we might well paraphrase that axiom a little bit and say that if you strike a Minnesota grain farmer you find a Mississippi cotton farmer. The variety of your products is different from ours, but our problems have always been parallel.

You have your fishing industries and we have our gigantic sea-food industry on our Mississippi Gulf coast, where we can more and better shrimp and oysters than any other seaport on earth.

Then, too, we share the big river which has played a so important role in the history, tradition, and commerce of our States. On the mighty Mississippi, which springs from your Lake Itasca, the State of Mississippi rests her head and bathes her right hand in its turgid waters as the river wends its sinuous way from Lake Itasca to the limpid waters of the Gulf of Mexico, where Mississippi bathes her feet.

Then, again, our respective sections are similar, because yours is also noted for its charming and beautiful women. It may be of interest to you to know that one of Mississippi's Governors traveled 1,500 miles to this region, and after much wooing and persuasion carried one of your wonderful and beautiful girls back and made her the first lady of the State of Mississippi.

Now, it may not be of interest to any of you charming and lovely ladies present, but, strictly confidentially, I am in the market myself, and I want to assure the committee in charge of this banquet that I'm not going to pad my expense account for this trip to Minneapolis, because I am making this visit out here somewhat of an inspection tour for my own personal benefit; being unattached, I'm noting good prospects as I travel along.

But the relation that brings us closer together tonight is the prideful fact that now your State, like mine, helps elect Democratic Presidents. Oh, I realize that Minnesota stayed out of the Democratic fold for 75 years but you, like the thinking people of nearly all the other Republican States, had the wisdom and courage to change your political affiliations when you were convinced beyond every doubt that the G. O. P. was a closed corporation, and that its real manipulators were operating and directing the policies of the Government in the interest of the "favored few." A Government of "equal rights and special privileges to none" must be our great objective and be made a positive and living reality, if this Republic is to survive and to fulfill its mission as announced in the Declaration of Independence, and given form and force in the Constitution ordained by the founding fathers. Do this and we will yet lead all the nations of the earth into the ways of peace, prosperity, and happiness.

I know you are proud of the fact that your State, like mine, helped to accomplish the election of Franklin D. Roosevelt—once, twice, three times, all in a row.

The opposition said that a third term for a President was unthinkable, unprecedented, dangerous. It was something that just shouldn't happen. With forensic frenzy they marched out the ghosts of tradition and quoted history—not well nor wisely—until their throats were dry and their listeners' ears were numb. But while they were quoting history, by the Eternal, as Andy Jackson would have said, we were making history.

Our Republican contemporaries are probably saying all sorts of ugly things about us this very moment, as they do every year when we hold our Jackson Day dinners. They say we get together to crow and that we capitalize on these occasions to raise funds for the Democratic Party. We do not plead guilty to their charges. We rightfully deny that the rooster, as one of our party emblems, is indicative of crowing proclivities on the part of the Democrats. Rather, we say that the rooster symbolizes the chanticleer's clarion call, heralding the daybreak when the Democratic Party became a reality and brought into action a Government not only of the people and for the people but by the people.

It's our business what we pay for our plates at these little table-side gatherings. We pay our party's bills with dollars honestly and openly contributed by Democratic people and not with the big folding money of a few high-powered monopolistic overlords. Besides, it is worth every cent we pay just to be in such good company.

No, my friends, we have not come here to crow but to reaffirm our faith in the democratic way of life fostered by our party and to rededicate ourselves to the perpetuation of these ideals. It is good for our collective soul to get together at least once a year for a revival; for a bit of retrospection and introspection. It is proper for us to assemble for

these annual table-side chats and take stock of our stewardship. It is essential to our vitality, lest we grow lethargic and cease to be vigilant of our responsibilities as a party. Certainly it is desirable as a means of keeping a clearly defined line of cleavage between the parties. Competition is the spice of life in the body politic, no less than in any other phase of life. The people's interests are best served when the compelling force of competition is kept alive. The funmakers say that two major parties are necessary so that one crowd can watch the other crowd and keep each other from stealing everything that isn't nailed down when in power. But that's just in fun, of course. We certainly do not by word or innuendo imply that there is wholesale dishonesty among our opposing party.

Every party should be able to give a reason for its platforms, and every citizen should be able to give a reason for the faith that is in him. Alas, I am afraid that there are far too many who cannot advance their reasons. On this point, I am forcibly reminded of a little incident I beg leave to relate. It centers around the Presidential campaign of last year. It was somewhere in the East—either Maine or Vermont or Connecticut—I'm not just sure. A history teacher was quizzing her pupils on the subject of political parties. She challenged her class with the proposition that she would give to the pupil who could most clearly explain his political faith, the box of luscious plums which she had on her desk. A young Republican arose and declared that he was a Republican because his father was a Republican, his grandfather was a Republican, and his great grandfather had been one. Another chap, a studious, intelligent fellow he was, arose and announced that he was a Democrat because the Democratic Party champions the rights of all the people and seeks to promote equal opportunities for all, and so on. Still a third youngster stood up and wanted to be heard. He had been listening to the proceedings and watching the teacher's reaction. He said he was a Republican. The teacher asked him, "Johnnie, tell me why you are a Republican?" Swift as a flash, rang out Johnnie's answer, "Because, teacher, I want that box of plums."

My friends, that's just the way it is with our Republican brethren. The majority of the Republican leaders are chiefly interested in the plums—the whole box—all the plums. They aren't willing to pass them around. As Democrats, we believe in dividing, so that everybody will have a chance to taste the plums. This explains why the Republicans are so dead, right now, while the Democratic Party is gathering strength with each passing year. The people can't be fooled. They know they are entitled to their share of the plums and that the Democratic Party can be trusted to pass them around.

When Thomas Jefferson enunciated his principles of democracy, he planted the seed and stirred the ground for the Democratic Party, which Old Hickory cultivated and brought to flower. But he was opposed and maligned on every front by the privileged class which ran the Government in those days. It was the age of aristocracy. Social and political leadership belonged as a matter of custom to the well-born, the large land owners, the merchant princes, the clergy, and the professional classes. Only men possessing property were allowed to vote and the right to hold office was further restricted to those who owned a larger amount of property than the ordinary voters. Seats in meeting houses, places at table and in processions, even at school, were governed by the rule of social distinction. It is said that John Adams, who later became the second President of the United States, was fourteenth in a class of 24 when he attended Harvard University. Let's see now, that made John Adams, well, just "middling" aristocracy, I suppose.

The first really official denunciation of caste rule recorded in profane history was promulgated in the Declaration of Independence on that memorable Fourth of July 1776. The preamble to this sacred document is, without question, the most eloquent and solid defense of democratic ideals to be found anywhere in any language, save in the Holy Bible.

At this crucial time when power-mad maniacs are strewing death and destruction over half the globe, when the world is shaken at its very foundation, when a dozen nations already have fallen victim to the worst tyranny the world has ever known, the meaning of that hallowed document takes on newer and deeper significance. We hold very dear our freedom of speech, freedom of assembly, freedom of press, and the right to worship God at our own altars according to the dictates of our own hearts.

However, it was one thing to officially gain these precious liberties bought with the blood and sacrifice of our Revolutionary forefathers. Quite another thing to apply them in actual practice under social conditions then existing in America.

Thomas Jefferson set his heart to this task, in the face of opposition and denunciation on every front by the privileged class. Let us take a peep behind the curtain of academic history and read from the archives some of the undemocratic utterances of certain leaders of the Federal Constitutional Convention which assembled in Philadelphia in 1787. Some of these founding fathers threw up their hands in horror at the suggestion of a popular government. The Honorable Gouverneur Morris, a rich and highly "cultivated" New York statesman of national and international prominence, held out that there was no more reason to entrust the vote to the ignorant and dependent common people than to children. The Honorable Roger Sherman said he thought that the people directly should have as little to do as possible with the running of the Government. The Honorable Elbridge Gerry declared that in his opinion—and I quote him—"the evils we experience flow from an excess of democracy." The Honorable Edmund Randolph seconded Mr. Gerry's statement and said that he believed, too, that the evils of the country had their origin in the turbulence and follies of democracy. The renowned Alexander Hamilton, who had always bragged on the British form of government as the best in the world, spoke his piece to the effect that the common people were too turbulent and changing, and that they were seldom capable of judging or determining right.

This gives us a slight idea of the sentiment Jefferson had to deal with when he went into office a few years later as the third President of our great Nation. The landed gentry, the merchant princes, the Napoleons of high finance beat upon their breast and shed crocodile tears over what they termed the fate of civilization if the masses were allowed to vote and if the farmer and laborer were allowed to acquire an education. Why, these obstructionists even opposed Jefferson in consummation of the Louisiana Purchase. They said it was unconstitutional. If they could have, they would have prevented what was later to be recognized as the greatest single achievement of the Jefferson administration. They had a reason for it, and it was largely a selfish reason on the part of most of these right-wingers. They foresaw in the expansion of the West a healthy competition that would (and did) eventually bring about a decentralization of the eastern oligarchy. Minnesota, in the main, was included in that territory acquired by the Louisiana Purchase. I believe you will agree with me that Jefferson drove a fine bargain. Do you not agree that Minnesota alone was worth more than the $15,000,000 we paid for the Louisiana Territory?

Jefferson passed from the scene of action before his noble dreams of a true democracy, as he had conceived it, were fulfilled. But his influence lived on. He had kindled in the breasts of men the surging spirit that was destined to put democracy to work.

It was no mere accident that within a third of a century there strode upon the scene a man of steel and spirit to translate Jefferson's dreams into reality. Andrew Jackson, the border captain who rose from the obscurity of his log-cabin origin to the victorious leadership of his country's armies, was drafted by the people to champion the inalienable rights of the people. Andrew Jackson, the people's President, the Democratic Party's President, if you please.

This child of adversity first saw the light of day on the remote frontier of South Carolina. Born in a cabin of an Irish emigrant mother still mourning for her husband whom she had just buried, untutored and untamed, he emerged from the western hills with the indomitable spirit and colossal integrity that launched him on the amazing career that blazed its way to everlasting renown.

Marquis James, the popular modern biographer, has fittingly said that the story of Andrew Jackson is the story of an almost fantastic courage, an unawed, lightning nerve, a stupendous will that was capable of astounding exploits, and that animated his followers to deeds beyond their strength, a burning patriotism, and a hairtrigger sensitiveness to social justice and personal honor.

All the way through the story of Andrew Jackson is a story of action, action, action. It is a story of relentless courage and righteous conviction, but always human.

At the tender age of 14 Andy was alone in the world, and he was already a war veteran. He had fought in the battle at Hanging Rock and had known illness and hunger in prison. He had sustained the saber wound of an officious British officer whose dirty boots Andy refused to clean.

By the time he was 18, he had somehow managed to read enough law to hang out his shingle. He fared forth to Nashville, which was then only a frontier settlement. At 21 he became the public prosecutor for the district which later constituted the State of Tennessee. He helped to frame the State's constitution. The people of Tennessee were now a commonwealth and entitled to send forth a man to represent them in Congress. With one accord they selected the greatest leader among their leaders to represent them in the halls of Congress. They sent Andy Jackson. The love and confidence of his people followed him to the Capitol, and he had served but a single term in the Lower House when he got a promotion. He was elected to the United States Senate, of which Thomas Jefferson was at the time the presiding officer.

George Bancroft, perhaps the greatest historian of the Jacksonian period, said of Andrew Jackson's career in Congress:

"Jackson showed his deeply seated, innate, intuitive faith in human freedom and in the institutions which rested on that faith. He was ever, by his vote and opinions, found among those who had confidence in humanity, and in the great division of minds this child of the woodlands, this representative of forest life in the West, appeared modestly and firmly on the side of liberty. It did not occur to him to seek to give durability to popular institutions by conceding to government a strength independent of popular will. From the first he was attached to the fundamental doctrines of popular power and of the policy that favors it."

There we have a thumb-nail sketch of the kind of statesman that he was.

During his period of service in the Senate, Jackson was commissioned as major general by the brigadiers and field officers of the militia of Tennessee.

Upon his resignation as a United States Senator, he was made judge of the supreme court in law and equity in Tennessee; such was the confidence in his clearness of judgment, his vigor of will, and his integrity of purpose to deal justly among the turbulent who crowded into the new settlements of Tennessee.

In recognition of his skill in crushing the Creek Indians, he was made major general in the Regular Army.

Of his climactic and immortal military victory in the Battle of New Orleans, the event we commemorate on Jackson Day, not enough can be said. I agree with Bancroft that time would fail and words be wanting, were we to dwell on the magical influence of his appearance in New Orleans. His presence dissipated the gloom and dispelled the alarm; at once he changed the aspect of despair into a confidence of security and a hope of acquiring glory for his country. Every man knows the tale of the sudden and yet deliberate daring which led him on to precipitate his little army on his foes in the thick darkness before they grew familiar with their encampment, scattering dismay through veteran regiments of England, defeating them and arresting their progress with a far inferior force.

"Who shall recount the counsels of prudence, the kindling of words of persuasion that gushed from his lips to cheer his soldiers, his skirmishes and battles, until that eventful morning when the day at Bunker Hill had its fulfillment in the glorious Battle of New Orleans and American independence stood before the world in the majesty of triumphant power?"

This victory won and peace restored, Old Hickory longed to return to his plantation and spend the remainder of his life in agrarian pursuits, leading a quiet domestic life with his beloved family. But this was not to be, for the southern Indians were on the warpath again. They were not appeased by the peace with Great Britain. Jackson was called forth again, this time to restrain the cruelty and treachery of the Seminoles. And, in the words of Bancroft, "It was in the train of events of this war that Andrew Jackson placed the American eagle on St. Marks and above the ancient towers of St. Augustine."

After this daring conquest we find that Andy's health was failing and he was borne on a litter across the swamps of Florida toward his home, supposedly to die. Through the tender, faithful ministrations of his devoted wife, he was spared from the grave. He reiterated his intention of retiring to private life forever but the people would not have it so. It was only natural that an awakened people who had found in this pioneer of the wilderness a true and tried champion of equal rights and opportunities for all should seek to place him in the highest office in the land. They sought him out as their candidate for the Presidency. In answer to their urgent solicitations, he said, in great modesty and sincerity, "No, sir; I know what I am fit for. I can command a body of men in a rough way, but I am not fit to be a President." The people wouldn't take no for an answer. They pursued him saying: "Nature never designed that your powers of thought and independence should be lost in retirement. We want you for President, and we won't accept a substitute." In modern parlance, they sent up a loud yell, "We want Jackson; we want Jackson."

You see they simply drafted Old Hickory for their candidate in the same way that we Democrats drafted President Roosevelt in 1940 to serve for another term, a third term.

The privileged powers put up one of the nastiest and bitterest political battles known to civilization in their frenzied effort to keep Jackson out of the White House. They nosed him out in the first round by a narrow majority, but 4 years later, in 1828, Old Hickory defeated John Quincy Adams with 178 electoral votes to Adams' 83. He was reelected in 1832 with 219 votes to 49 for Clay.

The Jackson administration stands out in American history as the Era of Good Feeling for the people as a whole, but for the monopolistic interests it was something of a reign of terror, a headache, a nightmare if you please. He had come into office with the expressed determination to turn the rascals out.

The Government had resolved itself into a machine for the enrichment of a powerful and avaricious minority. The United States Bank—the Biddle Bank—call it what you will—was under the virtual control and was in fact the tool of one plutocrat who held the less privileged under his thumb. With the same fierce determination and virile courage that had subdued the Indians on the frontier and repelled the British in the Battle of New Orleans, Old Hickory pitched a battle royal against the Biddle monopoly. His battle against the Biddle Bank was a battle of wits against the forces of conspiracy and intrigue. In the end, Andy won. He broke up the vicious monopoly of the Biddle Bank, turned the rascals out as he had sworn to do, and paid its debts. Yes; by the eternal, he drove the money changers out of the temple.

To Andrew Jackson is attributed the philosophy, "To the victor belongs the spoils"; but when we closely examine the facts we find that dividing the spoils among the victorious had not to do so much with distribution of patronage as with the free circulation of social justice and economic opportunity. Moreover, we find that a good many of the ejected officeholders had been guilty of varying degrees of malfeasance and dishonesty in office.

After breaking up the eastern oligarchy, Jackson turned his attention to the development of the West. Under his land-grant policy this great section where we are tonight grew by leaps and bounds. He collected from France a long outstanding debt and placed our country's financial affairs on a sound, practical basis. A smart practical statesman was Old Hickory, as well as a great humanitarian.

Historians are rather well agreed that Andrew Jackson enjoyed the unique distinction of going out of office as popular as when he went in. His influence pervaded not only our Nation but encircled the globe. Truly Andrew Jackson, the rugged frontiersman, lifted the American Nation to a new glory and the eyes of mankind to new horizons.

His tomb, beside that of his beloved Rachel, in the hallowed soil of his Hermitage garden, is a shrine where patriots of many kindreds and many tongues pay homage to his memory.

He left to the world a legacy beyond valuation, and we, the Democratic Party, are the foremost guardians of that heritage. He bequeathed to us the responsibility of preserving the democratic tenets of a true democracy. It was his will that all people should enjoy not only the basic freedoms of speech, assembly, press, and religion but that they likewise enjoy freedom of industry, commerce, and of universal action; freedom unshackled by restrictive privileges; freedom of economic creativeness unrestrained by the thraldom of monopolies. In brief, Jacksonian Democracy is a true democracy, the American way of life at its best.

The Democratic Party has had its "ins" and its "outs," its "ups" and its "downs." But, by righteous Providence, it always seems to have a renaissance when a despairing people needs it most. At the crucial moment some great Democratic leader appears on the horizon to retrieve and lift the Nation out of the slough of despond.

Time does not permit a review of the course of events between Jackson's time and now. Suffice it to say that after Lincoln's death the Republican Party passed gradually but ever more surely into the hands of the monopolistic interests that sponsor special privileges. It disregarded the farmer almost completely for about a half century. In fact, it got to the point it did not even mention the farmer in its platforms. It was only after the World War, with an aftermath of disastrous consequences for agriculture, that the Republican Party again realized that the farmers' interests are the basical interests of our country and that there was a farm problem. In 1920 the Republicans were frightened at the prospect of losing the farm vote, and the G. O. P. convention extolled the farmer as "the backbone of the Nation." At long last the "big boys" behind the scenes who were directing and manipulating the privately owned Republican machine acknowledged and ostensibly accepted the truth of the beautifully expressed sentiments of Lawrence Porcher Hext in his noble poem The Man Behind the Plow:

"The bards have sung no songs of him; no glory has he sought;
Nor for the spoils of victory has he life's battles fought.
There are no glowing stories told of deeds that he has done,
And on his breast he wears no badge, no trophies has he won.
Upon the page of history, no mention of his name
Is there inscribed, nor is he known within the Hall of Fame;
But tho' no sweet rewards are his, no laurels deck his brow,
He is the flower of the field—the man behind the plow.

"He wears no gaudy uniform, no buttons made of brass;
No shoulder stripes command salutes from others, as they pass;
Upon his sleeves there are no stripes of gold or silver braid;
No garb that he possesses could be worn in dress parade;
His name is not upon the rolls; he draws no monthly pay,
But on his rugged form he bears the mark of many a fray;
He fights his battles all alone, he struggles hard with toil,
This private of the commonwealth—this soldier of the soil.

"He is a loyal patriot, although he does not brag,
Nor boast of deeds that he has done to shield his nation's flag.
He does not hawk his chivalry about the city's streets;
He begs no man to lift him from the dust of his defeats.
He is a son of liberty—his country and his God
Are cherished and revered by him—the hero of the sod.

"The world is prone to buffet him with sneers and ridicule,
Society to laugh at him and herd him with his mule;
But what cares he for ridicule, society may laugh;
His storehouse holds the garnered grain, his stall the fatted calf.
He knows that with his brawny arm he sways the universe;
He knows that much depends upon the fullness of his purse.
And tho' he be uncouth and rude, we all must need allow,
There'd be no world at all without—the man behind the plow."

Yes; the G. O. P.'s got scared. They saw that the farmers were beginning to organize more thoroughly and pay closer attention to governmental affairs. Realizing the political power of the farm groups, the Republicans pledged the party to take steps to bring about

a balanced condition between agriculture, industry, and labor.

This sudden attachment for the farmer on the part of the G. O. P. was very amusing. It reminded me of a certain hero I want to tell you about. 'Way down South two Negroes, an old one and a young one, were sitting on the same log fishing. The young one became very drowsy while waiting for the bite that never came. He kept nodding and nodding, until finally he lost his balance and fell into the river. A kind-hearted white farmer who just then chanced to pass that way was delighted to see the old Negro fling down his pole and line and plunge into the river to rescue the boy. The white man said to the old Negro, "That was a noble act of yours to save that boy's life, Uncle Mose; is he a son of yours?" "Oh, no," said the old Negro, "he ain't no son ob mine." "But why, then, did you take such an interest in saving the boy's life?" asked the white man. The old Negro scratched his woolly head for a moment and then meekly replied, "Waal, de fac' am, massa, dat boy's got all my bait in his pocket."

So you see, my friends, it was that way with the G. O. P. in 1920. The farmers had the bait, that is to say, the votes, and the Republicans had to make promises to the farmer. Empty, idle, shallow promises they proved to be, for during the ensuing 12 years, representing three successive terms of Republican rule (or misrule) our country headed into the darkest depression of all time. As long as memory lasts the depression that was highlighted in the big crash of 1929 will remain green in the memories of us all.

Before the end of 1932 we witnessed a prostrate agriculture, with farm prices at rock bottom. The inevitable result was disaster for our whole economic structure. Banks were failing throughout the Nation; thousands of business concerns were going under. Depositors and investors bereft of their life savings were frantic with despair. Multiplied millions of people were unemployed. Hunger and distress stalked the land.

The people were clamoring for a new deal—a square deal. They had been ruined by the raw deal of the old deal, and they knew it. That's where we, the Democratic Party, entered the picture again to reshuffle the cards, straighten out the mess, clean up the debris, and pull the country out of the bog.

Fortunately, we found among us another Andrew Jackson, a twentieth-century Jackson, the gallant and courageous Franklin D. Roosevelt. We knew him to be a man of action, vision, and ability, with courage and integrity to match. We knew him to be wholly dedicated to the principles of social justice and equal opportunity for all. We knew him as a humanitarian of deep human understanding and forceful personality. It was fortunate indeed that he was the man selected to lead us in a time of direst emergency.

It is not necessary to reiterate the sad state of affairs that Mr. Roosevelt found when he entered the White House in 1933. Neither is it necessary, before this highly enlightened audience, to recite the effective methods adopted to straighten out the banking and financial situation and provide safeguards against recurrence.

You are familiar with the far-reaching New Deal programs put into effect to relieve want and suffering and to promote the future well-being of the Nation as a whole.

You are well aware of the fact that our President, for many years has been warning us against dangerous elements from without and within that threaten our democracy and our American way of life. He has fought relentlessly against the "isms" and "wasms" that seek to undermine our democratic institutions. If the obstructionists had not blocked him, our national-defense program would have been launched long before it was.

We do not claim that the record of the administration has attained perfection. But we do look with pardonable pride at what has been accomplished. We had a Herculean task before us and we have come a long way in the performance of that task. We do not claim that all of our programs are without blemish, but no one else has been able to come forward with anything better. We fully realize that there is work yet to be done—rounding out the curves—remodeling a little here and a little there—making alterations or extensions as conditions may warrant and as God gives us light to see and power to do.

By our votes last November 5 we made known to the world that we believed President Roosevelt had kept faith with the people. By those votes we said, in effect, that Franklin D. Roosevelt had done a satisfactory job in administering the affairs of our country under most trying circumstances and has sought to lead us into a new era of justice, liberty and social enlightenment through reforms in the governmental system designed to guarantee the right of people to jobs, to security in private employment, and in old age; the right of security of savings; the right to adequate pay; the right to a decent home; the right of security of home and family; the right to an education; the right to sell agricultural products at a fair price; the right to a fair share of the Nation's resources and the right to protection against exploitation.

By our votes we said that President Roosevelt was the best qualified to deal with national and international problems in this dark hour and to lead this Nation during these critical times.

It would be stepping on ashes in which the fire is not yet extinguished to dwell on the recent campaign. I'm sure that your ears still ring with the resounding echoes of the battalions of high-pressure speakers sent out by the opposition to tell the people they should not reelect the Democratic President. They said we had bungled the job; that we had had a discreditable inning and ought to let somebody else take the bat. Oh, to be sure, they had to agree with the wonderful objectives of the programs inaugurated by the Roosevelt administration but we had gone about it the wrong way they said. They purported to do all these fine things for the people lead us out of the wilderness and save the Government money besides. Inconsistency, thou art a synthetic jewel! They didn't say how they would do the job, however, or what they would use for money. So their glittering generalities did not fool the people.

But let us not dwell further on the campaign. It is not pleasant dinner conversation and it would not be good sportsmanship on our part to fan the flame in the ashes of the vanquished. To the victor belongs magnanimity as well as the so-called spoils.

In these times, when national unity is so much to be desired, we plead for cooperation from the right wing. In all fairness, we must acknowledge and express gratitude for the cooperation we have received from a small percentage of these gentlemen, who have voted for New Deal measures in the face of carping criticism from others of their party. For the obstructionists, we ask forgiveness. They know not what they do. True democracy demands that we be not too intolerant of minorities.

The recent bitter fight in the Senate over the lend-lease bill amply demonstrates that we need not expect full coordination, but we do most earnestly hope and pray that all American people shall stand united as we defend ourselves against the possibility of aggression by tyrannical dictators who seek to crush all democracies.

I am sure you heard the President's masterful address over the radio the other night. That message was broadcast throughout the world in 14 different languages, and England's Prime Minister has said, "At such a moment in such an ordeal, the words and acts of President Roosevelt and the people of the United States come to us like a draught of life and they tell us by an ocean-borne trumpet call that we are no longer alone."

You have heard the President's earnest plea for unity. You have seen by his fine spirit of nonpartisanship that he wants us to treat our party differences as a family row and join hands now to make and keep America strong against the common enemy of democracy. All of our people must realize, too, that defense does not consist of military defense alone but defense against all the things that human beings fear.

We are the very arsenal of democracy, the hope of a despairing civilization. When dictatorships shall have been vanquished and peace reigns again undoubtedly we shall play a large part in the reconstruction of a war-torn world.

A great responsibility rests upon our shoulders, especially upon the broad shoulders of the Democratic Party. Constant vigilance and personal sacrifice is the price we must pay for victory over the tyrannies that threaten us. Let us keep our lamps well filled and the wicks well trimmed. The eyes of the world are upon us. It is our sacred obligation to defend and preserve the American way of life bequeathed to us by Jefferson and Jackson.

To us is given the opportunity and the responsibility of diffusing to stricken mankind the bright light of our democratic institutions.

May we let our light so shine that groping humanity may see Jeffersonian-Jacksonian democracy as the lifeblood of the priceless liberties we cherish. May we show forth by precept and example that of this kind of democracy social justice to all is the handmaid, freedom its child, peace its companion; that safety walks in its steps and victory follows in its train; that it is an emanation from the Christian gospel, embodying the attributes of the Man of Nazareth who has taught us that we are our brother's keeper.

May we ever guard our cherished heritage so that, as long as the earth endures, this kind of democracy shall not pass away.

In conclusion, my friends, let me impress you with the fact that to be a free, true, and genuine American citizen in these days of growing despotism and totalitarianism is the greatest privilege ever given to man or woman. It is a possession for which we should gladly sacrifice our all, even life itself, if necessary, so that our children and our children's children might enjoy the freedom and blessings of such a great Government.

It is almost as great an honor and privilege to be a Democrat. We are proud to be affiliated with a party that, with one or two exceptions, has conceived and sponsored the great social and progressive reforms of the 150 years of our Nation's life—reforms that have caused our Government to function in such a way as to give the people a greater freedom and protection. It has been the Democratic administrations from Jefferson to Roosevelt that have driven the "money changers from the temple" and made a representative democracy function more and more for the average man by giving equal rights to every citizen, rich and poor, great and small alike.

The Democratic Party sponsored the election of United States Senators by vote of the people, taking this right away from the legislatures of the States where the corporate and monopolistic manipulators found it so easy to elect their "sympathetic friend" to the United States Senate. The Senate is now more responsive to the needs and welfare of the people than to the "favored few." The Democratic Party sponsored the Federal Trade Commission to protect the masses from unholy monopolies and combinations that robbed the people by controlling and fixing the prices of the necessities of life.

The Democratic Party was responsible, in the main, for the income-tax law that compels every citizen to pay and support his Government according to his ability to pay,

as God has prospered him in this great free country, this land of matchless opportunities and boundless resources.

It was the Democratic Party that sponsored the just and democratic cause of giving the women the privilege to vote. The Democrats first discovered that a woman was a citizen, and had as much sense and as just a right to help run the Government as a man.

The Democratic Party has been the uncompromising friend of the farmers of the Nation, and the New Deal has rendered greater service to the cause of agriculture than all other administrations combined since Washington's administration. The Congress has just passed the greatest appropriation in the history of the Nation to give relief to the farmers in the present world emergency. The bill carries an appropriation of $1,340,000,000.

The cause of labor got its first break under this administration—the right to strike, the right of collective bargaining, increase in wages per hour, limitations on hours, and the National Labor Board has been given to labor—and more besides. It is true we are having some temporary troubles on the labor front today, but I believe the rank and file of the laboring people of the Nation are satisfied, and I can assure you all these troubles will be shortly and equitably adjusted.

With so great and so glorious a record of achievements for equitable and human government, let us resolve to go forward from this night and convince every man and woman in Minnesota that they owe it to themselves and to their children and their children's children and to the cause of good government to enlist under the Democratic banner.

Now, before I say good night, please let me extend a sincere invitation to you and to all the people of Minnesota to come to the land of sunshine and flowers, the land of untouched resources and limitless opportunities.

Horace Greeley may have been right when he said, "Go West, young man," but if he lived today, after the West has been taken, exploited, and in many cases exhausted, he would surely say, "Now, young man, go South." I can assure you that a royal welcome awaits your coming. And when your eyes behold this heavenly paradise you will exclaim:

"O Southland, loveliest land beneath the bright blue bending skies;
O land most passionate this side the gates of Paradise;
A sense of gladness unconfined was mine when first I set my foot upon thy flowery sod.
It lingers with me yet."

Come, come, come, I plead with you; I urge you; I beg you to come to God's favored clime. I mean for you to come. Just the other day I introduced a bill in the Senate to build a streamlined four-lane highway from the Great Lakes region through the heart of the Mississippi Valley to the Gulf of Mexico.

I invite you to visit me personally, provided you don't all come at once and sojourn in my dream house beside the road, nestling beneath the sighing and murmuring pines on a sunny dale not far from the Mexican Sea.

Come, eat, sleep, and enjoy real southern hospitality; sit with me on a broad southern porch, fanned by the gentle breezes from a southern sea; and together we will listen to the hum of the honeybee as she gathers her daily load in the clover field nearby. In the eveningtide we will listen to the tinkling bells as my cows wend their way homeward. We will thrill to the plaintive call of the whippoorwill and be lulled to sleep by the singing of a southern mockingbird, as he pours forth the sweetest music in all the world.

Again I urge you to come to the land from which God has removed the chilling and killing blizzards of the North and blessed it with eternal sunshine.

Come to a land where the American citizen is the freest and enjoys his freedom most—a land where human rights are placed above property rights; where we prize human beings above the almighty dollar.

Come and you will better understand why we are all Democrats and why the South has given to the Nation such great Democratic leaders as Jefferson, Jackson, and Wilson.

The spirit of the land and our people could fittingly be expressed in the prayer of another, who said:

"I'd rather be a far-flung star
And shine in the midnight sky,
Than a sun eclipsed by the side of the road,
Where the race of men go by.

"I'd rather be a desert rose
And sweeten the desert air,
Than bloom in a heavenly paradise
And shed no fragrance there.

"I'd rather be a drop of dew
And sparkle with mirthful glee,
Than boast my size before man's eyes,
A stale and stagnant sea.

"I'd rather be a plumeless lark,
And sing in a meadow one day,
Then don forever the gayest plumes
And hide myself away.

"I'd rather be a humming bird
And sing a tune of love
Than a mighty bird with dreadful shriek
Like the eagle that soars above.

"I'd rather plant in the garden of love
The flowers of kindly deeds
Than sow with pleasure in the largest field
A crop of worldly seeds.

"I'd rather be least in the Kingdom of God,
Is the sum of all the things I tell,
Than first of all the surging hosts
Of a merciless devil's hell."

Sale of War Materials to Japan

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

RADIO ADDRESS BY HON. ARTHUR CAPPER, OF KANSAS

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address broadcast by myself over station WINX, Washington, D. C., March 8, 1941, discussing the sale to Japan of war materials which are being used in their war of conquest against China.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends of the radio audience, I am here tonight as a long-time friend of the people of China. I feel that China needs our help and is in every way worthy of that help.

In considering the moral aspects of our far eastern policy, let me first review the facts both concerning the history of Japanese aggression and the United States policy in the Far East.

Prior to the present conflict, and beginning with the Sino-Japanese War in 1895, Japan has annexed consecutively Formosa, Korea, Manchuria, and the north China provinces. An effort to seize Shantung during the World War was thwarted by the world powers.

The Japanese aggression since the World War has been in violation of the Nine Power Treaty and the Kellogg-Briand Pact, both of which Japan had signed. As the world powers did nothing to prevent her invasion of Manchuria, Japan assumed that she could continue her aggression against China with impunity.

In July 1937 Japan started the present war, and as a result she now occupies all of the industrial area and the large seaports of China and controls the highways and waterways of the flat agriculturally productive areas in eastern China.

In order to carry on a war such minerals as iron, copper, and petroleum are necessary and Japan has negligible deposits of these. To feed her factories and manufacture arms and ammunition, Japan has been forced to import such minerals—chiefly from the United States. The Japanese also lack the skill and equipment to manufacture all of the products needed to carry on a war. Such articles as machine tools for their factories, special steels and similar products, and automobiles and trucks had to be imported; again, chiefly from the United States.

In 1939, the United States supplied Japan with $163,000,000 worth of war materials. I have been informed that the United States supplied Japan with 54 percent of her war materials in 1938 and 56 percent in 1939. It appears that in 1940 we may have furnished Japan with as much as 70 percent of these war materials. This increase has taken place despite so-called moral embargoes and licensing restrictions. We have recently been sending more petroleum and petroleum products, manufactures, steels, copper, and machine tools than ever before.

The United States is also the largest market for Japanese exports, since we buy about 50 percent of the total exports from that country. Silk is the most important item, as we buy 90 percent of all Japanese exported silk. Our Government has also purchased large amounts of gold and silver. The latter has unquestionably been looted from the occupied portion of China. Now we find the proceeds of all sales in this country are used by Japan to buy war materials.

On the other side of the scales, to be sure, the United States has made loans to China in the amount of $170,000,000. China is not on this account compensated, because the Japanese invasion is only made possible by the materials which the United States supplies Japan.

These are the facts which establish our policy. Whether this aid to Japan is due to the shellfish acts of private citizens or official acts of the Government is only a question of academic interest, since the Government has the power to restrain these citizens and the majority of the people may make the Government responsive to its wishes.

The war which Japan is waging against China with our material aid is counter to all our American ideals of justice, humanity, democracy, universal friendship, and peaceful development. As I see it, it is an unjust war, because Japan merely found an excuse to carry through to completion her plan for the conquest of China. I say it is inhuman, in that men, women, and children are being ruthlessly slaughtered, maimed, starved, and oppressed by the Japanese.

This war is against democracy, because it would enslave a great democratic people and use them to extend the imperialist plans of Japan. It would destroy the prospect of friendly relationships in the Far East and the peaceful development of the Chinese. Instead China's resources would be developed and the Chinese people exploited for Japan.

Now, the Japanese cannot violate our ideals for us. It is we who are violating our ideals.

In all probability the Japanese could not carry on this war without our material aid. It is our trucks which carry the Japanese into China; it is our iron which blasts the Chinese to pieces; it is our oil which drives their tanks and airplanes, and it is our factory tools which manufacture their armaments.

Another moral question involved in our far-eastern policy is our honesty and good faith. The United States is also a signatory to the Nine Power Treaty, and under article I of that treaty is obligated to "respect the sovereignty, the independence, and the territorial and administrative integrity of China." The proclamation by the President caused the treaty to be made public, "to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof."

In spite of this treaty and proclamation, United States citizens are exporting materials to be used in an assault on China's independence and sovereignty, and they are being permitted to do so by the United States Government. If anyone doubts the power of the administration to prevent such trade, I need only refer him to article VI, section 2, of the Constitution of the United States, which states that "all treaties made, or which shall be made, under authority of the United States shall be the supreme law of the land"; and which also states that the President "shall take care that the laws be faithfully executed."

However, the President has recently been given additional legislative authority for stopping these shipments in the Defense Act of 1940, which provides that the President may prohibit or curtail the exportation of war materials of the kind now being shipped to Japan

The export of war materials which are used to carry on a war of aggression in China is at least a moral violation on our part of the Nine Power Treaty, and no rationalization concerning the money value of this trade or technical interpretations concerning our legal obligations under the treaty can remove the stigma which attaches to our conduct or relieve our consciences.

In the course of the war in China, there have been many official pronouncements by spokesmen for our Government, which have not failed to denounce Japanese aggression and to offer encouragement to China as the victim of aggression. A recent pronouncement indicated that it was the policy of the Government to withhold aid from aggressor nations and to extend it to the victims of aggression. Why then, I ask, are we still giving aid to the Japanese aggressor?

Finally, I wish to discuss the relation of our far-eastern policy to peace. I have been a lifelong advocate of peace and have always been opposed to any policy which is likely to cause wars or the spread of wars. In the Far East we have been providing Japan with materials which enable her to make war on China—but we have been doing much more than that. We have been promoting Japanese imperialism and building up the armaments of Japan. Fired by success in China and with the armaments which we have provided, the Japanese imperialists are likely to extend the war to other parts of Asia. They are now extending the war to that part of Asia immediately south of China. With the Philippines, Alaska, and Hawaii vulnerable, it is possible we might ourselves become embroiled in a war with Japan and have the armaments which we have furnished her used against us.

Let me say that if we are to live up to our American ideals and if we wish to avoid promoting the spread of war it would seem to me we should stop supplying Japan with war materials. The shipment of these materials may be prevented by direct legislation of Congress or by the administration, under authorities already granted. We believe the Government will respond to public pressure. We know that the public is overwhelmingly in favor of stopping these shipments. However, those who are responsible for the policies of the Government have not had enough evidence that the public is not only for stopping these exports but is definitely aroused over the situation.

Now, I have been a friend of the people of China for a quarter of a century, but I want to make it plain that nothing I have said tonight; or at any other time, should be construed to mean that I am advocating that the United States go to war with Japan. Neither am I advocating that the United States do anything that would force Japan to make war against the United States.

I am opposed to the United States trying to get into wars anywhere. I am totally opposed to the United States intervening in other peoples' wars. That is the reason I opposed, with every power I possessed, the passage of H. R. 1776.

Ever since Japan started its war of aggression against China I have been urging that the United States Government act to prevent the shipment of war supplies and war materials to Japan. I believed at that time, and I believe now, that the policy of the United States Government in selling war supplies to Japan has encouraged, whether intentionally or not, this dreadful war in the Far East.

My objections to H. R. 1776, the so-called lend-lease bill, recently before the Congress—entirely aside from my objections to granting any one man the broad powers provided in that measure—were largely due to the fact that I felt that its enactment would be a long step toward war.

I am opposed not only to Government policies which encourage wars abroad—as I believe the policy pursued by our Government has unintentionally done in China—but I also am opposed to Government policies that threaten to involve the United States in the war in Europe.

During the months and years since Japan started its invasion of China I have consistently urged that the United States Government refuse to be a party directly or indirectly to that invasion. A most effective way in which this country can work for peace in the Orient is to shut off at once and completely war supplies for the Orient. I am in favor of doing that now. We should have done it long ago.

Mr. President, I shall continue to do everything in my power to keep the United States at peace and to have the United States use its powers and influence for peace, and not for war, in the rest of the world. I hope that the powers of our Government shall be used for peace and not for war, and that our Government will promote a policy that is fair and just to China.

The Fight Over Beef

EXTENSION OF REMARKS

OF

HON. HARRY B. COFFEE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

EDITORIAL FROM THE OMAHA WORLD-HERALD

Mr. COFFEE of Nebraska. Mr. Speaker, under permission granted by the House, I am inserting a very timely editorial taken from the Omaha World-Herald. This editorial correctly reflects the attitude of the Nebraska livestock grower on the issue of purchases by the Army and Navy of Argentine canned beef. The editorial follows:

[From the Omaha World-Herald]

THE FIGHT OVER BEEF

The proposed purchase of 20,000,000 pounds of Argentine canned beef for the American armed forces is not in itself an important matter. But the principle involved is important, and the argument of those who favor the purchase is a little frightening.

It runs something like this:

"If we are to maintain the good-neighbor policy and build hemispheric solidarity, we must trade with Latin America. We must become a better customer of the Latins than the dictator nations ever can be. We must sell them the things they need, and we must buy what they have for sale."

Buy South American! Smash Hitler! It sounds grand and very, very logical.

But let's examine the situation a little closer.

What does South America want to buy from us? Mainly manufactured goods—things that are produced in our industrial East and Great Lakes region. That would be fine for our industrialists.

And what does South America want to sell? A little coffee. Some metals. Possibly, in years to come, a little rubber. But mainly meat and grain—the very staples that the American farmer already produces to excess.

It is obvious that both the American continents are preponderantly agricultural. They both have vast, fertile midlands, and it is inevitable that their people should cling to the soil. But if the planners at Washington have their way, the two continents will develop an interlocking economy. The people of South America will remain farmers and cattle growers, while the people of North America become, mainly, machinists' helpers and Government clerks. If that idea were carried to its conclusion, perhaps the Middle West would become a vast playground and recreation area, with "No cattle allowed" signs posted in the sandhills.

There is one way the trend can be stopped. The United States Congress can put its foot down firmly and say, "There will be no tinkering with our basic industrial balance. We will save the American market for the American farmer, and we will also, to the best of our ability, help him to sell his products abroad in competition with other countries."

You think such a policy would be too hard-boiled toward our good neighbors? Then ask yourself whether they aren't entirely hard-boiled and realistic in fighting for the welfare of their citizens.

Of course they are. That's one thing we like about them.

Hydro Power and Irrigation

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

ADDRESS BY HON. JOHN C. PAGE

Mr. HOLMAN. Mr. President, I ask to have printed in the RECORD an address

on hydro power and irrigation, delivered by Hon. John C. Page, Commissioner, Bureau of Reclamation, at the nineteenth annual convention of the Izaak Walton League of America, Inc., Willard Hotel, Washington, D. C., on March 28, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My subject, in leading off this symposium on public rights in water, is Hydropower and Irrigation.

The generation of hydroelectric energy and the irrigation of arid land have proven themselves natural working partners in the development of our western resources. Nearly 30 years of experience in constructing irrigation systems in the West have demonstrated to the Bureau of Reclamation that power and irrigation frequently form the most efficient combination possible in this work. On every irrigation project where they have been combined they have supplemented each other in attaining the ultimate objective of the reclamation law under which the Bureau of Reclamation operates.

The ultimate objective of the reclamation law is the creation of new homes and opportunities for a westward-pushing American population through the construction of irrigation works to make available a supply of water to fertile but arid lands in 17 Western States. Operations under the law have been highly satisfactory. Nearly a million people on 40 reclamation projects can thank this law for their homes and livelihood. About one-quarter of them cultivate irrigated farms which produce a hundred million dollars' worth of crops annually. These crops consist mainly of forage to feed livestock—the major industry in the West. Other main crops are vegetables, fruits, and specialties. The remainder of the project people live in the 258 cities and towns which have sprung up or expanded in the wake of project development. They work in stores and other business activities of the towns, and in the hotels, the feed mills, and the factories.

These million persons provide an annual market for more than $200,000,000 worth of manufactured articles and processed goods. This purchasing power forms a stable backlog of business for American industry greater in value in normal times than any foreign market except the United Kingdom, Canada, Japan, and France.

The taxable property created or protected by these 40 reclamation projects is valued at more than $4,500,000,000.

This entire beneficial investment with its consequent profit to the rest of the Nation owes its creation to this twin combination of land development and power development. In the first place, energy was required originally for the physical construction work necessary to build the irrigation projects, such as the erection of dams and the excavation of canals. Hydropower provided this necessary energy. Second, on many projects energy was required for pumping water to arid land higher in elevation than the reservoir or stream from which it was drawn. Here, again, hydro plants produced the necessary power. And, last, hydropower has helped irrigation projects meet their cost of irrigation construction, which must be repaid by the recipients of the water. As a matter of fact, in a number of instances hydropower made the construction of the project possible, for without the anticipated additional income from power revenues the project could not have been found economically feasible. A finding of economic feasibility is a requirement of the reclamation law before project construction may be started.

An example of this dependence on hydroelectric power is the Boulder Canyon project in Arizona-Nevada. Power revenues will pay the greatest share of the cost of construction of this great multipurpose project, so vital to the welfare of the Southwest.

Naturally, playing this large and helpful role in the permanent settlement and development of the West, hydroelectric capacity on reclamation projects has shown tremendous increase. The first small beginning was a power plant with a capacity equivalent to 975 kilowatts, built in 1906 on the Salt River Valley reclamation project in Arizona. This small power development has been multiplied nearly a thousandfold. Today the 24 power plants operating on reclamation projects have an installed capacity of 873,655 kilowatts, and an ultimate capacity much greater. When power plants now building and others planned for construction are completed, the total power available on reclamation projects will attain the impressive figure of four and one-half million kilowatts—practically equalling the entire present hydro development in the western half of the United States.

The increased use of hydroelectric energy in the expansion of the West, and the interdependence of hydro power and the irrigation of arid lands, are therefore obvious. In the work of the Bureau of Reclamation they can be said to be mated for life. Although irrigation of waste desert land and protection of closely settled irrigated areas are primary in the water conservation of the Bureau, the generation of electric energy is indivisibly the chief byproduct. Irrigation and power generation in the West complement each other.

I have stated that power is the chief byproduct of reclamation construction in the West. You who are assembled here this morning to forward the fine work of conserving the woods, waters, and wildlife of America are no doubt more interested in another reclamation byproduct—the conservation of wildlife and the creation of recreational facilities.

Irrigation construction has converted more than 3,000,000 acres of nearly worthless desert land, where once a jack rabbit could barely eke out a living, into a livable habitat for wildlife. Irrigation projects in the wide, arid West are about the only places where certain game birds can be found. Feed and cover abound on the irrigated farms along the canals and ditches and around reservoirs.

Twenty-nine reservoirs on reclamation projects have been set aside as national wildlife refuges by Executive order of the President. These havens for game extend from the southern California Salton Sea refuge in the extreme Southwest to the Okanogan refuge in Washington in the extreme Northwest. They extend east to the Lake Minitare and Lake Alice refuges in Nebraska. Additional wildlife refuges will be created by reclamation projects now under construction.

The importance of these game preserves is unquestionable. The Fish and Wildlife Service points out, for example, that the recently established Havasu Lake refuge at Parker Dam is strategically located about halfway between Lake Mead and the great waterfowl wintering area on the Colorado River delta in Mexico. It will form an important link in the chain of national wildlife refuges. Large numbers of ducks, geese, and other waterfowl, such as waders and shore birds, are expected to use the area during migration flights and during the wintering period. The lake will also offer a safe watering place for the quail and the mountain sheep of the uplands.

Of the 165 dams built by the Bureau of Reclamation many are valuable aids to fish life. All the reservoirs in accessible localities have been stocked by the Fish and Wildlife Service or State agencies. Many are among the most popular fishing spots for miles around.

The Bureau's construction work has actually created fishing opportunities. The Colorado River is a good example of this. Like most other large western streams, it was a muddy, silt-laden stream, a very poor habitat for fish, before Boulder Dam was built. Now the Colorado runs cold and clear as a mountain rill for 40 miles below the dam. A perfect habitat has been created for the trout being planted there. This section of the river is expected to become one of the best trout streams in the West.

As for Lake Mead itself, Boulder Dam's reservoir, most of you are no doubt familiar with stories of the magnificent large-mouth black bass being caught there. These tall tales are actually true. They have been proven with photographs of 10-, 11-, and 12-pounders.

The conservation of wildlife, waterfowl, and fish is an integral part of reclamation project planning. For instance, plans for the Colorado-Big Thompson project now under construction in Colorado were modified to insure a sufficient flow of water at all times in the mountain streams so that they would continue to offer choice fishing.

At Grand Coulee Dam, whose great hydroelectric power plant began operating last week, a sweeping program was launched by the Bureau for the conservation of the migratory salmon and steelhead trout of the Columbia River. The Fish and Wildlife Service is cooperating with Reclamation in carrying out the greatest single fish-conservation scheme ever undertaken. Thousands of large salmon and steelhead trout are being trapped and transplanted for spawning to tributaries entering the Columbia below Grand Coulee. Scientifically ice-cooled trucks are used for the job. Hatcheries have been built for artificial propagation. Also, as part of this program, a 2,500-foot tunnel was drilled through a spur of the Cascades to tap a mountain lake 250 feet below its surface so as to provide cold water all year around for the holding ponds and hatchery constructed by the Bureau at Leavenworth, Wash.

The newer reservoirs of the Bureau are all designed to retain carry-over storage so that they cannot be drawn too low for fish life. The field force of the Bureau is under orders not to empty reservoirs which lack this protection except in extreme emergency. When this becomes absolutely essential, State and Federal fish and game authorities are advised so that the fish may be salvaged.

With the disappearance of some species of wildlife from their natural habitat, with floods and dust storms in the western parts of the country, public opinion has awakened to the support of a broad conservation program for American wildlife. The Bureau of Reclamation today is making a substantial contribution to this program. In the Bureau of Reclamation's water-conservation work in the West, hydropower and wildlife conservation go forward hand in hand with other byproducts of irrigation toward a better and more satisfying country to live in for all of us.

The American Democracy

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

EDITORIAL BY JUDGE ALBERT W. JOHNSON

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial

entitled "Our Democracy—The Most Efficient Government in the World," written by Judge Albert W. Johnson, of the middle district in Lewisburg, Pa., and which appeared in the Philadelphia Inquirer of Sunday, March 16.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR DEMOCRACY—THE MOST EFFICIENT GOVERNMENT IN THE WORLD

(By Albert W. Johnson)

A world war is now being waged by the dictator nations, led by Germany, to destroy the democratic governments and set up a new order in the world. We are again engaged in a great struggle testing whether the democratic nations can long endure. The issue involved between freedom and slavery cannot be compromised; the tyranny which would enslave the whole world must be destroyed.

The life of our democracy, the most powerful nation on earth, is involved, and we must render every possible aid—not short of war, but with war, if necessary—to the other embattled democracies if we are to live and exercise influence in the world now and in the future. In this terrific struggle the allied democracies must win a decisive victory and thus save liberty and Christian civilization.

We must now consider the strength of our democracy and its contribution to victory. Faith in our democracy comes from the wisdom of its builders and the character of their work. Of the 55 Delegates to the Constitutional Convention 31 were lawyers, 12 educated in the best universities of England and Scotland; 39 were Members of the Continental Congresses, and 8 had assisted in framing their State constitutions; at least 22 were college graduates—9 of Princeton, 3 of Yale, 2 of Harvard, 4 of William and Mary, and 1 each from the Universities of Oxford, Columbia, Glasgow, and Edinburgh. Among them were James Madison, called The Father of the Constitution; Alexander Hamilton, author of The Federalist; Benjamin Franklin, the most versatile genius of the eighteenth century; and George Washington, the greatest man who ever stood at the forefront of a nation's history. They had studied every known form of government and were familiar with the classics of all times on the subject. Their work is summed up by Mr. Gladstone: "The American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man."

The Constitution is both ideal and practical; more ideal than Plato's Republic or Moore's Utopia, providing for the most advanced ideas and visions of a great people, and more practical and stable than any other form of government that has ever existed, being the oldest form of government of any great nation now existing. The storms which have destroyed other forms of government have left almost untouched the fabric of ours. In its construction the ideal of Washington expressed to the convention was followed: "Let us raise a standard to which the wise and just can repair. The event is in the hand of God."

Our Government, made by such men, is not only a good but an efficient and powerful government. This will appear more fully in the Preamble to Constitution and the history of 153 years of our democracy.

"We, the people of the United States * * *." This is democracy, a government of the people, by the people, and for the people. Such government has been the dream of the ages. DeTocqueville in his Democracy in America, tells us that the spirit of democracy is irresistible, because it is the most uniform, the most ancient, and the most permanent tendency found in history, and that we shall scarcely meet with a single great event, in the lapse of 700 years, which has not turned to the advantage of equality, and that in America men are seen on a greater equality in point of fortune and intellect than in any other country in the world, or in any age of which history has preserved the remembrance.

Montesquieu, in his Spirit of Laws, tells us that the love of a state is peculiar to a democracy and that government is like anything else; to preserve it, we must love it.

Back of the great democratic movement, down through the ages, is the power of God which is irresistable. This explains the spirit of the American people in their great accomplishment in times of peace and in times of war. In our democracy the people enjoy liberty; they love their Government, and they are willing not only to live for it but to die for it; such spirit is invincible and cannot be found in any other form of government.

"In order to form a more perfect union." A federal republic or democracy of this kind, an indivisible union of indestructible states, is able to withstand a powerful external enemy, and at the same time to enjoy all the advantages of smaller democratic states.

"In order to establish justice." The Constitution establishes a Federal judiciary. The establishment of justice for every person and every State in the Union is the sublime purpose of the Constitution. All are equal before the law and enjoy the right of trial by jury, and no person shall be deprived of life, liberty, or property without due process of law. These rights are not secured in any of the dictator nations. The Constitution has succeeded so well in this purpose that the Supreme Court of the United States is the most respected court in the world both by Americans and foreigners.

"In order to insure domestic tranquillity." Our Constitution gave to the Government the power to keep peace and good order throughout the Union. The promise of the preamble in this respect has been well executed. Outside of the Civil War, waged to save the Union, and test the strength of the Constitution, internal peace has reigned and property and life have been secure from the adoption of the Constitution to the present day. This result has not been accomplished under any other form of government.

"In order to provide for the common defense." For 153 years the Union has met every emergency. It not only stood the strain of the great Civil War when half of the States of the greater Union of 1861 attempted to destroy it but it has protected us from external attacks from the War of 1812 to the present time. In the greatest civil war in the history of the world, following the worst depression in our country, the Northern States alone during a period of 4 years raised a magnificent army of over 2,000,000 soldiers to preserve the Union. In the great World War our Nation in 2 years raised an army of 4,000,000 soldiers, of whom 2,000,000 were transported across the ocean to the battlefields of France, where they met and put to rout the best trained soldiers of the German Empire. Our democracy has never lost a war.

"In order to promote the general welfare." Our democracy has come from a population of less than 4,000,000 to a population of 130,000,000; from a state without money or credit to the wealthiest nation on earth, offering to every person the greatest opportunity in the world. Poor boys have become the heads of business, leaders of the professions, legislators, Governors, judges, and Presidents of the Republic. In America there are more and better homes, more and better hospitals, more miles of railroads and highways, more labor-saving machines, more automobiles, higher wages, and more conveniences of life than in any other country on earth. In no other country is there so much happiness and contentment as in these United States of America.

"In order to secure the blessings of liberty to ourselves and our posterity." Here we have a guaranty of individual liberty by constitutional limitations. Each individual as a responsible moral being has certain "inalienable rights" which neither the state nor the people can take away, among them, life, liberty, and the pursuit of happiness. This liberty, the gift of the gods, banished from the dictator nations, is the precious jewel of our democracy.

In conclusion, our fathers ordained a Constitution having no parallel in human history to form an indivisible union of indestructible free States; to establish justice; to insure domestic tranquility; to provide for the common defense; to promote the general welfare and to secure the blessing of liberty for themselves and their posterity. Thus they formed the last, the noblest, and the best government on earth.

"Sail on, O Ship of State!
Sail on, O Union, strong and great!
Humanity with all its fears,
With all the hopes of future years,
Is hanging breathless on thy fate!"

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

EDITORIAL FROM THE NEW YORK DAILY NEWS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD an interesting editorial from the columns of the New York Daily News of New York City and reprinted in the Times-Herald, of Washington, D. C., entitled "The Revolution Is On—Stop It Who Can."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Daily News]

"THE REVOLUTION IS ON—STOP IT WHO CAN"

We can't learn from Bartlett's Familiar Quotations or other source books who made the above remark. Maybe Danton, maybe Jack London—we don't know. But it is a pat remark for these times.

Some kind of revolution happened in Yugoslavia yesterday, on the heels of the previous Yugoslav Government's signature of a nonaggression treaty with Germany. Young King Peter II is in power as we go to press, with a lot of new faces in the Cabinet, the Yugoslav Army reportedly backing the King and anxious to get going against Hitler and Churchill trumpeting from London that Yugoslavia has "found its soul."

Belgrade telephone communications were down throughout the coup, and most of the news came from Budapest, London, Rome,

and Bern. It is possible that the Nazis will use this upset as a pretext for a swift military occupation of Yugoslavia to "save it from Churchill." If Hitler is to blitz Greece, unimpeded use of the easy Vardar Valley route to the Greek-Yugoslav border is almost essential to him.

In Syria the natives are staging bigger and better riots daily, with the situation nearing revolutionary intensity. Whether this coming revolution is against the Vichy French Government, which technically owns Syria, or against Berlin, which owns Vichy government, we are unable to make out.

FROM ARGONNE TO DAMASCUS

The ironic part of the whole mess seems to us to be the fact that Syria is owned by France at all, and why. Syria belonged to Turkey before the last war. It was awarded to France after the Allied victory. So our boys of the A. E. F., though they didn't know it at the time, were treading a road to Damascus, so to speak, as they slogged through the Argonne. They were helping to make Syria safe for the French.

We take it that President Roosevelt, empowered by the War Power Act to give aid to all friends of democracy, will presently discover that the Syrians are democrats under the skin and deserve our help. A Washington promise to help them against aggression went to the Yugoslavs yesterday.

WILD BILL SUGGESTS

As to probable increases in our help to Great Britain, we think a reliable tip-off was to be found in Col. William J. (Wild Bill) Donovan's striking and dramatic radio speech night before last. Wild Bill was one of the brightest ornaments of the first A. E. F.—a fierce and fearless fighting man—and he knows his way around the present-day world, too.

In this speech, delivered as a report of his recent "unofficial ambassador" trip through all the war theaters, Wild Bill hinted broadly that we'd better begin furnishing United States Navy convoys for shipments of war supplies to Britain. That, of course, was something the administration wanted said.

We think the Navy will be doing such convoy work before long; and that in the process some Navy vessels are highly likely to be sunk. In such case, we'll be much deeper in the war than we are now.

RUSSIA AND THE PEACE

The logical climax of all these increases in United States aid to Britain would be the sending of an A. E. F. II to make up for the fact (according to the available data) that Hitler has about twice as many soldiers as Britain has.

We're on this path; the decision has been made, and is now being acted upon. Another nation is pursuing the policy which we've thought all along would be the wise policy for the United States—a policy of keeping out of the fight, conserving its resources and building up its fighting powers, and planning to be strong enough at the finish to dictate much of the peace.

That nation is Russia. At the end of this war, Russia bids fair to be the strongest nation in the world. And the peace arrangements bid fair to bring forth a world order much closer to communism than any order now existing outside Russia and Germany. Ernest Bevin in Britain is already talking vaguely but vigorously about such developments.

All of which gives special aptness to the crack: "The revolution is on—stop it who can."

Aviation

EXTENSION OF REMARKS

OF

HON. MON C. WALLGREN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

EXCERPT FROM BROADCAST BY FULTON LEWIS, JR.

Mr. WALLGREN. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the broadcast of April 2, 1941, by Fulton Lewis, Jr., over station WOL, at Washington, D. C., describing his flight from Seattle to Washington, D. C., and indicating the strides that aviation is making in drawing the Pacific coast and Alaska closer to Washington, New York, and the Atlantic coast generally.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

It may seem just a little startling to you—broadcasting from Seattle, Wash., last night, from a shipyard there, and getting into Washington here this afternoon in plenty of time to prepare this broadcast for this evening; but that's the magic of aviation.

As a matter of fact, to make a little confession, I had a secret desire to do my broadcast of last evening from Ketchikan, Alaska, which, I told you on Monday, is less than 3 hours from Seattle, and then this evening to say something very casually—just off the cuff, so to speak—about "last night, from Alaska, I told you thus and so," and "this afternoon, here in Washington, I checked further on it and found out this and that," and then just let it lie, without saying anything more, and it would have worked, too, so far as the total time was concerned, but the regular schedules refused to fit in.

However, coming across the country last night and this morning on Northwest Airlines, which runs just inside of the Canadian border, and into Chicago, I found out that that company now has an application pending to put in direct service from New York and Washington to Fairbanks, Alaska. You would leave here, say, late in the afternoon and arrive in Fairbanks the next morning. So you see the whole Northern Hemisphere is shrinking—not just the continental United States. That might be a tremendously important national-defense project, incidentally, because it would mean, of course, the establishment of a great many commercial airfields all across Canada, and it would serve to make a roadway of the air between the main continental United States and the all-important territory there at the gateway to Asia.

Inter-American Bar Association Conference, Habana, Cuba

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

ADDRESS BY HON. WILLIAM F. CULBERTSON

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled the "Reign of Law," delivered by the Honorable William S. Culbertson, formerly professor, Georgetown University, vice chairman of the United States Tariff Commission, American Minister to Rumania, American Ambassador to Chile, before the first conference of the Inter-American Bar Association, at Habana, Cuba, on March 26.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE REIGN OF LAW

(Address before the First Conference of the Inter-American Bar Association by William S. Culbertson,[1] vice chairman, delegation, Pennsylvania Bar Association, and delegate, American and Federal Bar Associations, Habana, Cuba, March 26, 1941)

I

In our more than 20 countries in the Americas we find a baffling diversity of laws, which are often in conflict. Statutes and decrees have multiplied in untold numbers. Precedents have been laid down by thousands of judges; interpretations have been declared by thousands of officials. Volumes of decisions and volumes of comments have been written. The laws of the countries which we represent seem to have the variety of the Amazonian jungle, the transitoriness of a mirage on the Chilean pampas, and a barrenness of the morasses south of the Beagle Channel.

What unity is there in this mass of legal fact and fiction?[2] Is justice merely a shifting concept that changes under the influence of time and place? Or are there some principles which underlie all the conflicting scenes of legal life? Are there ultimate norms and standards hidden in our array of nationalistic laws?

The ancients were troubled by these question. Men in every age have sought to know the origin and the nature of law. We, too, are seekers. The search which we, the delegates to this meeting of the Inter-

American Bar Association, are to institute is not merely an intellectual venture appealing to our reason, but a practical work which, if successfully accomplished, will lay the secure foundation of inter-American understanding and strengthen our influence in the post-war world. My emphasis then today will be, not on laws, but on law.

II

A paradox of our times is the decline of law in the midst of the enactment of many laws. Laws have multiplied under the impact of narrow nationalism, class politics, and personal ambition for power. No country in the Americas (or in the world, for that matter) has escaped the evil effect of these tendencies nor are lawyers in a position to disclaim a fair share of the blame for them. The result is that, overburdened by mountains of laws, law itself is breaking down.

Let me enlarge a little on these tendencies which are world wide in their influence. They have, in the first place, affected national law. We have witnessed the infiltration and spread of ideas in derogation of civil rights and the rights of private property.[3] It is a curious development that these ideas seem to have become more effective politically in countries which are economically immature or in countries which are suffering from abnormal economic conditions. In the Americas, as well as elsewhere, the collectivism of Marx and Lenin has its defenders.

I would be the first to agree that law without orderly social change becomes tyranny. But reform without due process of law, reform by force and confiscation, is retrogression. It begins, as a rule, with an attack on private property. Then follows inevitably an attack on personal rights. The interrelationship between human rights and property rights is often not realized until encroachment by government on the former begins. In fact, it usually happens that the very groups in the population for whose benefit property rights are attacked are the groups whose personal rights are in the end most seriously infringed. It is for this reason that the laboring classes in Great Britain have rejected the doctrines of Lenin and are the uncompromising enemies of Hitler.

The violation of law by a government does not nullify law.[4] It merely controls by force a particular situation. The greatest menace to civilization is a government which considers itself above law.

Contributing also to the break-down of national law is the assumption of heavy economic responsibilities by governments without a corresponding development of judicial control and administrative efficiency. Frequently there is not an adequate appreciation of due process of law and fundamental rights guaranteed by an independent judiciary. In many cases there are legal forms and phrases which are nullified by political realities. Under the inspiration of nationalistic and socialistic ideas, governments minimize the place of the individual in the social order and preach their own omnipotence by propaganda.

III

The tendencies which are breaking down law have, in the second place, affected international law. They have resulted in some cases in the virtual denial of the existence of international law, especially the law of diplomatic protection. Governments seek to avoid responsibility for their unjust acts by the argument that national law is always superior to international law. They deny all protection against the collective force of the State. In part this situation results from a failure to distinguish between the substantive and the procedural aspects of international law. It can be shown, I believe, by the great mass of authorities, writers and findings of international tribunals, as well as by the decisions of national courts, that there are accepted principles of substantive international law which protect and guarantee the personal and property rights of aliens who cross frontiers.[5] Here and there differences of interpretation exist, but no serious dispute exists over basic principles which fix the responsibility of nations with respect to the property and personal rights of aliens within their borders.[6]

It is when we turn to the question of procedure that the political element enters and law begins to break down. This is due to the fact that nations have not set up adequate courts, tribunals, or commissions for the purpose of applying to particular cases the accepted principles of substantive international law. Therefore, the only resort, once there has been a denial of justice in the offending country, is a political appeal to that Government either directly or through the diplomatic channels.

Obviously, this procedure may not be satisfactory. Foreign offices are burdened with a variety of issues, and their views with reference to the merits of a particular case may be colored by other matters which may seem for the time being more important. Nevertheless, it is an accepted principle that the nationals of a country are entitled to the support of diplomatic interposition for the purpose of protecting under international law their personal and property rights in foreign countries, and the ineffectiveness of this procedure in some cases does not modify one jot the substantive rights of an injured alien under international law.

IV

War follows in sequence the break-down of international law. Somewhere in Plutarch we read that the laws speak too softly to be heard in the noise of war. In war the laws are silent.[7] Unhappily they are not only silent; they are forgotten. Men learn the immediate advantage which may come to favored groups from the use of force. Conceptions of justice, order, and impartiality are repudiated and law is set at naught.

Forces of destruction have been loosened by the present war—forces which are not only destroying material things but which are undermining the social and political restraints which are the accumulated results of civilization. They are giving impetus, if not sanction, to the above-mentioned destructive tendencies. They are ignoring principles of law and weakening respect for law.

We live then in an age which has forgotten first principles. Even lawyers seem to have forgotten first principles. Laws are like raw clay in our hands which we seem unable to mold into the useful pottery of our everyday life. We have no philosophy of law to guide the shaping of a new social order.

V

We should again reaffirm and give life to the simple truth that the reign of law is supreme both over individuals and over governments. W. A. Robson in his book, Civilization and the Growth of Law, says (271–273):

"There are many different conceptions of the nature of juridical law. 'Each shows us a picture of some ultimate basis, beyond reach of the individual human will, that stands fast in the whirl of change of which life is made up. This steadfast ultimate basis may be conceived as the divine pleasure or will or reason, revealed through a divinely ordained immutable moral code. It may be put in the form of some ultimate metaphysical datum which is so given us that we may rest in it forever. It may be portrayed as certain ultimate laws which inexorably determine the phenomena of human conduct. Or it may be described in terms of some authoritative will for the time and place, to which the wills of others are subjected, that will deriving its authority ultimately and absolutely in some one of the preceding forms, so that what it does is by and large in no wise a matter of chance.'

"The liberation of the human mind from the cramping influence of religious assumptions respecting the nature of the universe; the destruction of authoritarian dogmas concerning the sanctity of law and behavior of physical matter; the banishment of sprites, demons, angels, gods, witches, and wonderworkers of all kinds to the realm of myth and legend; the substitution of rational analysis for a belief in supernatural intervention and miraculous interference in the affairs of daily life; the awakening of a spirit of patient and impartial inquiry into the processes of nature; the belief that the behavior of all phenomena is subject to the operation of known or knowable causes and effects; the recognition that the laws of man are what men make them and the laws of nature what men discover them to be; all this constitutes a supremely important movement in the evolution of the human race. It forms, one may say, the most essential step toward freedom and knowledge and power that the human mind has yet taken.

"No less impressive is the craving to discern some ultimate foundation of truth and certainty on which to rest the laws of nature and of man. All through the ages and still today men have sought a rock upon whose stubborn sides the waves of doubt and disbelief could beat in vain and on whose surface the ravages of time would leave no mark. To discover by the light of reason a substratum of ultimate and unchanging truth, and to know, again by reason, that it would stand for all time impregnable against the assaults of reason; such was the aim of the ancient Greek philosophers who lived and held their discourse more than 2,000 years ago. Such is still the aim of those who hold aloft the torch of reasoned thought today."

Scholars in the ancient world and in later times scholars trained in both the Anglo-American and civil systems of law have discussed the origin and nature of law. Law, they severally tell us, comes either from God or from reason or from experience.

[4] Cp. E. Schwer, Catholic Social Theory, translated by B. Landheer, St. Louis, 1940, on the theories of Thomas Aquinas and Saint Augustine.

[5] Grotius was the first one to stress the possibility of a supernational law which was based upon the community of states.

[6] Except, naturally, in case of nations which deny fundamental individual rights altogether.

[7] "Silent enim leges inter arma," Cicero, Pro Milone, 4.

First. God: Plato began his "laws" with a reference to the divine origin of law.[8] Even when we have rejected the sacrosanct conceptions of law which controlled when the human spirit was subservient to magic and fear of the supernatural, we find persisting with tenacity the belief that the universe is governed by a moral force; that we live in an ordered world; and that any elimination of the divine from law leads to the unpleasant conclusion of an atheistic world.[9] In our sophisticated age, we like to avoid the question whether there is a universal reason or a universal moral law. Personally, I find no inconsistency between the recognition of a divine law-giver and the acceptance of a rational system of law. Moreover, I doubt whether from a purely practical point of view man can, especially in this age, dispense with the moral or religious[10] element in the administration of law.

Second. Reason: In the first century Cicero said:[11] "What is more divine, I will not say in man only, but in all heaven and earth, than reason? And reason, when it is full grown and perfected, is rightly called wisdom. Therefore, since there is nothing better than reason, and since it exists both in man and God, the first common possession of man and God is reason. But those who have reason in common also have right reason in common. And since right reason is law, we must believe that men have law also in common with the gods. Further, those who share law must also share justice; and those who share these are to be regarded as members of the same commonwealth."

"In civilized countries," says Roscoe Pound,[12] "men are compelled to administer justice by formulas. These formulas are designed to express ideas of right and justice and as a means to promote right and justice. But there is always danger that we forget those ideas and lose sight of those ends and treat the formulas as existing for their own sake. Since the time of the stoics men have appealed to Nature to save ethical, political, and juristic thinking from this danger; and by Nature they have meant reason and general principles of right. The appeal to reason and to the sense of mankind for the time being as to what is just and right, which the philosophical jurist is always making, and his insistence upon what ought to be law as binding law because of its intrinsic reasonableness, have been the strongest liberalizing forces in legal history."

Blackstone believed that the human mind could subjectively discover, so far as they are necessary for the conduct of human relations, "the eternal immutable laws of good and evil."[13] Jeremy Bentham poked fun at Blackstone's law of nature, but he was quite as abstract and as dogmatic on urging his objective test of right and wrong in law and legislation; namely, "the greatest happiness of the greatest number."[14] Both of these writers had implicit faith in reason's ability to discover the ultimate standards of law and to apply them to human society.

I could not in a volume, much less a speech, review the literature[15] on natural rights and law of nature. I may be called old-fashioned for even mentioning them. But "natural rights" played a mighty role in the creation of the American States. A mere sense of gratitude should impel us to respect their memory, and it might even invite us to consider whether we have achieved the social ideals which were the promise of the days of the great liberators and patriots who found their inspiration in the law of nature. Should we yield to the new ideologies, less adapted to our social and economic needs, before we give reality to principles which were written into our republican constitutions?

Third. Experience: The historical school of law undertakes to discover the principles of justice and right from human experience. It was a reaction against the codification movement and its arbitrary rules which lacked a sufficient historical foundation. Principles of law, it argues, have become established through the trial and error of history. The pendulum of experience has, as it were, finally come to rest at standards of conduct which the community accepts as right. Conclusions of right and wrong expressed in custom and in the cases decided by judges throughout the years are the rules which mankind recognizes as law. We associate with this school such names as Friedrich Karl Savigny[16] and Sir Henry Maine.

Fourth. Other theories of law are current—philosophical, historical, and analytical.[17] Some of them are products of nationalistic and socialistic movements and are to be judged for what they are worth as part of the propaganda of these movements and as attempts to give a philosophic basis to economic or political programs. I am not willing to classify as a philosophy of law the suggestion that laws are merely a working basis of human existence and that justice is determined by the pragmatic test of whether or not it works. Nor do I accept as a philosophy the materialistic concepts of law that law merely reflects the system of production and economic power relations which exist in a society in any given time.[18]

The mechanical positivist theories of law have had considerable vogue.[19] They have been sharply criticized and the German jurist Bergbohm has even shown that they have taken over parts of the theory of natural law. The sociological theory of law also has its followers. It at least has the merit that it aids us to discover the inadequacy of positive law. Moreover, the results of its analysis supplements the vagueness of natural law.[20]

In seeking a theory of law we sooner or later come back to the conception of freedom. Immanuel Kant thought that he gave us an adequate answer. Freedom, he argued, is not the antithesis of law; it is the highest expression of law. Man is free as an ethical subject, but he is governed by a system of law imposed upon himself.[21]

VI

Necessarily my review of the theories of law has been sketchy. I will be content if it has served to help to stimulate thought and discussion among the lawyers of the Americas. I do not expect agreement. For some lawyers one theory will be more persuasive than others. In my opinion, those thinkers have the best of the argument who hold that there are laws—great principles of human relationships—which men in civilized countries obey whether there are sanctions or not. They include at least a workable respect for civil and property rights and for contract obligations; also due process of law not only in suits between man and man but also in suits to which government is a party. The application of these principles change; they themselves do not change. They define the relation of man to man; of government to man and man to government, and of government to government. Nationalism, socialism, or capitalism do not modify the approach which they compel. Nationalistic, communistic, or inidividualistic creeds or systems can distort them but they rise above restraints and abuses and finally triumph. Legislative law should seek to proclaim these fundamental rules of conduct and to apply them to the changing needs of our time. No difference how far short of the ultimate standards of justice the authorities of our different countries fall, we need

---

[13] Cp. Sir William Blackstone, Commentaries on the Laws of England, vol. I, introduction, sec. 2:

"Human law must not contravene nature. This law of nature, being coeval with mankind, and dictated by God himself, is, of course, superior in obligation to any other. It is binding over all the globe, in all countries, and at all times: no human laws are of any validity, if contrary to this; and such of them as are valid derive all their force, and all their authority, mediately or immediately, from this original."

[21] Kant, Fundamental Principles of Morals (the Harvard Classics, vol. 32):

"As a rational being, and consequently belonging to the intelligible world, man can never conceive the causality of his own will otherwise than on condition of the idea of freedom, for independence on the determining causes of the sensible world (an independence which reason must always ascribe to itself) is freedom. Now the idea of freedom is inseparably connected with the conception of autonomy, and this again with the universal principle of morality which is ideally the foundation of all actions of rational beings, just as the law of nature is of all phenomena." Cp. Article on Kant in Encyclopedia of the Social Sciences, Macmillan Co. (1932).

the guidance of these ultimate standards to make efforts toward improvement in the social order worth while.

VII

Whether we like it or not we are destined to live in a world of many laws. Government is playing and will play an increasingly important role in the regulation of human activities. This tendency can be, but need not be, destructive of ultimate principles of law in an enlightened society. In fact, government can and should become a force, not destroying as it is doing in many places today, but preserving and protecting the realm of individual right in which law reigns.

Unfortunately, the great principles of law, even when accepted in theory, are often distorted in their application. Personal and political factors intervene. Law is a human institution. Public officials in dealing with both national and international questions often seek an excuse for not applying principles of law to a particular case when they would readily admit the soundness of the principles in the abstract or even in the particular case if their political objectives called for the support of the principles.

We are here in Habana to compare laws. Let us compare, not our bad law, but our good laws. We are also here to seek in our systems of law a common basis for living in peace and in cooperation. The civilization of a community of human beings can be measured by its laws. I do not mean merely the statutes which it enacts or decrees from time to time but also its acceptance and enforcement of those minimum standards of conduct for men and governments which reason and experience in all nations and in all ages have been wont to associate with an enlightened society. Not only individuals but governments violate at their peril these ultimate standards of justice, impartiality, and fair dealing.

Dr. Albert M. Justo, of Argentina, observes in the introduction of a recent work: [1]

"Comparative law shows the way to arrive at an understanding of the world's great juridical systems. This method enables us to get away from the regionalism or the conservatism in which, as a rule, the law-making process unfolds.

"Far from favoring a unilateral conception of the law, we think it indispensable, in this period of international confusion, to fight for a reciprocal understanding of the systems in force in the American countries in order to orientate the legislative reconstruction toward a frontierless juridical order."

Can we ever realize a juridical order without frontiers? If we look superficially only at laws, we cannot. But if we look behind the laws we will find the unity of law, a unity of principles which gives life and power to both Anglo-American and civil law and which give us a common frontier in the universe of our hopes and aspirations.

VIII

I have tried to speak today, not as a citizen of the United States, not as a citizen of the Americas, but as a citizen of that commonwealth of men everywhere in which law should reign. Even if we should succeed in discrediting the theories of law which condemn law to slavery under nationalistic and socialistic creeds, we will still hear plausible arguments for regional or inter-American law. We should not yield to this temptation. Isolation is no more an intelligible policy for the hemisphere than it is for a nation.

I recognize the contributions which jurists and statesmen throughout the Americas have made to the clarification and development of law, and this effort should be encouraged; but at times in former conferences of the American states attempts have been made to have local and specialized conceptions of law proclaimed as inter-American law. We will not fall into this error if as such cases arise we remind ourselves that fundamentally there is no such thing as a system of inter-American law as distinguished from law in and among all nations; that the principles of justice which we may proclaim and codify do not differ from the principles which apply to human relations in all the continents.[2]

Political and military leaders on continental Europe and in eastern Asia are today seeking unity through force. Instruments of power and empire! Force has been systematized and organized. It has been provided with a philosophy and its disciples are legion.

Even in these uncertain times when many hesitate, awaiting the outcome of battle, we at least should not falter in giving our answer. Our answer to unity through force is unity through law. It is a unity as old as the Hebrew prophets and as young as the hopes and aspirations which spring up daily in the hearts of the millions who love peace with justice. It comprehends in its ample scope not only the peoples of the hemisphere but all the nations of men. It offers security and prosperity within nations; understanding and peace among them. If it be said that I am visionary, if it be said that tanks and bombers do not permit us now to dream of a better world, I reply, "'Tis not what man does which exalts him but what man would do."

You Answer Him

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

ARTICLE BY FRANK C. WALDROP

Mr. REYNOLDS. Mr. President, Mr. Frank C. Waldrop is the foreign and political editor of the Washington Times-Herald, of Washington, D. C. Daily he writes a column for that newspaper. Several days ago I ran across a most interesting column by his pen entitled "You Answer Him." I respectfully ask unanimous consent that this be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[2] Cordell Hull, Secretary of State, said at the Eighth International Conference of American States, Lima, Peru, December 10, 1938:

"Nor has the earnest search for world order under law been confined to any one portion of the globe. The developments which have taken place in the Western Hemisphere have been a part of a mighty stream of new ideas, new concepts, new attitudes of mind and spirit, which has coursed and ramified, with differing degrees of vigor and success, throughout the world. We have made important contributions to that stream, and have, in turn, been nourished by it."

Cp. Mr. Hull's address on the Spirit of International Law, Nashville, Tenn., June 3, 1938.

[From the Washington Times-Herald]

YOU ANSWER HIM

(By Frank C. Waldrop)

A young lawyer flourished his draft registration card the other day and said:

"You see this? I had a high number in the draft, and they called me up months ago. I was perfectly healthy, so they were all set to send me off to camp when they found I am still going to school.

"I have my law degree, but I am studying for a final degree. They told me I would be deferred until July so I can get it.

"So now I'm studying and trying to make a living on the side, too.

"But I'm not getting very far. I can't take any cases worth having, because I'll be drafted before I can get 'em to trial. I can't get a job, because I will have to go off to camp just about the time I know what I am hired to do.

"What's provided in this country for guys like me?"

It's no good telling anybody as smart as that fellow he is just supposed to fight and be proud of the chance. That's too unsophisticated an answer for a lawyer, any lawyer, to swallow.

It's no good saying that his generation has a rendezvous with destiny. He doesn't want a rendezvous with destiny. He wants a rendezvous with a rich client in the United States Supreme Court. And why not, after all?

And it's no good calling him names. He has made up his mind about that.

"I'm going to do my part," he says. "I'm not scared and I'm sure I'll make a good soldier.

"But what I want to know is how come I must give up my career and be a military day laborer at $21 a month—and that's what I'll be—while a carpenter, doing day labor on a powder mill, will be making nearly that much every day, 5 days a week, and time and a half over the week-end?"

A very embarrassing question. Try to answer it if you doubt that. Remember, you're dealing with an educated and angry young man who isn't fooled by flag waving. He's going to fight, and fight hard, because that has to be done. Die if necessary. But he's not going to be soothed by phony talk. You'll have to give him and his kind a straight answer, so be thinking about it.

In the meantime, you can issue a point of fact for carpenters and all others to consider. If you switch a young lawyer into a soldier, you put ideas in his head that he never would have got hanging around the Supreme Court in a swallow-tailed coat.

One idea he already has: That he doesn't like "these strikes."

"How is it," he wants to know, "that a soldier can't strike but a man making things with which the soldier must fight, can strike?"

"How is it," he also wants to know, "that the Government can commandeer a man's business—shut it down, take it over, tax it to bankruptcy—and yet the Government can't do anything about the employees of that plant?"

He had particularly in mind the aluminum pot and pan industry of Ohio, which was told a few days ago by the Office of Production Management that it will have to quit because the aluminum is needed for airplanes.

"The workers in that plant," observed the young lawyer, "will get jobs because the Government has plans for them. But what happens to the owners? The stockholders? What happens to the people who put that plant together and made it tick? All they get is a big bill for taxes."

This young man has a curious turn of mind, obviously. He isn't looking at things the way so many of the people have become accustomed to. It has almost become a habit in some quarters to assume that a strike is a sacred right and never to be challenged either

as to its wisdom or as to its inalienable authority.

But that's not going to last. You don't have to be a young lawyer whose career is about to be busted by the draft to see that.

In the office of the Under Secretary of War there hangs a chart on which is marked up every day the rising total of man-hours of defense labor lost through strikes.

It is a startling thing to see. Somewhere on that chart there is an X point, at which you can expect the War Department to take action. Heads will be cracked, whether they are heads of management or of labor.

The young lawyer by that time will undoubtedly be in uniform and sweating through bayonet practice at $21 a month. The only question is how many high-priced carpenters and others will have driven themselves right into his class by shortsighted behavior.

Temporary National Economic Committee

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

CATALOG OF PUBLICATIONS OF TEMPORARY NATIONAL ECONOMIC COMMITTEE

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a catalog of various publications of the T. N. E. C. This catalog shows the prices for which the publications may be obtained at the office of the Superintendent of Documents. There has been so much interest in the publications of the committee that I feel it desirable that the complete catalog be printed in the RECORD.

There being no objection, the catalog was ordered to be printed in the RECORD, as follows:

DESCRIPTION OF HEARINGS AND MONOGRAPHS OF THE TEMPORARY NATIONAL ECONOMIC COMMITTEE

HEARINGS

Part 1, Economic Prologue, December 1, 2, and 3, 1938. Wasted resources; production of commodities in prosperity and depression; employment and pay rolls in depression; cost of depression to Government; business population growth; extent of corporate activity; size of enterprises measured by employees; measures of concentration by employees; size of enterprise measured by assets; growth of large enterprises; problems of the individual businessman; shifts in importance of industries and trades; measures of concentration; fluctuations in business conditions; unemployment and the labor supply; basic assumptions of American competitive capitalistic system; problems confronting Temporary National Economic Committee.

Superintendent of Documents, 25 cents.

Part 2, Patents, December 5, 6, 12, 13, 14, 15, and 16, 1938. Automobile industry: the policy of free licensing, the cross-licensing system, the license-royalty system; the glass-container industry: control of an industry through patents, patents in the glass-container industry, the largest glass producer in the world, litigation and licensing, the fruit-jar producers, the control of the lehr, the elimination of a Texas independent, refusal to license in Detroit, record of an independent, the specialty glass field, glass fiber and wool.

Superintendent of Documents, 75 cents.

Part 3, Patents, Proposals for Changes in Law and Procedure, January 16, 17, 18, 19, and 20, 1939. Examination of the patent laws and operation of industry under them; rate of filing of patent applications; distribution of ownership of patents; procedure in examination of patent applications; reform in patent procedure sought; assignment of patents to corporations by employees; "suppression of patents"; patent pools; recommendations of the Science Advisory Board on patent reform; need for scientific advisors in patent trials; value of patent system in reducing unemployment; need for single court of patent appeals; value of scientific research; value of patent protection to industry; patent infringement litigation discloses evils in present patent system; comparison of provisions of foreign and United States patent systems; licensing of patents; effect of abolition of patent system on competition.

Superintendent of Documents, 35 cents.

Part 4, Life Insurance, February 6, 7, 8, 9, 10, 14, 15, 16, and 17, 1939. Introductory statements and comment on size and importance of legal reserve life-insurance companies; growth, income and expenditures, and general comparisons; assets and investments; Metropolitan Life Insurance Co.; Management aspects: selection and attendance of directors in Metropolitan Life Insurance Co.; election of directors, Metropolitan Life Insurance Co., New York Life Insurance Co., Acacia Life Insurance Co., Mutual Life Insurance Co. of New York, analysis of recent elections in major companies; transactions of Mitchell D. Follansbee, director, Metropolitan Life Insurance Co.; growth of New York Life Insurance Co. and the selection and attendance of its directors; transactions involving interlocking directors and directors' affiliations: New York Life Insurance Co.; Mutual Life Insurance Co.; selection of directors—Home Insurance Co.; New York law governing conduct of life-insurance directors; transactions of Charles D. Hilles, director, New York Life Insurance Co.; transactions of Hendon Chubb, director, Prudential Life Insurance Co. of America; the Northwestern Mutual Life Insurance Co., election and selection of directors, duties, and standards of directors' conduct and policyholders' committee.

Superintendent of Documents, 50 cents.

Part 5, Monopolistic Practices in Industries, Development of the Beryllium Industry, February 28, March 1, 2, 3, 6, 7, 8, and 14, May 8 and 9, 1939 Monopolistic practices in industries: tendency toward monopolistic control of industry; relation between monopoly and depression; simplification of corporation set-up proposed; adequacy of antitrust laws as legal implements; causes of failure of present economic system; proposed economic reforms; representative cases of monopolistic and restraint of trade practices; respondent's right of appeal under Wheeler-Lea Act; section 7 of the Clayton Act; section 6 of the Federal Trade Commission Act; section 8 of the Clayton Act; financial structure, practice, rates, and returns of public utilities; financial accounting practices of utility companies; Federal incorporation or licensing of corporations; the basing-point system as practiced in steel industry; economic consequences of basing-point system; importance of sulfur and sulfuric acid; sulfur prices and profits; profits of sulfur companies; development of the beryllium industry; importance of beryllium; production and physical qualities of beryllium alloys; patent control in the industry; patent control over beryllium processing machines; reduction in price of beryllium sought to increase sales volume; "follow the leader" policy of pricing; cooperation between firms in price fixing of beryllium products; uncertainty as to amount of beryllium ore existing.

Superintendent of Documents, 75 cents.

Part 5–A, Federal Trade Commission Report on Monopolistic Practices in Industries, March 2, 1939. Résumé of formal action in restraint of trade cases, except sections 7 and 8 of the Clayton Act and the Robinson-Patman Act, July 1, 1930, to date; discussion of court decisions and summary of formal action in cases under sections 7 and 8 of the Clayton Act; informal investigations under section 7 of the Clayton Act; available economic material; agricultural implement and machinery industry; agricultural income inquiry; chain stores; competition and profits in bread and flour; cooperative marketing; house furnishings industries; household furniture, household stoves, kitchen furnishings, and domestic appliances; milk and milk products; open-price trade associations; packer consent decree; petroleum industry—prices, profits, and competition; premium prices on anthracite; price bases inquiry, portland cement, range boilers, utility corporations.

Superintendent of Documents, 15 cents.

Part 6, Liquor Industry, March 14, 15, 16, and 17, 1939. Presentation of conditions in the liquor industry; state systems of liquor control; the Federal Alcohol Administration Act; production by four largest units compared with total production; amount of whisky held in bonded warehouses by four large companies in comparison with whole industry's stocks; advantage of holding company set-up to producer; banking arrangements of the Schenley Corporation; bankers loan agreements with Schenley and Seagrams; distribution of liquor in "monopoly" states; effect of fair-trade laws on whisky prices; price concessions to distributors in "open" states sought by "monopoly" states; operations of D. C. L. and its subsidiaries in marketing Scotch whisky; typical sole agency contract; inception and operations of Distilled Spirits Institute.

Superintendent of Documents, 40 cents.

Part 7, Milk Industry, Poultry Industry, March 9, 10, and 11 and May 1, 2, and 3, 1939. Milk industry: problem of better distribution of wealth in dairy industry; suggestions for improvements in milk distribution system; retail and price received by farmer for fluid milk; need for protection to farmer; "cash and carry" method of distribution; proportion of purchase price of milk received by producer; "spread" between price paid to producer and that paid by consumer; The Borden Company's position in the milk industry; suggestions for improvement of conditions in the industry; establishment of cheese price by one exchange; percentage of milk and dairy products controlled by two major distributors; concentration of dairy production in North Central area of United States; desirability of Government control in fixing sound price basis; return to National Dairy on invested capital; effect of large holding companies on milk industry; per capita consumption of milk in various countries compared with United States. Poultry industry; monopolistic practices in the poultry industry; effect of labor unions in the poultry industry.

Superintendent of Documents, 75 cents.

Part 8, Problems of the Consumer, May 10, 11, and 12, 1939. The consumer movement; typical American consumer; inadequate consumer information; United Conference against the High Cost of Living; mislabeling of consumer goods; brands not a standard for quality; need for standard sizes; price not a guide to quality; confusion of brands, sizes, and prices; consumer credit; price fixing; consumer services and organizations; commodity rating services provided by commercial agencies; consumer "educa-

tional" material supplied to schools by commercial agencies; consumer organizations sponsored by commercial agencies; problem of marketing new consumer products; need for standard ratings in marketing household equipment; functions and activities of National Bureau of Standards; use of standards in purchases of consumer goods by public agencies.

Superintendent of Documents, 25 cents.

Part 9, Savings and Investment, May 16, 17, 18, 22, 23, 24, 25, and 26, 1939. The flow of savings and the flow of investment; effects of changes in the volume of capital formation on the size of the national income; factors responsible for the prosperity of the twenties; relation of savings to investment; outlets for savings, 1921–38; composition of total expenditures offsetting savings, 1921–38; effect of Government action on the volume and flow of the national income; contribution of Federal Government to income-producing expenditure; sources of capital funds—United States Steel Corporation, 1921–38; sources of capital funds—General Electric Co.; sources of capital funds—Pratt & Whitney Aircraft Co.; sources of capital funds—General Motors Corporation, 1921–38; significance of internal financing; social consequences of hoarding; growth in the volume of savings held by selected savings institutions, 1910–38; geographical concentration of assets of savings institutions; volume of public construction—Federal, State, and local, 1920–38; role of public works in solution of investment problem; role of legal list in directing flow of investment funds; effect of expanding the legal list of flow of investment funds; function and development of capital credit mechanism; increasing credit facilities available to small businessman; proposal for creation of capital banks with Federal credit for public works; the double budget—increasing importance of expenditures for investment in the total outlay of the Federal Government, cautions on use of a double budget; proposal for setting up institutions to finance small business; major difficulties encountered by small business seeking new capital.

Superintendent of Documents, 75 cents.

Part 10, Life Insurance, June 6, 7, 12, 13, 14, 15, 16, 20, and 21, 1939. Intercompany agreements; the Group Association, nonparticipating rates, annuities, settlement options, surrender values and surrender charges, medical information bureau, "jumbo risks," replacement agreement, reinsurance, terminations of life insurance—ordinary and industrial; theory of life insurance; lobbying and legislative activities—association of life insurance presidents; savings-bank life insurance—opposition of insurance interests; savings-bank life insurance—description.

Superintendent of Documents, 75 cents.

Part 10–A, Life Insurance, February 12, 1940. Operating results and investments of the 26 largest legal reserve life insurance companies domiciled in the United States, 1929–38.

Superintendent of Documents, 35 cents.

Part 11, Construction Industry, June 27, 28, and 29, July 6, 7, 11, 12, 13, and 14, 1939. Construction employment; volume of construction; available housing and housing needs; factors of housing costs and need for lower costs; effect of reduction in capital cost as compared to similar reduction in interest rate, the economic purpose of antitrust enforcement in removing restraints of trade in building; summary of the principal restraints of trade in the building industry; economic effect of removal of restraints in the building industry; procedures now available to attack restraints of trade in the building industry; necessary procedural amendments; "yield insurance" as a stimulant to low-cost housing; the "Lambert plan" for low-rental housing; effect of technical research on housing costs; interest rates and service charges; where home ownership savings can be made.

Superintendent of Documents, 75 cents.

Part 12, Industrial Insurance, August 23, 24, 25, 28, 29, 30, 31, and September 5, 6, and 7, 1939. Purpose and characteristics of industrial insurance; profits of companies writing industrial insurance; Monumental Life Insurance Co., history and description, transformation from mutual to stock company; Prudential Insurance Co. of America, operations of industrial department; industrial insurance policy terms; laws applicable to industrial insurance; adjustments of insurance holdings; Metropolitan Life Insurance Co.; Western & Southern Life Insurance Co.; cost of universal death benefit system; agency practices.

Superintendent of Documents, 75 cents.

Part 13, Life Insurance, September 11, 12, 13, and 22; October 26 and 27; December 7, 8, 14, 15, 20, 21, and 22, 1939. Travelers Insurance Co.; Shenandoah Life Insurance Co.; sales and agency practices; reinsurance and rewriting.

Superintendent of Documents, 75 cents.

Part 14, Petroleum Industry, September 25, 26, 27, 28, 29, and 30, 1939. Importance and economic significance of petroleum industry; percentage of ownership or control by major companies in various branches of the petroleum industry; proration; effect of proration on price; decline in price of petroleum products compared with general price decline of commodities; investment and income of 24 oil companies; petroleum industry income and the national income; the industry's transportation systems; keenness of competition in retail marketing; contractual relationship between integrated companies and retail marketers; cracking process patents; pipe-line transportation, rates of return, and the economic results; similarity in finished gasoline; excessive marketing costs in distribution of gasoline and oil; sponsorship of the Connally Hot Oil Act; pipe-line profits and rates of return; conservation differentiated from proration; cost of production; price posting and question of price leadership.

Superintendent of Documents, 75 cents.

Part 14–A, Petroleum Industry, Economic Outline and Data Relating to the Petroleum Industry, September 25, 1939. The industry in general: world production and consumption of petroleum; the petroleum industry in the United States; the twenty major oil companies: position of the twenty major oil companies in the various branches of the industry; crude-oil activities; transportation; refining; marketing; total assets and capital employed by major oil companies; earnings, dividends, and changes in surplus of major oil companies.

Superintendent of Documents, 75 cents.

Part 15, Petroleum Industry, Section II, October 2, 3, 4, 5, 6, and 7, 1939. Forces "squeezing out" the independent operator; rail rates lower on short than on long hauls; use of pipe lines denied the independent; effect of pipe-line profits on competition; suggestions for improvement of economic conditions in the industry; administration of proration in Texas; rapid progress of trucking as means of petroleum transportation; effect of pipe-line transportation on competition in the industry; advantages and disadvantages of integration; description of processes of modern refinery; percentage of various products obtained from a barrel of crude; cost of operating modern refinery; cost of producing gasoline; reserves of crude oil and percentage held by 20 largest companies; shifting position of 16 largest companies in the industry; existence of competition in retail marketing; reduction in gasoline price from 1920 to date; jobbers' profit margin; present market control; report on marketing practices in the industry; inducements offered to retailers for becoming exclusive dealers; jobber contracts; acquisition of jobbing businesses by major company; publication of tank-car and service-station prices; loaning of equipment to dealers and its effect.

Superintendent of Documents, 75 cents.

Part 15–A, Petroleum Industry, Report on Marketing Practices in the Retail Distribution of Motor Fuel and Motor Lubricant Products, Saturday, October 7, 1939.

Superintendent of Documents, 35 cents.

Part 16, Petroleum Industry, Section III, October 9, 10, 11, 12, 13, and 16, 1939. Costs of marketing and the difficulties of independent marketers; divorcement of marketing recommended for integrated companies; effect of proration on the independent; inducements offered jobber to become exclusive dealer; price structure of regular gasoline in various representative cities; basing point system in the petroleum industry; efforts of integrated companies to discourage competition from independent brands of Pennsylvania oil; absorption of retail outlets by major oil companies disclosed by marketing survey; discrimination, through price differential, between exclusive and "split" dealer and its effect on price to the consumer; interest and objectives of Petroleum Retailers Association; the "blockade" method and other practices; four types of retail outlets; Federal Trade Commission report on marketing practices in the industry.

Superintendent of Documents, $1.

Part 17, Petroleum Industry, Section IV, October 17, 18, 19, 20, 23, 24, and 25, 1939. Conditions peculiar to the industry in the Rocky Mountain States; importance of Wyoming as an oil-producing and refining State; aims and activities of the National Association of Petroleum Retailers; conservation of oil and gas pools; engineering aspects of conservation; unit operation; economic aspects of conservation and waste in oil production; naval oil reserves; Bureau of Mines' estimates of national demand and methods used in calculation, costs, profits, ultimate prices; ability and integrity of corporate management; opportunities for the independent in producing; opportunities for the independent in refining; profits and losses in marketing by Standard Oil Co.; opportunities for the independent in marketing; the Iowa plan; crude oil, posted prices, conservation; question of Government intervention and regulation of conservation; relation of optimum production to price.

Superintendent of Documents, 65 cents.

Part 17–A, Petroleum Industry, Replies of Oil Companies to the Committee Questionnaire on Financial Data and Related Topics, October 20, 1939. Restatement of capital stock and revaluations of assets; accounting practices and policies; comparison of compensation paid to officers and directors, net earnings applicable to common stock, and dividends paid on common stock; summary of companies reporting that surplus was credited for part of the proceeds received from the original issue of capital stock; analysis of shares of capital stock voted at stockholders' meetings; replies to question 32 of Temporary National Economic Committee questionnaire pertaining to costs of gasoline and costing policies; analysis of consolidated assets and consolidated income classified by branches or departments.

Superintendent of Documents, 30 cents.

Part 18, Iron and Steel Industry, Iron Ore, November 1, 2, and 3, 1939. History and background of the iron ore industry; the major iron ore producers; financial connections between ore companies and steel companies; acquisition of stock in Oglesbay, Norton Co., by Cleveland-Cliffs Iron Co.; Cyrus S. Eaton project for Midwestern steel merger; stabilization and competition; formation of the National Steel Corporation; the Rowe Mine; Pickands, Mather-Butler Bros. ore contract; the "United Front" policy; the Lake Erie base price; price rigidity; iron ore pricing; establishment of the base price; variations from the base price; effect of cutting the market price; limited market for ore sales; price discussions; significance of ore prices to integrated and nonintegrated steel producers; lake freight rates on iron ore; question of

modification of existing laws to allow more freedom for businessmen; iron ore reserves.

Superintendent of Documents, 30 cents.

Part 19, Iron and Steel Industry, General Price Policies, November 6, 7, 9, and 10, 1939. Iron and steel prices during World War I; the present situation; foreign and domestic demands; supply conditions; expectations of buyers and sellers; structure of United States Steel Corporation; the 1936 price increases; steel prices in 1937 and first half of 1938; the June 1938 price reduction; reasonable prices"; the Birmingham differential; Pacific coast prices; "extras"; change in extras in May 1938; price changes; government bids; Bethlehem's price-announcement policy; establishment of new basing points by Bethlehem; tin-plate prices; question of stabilization; operations of National Steel Corporation; price policy for steel industry suggested by Mr. Weir; development of the continuous rolling mill; continuous rolling mill license agreements.

Superintendent of Documents, 35 cents.

Part 20, Iron and Steel Industry, Price Policies on Specific Products, Pacific Coast Problems, Steel Export Association, November 8, 13, 14, and 15, 1939. Price relationship between finished and semifinished steel; tin-plate prices; contracts for the sale of tin plate; contracts for the sale of cans; employer cooperation in the British Isles and in the United States; tubular products; question of selling pipe f. o. b. the mill; competition between lap-weld and seamless pipe; lap-weld price discussions in August 1938; pricing of seamless pipe; Pacific Coast steel fabricators' problems; fabrication in transit; the Steel Export Association of America; the problem of nonmembers' shipments; possible effect of cartel control on home markets; question of eliminating the American nonmember.

Superintendent of Documents, 35 cents.

Part 21, War and Prices, December 4, 5, 6, 7, and 8, 1939. Effect of wars on prices; price trend, 1913 to 1922; prices, at the beginning of the World War, in present war, since August 1939; American foreign trade during the World War; inventories and production during the World War period and since August 1939; present price trends as viewed by an industrial purchasing agent; the problem of adequate supplies of commodities controlled by belligerents; present price trends as viewed by a municipal purchasing agent; price problems viewed by an institutional purchasing agent; automobile manufacturers compare present automobile prices and operating costs with those of 20 years ago; effect of lower costs on prices and volume of demand; average price increase on automobile materials since outbreak of war; effect of European war on American economic system; evaluation of trade agreements and other sanctions as effective controls of wartime trade; present price trends as viewed by a large retailer; information concerning productive facilities and their use, market conditions and inventories useful in preventing runaway prices; problems of the small merchant when prices change; relationship between mark-up on cost and profit on sales; state price control laws; proposed organization for prevention of unjustified price increases.

Superintendent of Documents, 65 cents.

Part 22, Investment Banking, December 12, 13, and 14, 1939. Brown Brothers Harriman & Co.—Harriman Ripley & Co., Incorporated, stock ownership by Harriman family in Brown Harriman & Co., Incorporated, the Banking Act of 1933; financing of Chicago Station Co., agreements among investment banking houses on participations in Chicago Union Station Co. financing, the 1935 refunding—Effects of the Banking Act of 1933; financing of Pacific Gas & Electric Co., the benefits of position in advertising, realignments in investment banking business—1933–1934; Charles E. Mitchell—Blyth & Co., Inc., return of "the Morgan people" to the investment banking business, utility holding companies to which Morgan Stanley & Co., Incorporated, had succeeded J. P. Morgan & Co. as banker, competition in investment banking, the telephone group, value of opening deposit account with J. P. Morgan & Co. to an investment banking house, Morgan Stanley & Co. "survey of street conditions."

Superintendent of Documents, 50 cents.

Part 23, Investment Banking, December 15, 18, 19, and 20, 1939. Financing of American Telephone & Telegraph Co.—J. P. Morgan & Co., percentage interests of original contractors in 1906 and subsequent syndicates, investment banking as a profession, distribution of spread on Telephone issues, competitive bidding as an alternative, telephone financing subsequent to the Banking Act—activities of George Whitney, the Illinois Bell Telephone syndicate, former members of Telephone group affected by Banking Act of 1933, alternative methods of selling securities; financing of railroad maturities, 1935, function of J. P. Morgan & Co. in refunding operations; relations of J. P. Morgan & Co. to Morgan Stanley & Co., analysis of business done by Morgan Stanley & Co., Incorporated, enumeration of former accounts of J. P. Morgan & Co. underwritten by Morgan Stanley & Co., Incorporated; accounts not underwritten, partners' interests in J. P. Morgan & Co. in relation to their preferred-stock interests in Morgan Stanley & Co., Incorporated, proposal by Mr. Leffingwell to abandon policy of tax exemption on certain Government obligations, tax-exempt income to J. P. Morgan & Co. and its partners.

Part 30, Technology and Concentration of Economic Power, April 8, 9, 10, 11, 12, 15, 16,

17, 18, 19, 22, 23, 24, 25, and 26, 1940. Report on the depression of 1873; invention of the art of invention; why are innovations introduced?; important types of technological change; labor-saving devices; how measure the impact of technology?; new industries created by technology; distress to laborers caused by machines; productivity of labor; increased capital per unit of product; shortened working hours; the mining industry; the national labor force; the potential working force; the efficiency of capital; technology and the business cycle; does industry need more capacity?; who benefits from technology?; how many are now employed?; average cost of production; nonproductive workers; technology and modern business empires; technology and pressure groups; technology and war; America unlimited; modern industrial research; government research expenditures; fields for further research; research in General Motors; patent policy of General Motors; government aid to research; mass production and mass purchasing power; effect of patents on invention; low-priced automobiles; cost of labor within the Ford plant; proportion of skilled to unskilled workers; a $500 automobile; technology and migration of industry; cost of production as measure of effect of technology; decentralization in Ford Motor Co.; trivision for X-ray purposes; problems of financing development of trivision; changes in productivity since 1928; effect of the "speed-up"; effect of shortened hours on productivity; production and employment since 1929; regularity of employment; effect of mechanization upon skill; effect of continuous strip mills on age of workers; operation of continuous mills at Middletown; production in American Rolling Mill Co.; labor costs for steel production; causes of increased volume; displacement of other industries by sheet steel; financing of new capacity; lack of investment as cause of unemployment; National Association of Manufacturers' study of older workers; provisions for displaced employees; ghost towns; cost of production in mechanized mills; mergers and consolidations in steel mills; greatest change in employment after 1936; extent of mechanization cost borne by labor; interindustry competition; problem of new entrants to labor force; proposed regulation of mechanization; technological change in the railroad industry; future progress in railroads; mechanization and wage changes in railroads; details of labor displacement by mechanization on railroads; resistance to technological change; introduction of dial switchboard in telephone companies; qualifications for employment in American Telephone & Telegraph Co.; progress of dialization after 1933; possibilities of expansion; analysis of effect of displacement; displacement in the Boston area; dial service versus manual service; earnings of employees; unionization in the American Telephone & Telegraph Co.; employee attitude toward the dial; technological change in telegraphy; labor displacement in the telegraph industry; concentration of ownership in American Telephone & Telegraph Co.; reduction of employment; employee policies in the Bell System; separation pay; union attitude toward mechanization; suggestions for cushioning displacement; leveling of skills; technology and economic recovery; International Business Machines' share of the business machines industry; advantages of business machine; direct and indirect International Business Machines' employment; effect of mechanization upon earnings; physical and social effects of mechanization; training for reemployment; prospect of foreign markets; responsibility of industry to displaced workers; provision for unemployables; the growth and composition of white-collar group; industrial urban concentration; earnings of white-collar workers; changing status of clerical workers; the introduction of the clerical machine; machine displacement of clerks; unemployment—secular or technological; union contracts and technological change; technological change in the textile industry; technological advances in cotton textiles; technological advances in synthetic yarn; shift from silk to rayon; shift of production away from silk mills; labor displacement in silk mills; technology in agriculture; labor force on the farm; earnings for farm laborers; productivity in agriculture; prospects for increased employment in agriculture; effect of mechanization on farm investment; farm ownership and operation; prospect of great technological change on farms; increase of corporate farm ownership; effect of tenant farming on mechanization; cost of mechanizing a small farm; credit policy of International Harvester Co.; origin of migrants to the west coast; mechanization in the Wheat Belt; Corn Belt mechanization; expansion of holdings after mechanization; agricultural concentration by States; future of family-sized farm; recommendations to eliminate displacement of farm workers; increase in occupational training; mobility of labor; productivity of trained labor; training to reduce unemployment; American Federation of Labor attitude toward dismissal wage; retraining for the employed and unemployed; how a larger vocational program should be established; efficacy of vocational guidance; need for economic literacy; use of education for recovery; competition of coal and gas; workers' education; industrial recovery after depression; advantage of size in mechanization; work-creating technological change; labor and capital saving change; changes affecting raw materials; social accounting faulty; displacement and the young and old worker; displacement costs paid by workers; displacement costs chargeable to society; cooperation of employment agencies.

Part 31, Investments, Profits, and Rates of Return for Selected Industries: Investments, profits, and rates of return for tobacco processors, iron and steel manufacturers, principal steel companies, United States Steel Corporation, farm implements and farm machinery, cement companies, and rayon companies.

Superintendent of Documents, 40 cents.

Part 31–A, Supplemental Data Submitted to the Temporary National Economic Committee.

Superintendent of Documents.

MONOGRAPHS

1. Price Behavior and Business Policy, by Saul Nelson, Senior Industrial Economist, and Walter G. Keim, Statistician, Bureau of Labor Statistics. Price behavior and business policy; price flexibility; nonprice competition; the electric-equipment industry, an illustrative case; measures of price flexibility; conventional price lines; statistical data; types of geographic price structures; geographic practices in American markets; retail markets; distributive margins.

Superintendent of Documents, 419 pages, 45 cents.

2. Families and Their Life Insurance. Donald H. Davenport, Special Economic Consultant, Insurance Section, Securities and Exchange Commission, and Gerhard A. Gesell, Special Counsel, Insurance Section, Securities and Exchange Commission. Description of the areas covered in the survey of 2,132 families reported; life insurance in force; annual cost of life insurance; miscellaneous problems; case studies, summary and conclusions.

Superintendent of Documents, 168 pages, 25 cents.

3. Who Pays the Taxes? by Gerhard Colm, Fiscal Expert, Department of Commerce, and Helen Tarasov, Industrial Economics Division, Department of Commerce. Scope and main results; procedures, consumer income, and consumer patterns in 1938–39, value added by manufacture, tax classification, allocation, shifting; final tax patterns; the Defense Tax Bill; tax capitalization; distribution of taxes on real estate by type of owners.

Superintendent of Documents, 55 pages, 10 cents.

4. Concentration and Composition of Individual Incomes, 1918–37, by Adolph J. Goldenthal, Economic Analyst, National Income Division, Department of Commerce. Summary of statistical findings; the concentration of income, 1918–37; the composition of income, 1918–37; the concentration of purchasing power, 1918–37; relief and veterans' adjusted-service payments.

Superintendent of Documents, 112 pages, 15 cents.

5. Industrial Wage Rates, Labor Costs and Price Policies, by Douglass V. Brown, Assistant Director, Industrial Relations Section; Charles A. Myers, Instructor, Industrial Relations Section; and John A. Brownell, Assistant, Industrial Relations Section, Massachusetts Institute of Technology; John T. Dunlop, Instructor, Department of Economics, Harvard University; and Edwin M. Martin, Economist, Bureau of Labor Statistics, Department of Labor. Summary; the shoe industry; the paper industry; the cotton-textile industry; the agricultural-implement industry; price determination and price policy; the movement of wages and labor costs; changes in technology.

Superintendent of Documents, 172 pages, 25 cents.

6. Export Prices and Export Cartels (Webb-Pomerene Associations), by Milton Gilbert and Paul D. Dickens, Bureau of Foreign and Domestic Commerce, Department of Commerce, and members of the staff of the Federal Trade Commission. A sample study of differences between domestic and export pricing policy of United States corporations; earlier studies, scope of field study, problems involved, comparison of export and domestic price policies, determining economic factors; direct foreign investments in American industry, 1937; operation of the Export Trade Act (Webb-Pomerene Law) 1918–40, background, administration, procedure, future of the Webb-Pomerene Law.

Superintendent of Documents, 310 pages, 35 cents.

7. Measurement of the Social Performance of Business, by Theodore J. Kreps, Professor of Business Economics, Stanford University, and Kathryn R. Wright, Associate Economist, Bureau of Labor Statistics, Department of Labor. Tests of social performance; social performance of twenty-two industries; groups of industries; social performance of individual companies; all corporations; the economic system; patterns of social performance; a bureau of industrial economics.

Superintendent of Documents, 207 pages, 30 cents.

8. Toward More Housing, by Peter A. Stone, Coordinator, Construction Studies, Temporary National Economic Committee, and R. Harold Denton, Economic Analyst in Housing, Department of Commerce. Some economic aspects of housing: Construction and the general economy; trends in nonresidential and public construction; market factors and needs in residential building; operation of the building industry; housing costs; housing finance; land, taxes and building codes; technical trends; public aid to housing; the relation of productivity to low-cost housing.

Superintendent of Documents, 223 pages, 30 cents.

9. Taxation of Corporate Enterprise, by Clifford J. Hynning, Department of Commerce, and Gerhard Colm, Professor of Economics, New School for Social Research. Taxes, public receipts, and governmental expenditures; Federal taxation of corporate profits; magnitude of Federal taxes and corporate profits, 1916–37; Federal taxation of

corporate income: statutory rates, exemptions, and deductions; Federal tax treatments of holding companies and related forms of intercorporate affiliation (consolidated returns); intercorporate dividends and interest on governmental securities; Federal taxation of "excess profits" and undistributed profits of corporations; Federal corporate income taxes paid by corporations of varying size, 1931–37; Federal taxation of monopoly profits: a negative record; equity versus creditor capital in Federal corporate income taxation; variable-cost taxes; fixed-cost taxes; conclusions.

Superintendent of Documents, 216 pages, 60 cents.

10. Industrial Concentration and Tariffs, by Clifford L. James, Associate Professor of Economics, Ohio State University; Edward C. Welsh, Instructor in Economics, Ohio State University; and Gordon Arneson, Junior Economist, Temporary National Economic Committee. Industrial concentration and tariffs; reduction or removal of tariffs and industrial concentration; sample study of industrial concentration and tariffs, foods and related products, textiles and allied products, wood and paper products, chemicals and allied products, rubber and leather products, stone, clay, and glass products, nonferrous metals and products, iron and steel products, agricultural and automotive machinery and related products, machine tools and equipment, electrical machinery, equipment, and related products; the gypsum industry; the flat glass industry; the borates industry; softwood lumber of the United States and the trade agreements; consumers' cost from import restrictions, sugar and rayon yarn.

Superintendent of Documents, 326 pages, 35 cents.

11. Bureaucracy and Trusteeship in Large Corporations, by Marshall E. Dimock, Assistant Secretary of Labor, Department of Labor, Professor of Public Administration, University of Chicago, and Howard K. Hyde, Research Analyst and Consultant, Temporary National Economic Committee. The development of giant corporations; the diffusion of ownership; the separation of ownership and control; the characteristics of bureaucracy; structural causes of bureaucracy; personnel causes of bureaucracy; structural methods; personnel factors; the requirements of trusteeship; securing and enforcing trusteeship.

Superintendent of Documents, 144 pages, 30 cents.

12. Profits, Productive Activities, and New Investment, by Martin Taitel, Senior Consulting Economist, Work Projects Administration. The corporate system; the character of profit measurements; dollar volume of corporate profits; the rate of return; the profit margin; internal and external disposal of profits; the distribution of dividend receipts; the relative degree of dividend concentration; the effect of dividend concentration on the distribution of income; the relation between the savings and the income level of individuals; the measurement of savings out of dividends; savings out of dividends; total savings out of profits; comparison of private income and total private savings with corporate profits and savings out of corporate profits; the effect of the concentration of savings out of corporate profits on the concentration of wealth; savings created, savings absorbed, and investment expenditures; leakages between savings absorbed and investment expenditures; dissavings and reductions of corporate equity capital; measurement of the rate of return; consolidations, mergers, acquisitions, etc.; relation between profit and asset expansion rates: oil producing and refining corporations; measurement of the rate of investment in property; the nature of investment expenditures; relation between profit and property expansion rates: oil producing and refining corporations; relations between profit and property expansion rates: steel corporations; relation between profit and property-expansion rates: corporations in other industries; the flow of funds in the economy; major determinants of the income level; the availability of funds; the importance of profits; the importance of the concentration of wealth and income; concentration and shortages of consumer purchasing power; further effects of concentration.

Superintendent of Documents, 188 pages, 25 cents.

13. Relative Efficiency of Large, Medium-sized, and Small Business, by Federal Trade Commission. Individual company cost tests, tests for groups of companies, individual plant cost tests, tests for groups of plants, tests based on table of rates of return on invested capital earned by individual companies, tests based on tables of rates of return earned on invested capital by groups of companies; cement cost tables; iron and steel cost tables; farm-machinery cost tables; petroleum cost tables; beet- and cane-sugar cost tables; milk and milk-products cost tables; wheat-flour and bread cost tables; high degrees of integration versus a less degree of integration; fundamental disabilities in size from the standpoint of efficiency; case studies of three mergers; critics of the first merger movement in American business; size in American business today; growth in the size of business units within a single industry, conglomerates; multiple directorships; where does responsibility for efficiency begin in giant corporations?; directors who do not direct finance; managerial responsibility in government; the problem of size in American business; study of Pennsylvania-Dixie Cement Corporation and predecessor companies—the merger and its effect on operations; historical development and merger motives of Bethlehem Steel Corporation; the fundamental principle of efficiency in mass production, by Dr. Frank Fetter.

Superintendent of Documents, 449 pages, 50 cents.

14. Hourly Earnings of Employees in Large and Small Enterprises, by Jacob Perlman, Chief, Division of Wage and Hour Statistics, Bureau of Labor Statistics. Variations in the wage structure in general; measurement of earnings; industry approach to the wage structure; earnings and methods of wage payment; geographical differences; variations by size of community; differences between union and nonunion plants; the occupational wage structure; variations in earnings by size of company; variations in wages by size of establishment; the radio-manufacturing industry; the explosive industry; the soap industry; the meat-packing industry; the fertilizer industry; cyclical stability of employment in large and small companies in 10 industries.

Superintendent of Documents, 94 pages, 15 cents.

15. Financial Characteristics of American Manufacturing Corporations, by Charles L. Merwin, Jr., Economic Analyst, National Income Division, Department of Commerce; under the supervision of Robert R. Nathan, Chief, National Income Division, Department of Commerce. Profits of American Manufacturing corporations; profitability and size; large corporations, small manufacturing corporations; dividends of American manufacturing corporations; all manufacturing corporations, large manufacturing corporations; working capital of American manufacturing corporations; all manufacturing corporations, large manufacturing corporations, small manufacturing corporations; fixed capital of American manufacturing corporations: all manufacturing corporations, large manufacturing corporations, small manufacturing corporations; fixed capital of American manufacturing corporations: all manufacturing corporations, large manufacturing corporations, small manufacturing corporations; source and disposal of corporate funds: sample of large manufacturing corporations, 1935–38; principal sources and uses for 47 industries; two samples of small manufacturing corporations, 1927–36; small baking corporations, small men's clothing companies, small furniture manufacturers, small stone-clay companies, small machine-tool companies; comparison of large with small companies.

Superintendent of Documents, 442 pages, 40 cents.

16. Antitrust in Action, by Walton Hamilton, Professor of Law, Yale University Law School and Irene Till, Social Science Analyst, Temporary National Economic Committee Staff. The task of industrial regulation; the charter of freedom; the current ways of restraint; administrative procedures of antitrust; big act little stick; the law reflects the agency; the origin of the suit; building the case; antitrust in the courtroom; the efficacy of sanctions; the reach after new weapons; a program of action; streamlining the act; toward an administrative base; antitrust faces the future.

Superintendent of Documents, 146 pages, 20 cents.

17. Problems of Small Business, by John H. Cover, Chief Economic Analyst, Department of Commerce; Nathanael H. Engle, Assistant Director, Bureau of Foreign and Domestic Commerce, Department of Commerce; Earl D. Strong, Head, Department of Economics, Grinnell College; Peter R. Nehemkis, Jr., Special Counsel, Securities and Exchange Commission, and William Saunders, Harold Vatter, Harold H. Wein, Industrial Economics Division, Department of Commerce. High mortality—facts and factors: business mortality in retail, craft, and service enterprise; business mortality in manufacturing; comparison of mortality experience of various types of business; change in business population; birth rates compared, tendencies in business growth, failures, short-period movement, cycles of failure; business migration; factors in industrial movement, managerial competency as a factor in business mortality; training and experience, age of manager, personality, accounting records, adequacy of capital; fraud, investment, source of capital, use of capital, control of assets and liabilities; control of costs of operation; overhead costs, overhead and sales, rent, rent and sales, pay roll, pay roll and sales, proprietor withdrawals and sales, costs and prices: margins, inventory, control of sales, of markets, and of product; credit as a factor in business mortality; personal affairs complicating management difficulties; government regulation as a factor in business mortality; purposes of government regulation, types of regulation, government aid to business, market security, and price stability (some phases of competition in distribution): the struggle for marketing control; changing channels, nature of the struggle, effect of the struggle on size, trends in size of retailing establishments, new developments in types of retailing, profits in manufacturing, wholesaling, and retailing, resale price, maintenance—an economic summary; why proponents want legalization of resale price maintenance, economic and social reasons for resale price maintenance, arguments against resale price maintenance, resale price maintenance laws in the United States, difficulties and limitations encountered in the practice of price maintenance, adequate long-term and short-term financing: capital and credit problems of small business; the financial position of small business, the economic position of small business, banking policy and the needs of small business, present governmental aids, suggested aids, the financial problem of small business.

Superintendent of Documents, 412 pages, 40 cents.

18. Trade Association Survey, by Charles Albert Pearce, Department of Commerce. Trade association membership; trade association income and staff; extent of incorporation; financial bases; trend of trade association organization; scope of activity: manner of performance; staff, management organizations, federations; trade practices: mutual

restraints of competition; trade association attitudes toward public policy; actions of the Federal Trade Commission and the Department of Justice against trade associations and other groups; elimination of price competition; elimination of competitors; elimination of design "piracy"; trade-practice activities of the sugar institute: the sugar-refining industry; formation of the sugar institute; trade-practice activities of the sugar institute; control of distribution; terms and conditions of sale; proposed code of fair competition; nature of trade statistics compiled by trade associations; administration of the trade-statistical service; dissemination of trade statistics; objectives and uses of trade statistics; price information; bid information; statistics of the Southern Pine Association, statistics of the National Container Association and regional affiliates; statistics of the Envelope Manufacturers Association; uniform accounting, cost statistics and studies: uniform accounting; methods for computing and combining elements of cost; cost and price estimating formulas and services; cost studies and cost statistics; uses of cost studies; development and promotion of the accounting program; objectives of accounting programs.

Superintendent of Documents, 501 pages, 50 cents.

19. Government Purchasing—An Economic Commentary, by Morris A. Copeland, Director of Research, Division of Statistical Standards, Bureau of the Budget; Clem C. Linnenberg, Jr., Associate Economist, Division of Statistical Standards, Bureau of the Budget, and Dana M. Barbour, Assistant Economist, Division of Statistical Standards, Bureau of the Budget. Scope and characteristics of Federal purchasing: materials, supplies, and services, other than personal, purchased; distribution of purchasing by departments and independent establishments; geographical pattern of Federal purchases; legal limitations on Federal purchasing; types of purchasing procedure; development of centralized control; notes on State and local purchasing; indications of disorderly timing of Federal purchase orders; indications that some prices paid are unfavorable to the Government; the problem of war procurement: experience during the World War—disorderly purchasing; attempts at centralized control; contracts and prices during the World War; general characteristics of the war economy; criticisms of the World War procurement system; requisites of adequate procurement preparedness; steps toward preparedness; establishment of the Army Industrial College; improvements in procurement organization in the Army and Navy and in the information available as to wartime requirements; designation of strategic, critical, and essential materials; stocking of selected strategic and critical materials; standardization and development of specifications for equipment; allocation of domestic facilities for the production of needed articles; educational orders; experimentation with various forms of contract; supervision of British-French military procurement; cooperation with State and local governments in procurement; greater flexibility in procurement arrangements; Federal antitrust laws and other Federal regulatory devices as aids in procurement; advance planning of procurement; selected bibliography on governmental procurement: diagrammatic representation of fundamental routings governing Federal purchasing; distribution of bids and bidders by Federal agencies in Washington and in the field; distribution of dollar volume of Federal purchases by classes of the Federal Standard Stock Catalog, by reporting agencies, by months: December 1937 through November 1938; distribution by Federal agencies of experience with identical bidding; data on the practice of identical bidding, by industry groups and subgroups; Federal Trade Commission activities arising out of Government purchasing.

Superintendent of Documents, 330 pages, 35 cents.

20. Taxation, Recovery, and Defense, by H. Dewey Anderson, executive secretary, Temporary National Economic Committee. The dynamics of our economy, the problems of idle men and machines, idle capital, foreign trade, the economic situation, and modern tax theories, tax theory, and the preparedness program; the needs of Government, an analysis of Government expenditures; the American revenue system; trends in tax revenues; sources of Federal revenues; the social-economic effects of the revenue system, who pays the tax bill, shifting and incidence of taxes, the rate structure and its effect, tax evasion and avoidance, tax exemptions, does the tax system retard recovery, is the revenue system inadequate, the balanced Budget, the preparedness program and taxation, tax recommendations; the economic structure of the United States, production and distribution, consumption, the organization of economic activities.

Superintendent of Documents, 374 pages, 35 cents.

21. Competition and Monopoly in American Industry, by Dr. Clair Wilcox, professor of Economics, Swarthmore College. The nature and significance of competition and monopoly; the nature of monopoly, duopoly, monopsony and duopsony, the classification of markets, the significance of competition, the significance of monopoly, competitive markets; extractive industries, manufactures, wholesale and retail distribution, service trades, other aspects of competition, monopolized markets: those in which one or two firms control nine-tenths or more of the supply; firms approaching complete monopoly in America before the first World War, firms approaching complete monopoly in America since the first World War, pairs of firms approaching complete duopoly in the American market, monopoly and duopoly in other markets, monopolized markets: those in which a few firms control the whole supply and those in which one or a few firms control a major part of the supply; concentration of production, price leadership, price agreements, delivered price systems, patents, competitive practices of dominant firms, market sharing, intercorporate relations, market dominance, local markets, monopolized markets: those in which several firms pursue a common policy; cartels, pools, trade associations, limitation of competition through trade associations, control of prices through trade associations, allocation of markets and customers through trade associations, allocation of production and sales through trade associations, trade association boycotts, cartels in the American market, the N. R. A. codes, legalized restraint of competition, local markets, the occurrence of competition and monopoly; concentration of business activity, uniformity of prices, rigidity of prices, areas of competition and monopoly, the instability of competition and monopoly, is monopoly inevitable?, the persistence of competition and monopoly.

Superintendent of Documents, 344 pages, 40 cents.

22. Technology in Our Economy, by H. Dewey Anderson, Executive Secretary, Temporary National Economic Committee; Lewis L. Lorwin, Economic Consultant, Temporary National Economic Committee; John M. Blair, Economist, Temporary National Economic Committee; assisted by Ruth Aull, Technical Assistant, Temporary National Econimic Committee. The problem of technological unemployment—a historical survey: nineteenth century backgrounds; early statements; the classical debate; John Stuart Mill on machinery and the stationary state; the Marxian analysis; pioneer inductive studies, 1886–99; twentieth century problems: neoclassical theory and its critics; prosperity and technological unemployment in the United States; technological change and the depression, 1929–33; recent studies and reports, 1934–40: productivity, prices, and employment; the measurement of reemployment opportunities; technology and economic balance: the change in labor productivity; the extent of the change; types of labor-saving techniques; power and energy development, materials, processes, individual, single-function machinery, management methods, the effects of labor-saving technology: technology as a cause of unemployment; technology and the displacement of skill; technology and labor's demand for goods; technology and the employed worker; technology and the compensatory forces: the reduction in hours; the development of new industries; the reduction of prices; technology and the concentration of economic power: the concentration of industry; concentration and operating efficiency; concentration and industrial research; concentration and patents; corporate size and earning power; measures of labor productivity: production and man-hour indexes; the National Research Project indexes of labor productivity in manufacturing industries; the reduction of varieties through standardization; wages as a percent of value added by manufacture; types of plastics and their uses, 1940; effect on labor of specified technological changes in two tire-manufacturing plants; labor productivity and industrial prices: the concentrated industries; the nonconcentrated industries; employment in industries classified according to the amount of electrical energy used per man-hour in plants of varying size, 1937; technical progress and economic welfare (an outline of topics for study).

Superintendent of Documents, 313 pages, 35 cents.

23. Agriculture and the National Economy, by Albert L. Meyers, Senior Economist, United States Department of Agriculture. The agricultural situation; concentration of control in agricultural production; factors tending to increase concentration of production; factors tending to retard or reduce concentration; control of production by means other than ownership; control of production by Government agencies; concentration of control on marketing agricultural products; concentration of control at local shipping points; credit control and market freedom; restrictions on trade in terminal markets; barriers to internal trade in farm produce; concentration of control in food processing; concentration of control in retail outlets; concentration of control in supplies purchased by the farmer; methods of reducing the farm market spread; the farmer and the national economy.

Superintendent of Documents, 48 pages, 10 cents.

24. Consumer Standards, by Samuel P. Kaidanovsky, Technical Director, Consumer Standards Project, Consumers' Counsel Division, Department of Agriculture; assisted by Alice L. Edwards, Consumers' Counsel Division, Department of Agriculture; under general supervision of Donald E. Montgomery, Director, Consumers' Counsel Division, Department of Agriculture. Standardization, inspection, and labeling activities of the Federal agencies; United States Department of Agriculture; Central Housing Committee; United States Department of Commerce; Federal Alcohol Administration; Federal Loan Agency; Federal Security Agency; Federal Trade Commission; Federal Works Agency; United States Government Printing Office; United States Department of the Interior; United States Department of Labor; United States Navy Department; United States Tariff Commission; United States Treasury Department; Veterans' Administration; United States War Department; standardization and labeling activities of private

United States Against the Cooper Corporation

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, April 4, 1941

OPINIONS OF SUPREME COURT

Mr. HILL. Mr. President, I have before me the opinions of the Supreme Court of the United States in the case of United States of America, petitioner, against the Cooper Corporation et al. These opinions deal with the question of the rights, if any, of the United States under the Sherman Act. I wish to call particular attention to the very able dissenting opinion of Mr. Justice Black. I ask unanimous consent to have the opinions printed in the Appendix of the RECORD.

There being no objection, the opinions were ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States. No. 484.—October term, 1940. The United States of America, petitioner, v. The Cooper Corporation, et al. On petition for writ of certiorari to the United States Circuit Court of Appeals for the Second Circuit. March 31, 1941]

Mr. Justice Roberts delivered the opinion of the Court.

We took this case because it presents the important question whether the United States may maintain an action for treble damages under section 7 of the Sherman Act.[1]

The complaint charged the respondents had illegally combined and conspired to fix collusive prices of articles purchased by the United States; alleged the money damage inflicted upon the United States thereby, and sought judgment for three times that amount. The district court granted a motion to dismiss the complaint on the ground that the United States is not a person as the term is used in section 7 of the Sherman Act.[2] The circuit court of appeals affirmed the judgment.[3]

Section 7 provides:

"Any person who shall be injured in his business or property by any other person or corporation by reason of anything forbidden or declared to be unlawful by this act, may sue therefor in any circuit court of the United States in the district in which the defendant resides or is found, without respect to the amount in controversy, and shall recover threefold the damages by him sustained, and the costs of suit, including a reasonable attorney's fee."

The United States is a juristic person in the sense that it has capacity to sue upon contracts made with it or in vindication of its property rights. The Sherman Act, however, created new rights and remedies which are available only to those on whom they are conferred by the act.[4] The precise question for decision, therefore, is whether, by the use of the phrase "any person" Congress intended to confer upon the United States the right to maintain an action for treble damages against a violator of the act.

Since, in common usage, the term "person" does not include the sovereign, statutes employing the phrase are ordinarily construed to exclude it.[5] But there is no hard and fast rule of exclusion. The purpose, the subject matter, the context, the legislative history, and the executive interpretation of the statute are aids to construction which may indicate an intent, by the use of the term, to bring State or Nation within the scope of the law.[6]

The Government admits that often the word "person" is used in such a sense as not to include the sovereign but urges that where, as in the present instance, its wider application is consistent with, and tends to effectuate, the public policy evidenced by the statute, the term should be held to embrace the Government. And it strongly urges that all the considerations which moved Congress to confer the right to recover damages upon individuals and corporations injured by violations of the act apply with equal force to the United States which, as a large procurer of goods and services, is as likely to be injured by the denounced combinations and monopolies as is a natural or corporate person. We are asked, in this view, so to construe the act as not to deny to the Government what public policy is thought to require.

Decision is not to be reached by a strict construction of the words of the act, nor by the application of artificial canons of construction. On the contrary, we are to read the statutory language in its ordinary and natural sense, and if doubts remain, resolve them in the light, not only of the policy intended to be served by the enactment, but, as well, by all other available aids to construction. But it is not our function to engraft on a statute additions which we think the legislature logically might or should have made.[7]

The recent expressions of this court in *Tigner* v. *Texas* (310 U. S. 141, 148, 149), warn that it is not for the courts to indulge in the business of policy making in the field of antitrust legislation. Congress has not left us at large to devise every feasible means for protecting the Government as a purchaser. It is the function of Congress to fashion means to that end, and Congress has discharged this duty from time to time according to its own wisdom. Our function ends with the endeavor to ascertain from the words used, construed in the light of the relevant material, what was in fact the intent of Congress.

1. Without going beyond the words of the section, the use of the phrase "any person" is insufficient to authorize an action by the Government. This conclusion is supported by the fact that if the purpose was to include the United States, "the ordinary dignities of speech would have led" to its mention by name.[8] It is supported also by the collocation of the phrase in the section. The provision is that "any person" injured by violation of the act "by any other person or corporation" may maintain an action for treble damages against the latter. It is hardly credible that Congress used the term "person" in different senses in the same sentence. Yet, unless it did, the United States would not only be entitled to sue but would be liable to suit for treble damages. The more natural inference, we think, is that the meaning of the work was in both uses limited to what are usually known as natural and artificial persons, that is, individuals and corporations. In addition, the concluding words of the section give the injured party, as part of his costs, a reasonable attorney's fee—a provision more appropriate for a private litigant than for the United States.

2. The connotation of a term in one portion of an act may often be clarified by reference to its use in others. The word "person" is used in several sections other than section 7. In sections 1, 2, and 3 the phrase designating those liable criminally is "every person who shall," etc. In each instance it is obvious that while the term "person" may well include a corporation it cannot embrace the United States. In section 8 Congress attempted to make clear that the term "person" is to include a corporation. The provision is "that the word 'person,' or 'persons,' wherever used in this act shall be deemed to include corporations and associations existing under or authorized by the laws of either the United States, the laws of any of the Territories, the laws of any State, or the laws of any foreign country." The very fact, however, that this sweeping inclusion of various entities was thought important to preclude any narrow interpretation emphasizes the fact that if the United States was intended to be included Congress would have so provided expressly. We may say in passing that the argument that the United States may be treated as a corporation organized under its own laws, that is, under the Constitution as the fundamental law, seems so strained as not to merit serious consideration. It is fair to assume that the term "person," in the absence of an indication to the contrary, was employed by the Congress throughout the act in the same, and not in different, senses.

3. The scheme and structure of the legislation is likewise important to a proper ascertainment of its purpose and intent. Sections 1, 2, and 3 impose criminal sanctions for violations of the acts denounced in those sections respectively. Section 4 gives jurisdiction to the Federal courts of proceedings by the Government to restrain violations of the act and imposes upon United States attorneys the duty to institute equity proceedings to that end. Section 5 regulates service in such suits. Section 6 authorizes seizure, in the course of interstate transportation, of goods owned under any contract or pursuant to any conspiracy made illegal by the statute.

Thus far the act deals in detail with the criminal and civil remedies of the Government in vindication of the policy of the legislation. There follows section 7, the only other substantive section, giving a civil action for an injury to property rights.

It seems evident that the act envisaged two classes of actions—those made available only to the Government, which are first provided in detail, and, in addition, a right of action for treble damages granted to redress private inqury. If this be the fair construction of the act, the Court's task is finished when it gives effect to the purposes of the law, evidenced by the various remedies it affords for different situations. Though the law gave a remedy by way of injunction at the suit of the United States, we were pressed to say that a private person should have the same remedy. We were compelled to answer that Congress had not seen fit so to provide.[9] For the like reasons we cannot hold that since a private purchaser is given a remedy for his losses in treble damages, the United States should be awarded the same remedy.

4. Supplemental legislation lends support to the view that Congress had in mind the distinction between public and private remedies and did not intend to confer a right of action on the United States by the use of the phrase "any person" in section 7. The antitrust provisions of the Wilson Tariff Act[10] follow the same pattern as the Sherman Act. Section 73[11] denounces combinations and agreements between parties importing articles from a foreign country and declares that every person guilty of violation of its terms shall be punished. Section 74 confers jurisdiction upon the Federal courts and authorizes proceedings in equity by the United States to restrain such acts. Section 76 provides for seizure and forfeiture of property imported into the United States contrary to law and section 77 gives an action for treble damages to any person against any other person or corporation in the exact words of section 7 of the Sherman Act.

[10] Act of August 27, 1894, ch. 349, 28 Stat. 509, as amended by act of February 12, 1913, ch. 40, 37 Stat. 667; 15 U. S. C., sec. 8.

[11] 28 Stat. 570, 37 Stat. 667.

The antidumping provisions of the Revenue Act of 1916 [12] make it a criminal offense for "any person" importing articles from a foreign country to sell, or cause to be imported or sold, such articles within the United States at substantially less than the market value of such articles at the time of exportation in the principal markets of the country of production, etc. They further declare that any person injured in his business or property by any violation may sue therefor in the United States courts and recover threefold damages and costs, including a reasonable attorney's fee. It must be obvious that the United States cannot be embraced by the phrase "any person" there used.

When Congress came to supplement the Sherman Act by the Clayton Act,[13] it included in the latter a significant section bearing upon the question under consideration. Doubts had arisen as to whether issues adjudicated in a criminal proceeding or a suit in equity brought by the United States should be taken as concluded in an action for treble damages subsequently brought by an injured party. By section 5 of the Clayton Act it was sought to give such adjudication that effect. The section provides:

"A final judgment or decree hereafter rendered in any criminal prosecution or in any suit or proceeding in equity brought by or on behalf of the United States under the antitrust laws to the effect that a defendant has violated said laws shall be prima facie evidence against such defendant in any suit or proceeding brought by any other party against such defendant under said laws as to all matters respecting which said judgment or decree would be an estoppel as between the parties thereto: *Provided*, This section shall not apply to consent judgments or decrees entered before any testimony has been taken."

Immediately following this provision the section continues:

"Whenever any suit or proceeding in equity or criminal prosecution is instituted by the United States to prevent, restrain, or punish violations of any of the antitrust laws, the running of the statute of limitations in respect of each and every private right of action arising under said laws and based in whole or in part on any matter complained of in said suit or proceeding shall be suspended during the pendency thereof."

Here again it seems clear that Congress recognized the distinction between proceedings initiated by the Government to vindicate public rights and actions by private litigants for damages.

It should be noted that section 1 of the Clayton Act again defined the term "person" exactly as it was defined by section 8 of the Sherman Act, and section 4 again enacted that any person injured by a violation might recover treble damages together with a reasonable attorney's fee.

5. There has been a considerable body of judicial expression to the effect that section 7 authorizes an action for damages only by private suitors and not by the Government.[14] While none of the cases presented the exact question here involved, the statements bearing on the subject exhibit a uniform opinion contrary to the Government's present contention.

6. The legislative history is persuasive that the Sherman Act was not intended to give the United States a civil action for damages. Senator Sherman, on March 18, 1890, introduced a bill which, in section 1, provided that the United States might bring various civil actions and, in section 2, that "any person" should be entitled to sue any "person" or "corporation" for double damages.[15]

In the discussion of the bill it was pointed out that section 1 authorized the United States to bring civil actions, including those for simple damages and that, under section 2, private parties were entitled to sue for double damages. Senator Sherman stated that section 2 gave a right to sue for double damages only to private parties and not to the United States. He stated that the civil suit by the United States authorized by section 1 might be for an ouster of the power of the corporation, for damages, or in quo warranto, and added: "But the second section provides purely a personal remedy, a civil suit also by citizens of the United States." [16]

As is well known, after Senator Sherman's bill had been amended, Senator Hoar rewrote most of the bill. In so doing he eliminated section 1 with its provision for civil suits by the United States and substituted sections 1, 2, 3, 4, and 6, specifying the remedies, civil, criminal, and by way of forfeiture, available to the United States. In that revision he retained, with slight change, section 2 of the bill, increasing the recoverable damages to treble instead of double, and renumbered the section as section 7. In this form the bill was adopted.

As already stated, the language of section 7 of the Sherman Act was repeated in later statutes extending the antitrust laws although in the meantime this and other courts had expressed the view that the section accorded the Government no right of suit for treble damages. When the Clayton Act was before the Senate, Senator Culberson, chairman of the committee which reported the bill, enumerated the usual types of action prosecuted under the Sherman Act—criminal prosecutions, suits in equity, and actions for damages, and stated with respect to Government suits under the Sherman Act and the Clayton Act: "There is no suit authorized by any of these statutes except a criminal prosecution or a suit in equity. The United States does not bring a suit at law for damages." [17]

In 1926 the Attorney General, in response to a Senate resolution asking for information with respect to cases instituted under the first seven sections of the Sherman Act, wrote: "Under section 7, which gives to private persons the right to sue for injuries arising under the act, a number of actions have been instituted. The United States, however, under the statute is not a party to suits under that section." [18]

Senator O'MAHONEY has introduced a bill, which is pending as S. 2719, prepared jointly by him and by the Assistant Attorney General in charge of antitrust matters. On June 28, 1939, the Senator stated that the purpose of the bill was to provide more effective civil remedies. In the course of his statement he said: "There is only one other remedy worth mentioning available under existing law to the Department of Justice—the civil action for an injunction. In addition there is the action in damages by a private person who has been injured. Neither of these remedies is effective." He further stated: "The bill permits the United States, in effect, to bring a suit for damages against an offending corporation and against its individual directors and officers." [19]

7. It is significant that, in the light of the expressions by the courts, the supplemental legislation, and the legislative history, no action has ever been brought by the United States under section 7 in the 50 years during which the statute has been in force until the present action was instituted. Down to the close of the year 1937, 428 criminal prosecutions and suits in equity had been instituted by the Government.[20] Down to December 1939, 103 civil suits had been instituted by private persons, including corporations.[21] In the meantime the World War intervened with the Government a purchaser of enormous quantities of material and supplies. Then, as now, the complaint was prevalent that agreements and conspiracies existed to fix and maintain prices of materials needed by the Government. And throughout the life of the legislation able and vigilant officials devoted to enforcement of the policy of the Sherman Act have not been wanting.

In these circumstances the conviction that no right to sue had been given the Government, rather than a supine neglect to resort to an available remedy, seems to us the true explanation of the fact that no such actions have been instituted by the United States.

In summary, we are of opinion that the text of the act, taken in its natural and ordinary sense, makes against the extension of the term "person" to include the United States and that the usual aids to construction, taken together, instead of inducing the contrary conclusion, go to support the view that Congress did not use the word in the sense for which the Government contends.

The judgment is affirmed.

Mr. Justice Murphy took no part in the consideration or decision of this case.

S. 20, 52; *United States* v. *Patterson*, 201 Fed. 697, 714; *General Investment Co.* v. *Lake Shore & Michigan So. Ry. Co.*, 260 U. S. 261, 286; *Glenn Coal Co.* v. *Dickinson Fuel Co.*, 72 Fed. (2d) 885, 889, *Quemos Theatre Co.* v. *Warner Bros. Pictures*, 35 Fed. Supp. 949, 950; *Tigner* v. *Texas*, 310 U. S. 141, 148.

[15] SECTION 1. * * * And the circuit court of the United States shall have original jurisdiction of all suits of a civil nature at common law or in equity arising under this section, and to issue all remedial process, orders, or writs proper and necessary to enforce its provisions. And the Attorney General and the several district attorneys are hereby directed, in the name of the United States, to commence and prosecute all such cases to final judgment and execution.

SEC. 2. That any person or corporation injured or damnified by such arrangement, contract, agreement, trust, or combination defined in the first section of this act may sue for and recover, in any court of the United States of competent jurisdiction, without respect to the amount involved, of any person or corporation a party to a combination described in the first section of this act, twice the amount of damages sustained and the costs of the suit, together with a reasonable attorney's fee.

[16] 21 CONGRESSIONAL RECORD, 2563–2564.

[17] 51 CONGRESSIONAL RECORD, 13898. Statements by members of the House Judiciary Committee indicate a similar view: 51 CONGRESSIONAL RECORD, 9079, 9490. Representative Webb, the chairman of that committee, mentioned the civil remedies available under the bill as treble damage actions by persons, suits by the Federal Trade Commission, suits by the United States for injunctions, and similar suits by persons. He then said, "Certainly the remedies are cumulative. The remedies pile up, and all of the remedies are open to the individual in a suit." 51 CONGRESSIONAL RECORD, 16275. But obviously he meant that the remedies given the public and the individual, respectively, were cumulative, as they clearly are; for it is plain the remedy given the Federal Trade Commission is not afforded to the individual.

Mr. Justice Black, dissenting.

In order to give purchasers of goods an opportunity to buy them at prices fixed by competitive trade, the Sherman Act made it illegal to fix prices by combination or conspiracy. It is difficult for me to believe that Congress did not intend to give equal protection to all purchasers similarly injured. In my judgment, no language of that act, nothing in its history, and no argument now presented for our consideration makes necessary the conclusion that Congress intended to discriminate in favor of some purchasers and against others. It would require clear and unequivocal statutory language to persuade me that Congress intended to grant a remedy to all except one of those who were injured by trust prices—the "all" including every natural and artificial person, every corporation and association [22] foreign and domestic, and the single exception being the United States, which buys more goods and services than any other single purchaser.[23] No such clear and unequivocal statutory language exists. And no plausible reason has been hazarded to prove that the Government as a purchaser of goods needs less protection from unlawful combinations than do other buyers.[24] Many deplorable instances in our history, in fact, indicate the contrary. Congress, no doubt stimulated to action by these historical occurrences, has by numerous enactments recognized the urgent necessity for safeguarding governmental purchases of goods and services against unfair and collusive price-fixing. To that end, competitive bidding as a prerequisite to Government contracts has been the general statutory rule over a long period of years, and combinations to deprive the Government of the advantages of such competition have been made criminal. It is therefore strange indeed that the Sherman Act, the greatest of all legislative efforts to make competition, not combination, the law of trade, should now be found to afford a greater protection against collusive price fixing to every other buyer in the United States than is afforded to the United States itself.

So much for what seems to me to be the logical approach to the problem, and the one that should cause us to say that the Government can sue for damages. If, however, we apply familiar canons of construction, I think we are led to the same result. For it is a primary principle that a law should be construed so as to carry out its purpose, in the light of the evil aimed at and the protection intended to be afforded. Here, among the evils legislated against was price-fixing by combination, and among the remedies afforded was the giving of a right of action to purchasers injured by prices so fixed. The result of this case—denying to the largest single purchaser of all goods manufactured and sold in the Nation the protection afforded by this legislation—is to restrict the remedy in such way that the evil aimed at is less likely to be supressed. For the construction given the Sherman Act, insofar as sales to the Government and civil damages are concerned, enables those guilty of violating it to elude its provisions, escape its consequences, and defeat its objects.

Nor do I believe that the previous failure of the Attorneys General of the United States to bring actions similar to this should be deemed a persuasive reason to read the Government out of the act's benefits. The 1926 statement of the Attorney General to the effect that "the United States * * * is not a party to suits under" section 7 does not supply such a reason. For in the quoted statement the Attorney General did not take the position that the Government lacked the power to sue for civil damages; apparently what he had reference to was the fact that the Sherman Act did not make the United States a party to actions for civil damages by private persons against private persons. We do not know and cannot possibly determine why no prior suits were instituted for the benefit of the Government. To assign reasons for such inaction is but to guess. And the guesses would doubtless vary almost in accordance with the preconceived notions of the guessers. But whatever might have been the reasons behind the Government's failure to sue, sure it is that the Attorney General is not the purchasing agent of the Government. He cannot be assumed to have constant knowledge of the manifold problems that face those who buy the Government's supplies. In the final analysis, it is probably true that even an Attorney General who might zealously desire to enforce the criminal provisions of the Sherman Act would not likely be stimulated to institute civil proceedings for damages unless his attention was directed to the point by keenly alert and diligent purchasing agencies. To attempt to construe the Sherman Act by a vain effort to appraise the reasons responsible for the nonaction of Attorneys General is a journey into the realm of imponderables I find it unnecessary to take. I would simply read the act from its language and manifest purpose as giving all purchasers of goods a right to sue if they have been injured as the result of prices held up by those types of unlawful combination condemned by the act.[25]

The principle of strict construction now adopted in this case, resulting as it does in denying to the Government the benefit of section 7 of the Sherman Act, is a radical departure from a long-established policy under which the courts have construed laws most liberally in order to declare the Government entitled to their benefits.[26] And certainly it can hardly be denied that the language of the act, giving all persons a right of action, should if liberally construed be held to justify suit by the United States. For in *Cotton* v. *United States* (11 How. 229, 231), decided 40 years before the Sherman Act was adopted, this Court said in speaking of the United States: "Every sovereign State is of necessity a body politic, or artificial person, and as such capable of making contracts and holding property. * * * It would present a strange anomaly, indeed, if, having the power to make contracts and hold property as other persons, natural or artificial, they were not entitled to the same remedies for their protection." And, speaking in similar vein in *Helvering* v. *Stockholms Enskilda Bank* (293 U. S. 84, 92), after having cited Blackstone for the proposition that the sovereign is a "corporation," and after having gone even beyond this to hold that the statutory word "resident" included the United States, the Court said: "This may be in the nature of a legal fiction; but legal fictions have an appropriate place in the administration of the law when they are required by the demands of convenience and justice." [27]

These particular cases are but facets of a general rule that has long been accepted—the United States can exercise all of the legal remedies which other persons, bodies, or associations can exercise, both at common law and under statutes,[28] unless there is something

---

[22] A 1940 report to the Senate, made by the Secretary of the Treasury pursuant to a Senate resolution, revealed that the Federal Government was transacting part of its business through the medium of at least 1,489 Government corporations. S. Doc. No. 172, 76th Cong., 3d sess., pt. 1, p. 4. The judgment here does not foreclose such corporations from suing for damages under section 7, or so I assume. If I am correct in my assumption, the result is that as to those purchases made by its corporate agencies, the Government is protected by the Sherman Act, while as to those purchases made by its noncorporate agencies, it is not so protected. A process of statutory construction which results in giving to Government corporations a right denied to constitutionally authorized Government departments seems to me to conflict with the frequently declared rule that a statute should not be interpreted in such way as to produce an unreasonable or unjust result. See *United States* v. *American Trucking Associations*, 310 U. S. 534, 542–543; *Sorrells* v. *United States*, 287 U. S. 435, 446.

[23] For a recent study, see Government Purchasing—An Economic Commentary, Monograph No. 19 of the Temporary National Economic Committee (1940).

[24] An argument is offered to the effect that the Government has no need of a right to damages, because it has the power to bring criminal and injunctive proceedings. But the right to bring those proceedings is given to the Government for the protection of the public, rather than for its self-protection as a purchaser. Further, criminal and injunctive proceedings, whatever their efficacy, do not achieve the object of section 7, which is to indemnify all injured purchasers.

[25] Though the act is all-inclusive in naming those who may sue for damages, it is not equally all-inclusive in describing those acts which may be regarded as unlawful combinations. This is true both because of the original language and objects of the Sherman Act itself, and because of subsequent legislation. The most notable example of such subsequent legislation is that portion of the Clayton Act which provides: "The labor of a human being is not a commodity or article of commerce. Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations * * * or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade, under the antitrust laws" (38 Stat. 731, 15 U. S. C., sec. 17. See *Apex Hosiery Co.* v. *Leader* (310 U. S. 469)).

[26] It is argued that if the Government can sue for damages it may also be sued for damages. That question is not before us and need not be decided. Other principles will be material if such a question ever should be presented. See *United States* v. *Sherwood*, this day decided; *Nardone* v. *United States* (302 U. S. 379, 383–384); *United States* v. *Knight* (14 Pet. 301, 315). Among these principles the most important is that of sovereign immunity. "The sovereignty of the United States raises a presumption against its suability, unless it is clearly shown; nor should a court enlarge its liability to suit beyond what the language [of the statute in question] requires." *Eastern Transportation Co.* v. *United States* (272 U. S. 675, 686); *Price* v. *United States* (174 U. S. 373, 375–376); *United States* v. *Sherwood*, supra.

[27] To this statement the Court added: "If to carry out the purposes of a statute it be admissible to construe the word 'person' as including the United States [cases to that effect having previously been cited], it is hard to see why, in like circumstances, it is inadmissible to construe the word 'resident' as likewise including the United States." *Cf. Ohio* v. *Helvering* (292 U. S. 360, 370–371); *Stanley* v. *Schwalby* (147 U. S. 508, 517).

[28] See *Dugan* v. *United States* (3 Wheat. 172); *United States* v. *Gear* (3 How. 120);

in a statute or in its history to indicate an intent to deprive the United States of that right.[19] In this case, nothing in the Sherman Act itself and nothing in its legislative history makes necessary the conclusion that Congress intended to withhold from the United States a remedy given to all other purchasers.[20] Under these circumstances it is my opinion that the judgment below should be reversed.

Mr. Justice Reed and Mr. Justice Douglas join in this dissent.

Jackson Day Dinner Address

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, April 7, 1941

ADDRESS BY HON. CLYDE L. HERRING, OF IOWA

Mr. HERRING. Mr. President, I submit for the RECORD and ask unanimous consent to have printed in the Appendix an address delivered by me in Des Moines, Iowa, upon the occasion of Jackson Day entitled "Andrew Jackson, Symbol of American Democracy." I am informed that the 1,373 who sat down to dinner upon this occasion were the largest in point of attendance at any similar occasion in the United States this year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Years before those present tonight were born, Americans set apart a day known as Jackson Day, that we might not forget the man who carried the torch of democracy and freedom in the early days of the Republic. The day set aside was the anniversary of the Battle of New Orleans, fought and won 2 weeks after the Treaty of Ghent was signed, and tonight we have had the great privilege of listening to another great American—a streamlined 1941 model of Andrew Jackson.

It is more fitting, perhaps, today than upon any previous anniversary that we should pause to pay our tribute to that great man whose life and deeds stand as a symbol of American democracy. They provide both the inspiration and the challenge to us, the living, to preserve and defend not alone the democracy for which he fought and for which he was ever willing to die, but our American way of life.

Because what this great American represented and did is so vital to us today, I think it is worth while that I take time to revive in your memories something of the background and history of Andrew Jackson.

His biography, a saga of American patriotism, relates that his Scotch-Irish parents, Andrew and Elizabeth Hutchinson Jackson, and their two sons migrated to America in the year 1765 to escape the poverty and oppression in Ireland.

After a hazardous journey, which consumed months, they finally arrived at the little frontier settlement of Waxhaw, in South Carolina, and with limited provisions and most meager tools they set about the task of clearing a piece of ground and building a log cabin.

A linen draper by trade, Andrew Jackson, Sr., was unequal to the hard tasks of a pioneer, so less than 2 years after his arrival, and but a few days previous to the birth of the son, who was to bear his name, and make that name famous, he sickened and died.

He left scant provision for his young widow and only the bounty of Providence provided her with a place, wherein to bear her child, who arrived on the 15th of March 1767; yet two sovereign States, North and South Carolina, were later to set up claims to his nativity, still a subject of dispute.

Andrew Jackson owed his genius to his courageous and liberty-loving parents, and his career to the time and country into which he was born.

Possessed of an indomitable will, a supreme faith in God, the ability to make the best of a bad situation, and the willingness to work hard, Jackson's mother managed to eke out a livelihood for herself and her little brood by keeping house for a relative and his invalid wife.

Realizing that she could not hope to educate all of her children, crude and limited as were the means, she decided to concentrate her efforts on her youngest born. After the manner of the mother of Samuel, the great prophet, she consecrated him to the service of God, and set about the task of saving the pennies needed to educate him for the Presbyterian ministery, one of the most influential as well as most noble callings of the time and place.

The outbreak of the Revolutionary War on March 13, 1775, intervened to put an end to her dream and to change the course of her ambition.

The spirit of independence, ever burning brightly in her heart, caused her to counsel her sons to support the Revolutionary cause. By the time the war had been in progress 5 years, although none of her sons were grown, all three had volunteered their services to their country.

Those were dark days indeed for General Washington and the Revolutionary armies, and more particularly for the poverty-stricken but heroic Jackson family.

Hugh, the eldest son, died as a result of his part in the Battle of Stono.

Robert and Andrew were taken prisoners by the British. A British colonel ordered Andrew to clean and polish his boots. The spirited young prisoner defiantly refused, and demanded to be treated as a prisoner of war, not as a personal servant. Enraged, the testy colonel struck him over the head with his saber, knocking him to the ground. But he did not polish the boots. He bore to his grave the heavy scars of the encounter, and did not overlook the opportunity later afforded him to avenge the wrong.

He and his brother were marched off to a prison camp at Camden, S. C., 40 miles away, without even having their wounds dressed. They covered the distance somehow, on foot, and were herded into a huge stockade, wholly lacking in sanitation, and without bedding, adequate equipment, food, or medical supplies, and already overcrowded by 250 other unfortunates, many of whom were wounded or ill with smallpox and fever.

It was not long before they, too, were taken sick. By a miracle, the news of their plight trickled through to their courageous mother, who was ingenious enough to secure the promise from a Whig bushwhacker to exchange 13 British prisoners for her 2 sons and 5 other Revolutionary soldiers.

What a ghastly spectacle confronted that poor woman upon arrival at the prison camp; her son Robert was all but dead. Andrew was racked by a terrible fever. Nevertheless, they set out for home, Andrew barely able to drag one foot behind the other; his brother, too ill to walk, too weak to ride, had to be held on his horse, while their mother got on another mount and, accompanied on foot by Andrew and the other soldiers, they started bravely on their journey.

Almost within sight of home they were overtaken by a terrible downpour of chilling rain. The smallpox was driven in, and 48 hours lated Andrew was raving in delirium, whilst his brother lay dying. Afflicted by her new sorrow, the mother dared not stop to mourn. She had to save Andrew. How she managed to do it even he never knew, but one suspects it was her homespun common sense, augmented and sustained by her resolute faith in God.

There was to be but one more magnificent scene in the epic of the Joan of Arc of the new democracy.

Having become familiar with the dreadful conditions prevailing in the prison camps of the British, she sought out, and volunteered her services to the American hospital ship at Charleston. She helped care for the sick and wounded and was herself taken ill with ship fever, from the effects of which she died at the home of William Barton, and was buried in an unmarked grave out on the open plain beyond Charleston.

What a magnificent example of heroism; what sublime patriotism; what a superb portrayal of the noble sacrifices and limitless devotion of motherhood.

All mothers are exceptional women, but Elizabeth Hutchinson Jackson was an exceptional mother. With Abraham Lincoln, Andrew Jackson could say: "All that I am, and all that I ever intend to be, I owe to my angel mother."

His family wiped out by war, he stood friendless and alone, in the midst of a conflict still raging, the outcome of which was yet to be determined.

Loyal to the cause of freedom, he concealed his grief and carried on somehow until the war ended.

Life was hard and cruel. It meant enormous sacrifice—not to succeed—but to survive.

At 15 the harrows of hell had passed over him, and forever after—he was a grim realist, assuming, at that age, the full responsibilities of a man, to which he ever after measured up.

The only gift the Revolution gave him was freedom. The only advantage the times provided was opportunity.

Contrast, if you will, the situation confronting this young man and the adolescent youth of today.

Two years after the close of the war he began to read the law, and 4 years later he mounted his horse and rode off into a new territory that was opening up for settlement, there to begin the practice of the little law which he had learned, and where he was soon to demonstrate his one great talent—the ability to influence men and win decisions.

The West of 1788 was as primitive and wild as our West of 100 years later; its people, plain, unlettered—even rough.

The ability to fight was the measure of a man's strength, and the dependability of his word was the index to his character. Fortunately for Jackson, he possessed both the ability to fight and the honor to keep his commitments. "Make friends by being honest. Keep them by being steadfast," were his mother's last words to him, a lesson never forgotten, and he took this with him into the wilds of what was later to become the great State of Tennessee.

Cotton v. *United States*, supra. Cf. *Dollar Savings Bank* v. *United States* (19 Wall. 227); *United States* v. *Chamberlin* (219 U. S. 250).

[19] Cf. *Davis* v. *Pringle* (268 U. S. 315).

[20] The legislative history of the Sherman Act is not enlightening on the question now before us. At best, all that can be said of the very few and scattered statements that were made on the subject during the debates on the Clayton Act is that they look both ways.

At the age of 21 he was named solicitor, or public prosecutor, of the new Territory.

Young Jackson had served a hard apprenticeship long before reaching his twenty-first birthday, which well qualified him for his new duties. Danger was to him a commonplace. Hardship was his inseparable companion. The frontier suited his temperament quite as much as his ability to take care of himself suited the frontier.

During that period began the development of the philosophy of democracy, which was to become the essential part of his life and being. His faith in the common man, the average citizen, was not arrived at after the manner of Thomas Jefferson and other liberals, who, while believing in the abstract theory of democratic self-government, associated almost exclusively with the aristocrats and the scholarly men of the time.

Andrew Jackson knew the frontiersmen and the backwoodsmen. His belief in their ability to govern themselves was founded upon experience. They came to have an even greater faith in him.

When, in 1796, Tennessee became a State, Andrew Jackson assisted in modeling the constitution and helped to develop the political organization for the establishment of its State government.

He was elected as the first Representative in the Congress from the new State of Tennessee, and a year later resigned to accept the appointment of the State legislature as United States Senator, serving only about a year, when he again resigned. With the exception of Henry Clay and one or two others, Andrew Jackson, appointed at the age of 29, was the youngest man ever to occupy a seat in the United States Senate.

It is a matter of record that Andrew Jackson resigned from every public office he ever held except the Presidency of the United States. He resigned the office of Governor, the office of Member of the House of Representatives, a supreme court justiceship, a major generalship in the Army, and three times he resigned his membership in the United States Senate. In fact, he holds the all-time record for resignations, having spent about as much time and effort in getting out of the United States Senate as most men have spent trying to get in.

His temperament was wholly unsuited to the duties of a United States Senator. He could not endure endless argument and debate, accompanied by long and unnecessary delays—an attitude with which many of us have developed a renewed sympathy during recent months.

The first time he resigned from the Senate he opened a small mercantile business to meet with little success other than to grow in popularity and in the affection and esteem of his companions, which probably resulted in his being appointed judge of the Supreme Court of the State of Tennessee. At the same time he accepted a commission as major general of the State militia.

When the Creek Indians made war upon the white settlers in 1813, Andrew Jackson raised a volunteer army of 3,000 men and won a final victory on March 27, 1814, a date which marks the decline of the Indian race in the eastern part of this continent. The leadership accepted by him during the Indian wars was never repudiated by his followers and never forfeited by himself.

As a result of his part in the Indian wars he left "a broad highway, free of enemies, from the Tennessee River to the Gulf of Mexico," and made secure the right of the United States to occupy all of the territory between the Ohio River and the Gulf, having also effectually driven the British from that region.

Desiring peace so much that he was willing to fight for it, he accepted a commission as general in the United States Army in the War of 1812. He went to the defense of New Orleans, and on January 8, 1815, a date ever to be remembered by American patriots, he successfully defeated General Packenham. His military deeds captured the public imagination and gained for him the unrivaled popularity which ultimately was to make him President of the United States.

With the acquisition of Florida he was made military governor, a post which he also resigned, having determined to seek permanent retirement at his country estate, the Hermitage, at Nashville, Tenn., in the development of which he had taken a profound interest and had invested a substantial fortune.

Strangely enough, the hour which he picked for retirement was the very hour chosen by fate for the commencement of his real career: the Presidency of the United States.

Unlike many candidates, he received the call to the Presidency quite without personal solicitation. And not until he had learned of the political intrigue which brought about his defeat in the House of Representatives in 1825, following an election which had failed to elect a President, but which had revealed him to be the popular choice, did he get his "dander up" and resolve not alone to become President but to expose the unwholesome "deal" by which Henry Clay was promised the secretaryship of State in exchange for his vote for John Quincy Adams.

Not unlike other political campaigns, however, some within our memory, Jackson found himself the choice of the people, whilst the press, business, high finance, and so-called society were opposed to him. His nomination and election in 1828 marked the beginning of real democracy in the United States. Andrew Jackson served as the link between the old order which was passing and the new order which was forming. He knew and respected George Washington, the first President of the United States, and he was destined to live long enough thereafter to become the seventh President.

He arrived at the Presidency under circumstances not at all creditable to his opponents. His heart seared by the bitterness of an acrimonious and vilifying campaign, conducted not alone against himself but against his wife, and his head bowed by the grief of her untimely passing, he entered upon his duties as President singularly free of fear and ambition.

Fear he had never known. Ambition died with the woman whom he had cherished and in defense of whose honor he had killed in a duel the greatest pistol shot in Tennessee. But for that very reason the spirit of the warrior burned the more brightly.

Regarded as a rank outsider by the worldly and scholarly men of the day, he set about the tasks of the Chief Executive with the same farsightedness and cool determination to win which had characterized his military successes.

One by one he met and adroitly overcame his most powerful adversaries, many of whom were self-chosen. Among them were such outstanding leaders as Henry Clay, John Quincy Adams, Daniel Webster, Francis Biddle, and John C. Calhoun.

Profoundly respectful of the rights of others, he demanded similar consideration for himself. Impressed with the importance and dignity of mankind, his career was marked by the studied determination to do that which he conceived to be fair and right, even in the face of tremendous opposition, and to give to every man an equal opportunity to be and to do his best.

Confronted as are we today by the necessity to make vital and fearless decisions, he had the courage to return to the Congress without approval measures which had been passed by large majorities, and he lived to see his vetoes sustained by popular opinion as well as by wisdom and justice. He thus won the respect and admiration even of his enemies.

He served his country as President during a period when economic and social problems were relatively as difficult and as numerous as those with which we have been confronted. The success of his administration was due in large measure to the vast popular support which he received from the general public despite the organized opposition of hostile minorities.

Few Presidents have made the enduring impression upon our country and its institutions which was made by Andrew Jackson.

He, quite as much as Thomas Jefferson, helped to shape national policy away from the Federalist concept toward the democratic ideal.

Jacksonian democracy, the essence of popular self-government, he applied and encouraged its fullest expression. It embodied hostility to aristocracy, tyranny, and oppression, and affirmed the capability of the common people to rule by direct participation in government. The extension of the suffrage to citizens who did not own property became politically effective through strong pioneer groups of the South and West, the vitality of which was felt by the opponents of democracy.

To the challenge of nullification and State's rights he made the mighty answer, "The Union—it must be preserved," and thereby put far into the future their ultimate settlement—one of the results of the Civil War.

He was responsible for the "Kitchen Cabinet," the name given by his opponents to his unofficial advisors, whose power and influence were believed to be greater than those exercised by the memers of his Cabinet. There is no doubt that while he enjoyed the benefit of their counsel, the decisions which he ultimately made were his own decisions—those of the Chief Executive.

Efforts have been made to detract from his glory by charging that he was the originator of the spoils system. Senator Marcy, of New York, coined the phrase, "to the victors belong the spoils of their enemies," which happened to catch the popular fancy, as descriptive of Jackson's policy.

The practice of rewarding one's friends for political favors was well established long before the administration of Andrew Jackson, however, and, I may add, the example afforded him has not been overlooked by his successors.

He simply extended his patronage to the little fellows, hitherto ignored or overlooked. To the credit of Andrew Jackson, he appointed able and competent men, and their qualifications and their sympathy with the objectives of the administration were a condition precedent to their being chosen. His action was consonant with that of any conscientious Chief Executive.

His outstanding achievement was the peerless demonstration that democracy could be made to work.

He retired from public life before his personal popularity had reached its zenith, and he left the Nation's Capital expressing but one regret, that he "had not hanged Henry Clay and shot John C. Calhoun."

Despite his retirement, he remained, up to the time of his death, a potent influence in every important matter affecting the political destiny of this Nation.

An essential part of Jackson's philosophy was that a people must demonstrate by their ability to overcome obstacles and conquer conditions, their fitness to survive. He had no patience with the policy of appeasement.

Andrew Jackson symbolizes all for which American democracy stands. He was the living embodiment of the new freedom, a fair justice, an outstanding military general, a great statesman, and a profound believer in humanity and liberty.

At this critical hour in the life of mankind, it is imperative that the people of the United States rededicate themselves to the

American ideals of liberty and freedom, which his life so certainly represents.

The challenge of the present crisis, infinitely more grave than that which confronted the founders of this Nation, demands that each and every one of us take stock of ourselves, and prepare for the tremendous test of strength, which events are forcing upon us.

Everything for which Andrew Jackson fought, and which, in essence, is the American way of life, is challenged by forces rampant throughout the world. There are few among us so foolhardy as to believe that the free life and the free economy of all other nations in the world can be destroyed; yet the people of the United States of America and the rest of the Western Hemisphere can remain untouched—our institutions unchanged—our liberties unaltered.

The national unity which was ours only a few short weeks ago has been seriously impaired, and since our national solidarity is an impregnable wall protecting the liberty and the good which are ours, that unity and solidarity must be restored, and vigilantly maintained.

A division within our own ranks has been brought about by repeated attempts on the part of opponents of the administration to link up the last World War with the present world revolution. They have cast aspersions upon the reasons which forced us to enter the World War, and they attempt to repudiate our Government for having done so.

Our leadership of the World War period has been spoken of with derision and some of the noblest utterances and most heroic acts of that great President, Woodrow Wilson, have been held up to public ridicule.

Would that the historic facts might be burned into the minds and hearts of all Americans.

On February 26, 1917, President Wilson came before the Congress and asked authority to arm American merchantmen and recommended that we adopt a policy of armed neutrality. In response the House of Representatives by a vote of 403 to 13, appropriated $100,000,000 for that and kindred purposes, but in the Senate a small number filibustered against the measure and the session closed without a vote.

It was necessary then, as it has been necessary recently, to call a special session of the Congress, at tremendous cost to the taxpayers and involving delays fraught with grave danger, to enable the Members of Congress to take the action necessary to protect the rights of the United States of America.

Then, as now, the peace of the world was menaced by pan-Germanic ambitions in the Balkans and the Orient looking toward world domination. Then, as now, the grave problem confronting the United States was what to do about its rights as a neutral power—whether to defend or surrender them.

Woodrow Wilson acted in absolutely good faith, just as President Roosevelt has done, when he went before the American people for reelection based upon his achievement that he had kept this Nation out of war. Woodrow Wilson did not change. The conditions which he was required to face changed. They grew increasingly worse until he was forced to take action. It was Germany's ruthless declaration of unrestricted submarine warfare by the Imperial German Government, which compelled us to take up arms to protect our very lives and to safeguard our American democracy.

A more unselfish statement of war and peace aims has never been recorded than Woodrow Wilson's famous Fourteen Points. This Nation, and Woodrow Wilson, kept that solemn covenant to the letter. We fought a war "to make the world safe for democracy," and let it be observed, democracy is the only living philosophy safe for the world.

We asked not one additional square mile of territory, not one dollar in punitive damages. Woodrow Wilson went to the peace conference at Versailles with motives so noble, so generous, so far above the comprehension of the minds of little men, that he was bound to be misunderstood by the giant pygmies, observing his influence, enviously, from afar and thinking, as small-minded men are prone to do, how much better they could have done the job.

The Versailles Treaty, like the Bible, is often discussed but seldom read. How many of its critics realize that its first provision was for the establishment of a League of Nations, that its second provision was for the establishment of a world court. Successive provisions were based upon the "doctrine of self-determination of nations," enunciated by Woodrow Wilson, and under whose inspiration seven independent and free republics were set up in central Europe for the express purpose of restoring the rights and the freedom of those peoples, who had been subjugated in times past by military conquest.

Is there a man or woman among us who dares quarrel with that purpose and the achievement of that objective?

Yet those very countries are today ground under the heel of a military despotism and subjected to an economic slavery infinitely more terrible than the plight from which they were rescued by an Allied victory and the terms of a peace which sought to make Germany harmless and to enable those poor peoples to live again as free men and women.

Nor do these new nations lie prostrate alone. The same desperate tyranny has destroyed the ancient freedoms of Norway, Denmark, Holland, Belgium, Luxemburg, and France as well.

As for the matter of reparations, let this be remembered, Germany was not asked to pay punitive damages but merely to repair the actual physical damage which she had done in the territories of the countries which she invaded, and for the property and lives which she had destroyed.

In 1932, a new treaty was negotiated with Germany under which she was committed to an eventual payment of only $714,000,000, but no action whatever has been taken under the terms of that agreement. Therefore, it is but the voicing of propaganda, repeated either out of ignorance or maliciousness, to charge that the Versailles Treaty is responsible for Adolf Hitler.

Rather, it is now plain that had the terms of the Versailles Treaty been strictly enforced Adolf Hitler could not have risen to power. He would have been stopped with his initial attempt to reoccupy the Rhineland on March 7, 1936. The military force of Germany would have remained a negligible quantity, without challenge to the peace and safety of the world. Nor would Germany have been permitted to develop her pocket battleship fleet, implemented by her air force and an ever-increasing number of submarines, which now prove to be her most deadly weapons.

An attempt strictly to enforce the terms of the Versailles Treaty has never been made from the time of its adoption to the present hour.

The British and the French made one concession after another to Germany from the acceptance of the peace down to the heartless invasion of Poland.

So much did Great Britain and France desire peace that they were willing to risk their national safety in order to maintain peace. They shrunk from the necessity to rearm adequately, long after they were possessed of definite knowledge as to the tremendous progress which Germany, Italy, Russia, and Japan were making in building vast war machines and gearing their entire industrial production and economic life to militaristic governmental policies.

What a price France has already paid! What price will Great Britain be required to pay?

Bound by a solemn covenant to respect the neutrality of Belgium in 1914, Germany turned her back on that obligation and marched her armed forces into Belgian territory.

Great Britain and France, bound by an equally solemn covenant to defend Belgian neutrality, entered the World War to fulfill that obligation.

In 1925, under the terms of the Locarno Treaty, Germany obligated herself to respect the territorial integrity of Poland, and was signatory, with Great Britain, France, Italy, and Belgium, to a nonaggression pact. Great Britain and France obligated themselves to defend Poland, if she should be attacked.

On the 1st of September 1939 the mechanized army of Adolf Hitler moved upon Warsaw and liquidated the western portion of Poland, whilst Russia seized the opportunity to take the "bear's share" on her eastern flank, together with a very large bite out of little Finland.

Great Britain and France, in fulfillment of their solemn treaty obligations, came to the assistance of bleeding and beleaguered Poland.

Since that date events have moved with kaleidoscopic swiftness. Today all but a remnant of the territory of Europe is under the complete military and economic domination of the Nazi-Fascist war machine or Communist Russia.

Freedom has completely disappeared from those occupied territories. Famine, pestilence, and slavery are the order of the day. Hope is gone; faith is broken. The present is black with despair. The future holds no promise.

Yet there are those among us, seeing the picture as clearly as you and I, who dare insist that it would be possible for the United States of America to treat with the terrible force that has brought this dreadful situation about; that we can expect an ultimate peace when Mr. Hitler is through changing the map of Europe and Japan has completed its aggressions in Asia; that then our cultural, trade, and spiritual relationships with the rest of the world can be restored and we, meanwhile, will have remained whole.

To remain aloof from those conflicts and to keep war away from these shores has been the constant hope and aim of this administration, the American people, and their representatives in the Congress, and it was in pursuance of this policy that the defense measure was enacted by the Congress, and $7,000,000,000 with which to carry out its purposes was appropriated.

It was our desire for peace which caused us to adopt the Neutrality Act of 1935 and to later amend it, giving up rights for which we had fought at various times during 100 years.

We voluntarily relinquished fundamental rights, which we had so deeply prized that we fought no less than six major wars to establish and maintain them. First among these rights were the freedom of the seas and the right of our nationals to travel unmolested throughout the world.

We cannot afford to overlook the important fact that Hitler's aggression outside Germany have been subsequent to the passage of our Neutrality Act.

The time has come, however, when the American people must realize that we cannot longer ignore the possibility of an attempt on his part to do to the republics of Central and South America and ourselves precisely what he has succeeded in doing to the independent nations of Europe.

The defense measure which we have just passed enables us to make effective our determination to defend ourselves in every way possible.

It is not merely a question of enabling England, Greece, and China to live. It is imperative that we give them the physical equipment with which to win. There is in-

finitely more at issue, moral, physical, and political, than many of our people realize.

We, like the democracies of Europe, are several years late in our program of national preparedness and defense. We must exert our every ingenuity to make up for lost time. In carrying forward the immense program which is now under way, we must speak as with one voice and act with but one purpose, to perfect and accomplish an adequate national-defense program.

In Andrew Jackson's day, the great question was whether the brave souls who had populated the seacoast of this great continent were willing to make the sacrifices necessary to become free men. Our great question today is, Are we willing to make the sacrifices to remain free men? Today the great question confronting this generation is, Are we courageous enough to preserve to ourselves and to our posterity the great freedom which is ours?

In my mind, there is no doubt America will meet the challenge to democracy.

Common Council for American Unity

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, April 7, 1941

ADDRESS BY ATTORNEY GENERAL ROBERT H. JACKSON

Mr. LEE. Mr. President, on April 3 the Attorney General of the United States, Hon. Robert H. Jackson, delivered a very able and patriotic address to the Common Council for American Unity at New York. I ask leave to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Propagandists of unfriendly foreign powers have said that a conquest of the United States could be an inside job, to be done by playing race against race, religion against religion, and class against class. Such strategy has been vindicated by dramatic successes in Europe. The American's natural first reaction has been a wholesome demand for intensive and critical examination of our own society to expose sources of possible treachery.

I am convinced that the time has come when we should no longer concede the initiative to enemies of our way of life or rely solely upon defensive measures against foreign penetration.

The advantage of a confident, instead of an apprehensive, attitude and of a constructive program instead of a merely defensive one are especially significant in our relations with immigrant aliens. Foreign propagandists specialize in spreading fear that the large number of our foreign born makes the United States an easy victim of their divide-and-conquer strategy.

We all realize that the fact that we are not a distinct and separate race, but rather a mosaic of races, introduces into our public life emotional cross-currents that are often unfortunate. We know, too, that their very diversity tends to make them cancel each other, and so, while we often disagree on foreign policy, we have never failed to achieve a working unity, especially in the presence of any danger from without.

It will help us to appraise the present threat from abroad to divide our society by reflecting that this is not a new strategy, but is an old and discredited one. Twenty years ago Emperor Wilhelm 2d planned the same kind of inside job on America and boasted to Ambassador Gerard that he could induce an uprising of such elements in the United States. He counted on certain organizations, such as the German-American Alliance, which was then more influential than the bund is today. He counted on the help of radicals, who were then organized under the I. W. W. and were comparable to present-day Communists. He, too, used secret agents, spies, and propaganda. The Kaiser finally got an American uprising, but it was not of the kind he planned. American unity was not seriously disrupted, but, on the other hand, democratic propaganda did make such inroads on German morale that in spite of rigid censorship and suppression, the Kaiser lost his throne as well as the war.

Since the Kaiser's attempt backfired, the proportion of aliens to our total population has diminished, until it is today only about one-half of what it was then. In World War days we had about seven and one-half million aliens in a population of 105,000,000. Today we have only about 5,000,000 aliens in a population that has grown to 130,000,000. The proportion of alien population has decreased from about 7 percent in World War time to approximately 3½ percent now.

It should also be reassuring to recall that the Government is now much better prepared to deal with any disloyal groups than it was in 1917. The country then had neither legislation nor administrative experience appropriate for combating subversive activities. It had a very limited military intelligence service, and the Department of Justice had only an embryo division of investigation. Today we have effective intelligence divisions in both Army and Navy, and the Federal Bureau of Investigation, with a trained personnel of approximately 5,000 men, operated under a substantial body of tested legislation.

Alien control is a conspicuous example of improvement in governmental technique. We have just completed, with excellent cooperation from the aliens themselves, the first real working inventory of our noncitizen population. The registration will soon be classified and tabulated and we will know who our aliens are, where they live, whence they came, and we will be able to sift out those with criminal records. Moreover, we will be able in a matter of hours to identify aliens of any particular nationality, in the whole Nation or in any locality, and specify those with military experience or of any selected occupation.

These detailed individual records enable the Government to deal with any alien problems on the basis of individual merits, and they take away any excuse for indiscriminating dragnet procedures or mass action.

I do not underestimate the dangerous possibilities nor the sinister purposes of certain subversive groups which have many alien adherents. These groups, as a whole, require proper policing. They were equally aggressive during the World War. That aliens did not contribute a disproportionate number to such disaffected groups appears from the fact that during the World War, with nearly twice the present number of aliens in this country, it was found necessary to intern only about 2,200 of them.

In the light of these facts, has the time not come for the American people to supplement the psychological defensive with a real psychological offensive? Should we not now take up constructive measures which would enable our loyal foreign born better to serve the cause of democracy?

A first step is to modernize our immigration laws to permit a firmer but more flexible alien control. Deportation of undesirable aliens has broken down in practice because transportation to most countries has become impossible and because many countries refuse to accept their return. But the law still commands us to issue deportation warrants for many causes and to conduct long and costly proceedings which now usually end in deportation orders that cannot be carried out. Over 6,000 persons have been ordered deported who, because of conditions beyond our control, cannot be gotten out of the country. Such a situation breeds contempt for law and government.

I have called this situation to the attention of Congress and have asked, in lieu of deportation, that an independent board, after hearings, be allowed broad discretion to intern dangerous criminal aliens and to condone mere technical violations of law which would now subject aliens of good character to deportation. This would assure the country of protection against the vicious, which it cannot get from present procedure, and would regularize the status of decent and loyal aliens.

I am speaking only of immigrant aliens who have already cast their lot with us. Our policy must distinguish sharply their situation from the case of visiting foreigners or future immigrants. Present conditions require sharp scrutiny of all visitors, at least those from beyond our own hemisphere, restriction of visiting permits to persons and purposes clearly of advantage to our own country, and prompt return when temporary permits expire. Some of these visitors develop a sudden attachment for us that is not reciprocal. The tide of immigration has, of course, been largely arrested by war conditions. It seems probable that the easy migration which characterized the past two centuries throughout most of the world is at an end. Certainly our immigration policy will need to be reconsidered and recast to meet the needs of our own society as it appears in the light of the war and post-war conditions.

But whatever discrimination or selection we see fit to make in our future policy, immigrant aliens who are already in the process of assimilation into our society must be given opportunity to be self-supporting and self-respecting members of our community life. It is vital to any program of Americanization that there be no general discrimination against aliens in employment. We do not want to create a class of refugees from work. The dictators would quickly seize upon such mistreatment of aliens here to convince their kinsmen and countrymen abroad that democracy offers them no hope.

Foreign propagandists and domestic fearmongers deceive themselves when they discount the deep-seated good will toward our institutions which has led the immigrant to tear himself up by the roots and transplant all his worldly hopes to this country. It is difficult for minds conditioned by European environment to understand the voluntary nature of the relationship of our aliens toward America. They cannot visualize a society made up of successive waves of migrations all bound together by a unifying American dream of liberty and opportunity. Among immigrants, of course, are about the usual run of scamps and traitors, but I see little reason to believe that any threat to our national unity today either originates or is predominantly supported by noncitizens.

I think most Americans, because of their defensive attitude of mind toward the so-called "fifth column," have failed to realize that real vulnerability to the "fifth column" is Hitler's, not ours. His overextended domain now includes millions of alien and unwilling subjects—full of revenge and on the verge of insurrection. These are Czechs,

Poles, Danes, Norwegians, Hollanders, Belgians, and French. They are held down only by the machine gun and disciplined by the concentration camp. They constitute the greatest "fifth column" opportunity in history.

Hitler's aliens are a sorry contrast to our aliens—other Czechs, Poles, Danes, Norwegians, Hollanders, Belgians, and French—yes; and Germans and Italians, too—the overwhelming majority of whom eagerly became subject to our laws and are devoted to the free institutions they have voluntarily adopted.

Aided by these loyal recruits to our democracy we can, if we will, take the propaganda offensive, out-"fifth-column" the master "fifth columnist" himself. And if we are to attack this menace at its source, we could have no more effective weapon than the good offices of the alien. In the Old World his testimony as to the advantages of democracy over dictatorship will carry more weight than that of native Americans.

Given the help of our immigrants from the recently oppressed countries, we could send in Europe's own tongues from her own native sons messages of their progress and happiness under free institutions that would stir new vitality for democracy in every occupied community of Europe. Loyal aliens are not intruders to be merely tolerated. They are priceless assets for the defense of democracy if we have the wit to cultivate them.

Every person in the reach of my voice owes his presence on this free continent, either remotely or immediately, to the impulse to migrate. Some, like myself, are products of migrations so far back that we have lost any sense of European origin. But that is no excuse for losing our understanding also. Those who stem from the earlier migrations can render no more timely service to our national defense than to join hands with later immigrants to make our common lot of American freedom completely and permanently secure.

Flying Farmers

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 7, 1941

ARTICLE BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article by my pen entitled "Flying Farmers." This article was published in the April 1941 issue of the Southern Agriculturist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Southern Agriculturist for April 1941]

FLYING FARMERS

(By Senator ROBERT R. REYNOLDS, of North Carolina)

Aviation is now referred to as the new right arm of agriculture. But that's not because there are large numbers of flying farmers. As a matter of fact, there are not many flying farmers as yet, but the number is increasing all the time. It's because the airplane has established itself as a useful farm weapon for fighting forest fires, boll weevils, grasshoppers, and so on. The airplane has also proved its worth to the farmer in spotting high-flying spores that cause crop diseases, and in helping to locate tree ailments, such as the Dutch-elm disease.

The reason that the flying farmer is not a common sight today is due largely to the cost of planes. It's only in the last year or so that a plane has been manufactured at a price the farmer could afford to pay. Last year, for example, American airplane manufacturers constructed less than 3,000 of what is commonly called "flivver" planes, with motors of less than 70 horsepower. Lowering the horsepower without lowering the efficiency of the plane brought about a lower price. So today you can buy a brand new "flivver" plane for around $1,200.

That may sound high to the person driving a low-price automobile. But you have to remember that the price of automobiles has not always been as low as it is now. When automobile manufacturers were turning out 3,000 cars a year the "horseless" buggy sold for considerably more money than it does today. An expanded market and mass production—the two factors which brought the price of automobiles down—are undoubtedly having a similar influence on the price of small planes. And it isn't at all rash to predict that farmers will take to the new air flivvers just as they took to the automobile when the price is within their reach. As a matter of fact, the farmer is about the only person of moderate means who could afford to own and operate a landing field. Of course, he would have to subsidize the enterprise by running a few cows on his airport while he isn't taking off or landing, but that would probably prove to be an asset instead of a problem. And the farmer's knowledge of machinery would also aid in this new venture.

Now let's take a look at one of these new flivver planes and get a little better acquainted with some of its features. To begin with, most of these small planes are powered with a single motor which develops from 36 to 70 horsepower. They are graceful, streamlined ships with the comforts of an enclosed cabin and without a doubt among the safest ships in the air today. They can cruise along at from 70 to 90 miles an hour, and if necessary may be throttled up to 100 or 130 miles per hour. All of the present-day flivvers are what is called one- or two-place machines—that is, pilot alone or pilot and one passenger.

THEY'RE ALMOST FOOLPROOF

The Federal Civil Aeronautics Authority considers these planes as nearly foolproof as engineers can make them. They can take off and land on small fields, glide well with an idle motor, and are very reluctant to go into the dreaded tail spin. Experienced pilots putting these planes through their tests say it is hard to get them into an intentional spin. The C. A. A.'s civilian-pilot-training program, started last year in the Nation's colleges, focuses attention on the safety of these air flivvers. Students spent more than 400,000 flying hours in training with but one student fatality. That is 30 times better than any previous record, and it could not have been accomplished without good ships.

While the flying flivver is new to the farmer as well as to the rest of the people yet the farmer has been acquainted with airplanes generally for quite a while. Since 1918 when the first airplane was used to observe Texas cotton fields infested with pink boll worms the airplane has developed into a useful implement for the farmer. On April 30, 1919, the airplane was first used for crop reporting when Field Agent J. L. Cochron made a survey of spring plowing in Montgomery County, Ohio. The results suggested camera crop surveys—a work which has since developed on a large scale. Various action programs of the United States Department of Agriculture which are now stressing the wise use of land and the conservation of water resources, have used aerial pictures rather extensively in recent years. No doubt the fields of many of the readers of Southern Agriculturist have been measured by airplanes for performance under the triple-A program. Aerial pictures aid the Soil Conservation Service in its fight against erosion on privately and publicly owned land, and in the retirement of submarginal land that is unsuited for farming.

Reports from the Department of Agriculture indicate that this one agency has spent more than $7,000,000 on this work, and photographed more than 2,000,000 square miles of land or a little more than two-thirds of the entire area of the country. These land photographs can be used for a great many purposes. The Forest Service has long maintained a fire patrol over the great tree-covered regions and is pioneering now in fire-fighting equipment which can be dropped from the air. The latest method involves men parachuting to the earth near the fire. Their fire-fighting equipment follows in another 'chute. These men are equipped with small portable 2-way radios which they carry down with them and can establish radio contact with the circling pilot in 10 minutes after they land. The Bureau of Entomology and Plant Quarantine has a fleet of 10 planes used in its work to help control Dutch-elm disease and in scouting for the gypsy moth. In the isolated regions of the far West the Soil Conservation Service is reseeding range land to grass from the air. A 2-section ranch was reseeded in 3 days at a cost of less than 50 cents an acre, much less than the cost of hand seeding. The seed was dropped from the plane flying about 300 feet above the ground at an average speed of 80 miles an hour.

"AIR TRUCK" MAY BE NEXT

Seeding land with an airplane is not only fast farming, but it points the way to a changing condition in the handling of agricultural commodities. As the pleasure motorcar was the forerunner of the present highway truck so the new flivver plane may be the forerunner of the "air truck." The use of long-distance, short-time delivery that the airplane can bring about may have beneficial influence on sections which produce perishable commodities. I can think of cut flowers as a good example. Six-hour delivery of freshly cut flowers from Gulf coast gardens to New York or Chicago might interest gardeners in the Gulf coast area. It might even mean a new winter industry for the South.

So let's not laugh at the idea of using airplanes in agricultural work. They can't be used on all farms, but they can be of service on many. It's not only a new venture, but a very interesting one. Let's watch it grow.

The People's Brake on War

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. LUDLOW. Mr. Speaker, there is a sharp revival of interest in the proposal for an amendment to the Constitution which would give the people the right to decide whether or not our boys shall be

sent into the hell of foreign wars. The subject is being debated once more with keen interest and zeal around the base burners in country stores, in high-school debating circles, and wherever people meet in knots and groups to discuss the war. One ardent proponent of my war-referendum proposal recently had a large number of petitions printed, addressed to Congress, to be circulated among mid-western citizens for signatures, but he has had to withdraw the petition temporarily for, in his hurry and zeal, he described the wrong bill! The awakening of interest in the war referendum is noticeably widespread and there is every indication that it will become still more far reaching and will increase in tempo the nearer we get to the brink of war.

What is the cause of this renaissance? Why are many persons who had apparently dismissed the subject from their minds as a noble but unattainable objective when my resolution was beaten down in the House in 1938 again talking about it? In seeking an explanation I think we should take cognizance of one basic fact and that is, that speaking by and large, at least 95 percent of the American people are opposed to sending our American boys into foreign wars. I think that statement is conservative. Along the eastern seaboard where the war jitters have taken strong hold, the percentage favoring armed intervention may be higher, but taking the country as a whole I would say that the proportion of those who oppose sending our troops to foreign shores, to participate in the settlement of quarrels of foreign origin, is nearer 98 percent than 95 percent; but let us say 95 percent.

Let there be no misunderstanding in regard to the position of this 95 percent of our people. They sympathize with the democracies and they want Congress to extend immediate aid to the democracies but always with one reservation. The proviso which they insist upon is that whatever aid is given to the democracies must not drag us into the war.

For many weeks Members of Congress have noticed strangely contradictory advice in the letters that pour in at their offices on the war situation. I have received hundreds upon hundreds of these paradoxical communications. The writer usually starts out by adjuring the Congressman to do everything that he can to see that assistance is extended to Britain and the other democracies, and then winds up in short order with this peremptory finish: "But don't get us into war."

It appears that lately there has come over the people more of a realization of how close to the chasm of war we really are and an outcropping determination that if it comes to a proposition of sending our boys to fight in foreign wars in Europe, Africa, or Asia the people shall have something to say about it.

The people have seen day by day a trend of events that points more and more to the involvement of our manpower on foreign battlefields, and with the realism of that prospect before them they are looking more and more to the war-referendum resolution as the people's brake on war. That, I believe, is the true reason why the war referendum is now appearing again in the forefront as a subject of public discussion and consideration.

It has been more than 6 years since I introduced in Congress the resolution for a referendum on participation in foreign wars. I thought then that the adoption of this noble democratic principle was a long way in the future; that it would have its up and downs in the forum of debate; but that ultimately it would become a part of the Constitution, as important as any guaranty of the Bill of Rights. I still have faith in that vision.

On the opening day of the present session I reintroduced the war-referendum resolution, as I have done in every Congress since it was first presented, and it fell heir to a very distinctive position in legislative annals as House Joint Resolution No. 1 of the Seventy-seventh Congress. On February 25 Senator CAPPER, long a sincere advocate of the war referendum, introduced an exactly identical resolution in the upper Chamber, and it is Senate Joint Resolution No. 47 of the Seventy-seventh Congress. It would be pleasing to me and, I hope, to Senator CAPPER if the proposal might be known hereafter as the Ludlow-Capper resolution, as I take pride in being associated with the distinguished Senator from Kansas in a campaign to vindicate the people's right to a vote on the greatest issue that can ever confront them and their families and firesides. The Ludlow-Capper war-referendum resolution would insert the following provision in the Constitution:

> Except in case of invasion by armed forces, actual or immediately threatened by an approaching military expedition, or attack upon the United States or its Territorial possessions, or by any non-American nation against any country in the Western Hemisphere, the people shall have the sole power by a national referendum to declare war or to engage in warfare overseas. Congress, when it deems a national crisis to exist in conformance with this article, shall by concurrent resolution refer the question to the people.

If this provision were adopted as a part of the Constitution, the people would decide whether American boys shall be sent into the slaughter pens of overseas wars, women having equal voting rights with men. And why should not women have a vote on war? They go down into the shadow of the valley of death to bring our boys into the world. Why should they not have something to say as to whether their flesh and blood shall be hurled into the shambles of a foreign conflict? In Congress, where the war power is now lodged, only 7 of the 531 Members are women, so you see how pathetically impotent women are in giving expression to whatever viewpoint they may have on any particular war proposal.

It will be noted that the Ludlow-Capper resolution in no way, shape, or form interferes with our national defense, and that it fully recognizes our obligations under the Monroe Doctrine, for under the terms of the resolution, if the United States or any other country in the Western Hemisphere should be attacked or invaded, the referendum would not apply. Everybody knows that if America were attacked our people would rise en masse in its defense and a referendum would not be needed.

The stock argument so often advanced by opponents of the resolution that loss of time in taking a referendum would place America at a disadvantage in dealing with a foreign enemy power has been so effectively exploded by obvious facts that it hardly needs to be referred to here. It is now patent to everybody, I think, that wars between countries with vast oceans separating them are not begun in a day, and that in any conceivable circumstance there would be time not only for one referendum but for several referendums. Furthermore, if the referendum should be adopted, the General Staff of the Army would set up the machinery whereby a referendum vote could be taken on the shortest possible notice. The time argument has been shot to pieces by the logic of the cold facts as everybody now understands them.

Boiled down to its final essence, therefore, the Ludlow-Capper resolution simply means that when it comes to sending our boys overseas to fight in wars of foreign origin, against merciless forces that have done nothing but train for war since time immemorial, the people of America who have to suffer and die and to bear the unspeakable burdens and costs and griefs of war shall have something to say about it. What could be more elementally just than that? And is it to be wondered at that the people are becoming aroused on this most vital and intriguing subject?

Can I say to citizens of my district, "You have sense and intelligence and information enough to vote for me for Congress, but you do not have sense and intelligence and information enough to have a vote on sending your boys into the shambles of Europe, Africa, and Asia?"

Certainly I cannot. In these days of quick communication by radio and telegraph the citizen is in touch with the world and he has ample information on world affairs and is well qualified to make up his mind on the greatest issue that can possibly affect him and his loved ones. He knows that fundamentally and as a matter of absolute justice he has a right to express himself on participation in foreign wars and that explains why the proposal introduced in the Seventy-seventh Congress by Senator CAPPER and myself is being revived for extensive study and evaluation as the war clouds darken the international horizon.

New Uses for Agricultural Surpluses

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 7, 1941

ARTICLE BY DR. HARRY E. BARNARD AND ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. WILEY. Mr. President, because Wisconsin is a great dairy State, I am

naturally concerned with anything which would increase the extent of the market for dairy products. Furthermore, we are all concerned, at this time particularly, with preparations to use every raw material which we grow on our land.

The most valuable crop in the land is milk, with a cash value of nearly $2,000,000,000, and constituting nearly 20 percent of the total farm income.

Now, more than ever before, I believe we must be concerned with utilizing the byproducts of milk, and in this connection I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Textiles From Milk," by Dr. Harry E. Barnard, director of research, National Farm Chemurgic Council, as printed in the Kiwanis magazine of April 1941.

In the same connection I ask to have inserted with Dr. Barnard's article an article from the Christian Science Monitor of April 2, 1941, entitled "Laboratory Seen as Farmers Hope to End Surplus Crops."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Kiwanis Magazine for April 1941]

TEXTILES FROM MILK

(By Dr. Harry E. Barnard, director of research, National Farm Chemurgic Council)

We are a wasteful people; even in these strenuous times, when we should be preparing to use every raw material we grow on our land and which the warring world will be unable to buy when peace comes to troubled Europe. Our most valuable crop is milk—milk made from hay and grain by some 25,000,000 cows. All this milk has a cash value of nearly $2,000,000,000, or some 20 percent of the total farm income. Our milk production approaches the combined value of cotton, wheat, and tobacco. But we only use part of all this milk. We still think of the butterfat it contains as its important value. And we throw away or feed to young farm animals about 50,000,000,000 pounds of skim milk every year. No more than 20 percent of all the skim milk we produce is made into dairy products, and in some States, because of the popular prejudice against it, skim milk cannot legally be sold.

It is this enormous quantity of skim milk which concerns us in a discussion of milk byproducts, for, although much of this milk is dried and sold as skim-milk powder, and a still larger amount finds use on the farm for the feeding of pigs and calves and to a lesser degree poultry, the huge quantity of skim milk, which contains everything but butterfat present in the original material, goes to waste as far as human beings are concerned. Today's usage runs about as follows:

Over 700,000,000 pounds of the skim milk at creameries or milk plants is used in making cheese. Some 4,000,000,000 pounds is reduced to dried skim milk, and 1,700,000,000 pounds goes into buttermilk and other beverages, much of which is fed to farm animals either in its natural condition or in a semisolid or dried form. The latest available figures show that we are making nearly 50,000,000 pounds of milk casein. Some 120,000,000 pounds of whey from the cheese factories are used in the manufacture of lactose and a small quantity—not more than 5,000,000 pounds—is fermented into lactic acid.

Manufacturing processes which use skim milk frequently produce, of themselves, a waste product which has very important values. For example, in the making of casein from skim milk billions of quarts of whey, rich in milk sugar, find no use at all. For the most part it is wasted material.

It may be important to discuss the chemical raw materials in milk byproducts. The first of these is the protein content or milk casein. We have used milk casein for many years in making such plastics as buttons and dress ornaments, and in providing the essential material for the sizing of paper. Milk solids contain from 26 to 28 percent of protein—more than alfalfa, and nearly as much as linseed meal. A considerable quantity of casein is used as a basic ingredient in the glue industries. Several years ago a casein paint of uniform viscosity was developed, and this point is now being made in considerable volume. Casein paint is well adapted for interior surfaces. It has considerable decorative values and is noted for its high light reflectivity and nonyellowing property, and for its delicate color effect in pastels. More recently it has been used for exterior surfaces of concrete, brick, and Masonite, and as a paint for marking highways.

But while we are using much of our skim milk in these ways, we are still importing enormous tonnages of milk casein from the Argentine. Inquiry as to the reasons for these imports suggests that many users prefer imported to domestic casein because, as they explain, the domestic product is not as good. This is undoubtedly due to the fact that milk casein has been made in plants having no technical control and producing a product ununiform in character and frequently of a condition described as "specky." However, modern production methods now being adopted produce an excellent milk casein. It is to be hoped that, in spite of the apparent effort to furnish a market in this country for foreign-produced materials, we shall continue to expand our casein business until all of this important byproduct of our most important industry finds profitable use.

The possibilities in using the plastic properties of casein in the manufacture of a spinnable fiber are very great. Several years ago the Italians developed processes for making what was first described as a synthetic wool from milk casein. This product, the trade name of which is lanital, is chemically almost identical with natural wool. It contains 53 percent of carbon, while wool contains 49.5 percent; 7 percent of hydrogen as against 7.57 percent in wool. The oxygen content is 23, while that of wool is 23.66 percent; the nitrogen is 15.50 as against 15,56. The important chemical difference is in the sulfur content—but 0.7 percent, while 3.66 percent is found in wool.

But we are not interested in Italian processes. We have our own method of making fiber from milk casein. Several patents have been taken out by research workers of the United States Department of Agriculture, and our great milk companies have supported research which points to the practical and valuable use of much of our surplus skim milk in the next few years.

The process of converting casein into a textile fiber was first patented in Germany by Dr. Todtenhaupt in 1904. His process consisted of dissolving casein in an alkaline solution and extruding this solution through fine openings into a precipitating bath containing acid, formaldehyde, and alcohol, but was unsuccessful commercially, principally because the individual fibers stuck together and were brittle.

Casein fiber is practically entirely casein, 1 pound of casein producing 1 pound of fiber. The modifying agents added in the manufacturing process add only a negligible quantity to its weight. It has an ultimate composition closely approximating that of wool, the chief difference being a less sulphur content. Because of this small sulphur content the material takes up much more color than does wool when dyed with acid colors in dilute acid baths. The fiber is faintly yellow in color, has a fine kink, and resembles in appearance a thoroughly washed and carded good Merino wool. Unlike wool fiber, which has a scaly surface, casein fiber is smooth, and does not shrink as much as wool. Casein fiber may be made either soft or harsh to the touch. The softer grades have the advantage over wool that the knitted fiber may be worn next to the most delicate skins which cannot tolerate knitted wool. A peculiar feature is that the silkier the finish the weaker the product. Conversely, the harsher the feel the stronger the fiber.

The fineness of casein fiber may be regulated to be constant to any denier, down to three, which is the value for fine wool. Any desired length of staple may be produced. When wet, casein fiber swells, has greater stretch, and breaks more easily than when dry. In the dyeing process particularly, the fiber becomes very soft and tends to aggregate together due to its comparatively low strength, but when dry it resumes its normal strength.

The conversion of casein to fiber is accomplished by softening the casein in water and dissolving it in a solution of caustic alkali. The viscosity of this solution is carefully adjusted by aging, addition of modifying agents, and dilution. The solution is then extruded through multiple spinnerets of the type used in the rayon industry and precipitated and hardened in an acid bath containing formaldehyde and modifiers, or the precipitation and hardening may be brought about in two stages. Subsequent treatments are similar to those used in the manufacture of rayon.

This process modified and improved is now successfully used by a subsidiary of the National Dairy Products Corporation, which in its Rhode Island plant is gradually expanding production of the various types of milk fiber. Three creameries in Ohio and New England are drying and grinding skim milk into casein of the proper consistency for the spinnerets. One interesting use of the fiber is in felt hats. Our felt hats have been made from European coney and hare skins, and every year we have imported great quantities of rabbit fur from Australia. Now skim milk is taking the place of rabbit fur and many of the felt hats made for our use this year contain a considerable portion of this new casein fiber. The president of one of the great hat companies has recently said, "Some day we are going to have a felt hat that will be 100-percent casein fiber. The casein is a standardized product which can be made under mechanical control and so it is always uniform. The fiber is more velvety to the touch than rabbit fur."

The textile industry is keenly interested in this new wool-like fiber which is readily handled on the machines now in use. Since the fiber is a solid rod instead of a hollow tube as is the case with wool fiber, it does not have the insulating value of wool and so is better adapted for summer clothing. We are promised a cloth for summer suitings which will possess the qualities we most desire—qualities of softness and at the same time an ability to withstand wrinkling when mixed with other fibers, as is now necessary because the synthetic product still possesses less strength than natural fibers. It is dyefast and durable. In these years when new fibers are now being made from so many things, from soybeans and corn, from whale meat and almost every kind of woody fiber, this new casein product is, full of promise, not as a competitor of cotton or wool, but as something which has its own intrinsic value, and which in the years to come may provide the farmer a profitable market for the great volume of skim milk which now has little use. Artificial wool, or milk casein fiber, is an outstanding achievement of chemurgy.

[From the Christian Science Monitor of April 2, 1941]

DAY FOR FARM PRODUCTS—LABORATORY SEEN AS FARMER'S HOPE TO END SURPLUS CROPS

CHICAGO.—The industrial research laboratory, first a collegiate institution, then an activity of big business, is now going rural. It was pictured as the farmer's hope at the seventh annual chemurgic conference here when businessmen, farm-organization leaders, chemists, and other interested in the farm problem came together to study new uses for agricultural surpluses.

Farmers have had, it is true, the benefit of one type of research in the State college experiment stations for some two or three decades. But this research has amounted to only about one-seventh of 1 percent of the total annual value of farm products, speakers noted. In contrast they cited the sums spent by manufacturers. The chemical industry, they said, spends from 2 to 4 percent of its gross sales on research.

CHANGE OF EMPHASIS

What's more, industrial research is pointed at finding new markets, while agricultural research has been focused largely on increasing productivity. Change the emphasis and great things will result for the farmer, the conference was told by a representative of a business famous for its research activities, E. I. du Pont de Nemours & Co.

"In the past, 95 percent of the funds expended on agricultural research have been used to increase production and only 5 percent to find new uses for farm products," said Mr. L. F. Livingston. "I have every faith that when a sufficient expenditure and effort is made to discover what to do with these products, the answers to many important agricultural questions will be found.

"The fruits of research are revolutionizing every field of industrial effort. Continued work along agricultural lines will lift the economic plane of the American farmer and will provide untold benefits for the American people."

But farmers should not expect quick results from research effort, this speaker pointed out. "In the du Pont company," he said, "the average is 7 years from the time a research project starts in the laboratory until a product is put on the market."

A new day for agricultural research in the United States Department of Agriculture has dawned with the opening of four regional research laboratories this year. These laboratories, built at a cost of $4,000,000, are setting experienced research men to work searching for new industrial uses for surplus crops, explained Dr. Henry G. Knight, chief of the Bureau of Agricultural Chemistry of the United States Department of Agriculture.

SEARCH FOR NEW USES

Searching for industrial uses for farm products has heretofore been "sort of a side line" of Department of Agriculture research, said Dr. Knight. In these laboratories it is to be a major project. Further, pilot plants to check on the commercial possibilities of laboratory products are being established in connection with these research stations. They mean to carry studies far beyond the "test-tube stage."

Hearty approval of the type of work to be carried on in these stations was expressed by Philip R. O'Brien, president of the Board of Trade of the City of Chicago and by C. J. Strike, president of the Idaho Power Co., of Boise, Idaho. New uses for farm products mean, in the opinion of Mr. Strike, "finding a way to aid agriculture in adjusting its operations to the end that they will produce those things for which there is a demand and a satisfactory price."

Farm cooperatives, through which rural people pool their buying and selling efforts, are encouraging research into new uses for farm products, said Mr. H. E. Babcock, director of the G. L. F. School of Cooperative Administration at Ithaca, N. Y. They are steering research activities in the colleges and providing fellowships for special studies, said Mr. Babcock.

America's Second Chance

EXTENSION OF REMARKS

OF

HON. JAMES F. BYRNES

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1941

ADDRESS BY THE VICE PRESIDENT BEFORE THE FOREIGN POLICY ASSOCIATION

Mr. BYRNES. Mr. President, on April 8 last, in New York City before the Foreign Policy Association, the distinguished Vice President of the United States, Hon. HENRY A. WALLACE, delivered a noteworthy and interesting address which well merits perusal. The address is entitled "America's Second Chance." I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The responsibility which was offered to us following World War No. 1 we declined. We didn't realize that, while we might evade our duty for 10 or 15 years, the time would inevitably come when our growing power and position in the world would force us to accept the responsibility of such power and position for the sake of the Western World and eventually for the sake of the entire world. We of the United States can no more evade shouldering our responsibility than a boy of 18 can avoid becoming a man by wearing short pants. The word "isolation" means short pants for a grown-up United States.

Tonight we are not greatly concerned with the past except insofar as it furnishes a lamp to guide our footsteps in the future.

The United States now has her second opportunity to make the world safe for democracy. During World War No. 1 and the 15 years which followed our intentions were of the highest, but our judgment was not good. From the depths of our hearts we responded to the idealism of Woodrow Wilson. Our boys enlisted to save the democracy of western Europe and the New World from encroachment by the imperialism of a militaristic Prussia. Our boys thought they knew what they were fighting for. That is why they fought so well.

In World War No. 1 we fought well, believed profoundly, and produced tremendously. Aside from that our record was not so good. When the peace came we refused to accept responsibility for the world we had helped to create. We turned our back on Europe and said we were isolationists. During the war prices, taxes, and wages had doubled. When the war ended consumers wanted lower prices, employers wanted lower wages, and everybody wanted lower taxes. Therefore everyone talked about getting back to normalcy.

The desire of the American millions for normalcy and for isolation caused our people to refuse to accept the world responsibility which had been brought to them by World War No. 1. The United States of the 1920's thought that we, a creditor nation, could create prosperity by exporting more goods than we imported. Laboring under that illusion, we raised our tariff in 1922 and again in 1930. The destructive effect of these high tariffs on our exports did not come home to us until we stopped loaning money to foreign countries. We learned by hard experience that a creditor nation which cultivates a high-tariff policy and an isolationist psychology is certain to bring disaster on itself and the rest of the world as well. Yes; after World War No. 1 we were offered responsibility but instead of accepting it we gave to the world high tariffs and isolation. We thought by employing high tariffs and isolation we could protect ourselves and avoid the responsibility which our creditor position, our geographical situation, our vast natural resources, and our trained population have so clearly marked out for us at this stage of world history.

Those who preached isolation and normalcy were skilled in their political insight. They appealed successfully to the blind prejudices of the people who were disillusioned when the war excitement stopped, when taxes went higher, and prices fell and unemployment increased. The people were hungry for isolation, high tariffs, and normalcy—the very things which would make our problem worse. Looking backward, we can afford to be charitable toward the isolationists and high-tariff men of the 1920's, but we cannot feel so kindly toward those mistaken men as to encourage others in the future to repeat their mistakes.

As we have pondered on the lessons of the World War No. 1, our desire to remain at peace has increased. But at the same time our study of the aggressor nations has led us to realize that the greatest likelihood of remaining at peace is to make these ruthless, treaty-breaking nations understand that the American people are ready to go to war if their rights are transgressed at any vital point. It is one of the rights of the American people to defend democracy by helping Britain, China, Yugoslavia, and Greece to the limit with planes, ships, munitions, and food.

A second right of the American people is to defend the multilateral revision of the Monroe Doctrine as defined at the Habana conference. Bismarck called the Monroe Doctrine an impudence, and the Nazis use stronger language. The Germans look on Latin America as their eventual happy hunting ground, and therefore we may be sure that as soon as they have the power they will so push us around politically and economically as to force us into war. With the situation as it is today, I believe the United States can stay out of war if the nations of the world know we are ready and willing to give all possible aid to the democracies. The passage of the lease-lend bill, for example, has already aided the movement to bring back peace to the world. England dared, because we have dedicated ourselves to the task of providing arms to the democracies, to land in Greece and with the Greeks to establish a line from which Yugoslavia can be supported in its fight for freedom.

Thanks to the ever-normal-granary program, we have great quantities of feed grain, which we shall now turn into livestock products with the greatest speed possible. We are in a much stronger food position today than 25 years ago and can use surplus food as an aid to our declared purpose of supporting the democratic principle in those areas where freedom of action still exists.

Today we know more about psychological warfare than we did 25 years ago. We know that the Nazis start carefully planned psychological warfare against a nation long before the tanks, planes, and submarines get into action. The Nazis in 1933 began their psychological warfare upon the United States, not only in our own country but also in Latin America, Asia, and Europe. This

warfare has been greatly intensified since the fall of 1939, and especially during the past few months. It is my belief and hope that the United States will not be forced into this war in a military sense. But in a psychological and economic sense we would be foolish not to realize that we have been the object of fierce German attacks for several years. The Nazis have pursued their policy of undermining the morale of nation after nation as a means of "softening it up," as they phrase it, for conquest. And what is this "softening up" process? It is simply to stir up prejudice, discord, conflict, and confusion in the population. For the Nazis know what too many of us are likely to forget: that the real inner strength of a people is its unity of purpose; its devotion to certain basic principles of justice, truth, and democracy which are beyond dispute. If doubts are raised regarding these principles, political action is short-circuited, and impotence and chaos can result. By promoting prejudice, by turning men of different faiths against each other, by capitalizing on every political and economic controversy, a nation can be so weakened that its resistance to military aggression is destroyed.

We have done some counterattacking in speeches, books, magazines, and newspaper articles. As that counterattacking becomes more vigorous, it is important that we use ammunition of a sort which will leave us intellectually strong and able to shoulder the burden of our responsibility to ourselves, the Western Hemisphere, and the New World when the peace comes.

In order to win the psychological war, the battle of nerves, it is vital to define the difference between nazi-ism and democracy in such a way that the young people of the United States are wholeheartedly with us. The issue must be drawn not in terms of a short-time propaganda, but as an everlasting reality. We must believe in the worth-whileness of that for which we are now fighting and that for which we intend to fight with even greater passion when peace comes.

The Nazi youth, led by evil men, are fighting with all the intensity of their souls. Our youth must fight with an even greater intensity. Today the battlefield for our youth is only on the psychological and economic front. Only by doing a thoroughly good job there can we avoid fighting on the other fronts. But if young men of good American background, serving unwittingly as tools for the Communists, the Nazis, and defeatists, are able to weaken our efforts at psychological and economic defense, we shall inevitably get into military warfare.

The very heart of nazi-ism is the belief that the German race has not only the right but the positive duty to dominate all other races and to control and manage the entire world for the benefit of the German race alone. The present-day Nazi gangsters are worse than the old Prussian rulers because they are more thorough in their use of economic and psychological warfare and more brutal in their use of deceipt, violence, and physical torture. They send carefully trained men into all the countries of the world to carry on ideological warfare. Their monetary control is so tight that no one can leave Germany to travel unless he or she agrees to act as a spy, a propagandist or an investigator. True it is, the Germans, even under Hitler, have a fanatical devotion to duty. They are passionately eager to put their all at the service of the state. Yet it is certain that in any long-drawn-out conflict the German psychology will crumble. It thrives on success but it cannot stand up against even temporary failure because the basic Nazi principles of lies and deceit outrage the fundamental interests of the human soul.

In strengthening our youth against the Nazi lie, we must make their faith glow in the truth, which is that the essence or democracy is belief in the fatherhood of God, the brotherhood of man, and the dignity of the individual soul. Democracy so defined is almost identical with religion. Hitler has no concern whatever for the individual soul, and boasted to Rauschning: "To the Christian doctrine of the supremacy of the individual conscience and personal responsibility, I oppose the emancipating doctrine that the individual is nothing and survives in the immortality of the nation. I reject the dogma of man's redemption by the suffering and death of a Divine Savior, and I put in its place a new dogma of the communication of merit, namely, that individuals are redeemed by the life and action of the new lawgiver and leader who delivers the masses from the burden of liberty."

The Nazi gradations of authority are imposed by fiat. Democracy, of course, also has gradations of authority, but the authority is derived from the free choice of the people and is not exercised ruthlessly in complete disregard of the rights of the individual soul to freedom of speech and freedom of worship. The Nazis drive their people like cattle to the slaughter. The democracies, if they are to survive, must work out some way which, while holding fast to human rights, will at the same time permeate the individual souls with a feeling of responsibility so that the citizens of a democracy will be as willing to give wholehearted, unselfish service as the citizens of a totalitarian power. This we can do if in addition to holding firmly to our Bill of Rights, which this year is exactly 150 years old, we formulate a bill of duties. Under the Bill of Rights and Duties we can have a flexible structure into which each citizen may make his productive contribution to the general welfare. Youth now has a more intense desire to serve. Our governmental and business leaders must make it a No. 1 business of the peace to give our youth the opportunities to work and serve under the bill of duties, so that they may enjoy the privileges of the Bill of Rights.

Properly equipped with a bill of duties, the United States can shoulder her responsibility to the world in the peace that is to come. Without such a bill of duties, I fear peace will mean world chaos. With such a bill we can help build a pax democratica which will bless us and the whole world for a century to come.

Modern civilization, in order to continue, must have order. Under the Nazi scheme of things, order is imposed from above. In a democracy, most of the order must and should come from the individual human heart. The most perfect order in the world will eventually be obtained whenever the citizens in a democracy recognize instinctively and fully in all of its implications the fatherhood of God, the brotherhood of man, and the dignity of the individual soul. Individuals who have meditated on the full meaning of these fundamental principles which characterize both religion and democracy will treat their fellow human beings in such a way that the entire state can serve with power as a unit on behalf of the general welfare, and especially so in any time of crisis. In time of crisis, special education is needed. Above everything else right now, we in the United States and in all of the western world need a counter-offensive to correct the lies about the degeneracy of democracy which the Nazis are so busily spreading over the air, through the press and through their American-born tools.

Every young man, his sweetheart, and his parents should realize the difference between the various types of peace. A Nazi victory in Europe means a peace which is not a peace—a peace which is preliminary to either slavery or war for this hemisphere. A Nazi victory and a Nazi peace are unthinkable. To avoid such a calamity, we will help ourselves through helping England by all methods short of war. Britain will win. Only defeatism on the psychological and economic front in the United States can prevent it.

After the victory, what of the peace? Let us consider the world which will emerge from the war, and of our place in that world. President Roosevelt said in his speech of a few Saturday nights ago: "When dictatorships disintegrate, then our country must continue to play its great part in the period of world reconstruction."

We cannot, once the present menace is overcome, trust again to the blind forces of chance, to the oceans that have shrunk, to wishful thinking and illusions based on a false reading of history, to escape our responsibility.

The battle of the peace will be more difficult to win than the battle of the war. All Europe will be a mad swirl of chaotic forces. Unless we are prepared to help in the reorganization of a shattered world, these forces will leap from continent to continent and destroy even the United States. Our help must be of such a nature that neither a madman nor a mad nation will ever again have the opportunity to kill millions of people and destroy tens of billions of dollars of property. The Nazi ideology with its belief in violence and deceit, its hatred of non-German races, and its denial of the rights of man must be so crushed that it can never rise. The peace, if it is to be a lasting peace, must also make certain that neither the barbaric philosophy nor the militaristic imperialism of Prussia will ever again have the opportunity to find incarnation in the person of a leader possessed of devils in the biblical sense.

But the battle of the peace is far more than protecting the fine people of Germany from their heritage of deceitful Prussian statecraft. There must be worked out an international order sufficiently strong to prevent the rise of aggressor nations. We must not let the next peace be such as to force the defeated nations to engage in economic warfare by the use of controlled currency, impossibly high tariffs, and bilateral trade agreements. The victor nations must also refrain from economic warfare. We must remember that we cannot compel a defeated nation to pay an impossibly high indemnity and at the same time forbid such nation to export by means of high tariffs employed by the victor nations. The next peace must take into account the facts of economics; otherwise it will serve as the seed bed for aggression. The next peace must give the defeated aggressor nations the opportunity to buy raw materials and sell manufactured goods without discrimination as long as they do not produce offensive weapons, engage in economic and psychological warfare, or treat their labor unfairly.

Labor and agriculture in the United States will demand jobs and security from the next peace. They can have jobs and security provided the peace is such a real one that private initiative feels safe to move again as it did from 1860 to 1910. Here is Latin America to the south of us ready to go through during the next 50 years what the United States went through from 1860 to 1910. Opportunities will not be lacking.

Here in the United States we have tremendous reserves of unused capital, technical understanding, and trained labor eager to cooperate with our brothers to the south in the development of a hemisphere. It is vital to the welfare of both Latin America and the United States that the industrial expansion south of the Rio Grande should not only be rapid, but that it should avoid the mistakes we in the United States made. We have made great strides industrially, but we have had depressions and unemployment with resulting slums and malnutrition. We believe that industrial expansion in the Western Hemisphere is possible without these mistakes, and we stand ready to

help our neighbors avoid them. I am sure that a real peace will unleash such an expansion as the world has never seen. But such an expansion will require the most understanding cooperation between private and governmental capital in planning to take care of what otherwise will be a most serious unemployment problem. Peace will bring world-wide chaos unless the United States furnishes positive leadership.

Before we have the right to talk so very much more definitely about the foundations of a just and democratic peace, we must put our backs under the job of defeating the forces of evil. These forces are immensely stronger than most of us realize. Jesus, recognizing the devilish efficiency of the dark forces, said, "the children of this world are in their generation wiser than the children of light." At the moment most of us in the United States are overconfident. We are not working hard enough. We do not realize that our very lives are at stake and that speed now may make the difference of millions of lives in this hemisphere. I myself am confident of the final outcome because I know in the long run that that which is good will triumph over that which is evil. I know that democracy has a tremendous reserve of material and spiritual strength. We have the labor, capital, resources, and brains to do the job.

A generation ago the United States missed her first chance to serve the world in a big way because of a naive belief in such catch words as "isolation" and "normalcy." Our second chance is now with us. There are those who will wish to make the same mistakes again. There are none so blind as those who will not see. As for us, we are wide awake. We shall make this hemisphere safe for peace and prosperity. That is why we shall strain every nerve right now to help England, Greece, Yugoslavia, China, and all other victims of aggression.

God grant that we may now have the wisdom to write democracy's new testament in a bill of duties, a testament which in no way will deny the old testament with its Declaration of Independence, its Constitution, its Bill of Rights and its Gettysburg speech. The new testament of democracy will fulfill, not deny, the old. But to fulfill, there must be a sense of interdependence as well as independence—a sense of duties as well as rights—a feeling of responsibility commensurate with our power.

Industrial Development and Interregional Freight Rates

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1941

ADDRESS BY DAVID E. LILIENTHAL

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by David E. Lilienthal, Director of the Tennessee Valley Authority, at Lincoln, Nebr., on the occasion of the third annual transportation conference of the University of Nebraska on April 7, 1941.

I should like to call the attention of Senators, especially from the West and the South, to this address. It is one of the ablest discussions of the transportation question, particularly as it affects the West and the South, that it has been my privilege to read. I know that it will receive the candid and careful consideration of every loyal citizen who will devote enough time to the address to read it.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The people of this midinterior region and the people of the South have a common interest that is fundamental. You of the midinterior and we of the South alike do not have a fair opportunity to develop our resources to the fullest measure of our skill and enterprise. Man-made rules and not the limitations of nature are responsible for this denial of equal opportunity. This inequality has produced acute economic problems for both our regions. Since at this conference we are particularly interested in transportation, I shall concentrate my discussion upon the interterritorial freight-rate structure of the United States as one of the major causes of this unequal development of the midinterior and of the South compared with other regions.

We will all agree, I believe, that for a nation to attain its fullest productive strength, every region must make the fullest contribution for which it is fitted by its natural and human resources. The healthy, natural development of every region is required for national prosperity in ordinary times; in times like the present it is required for national defense as well.

THE BROTHERHOOD OF AMERICA'S REGIONS

Handicaps on a region's productiveness will be felt first by the region itself, and to that extent they are regional problems. But they will also be felt, and most painfully, by the country as a whole. The shackling of any region puts fetters upon the strength of the whole Nation. I want to discuss the handicap of interregional rates upon the interior regions of America as a national problem.

We think of America today more than ever before not as a group of sections but as a nation. We are in truth one people defending the fires of freedom that the most sacred traditions of this new land commit to our stewardship. We realize that our country cannot be at the zenith of its strength either for peace or for defense if any one of the great regions that compose it is moving toward the precipice of poverty or the bankruptcy of its resources, nor if its people are weighted down by a feeling of hopelessness and despair.

And so it was appropriate that in May of 1933 the National Government took action to meet the problems of the great region of the South. Under this conception of interdependence among regions, it is not difficult to understand why a former Governor of New York State and a Senator from Nebraska should have been the men who sponsored the Tennessee Valley Authority. And since 1933 Congress has appropriated substantial funds to the T. V. A. not simply to provide opportunities for southern people, but to serve a national purpose. The development of the Tennessee River for navigation has provided a water highway not for the South alone; for corn and wheat from the fields of this mid-interior region are also moving on those inland lakes. The creation of a huge supply of power and the industrial research of the T. V. A. are likewise yielding dividends to every region of the country. For T. V. A.'s power is energizing the major supply of aluminum for aircraft; T. V. A.'s industrial research has led to discoveries of practical defense value. The munitions plant built at Muscle Shoals in 1918 has been expanded by T. V. A. and soon will begin the production of high explosives, not merely for the South but for the armed forces of the whole Nation. T. V. A.'s production of concentrated phosphate fertilizer goes to farms all over the country—much of it to your region—for the upbuilding of America's soil. And what has been going on in the Tennessee Valley to stop the gullies on eroded hillsides has meaning and value to the whole country, for all of America has a stake in every acre of America's basic resource of soil.

There is fittingly a national concern about the problems of the South. And similarly, the whole Nation has a stake in the development of your region and the problems of your people. For you, too, have great difficulties to face. In many respects the midinterior is faced in the early stages with some of the very conditions which in their later and acute stages we find in the South today.

Take the matter of farm tenancy. Everyone knows that a high degree of farm tenancy is the symptom of an unhealthy condition. We in the South have a very high tenancy rate. In Georgia and Alabama it is about 60 percent, and even higher in Mississippi. The percentages here in the midinterior are not, of course, nearly so high as these. But the alarming thing is that they are increasing and increasing rapidly. Tenancy has not increased materially in the South in the past generation, and in the past 5 years it has declined—markedly in Tennessee, Alabama, and Georgia. But in Nebraska the percentage increased from 38 percent in 1910 to 52.8 percent 30 years later; in Kansas from 37 percent to 44.9 percent; in Iowa from 38 percent to 47.6 percent. You may not realize that farm tenancy has grown to be as severe in several midinterior States as in several Southern States.

And similarly you have a serious problem of soil conservation and fertility. The tragedy of wind erosion of the soil in the western part of this region is a parallel of the devastating water erosion on the hillsides of the South. After all, we can hope for no industrial development or any other kind of growth if the very foundation of life itself is undermined and destroyed.

The midinterior and the South have yet another grave problem in common. I refer to the loss, the draining out of both our regions of our human resources, and especially our young men and women, who after they have been trained find better business and professional opportunities in other regions of the country, especially the industrial North and East.

But the chief similarity between your problems and ours in the South lies in this: That we are both lacking in an adequate industrial development to balance our reliance upon agriculture. We both rely too greatly upon the production of raw materials, because we do not have the facilities for processing our raw materials into goods of higher value and greater income return. And here, as many people believe, is the nub of our economic difficulties.

MIDINTERIOR INDUSTRIAL DEVELOPMENT HAS LOST GROUND

Industrial development in the midinterior—the production of income for your people through manufacturing—has lost ground in the past generation. This region has not kept up with the country as a whole in the growth of income from manufacturing. This is the most important single economic fact about this region—the most important to you and to the country. Take the State of Nebraska, for example. If Nebraska had grown industrially as fast as the whole Nation did from 1909 onward, its manufacturing income in 1939 would have been double what it actually was. This would amount to $70,000,000 additional income in wages, profits, rents, taxes, insurance premiums, etc.; and we can only guess how many additional millions it would have brought

Nebraska farmers and other producers of raw materials used in industry.

Nor is Nebraska an isolated example. Kansas, Iowa, Minnesota, North Dakota, and even Missouri have all failed to keep pace in the last generation; and South Dakota remains greatly deficient industrially.

The 7-State region of Nebraska, Kansas, Minnesota, Iowa, Missouri, and the 2 Dakotas has a little over one-tenth of the national population. But it has just over one-twentieth of the manufacturing income. By simple arithmetic this makes the region about one-half as industrialized as the whole country. The section is barely over one-third as industrialized as the region of 17 States east of the Mississippi and north of the Ohio and Potomac.

The southeast is in the same boat. So is the southwest. These two southern regions combined have more than 28 percent of the population and less than 12 percent of the manufacturing income. That means that we in the South have achieved an even less favorable industrial position relative to the whole country than has the midinterior.

HOW MANUFACTURING MULTIPLIES A REGION'S INCOME

A region that relies predominantly upon agriculture or the production of raw materials for a livelihood suffers under a lower standard of income than a region that engages to a greater degree in processing or manufacturing those raw materials. Let us take a specific case: here in your region—or at least not far to the west of you—there are great droves of cattle. Where there are cattle, there are hides. Where there are hides, there can be leather. Where there is leather, there can be shoes. And where there are people, there is a heavy demand for work boots and dress shoes.

The cattle and the hides, as raw material, do provide an income; but only a fraction of the income that comes if that raw material can be transformed from low-value cattle to high-value boots and shoes right here in the midinterior. The illustration is commonplace, but without the trimmings of technical jargon it contains the essential truth upon which you and I must work.

I have tried to estimate, as well as I can from available information, what would happen to your income if hides were made into shoes in your region. Suppose we started out with a tannery or group of tanneries, purchasing $100,000 worth of raw materials a year—that is, mainly hides. In the tanning process the hides become leather, and they rise in value to $151,000. That means a gain of $51,000 to divide among the tannery owners and their workmen, their bankers, their landlords, the agents and companies that write their insurance, the tax collector for use on highway construction, public education, etc.

Having gained $51,000, we go on to the next step—that of converting the leather into what the trade calls boot and shoe cut stock and findings. In that conversion you gain another $57,000, also available for wages and profits, and so forth. Then you come to the last step and make up the boots and shoes themselves, adding this time another $192,000.

Summing the whole thing up, you have started with $100,000 in hides and wound up with $408,000 in shoes. That is, you have $308,000 more income than if you rely on raw materials alone.

I took boots and shoes as an example because it is so logical an industrial development for this region where the raw materials are to be found. If I had chosen business machines instead, your original $100,000 of unfabricated material would have gained not $308,000 but $415,000. But I wanted to fix on something that has the soundest of reasons for locating in your region.

What actually happens is far from the pretty picture I have painted. The hides raised on these plains move out of the region. In distressingly larger proportion, the hides are moving out on the backs of the live animals that grew them—as witness the declining position of your Omaha meat-packing industry. When you buy shoes you pay someone else that $308,000 or $408,000 that you might have paid yourselves. And because agriculture cannot provide enough jobs at a good living, people are moving out of the region as the 1940 Census shows. If that $308,000 of added income had come to the people of this region they could have bought more of the manufactured articles of other regions that are best made in other regions. All commerce would have been multiplied and the whole country benefited.

Why is the midinterior not getting its share of national income from industrial activity? Why is it losing ground? There are a number of reasons, of course. One of the more important is the relative lack of industrial research in this region; here again the same is true of the South. New industrial processes these days usually come out of large research laboratories. These require major expenditures and can only be undertaken by huge enterprises. Those large industries are chiefly in the northeastern region. When we remember that 72 percent of industrial income is produced in that one region of the United States, we can understand why most industrial-research facilities are likewise concentrated in that region. We do not have in the interior regions and in the South adequate industrial research, because, for the most part, industry that fathers such research and pays for it has become concentrated in other regions. As one result the technical investigation of our raw materials looking toward their processing by new methods lags and lags badly. The T. V. A. and its cooperating agencies have taken practical action to remedy this lack of technical research. It is a story of interest to you because your problems are similar, but there is not time to discuss it tonight.

INTERREGIONAL RATE LEVELS AS A BARRIER TO MIDINTERIOR DEVELOPMENT

The barrier to industrial development I shall discuss with you tonight in this transportation conference is the system of interterritorial freight rates which govern the transportation of manufactured products, the so-called class rates of the American railroads.

These interregional freight rates deprive the interior regions of the country of an opportunity to develop their natural resources through manufacturing on an equal footing with the more highly industrially developed region east of the Mississippi and north of the Ohio. And as a consequence the whole Nation suffers.

I wish to introduce what I have to say on this subject by calling attention to a wall map of the United States I have set up here; a smaller reproduction I am attaching to my paper for filing with your proceedings. On this map are shown the various regions of the country with the names by which each region is called in railroad rate parlance: Official or eastern territory, which is, of course, the area east of the Mississippi River and north of the Ohio; southern; southwestern; mountain Pacific; and then the region in which we are meeting here tonight, the western trunk line. Each of the four other than the eastern or official territory is shown in such a way as to compare graphically the level of class rates in that territory with the level in official territory.

This is a kind of class-rate relief map of the United States, and it shows that the level in all parts of the country is higher than in official territory. As the key points out, class rates are on the average nearly 50 percent higher here in your western trunk-line territory than they are in official territory, embracing Pennsylvania, Ohio, etc. The comparison with southwestern is even more favorable to the eastern area.

To see how this inequality of rates for the same distance works out in actual practice, let us take boots and shoes as an example. As I pointed out a few minutes ago, it seems only good sense that cattle grown in the western part of your region should be slaughtered here in the region, the hides tanned, the leather made up into boots and shoes, partly for you, partly for the market of high purchasing power east of the Mississippi River. It is good sense, for one thing, because almost the whole process moves in the one direction from west to east; there is no wasteful back-tracking. It is more sensible than shipping your cattle hides a thousand miles east and having the shoes you wear shipped a thousand miles west back to you.

But here is what the inequality of interterritorial freight rates will do if you go into the shoe-manufacturing business in this territory. Suppose your factory is in Topeka, Kans. One of your salesmen is trying for a 10,000-pound order of shoes in, say, Mansfield, Ohio. In his weekly report to the office he mentions that a firm in Brockton, Mass., is also after the order. You start out figuring your bid. You find that you are the same distance in rail-miles from Mansfield as the Brockton plant. Your traffic manager tells you that the Mansfield dealer will have to pay $141 transportation charges if he buys the shoes from your Massachusetts competitor. You ask if $141 will get your shoes to Mansfield since you are the same distance from Mansfield as is Brockton. And you find that it won't. It will get them only as far as Springfield, Ill., which is less than halfway. To get them on into Mansfield will take $55 more. You pay 40 percent more for the same distance. This wall map will serve to illustrate what I have been saying.

The chances are that in the long run that extra $55 and all other similar extras will come out of your operating margin, because you are not often going to find customers who are willing to pay a premium for the privilege of doing business with you when they can be as well served by someone else.

I am aware, of course, that shoes are branded merchandise and that the situation is not as though your product and the Massachusetts product could not be told apart. But on the whole, brand preferences are as likely to favor your competitor as much as they favor you, so that in the end you are still left with the freight differences to meet.

Nor should one get the idea that $55 extra on 10,000 pounds of shoes is a negligible thing which you can easily bear. It is true that the extra transportation charge is a very small percentage of the retail or even the wholesale value of the goods. But the value of the goods is not the thing to look at. It is rather the vital margin between what it costs you to make shoes and what you can get for them when you sell them. Extra transportation charges may amount to only 2 percent of the wholesale value, but the same charges become 20 percent of the profits in a business which runs on a 10-percent margin, as many competitive manufacturing businesses do.

The inequality of freight rates for equal distances is not the whole reason for the lack of shoe manufacturing in this region; I understand that. But that it is an important factor seems to me clear.

Let us take another example, the case of two paint factories, one in Detroit, in official territory, and the other in Omaha, in western trunk territory. In Peoria, Ill., a prospective purchaser of a carload of paint asks for prices. Peoria is the same distance in rail-miles from Omaha as from Detroit. And yet that carload costs $39.60, or 29 percent more, to ship to Peoria from Omaha, in western trunk territory, than the very same distance from Detroit to Peoria. What the Detroit manufacturer must pay, $136.80, to get his paint all the way, will only pay freight bills for the Omaha concern to Ottumwa, Iowa, 167 miles short of Peoria. This map will illustrate what I have said.

The paint being equal in quality, the man in Peoria will not pay extra for the privilege of using Omaha paint. This means that the Omaha paint manufacturer can secure that Peoria order only if he can somehow make up the $39.60 out of his own pocket or the pay envelope of his employees. Lower wages mean lower purchasing power. Industry cannot thrive and grow here under this kind of handicap.

And here is a final illustration, also on a map, that I submit only to show that the Southeast suffers under the same kind of rate handicaps that you do. Chattanooga, Tenn., and Auburn, N. Y., are the same distance from Fort Wayne, Ind. But for the amount of transportation charges which will carry a carload of agricultural implements weighing 24,000 pounds from Auburn to Fort Wayne, a carload from Chattancoga will get only to Lexington, Ky. To cover the rest of the distance, the charges are $48, or 43 percent more than those incurred by the producer in the low-rate region.

As transportation people, you will, of course, realize that these examples are not hand-picked for effect. It is true that some commodities and certain traffic movements would depart widely from them; and there are even perhaps a few isolated instances in which southern and western manufacturers have rate advantages rather than rate handicaps. But on the whole the examples I have exhibited are fair and representative. There are many, many more examples, with some of which you are doubtless personally familiar.

CONCENTRATION OF PURCHASING POWER AND THE INTERREGIONAL RATE HANDICAP

These cases demonstrate the extra cost of getting to market from a rate-handicapped region such as western trunk-line territory or the southern territory. They point to the fact that the transportation dollar carries goods farther in official or eastern territory than it does for you here or for us in the South or Southwest. But these charts alone do not make clear, perhaps, another unfair consequence of the interregional rate discrimination. I have set up here still another map that is needed to bring out in full the unfairness and the sterilizing effect of the interregional rate status upon the industrial development of these interior regions.

This is the same map I referred to earlier as a class-rate relief map of the country, but with one important difference: Here the various States, regions, and rate territories are shown not in proportion to their geographical area but in proportion to their purchasing power; that is, an area representing $4,000,000,000 of purchasing power on this map would be twice as long and twice as wide as an area representing $1,000,000,000. From the table in the lower left-hand corner of this chart you see that the purchasing power in official territory, in the industrial region east of the Mississippi, is greater than that of all the other territories put together—amounting to almost $6 out of every $10; also that purchasing power out here in western trunk-line territory is very little over one-fifth as great.

This map shows, of course, that the largest national market is concentrated in official territory. Industries or prospective industries in your region must sell a part of their output east of the Mississippi River in official territory if you are to create a robust industrial development. In much of this market in official territory your industries expect to have to pay higher transportation charges, simply because your goods must move greater distances. In other words, there is a large part of this concentrated market that is too far from midinterior manufacturers even if the midinterior producers were granted parity mile for mile in their freight rates. You are out of that market, or most of it.

But what of that part of this great market that you are closer to than producers enjoying official territory rates? The astounding fact is that as a result of the interregional rate system your producers here are actually required to pay a higher rate than manufacturers in eastern territory, who are farther away from that market. If the freight-rate differential were removed your industries could enjoy a much larger share of the markets in official territory than at present, and this the chart plainly shows.

Referring to the map that illustrates the shipment of boots and shoes, you will see that in the entire zone between Springfield, Ill., and Mansfield, Ohio, a shoe manufacturer in Topeka is actually closer to Mansfield than is the producer in Brockton, Mass. If he were not required to pay a greater freight rate mile per mile than the Massachusetts producer, the Topeka manufacturer would actually have an advantage.

If the purchasing power in the United States were distributed evenly over the entire country, it would be a handicap to you if you were required to pay a greater freight rate per mile than was exacted of some other region. In view of the actual concentration of purchasing power, so startlingly shown in the final map I have submitted, the differential against you is a burden almost fatal to the decentralization of American industry.

I am not advocating, and no one I know of is advocating that rates be adjusted to offset your disadvantage of distance. The nub of the case against the interregional-rate system is that it requires producers in the West, the Southwest, and the South to pay more for the same distance; in short, the case is not built upon a desire for favoritism but rather for equality of opportunity.

NATIONAL BENEFITS IN CORRECTION OF INTERREGIONAL DISCRIMINATION

The restoration of equality of opportunity by a correction of this situation would, in our opinion, not only be beneficial to the South and the West, would not only tend to conserve natural resources, raise purchasing power in those regions, give midwestern and southern businessmen an opportunity to show the skill and resourcefulness they have, but would be a great regenerative force for the Nation. These "Chinese walls" of freight rates between sections of our common country have a depressing and sterilizing effect on the whole Nation. It is sound economics and sound public policy to remove every barrier to a free flow of commerce within the United States.

The T. V. A. Board of Directors a few months ago instituted another study now approaching completion that we feel will throw further light on this crucial issue. This report, like the one we made in May 1937 (known as the Alldredge report), will be made to the President of the United States. We are now seeking to discover the consequences, in practical terms, of interterritorial freight rate inequality upon the economic development in the interior regions.

Industrial possibilities in the processing and marketing of the South's raw materials will be studied, and the effect of such regional inequality upon economic well-being is being investigated. I believe this report will also contribute to a better comprehension of the factors that make for national well-being. In the preparation of this report our staff is consulting and cooperating with other interested and qualified agencies in various parts of the country, including this midinterior region.

INTERREGIONAL FREIGHT RATES AND THE LACK OF DEFENSE INDUSTRIES IN THE INTERIOR REGIONS

The country is now in the midst of the greatest industrial-production effort ever undertaken in any land at any time. The collective energies of a nation of 130,000,000 people, the greatest industrial nation the world has ever seen, have been geared to a monumental task. This industrial acceleration and expansion will inevitably influence, if it will not indeed determine, the economic pattern of this country for many, many years to come. It is no wonder, therefore, that the people of the Midwest and of the South look with the greatest concern upon the undisputed fact that thus far only a small, a very small, proportion of the defense industrial expansion has taken place in these regions. Defense production has intensified the already nationally unwholesome concentration of industry in the area known in railroad parlance as "official territory." And for this situation the interregional rate system must share responsibility as one underlying cause.

The distribution of defense contracts, I am confident, was in no sense dictated by willful discrimination against the West and the South. Speed was absolutely essential. Many of the industries required for defense production already existed in the North and northeastern regions. Experience and trained skills were available there. Existing plants could be expanded. The "know-how" of industrial matters was there. The men who had the responsibility of decision in defense production had naturally enough acquired a habit of thinking chiefly in terms of our largest producers; these, as we know, are concentrated in one region. There are other factors, but it is chiefly due to such as these that the West and South are losing out. And the Nation loses out, too, for defense production could do much to decentralize industry through the country.

And it still may do so. It is not too late. For it is agreed within the Government that the Nation would be better off if a greater share of defense production would be carried on in the West and South. Only a few days ago the National Defense Advisory Commission reiterated the principle of decentralization in a report from that Commission directed to the Plant Site Committee of the Office of Production Management. These words were used:

"On the (defense production) sites which are selected depends not only the strategic security of our defense industries and much of their efficiency for defense production but also important and permanent consequences for the economic life of different parts of the Nation. Experience gained during the past 10 months would indicate that the immediate ends of national defense are largely consistent with the longer-run objective of a better-balanced industrial economy."

The report states further that the following principles should be observed in plant locations:

"That every possible preference be given to locations where large reserves of unemployed or poorly employed people are available and where industrialization during the defense period will contribute to a better long-run balance between industry and agriculture. These conditions are particularly acute in many areas of the South and West.

"That the proper location of new plants, the wider distribution of defense contracts, and an aggressive policy to promote the subcontracting of the larger defense orders held by private contractors all be considered essential parts of a well-rounded program to obtain larger use of the human and material resources of the country in the defense effort."

Merely to protest against the distribution of defense contracts is not enough, for that will not remedy the underlying regional inequities that have contributed so largely to the concentration of industry; and it is the concentration of existing industry that, in turn, accounts largely for the present inequality in distribution of defense production. The more constructive position is to set out to change those underlying inequalities. And the Interstate Commerce

Commission inquiry into interregional rates is one such step, and an important one, if it is concluded with reasonable celerity.

WE MUST BE READY WHEN EQUAL OPPORTUNITY IS RESTORED

A change in the interregional freight-rate situation, however, is not a panacea either for the problems of the Mid-Interior or of the South. I trust that my emphasis upon the importance of this barrier to our future development has not given that impression. There are other equally important matters to concern us. We must not only remove barriers; we must go even further and see that when the walls are leveled and equality of opportunity restored we will be ready. We must make ourselves ready with industrial knowledge generally, be ready with the skills and with backlog of industrial research upon which modern industry so greatly depends. This is vitally important to you in this region as it is in the South. If there were time, I should like to describe to you what the Tennessee Valley Authority and its cooperating State institutions have actually accomplished in the way of industrial research. That program of research has resulted in new private industry based on materials and skills of the southern region itself. And as recent experience in the Tennessee Valley has demonstrated in a practical way, for industrial development we need, too, to continue to develop our rivers so that they will furnish us great blocks of cheap electricity as well as water control for navigation, flood control, and irrigation. To progress industrially the interior and the South must press for more and more electricity, for we are only on the threshold of the age of power.

More than this, it seems to me, we must actively support and promote every effort, State and Federal, public and private, strengthening the conservation and wise utilization of our natural resources. We are only as strong as the foundations upon which we stand are strong. Those foundations we find in our soil and minerals and forests and streams and in the skills and energies and spiritual qualities of our citizens.

A PROPOSAL THAT MIDINTERIOR, SOUTH, AND SOUTHWEST JOIN IN PRESENTATION BEFORE I. C. C.

On July 29, 1939, the Interstate Commerce Commission instituted its class-rate investigation. That inquiry can be epoch making. The Commission has set aside funds for research into costs and other factors and has given indications that this investigation will become one of the high points in the work of this transportation supreme court of the United States. To those of us who live in the West and the South the importance of this investigation can hardly be exaggerated. It will stand as one of the landmarks of economic history, taking its place with us with such dramatic events as the invention of the cotton gin, and for the West with the first transcontinental railroad.

The Transportation Act of 1940 made rate discrimination as among regions unlawful—that is, unjust discrimination. The Interstate Commerce Commission is now engaged in the early stages of its investigation to determine whether unjust discriminations do exist, and if they do, where they are and how much they amount to. The Commission is concerned with unjust discrimination, not with mere differences in rates. Those of you who are transportation students and experts are, of course, familiar with this distinction. It is inquiring into rate differences not justified by regional differences, such as the cost of furnishing the service or other factors. And at the risk of laboring a point obvious to you who know the field, let me point out that the burden of proving by the facts that present inequalities such as I have recited are unjust rests on those interests, communities, and regions that feel they are being unjustly treated. You know, too, that the Interstate Commerce Commission is a quasi-judicial body that will base its conclusions only upon facts put into the record before that body, and hence, in a form acceptable under the Commission's rules of procedure. In other words, proponents of interterritorial rate reform must present their case to the Commission in its hearings, must present it ably and convincingly.

You probably know that numerous petitions have been presented to the Interstate Commerce Commission requesting that the class-rate investigation be abandoned or postponed, chiefly on the grounds that it would interfere with the task of national defense. Fortunately, the Commission has denied these petitions. Those who are enjoying special advantages under present rate structures are exerting every effort to continue those privileges, and they are able and diligent in that effort.

It is my personal view that the regions now handicapped, that is, the South and West, could well join hands in preparing and presenting the case for equality of opportunity. It occurs to me that such a joining of hands in presentation might also be of aid to the Commission. In working out the grounds on which cooperative action can be based, I believe you will find that the fundamental interests of Mid-Interior, Southwest, and Southeast are the same, and that we have common interests in a great many more respects and in much more important respects than we have divergent or conflicting interests.

To sum up:

The industrial future of the interior and southern regions depends upon:

1. Restoring economic equality between all the regions of America.
2. Conserving our resources, human and natural.
3. Industrial research by public and private agencies to further new industry and industrial "know-how."
4. Developing our power and water assets to the fullest.

Trade With South America

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1941

INTERVIEW WITH HON. JAMES A. FARLEY

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an interview which Mr. John F. Coggswell had with Hon. James A. Farley, former Postmaster General. The interview was published in the Boston Post of Sunday, March 16, 1941.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

[From the Boston Sunday Post of March 16, 1941]

JIM FARLEY PREDICTS BOSTON SHIPPING BOOM—HUB NEAREST MAJOR UNITED STATES SEAPORT TO BRAZIL AND ARGENTINA—BUENOS AIRES HAS CLOSE SOCIAL, RACIAL TIES WITH NEW ENGLAND—NOTED POLITICAL LEADER, JUST BACK FROM SOUTH AMERICAN BUSINESS SURVEY, SAYS NAZIS' INFLUENCE DECIDEDLY ON WANE

(By John F. Coggswell)

The Honorable James A. Farley, big, glowing with health, affable as ever, just back from a 9-week "best vacation without a care in the world that I ever had," during which he visited nearly every nation in South America, left the shelter of the big desk in his New York office, came round front and sat down beside me.

"One of the greatest assets these United States have in South America and one which your port of Boston should find it especially easy to cash in on," he told me, "is the colony of nearly 100,000 Irish, among them an especially high percentage of business and cultural leaders, that I found in Buenos Aires.

"The very existence of this great colony from Eire was a surprise to me, something of a blow to my pride in being a student of the achievements of the Irish in the New World."

CONSORTING WITH PRESIDENTS

Mr. Farley had been consorting with Presidents and other high Government officials, ambassadors and ministers, big-shot business leaders, the great and near-great down there, all of whom persisted, according to the news dispatches, in viewing him as a looming national figure in spite of his return to private life.

He has come back full of enthusiasm for the war-sent opportunity of these United States to tie ourselves to Latin America with commercial bonds that will make us independent of European trade, establish a "hemispherical solidarity" that will leave both continents free and prosperous, no matter what the outcome of the war in Europe.

And that is especially important to Boston, as the nearest important American port to eastern South America, he assured me. It will probably mean a doubling, quadrupling, and more of the already tremendous and constantly increasing trade that is moving out of and into the port of Boston, in one of the finest, most modern fleets on the seas today.

But the famous Democratic leader simply had to tell me about that Irish colony in Buenos Aires before he expanded upon our glowing trade prospects below the Equator, told of the big men he had met and their attitude toward the United States, even before he chuckled over his meeting with Louis Firpo, the immortal Bull of the Pampas, whose iron fist sent Jack Dempsey catapulting over the ropes one memorable evening at the Yankee Stadium; Firpo, who had parlayed his ring winnings into affluence as a rancher, a real-estate promoter, and all-around businessman.

Quite evidently his discovery of that prosperous, public-spirited, internationally minded settlement of Irish down in Argentina interested Mr. Farley more than anything else he encountered on his long trip. I give you the story of the discovery, though, not as the great American told it to me, but as a representative of the weekly Southern Cross reported it in his paper, under the heading "Mr. James Farley comes to town—a great Irish-American."

This reporter, J. B. Sheridan, native of the Emerald Isle, came into the Plaza Hotel, Buenos Aires, called the Farley suite over the house telephone. It happened that Mr. Farley answered the call himself. Sheridan named his paper, explained that it was published in the interests of the 100,000 Irish Catholics in the city.

"What! One hundred thousand Irish in Buenos Aires! A paper published just for them in English!" the astonished Democratic leader ejaculated. "Man, you come right up here."

Sheridan got his interview all right, but if he came to get a message from one of our leading Irish-Americans to Irish-Argentinians it didn't get into the paper. It is illuminating to find that he took up nearly all his space writing of Mr. Farley's personality. It wasn't until near the end of the interview that he thought to ask a question that has been worrying the Irish of Buenos Aires ever since the lend-lease bill got into the United States Senate.

"Is Senator BURTON WHEELER, who has been so vitriolic in his diatribes against President Roosevelt, of Irish descent?" the reporter wanted to know.

"I tell you definitely, Mr. Sheridan," Mr. Farley replied, "BURTON WHEELER hasn't a drop of Irish blood in his veins."

That was a comfort to the Southern Cross writer, and he was sure it would be, too, "to men of Irish blood in this southern land, who have felt somewhat ashamed that a man with Irish blood in his veins would attack the Bayard of democratic ideals in America."

Tomorrow being St. Patrick's Day, a couple of paragraphs which Mr. Farley pointed out to me on the front page of the Southern Cross will be of interest to all Boston, especially those of Catholic faith.

"A great many churches and chapels in Argentina possess altars or statues dedicated to St. Patrick," the item stated. "In many localities flourishing communities will gather at the feet of the patron saint on his feast day; in other, the Gaels have moved on.

"We know a certain camp town where the parish church boasts a splendid altar of St. Patrick. On St. Patrick's Day, the solitary remaining member of a family of long Irish-Argentine lineage never fails to have the altar profusely illuminated and bedecked with flowers."

It was only natural that Irish colony in remote South America should have proved one of the high points of interest in Mr. Farley's trip south of the Equator. He spent a great deal of time delving into their history, meeting the leading members of the community, and prizes as much as anything else brought back with him a book, The Story of the Irish in Argentina, written by the Reverend John S. Gaynor, P. S. M., editor of the Southern Cross.

SAME AS BOSTON IRISH

"The Irish of Buenos Aires are just the same sort that settled in Boston and spread out all over the United States," Mr. Farley told me. They're descendants of pioneers, many of whom migrated to South America three and four generations ago. Why, that weekly paper, "The Southern Cross," was established in 1875 and has flourished ever since.

"Just as has been the history of Irishmen in the United States, men whose grandfathers and great grandfathers came from the old country, one finds Irish names in positions of leadership all through Argentina—leaders in public life, in business, in the professions, in education, and the arts. But they're still just as full of love for Eire as are our own Irish-Americans. And it made me sort of homesick to hear an Irish accent, way down there, among those more lately from the other side.

"One day, I went to see a party of four-generation Buenos Aires Irish. None of them could speak English and an American newspaper correspondent was acting as interpreter. I saw him smiling and wanted to know why.

"'It's the first time I ever heard Spanish with an Irish accent,' he replied.

"And those South American Irish are just as important as they are interesting to us of the United States. One after another, they asked me about cousins, relatives to the *n*th degree in Boston, New York, all the large cities of the United States, wondered if I had ever met them.

"They seem to have almost as great a love for our country as for the home land. They're all violently antagonistic to Nazi propaganda and strong advocates of closer relations between Argentina and the United States. They're a power down there, too, and their attitude should be of great value in establishing better trade relations."

Everything that Mr. Farley had to say regarding the Irish of South America indicates that they may prove to be our ace in the hole in establishing closer relations with the South American country that has been the slowest to respond to the good-neighbor policy.

The former Postmaster General believes that that should be especially important to Boston, in view of the increasingly great tonnage of traffic to and from South America moving through Boston Harbor. He was amazed at the commercial potentialities of all our neighbors to the south, believes that trade opportunities have hardly been touched, is sure that by wise methods an interchange of products can be developed that will give us new ideas of commercial development.

"Like most citizens of the United States, it is only lately that I have become South American conscious," he told me. "And this trip has been an eye opener."

He points out that we even failed to develop the business down there that we grabbed off during World War I, let it slip out of our grasp when Europe settled down, and began looking for export business again. But now we have an opportunity for commercial development even greater than during the last war, now that Europe has gone out of the exporting business altogether.

"Mine was a business trip," Mr. Farley said, "and I rather hurried along, but I had plenty of time and opportunity to make observations. Right now South America is just about in the same stage of development that the United States was at the time of the Civil War. It's a continent of tremendous undeveloped natural resources.

"What they need more than anything else is aid in developing these resources and transportation facilities to make them accessible. Give them these and at the same time they'll be given a higher standard of living, greater purchasing power, the ability to buy from us what they can't now.

"It's time we got practical in South America. Too long our professional idealists and educators have been talking down to, patronizing the South Americans. That sort of talk doesn't go across with them at all.

"The administration's 'good-neighbor' policy has done a great deal to improve cultural relations. But culture alone doesn't buy bread, or automobiles, or machinery, or any of the thousands of things that South Americans would buy from us if they had the money, or goods to exchange.

HOW TO BE PRACTICAL

"By getting practical down there, I mean more of such projects as the recent loan of $25,000,000 for the building of a steel mill in Brazil. Anything we do to enable them to develop their natural resources will not only foster friendship but give us a big cash profit.

"I'm in hopes that some method will be developed that will enable us to take some of the surplus Argentine beef, without seriously handicapping our own cattle raisers. Conversations in Argentina lead me to believe that we could import approximately 100,000 tons of their beef a year, without any severe effects upon the market for the domestic supply.

"But the purchase of even that relatively small amount would make a great and favorable change in their situation and develop a friendly feeling toward the United States in the country where it is most needed.

"We must remember that reciprocity is not a one-way street, that we have no right to expect South Americans to fall over themselves rushing to buy our goods, unless we reciprocate, make some sacrifices, too, to buy their products. They are particularly in need of our patronage, now that the war has cut off all their European markets, save Britain. And the difficulty of getting goods across the Atlantic makes that market a precarious one."

On the whole, Mr. Farley believes that most of South America is strongly in favor of fostering trade relations with the United States. The business leaders with whom he talked hold that such relations offer the greatest assurance of permanency, the soldiest foundation for hemispherical well-being. That's their cold-blooded business view of the trade situation.

The man on the street—and always trust a man with James Farley's political experience to get close to the folks who cast the votes—he wants goods produced by the United States, feels that in them he gets most for his money. The inclination of the common people, too, is tinged by a feeling of friendliness and respect for North America such as they have never had before.

And government officials realize that in a changing, upset world their only hope lies in a strong economic tie-up with the United States. They are developing a real desire to cooperate.

"Leaving the dollar mark out, which idea seems to be going over the stronger down there, our 'good neighbor' policy or Nazi-Fascist propaganda?" I asked.

Mr. Farley pressed a buzzer button on his desk, asked his secretary to bring in clippings from the newspapers telling of his visits to various cities in representative countries. It was a big envelope chock full of the clippings with translations attached.

"My impression of the newspapers down there was that they are honest, sincere in their desire to reflect the opinion of the people, to bring their readers sound editorial opinion, to work for the things that are best for the Nation," the Democratic leader turned businessman told me.

"Maybe these editorial opinions will give part of the answer to your question."

Those newspaper writers certainly went to town on Mr. Farley's visit, refused to view him as anything save a great American public figure instead of a businessman on business bent. An editorial from Rio de Janeiro's Correio da Manha is typical, displays the tie-up with North American traditions with which South American newspapers are combating propaganda from abroad.

It happened that Mr. Farley landed in Rio on the first day of their celebrated carnival; it was also Washington's Birthday and the North American was wearing a picture of Washington on his lapel.

"The representative of a great free nation," the Correio da Manha editor wrote, "could not have worn a more appropriate symbol on coming in contact with the people of another nation who love liberty, George Washington, Simon Bolivar, San Martin, Jose Bonifacio—names that are remembered as of yesterday in these uncertain times when dictators are trying to destroy the freedom that great, inspired liberators founded in the Americas. * * *

"James Monroe, another leader whom civilization will consecrate when we are rid of those who still wish to rule on the theory of hate and ambition, created the structure of what we celebrate today as one of the most perfect realizations of the age: The neo-Monroeism that received its final touches at Lima, Panama, and Habana."

That's typical of South American newspaper opinion when balancing North American against totalitarian ideologies. Mr. Farley brought out another point, seldom considered when viewing the undoubtedly large German and Italian populations in some South American countries.

"Some sections do have large populations of descendents of Axis people," he said. "But everywhere they are gathered in close, compacted colonies. They herd by themselves, and have little to do with other citizens. Their very isolation, insularity reduces the effectiveness of their efforts in behalf of Hitler and Mussolini."

Mr. Farley was especially impressed with the friendliness toward the United States demonstrated at every turn in Brazil. He had long visits with President Getulio Vargas and with Dr. Oswaldo Aranha, long-time Brazilian Ambassador to the United States, now Vargas' right-hand man. With the government heads, our Democratic leader went to an "esado" or barbecue, given in his honor by the President of the Bank of Brazil, at Petropolis, Rio's summer resort.

Prominently displayed were Brazilian and American flags, side by side, at the entrance

to the hacienda. President Vargas removed his hat, stood long silently gazing at the flags, then said that he prayed that they'd always be that way—side by side.

LEADERS IMPRESSED

"I've been coming in contact with men in public life for more than 30 years," Mr. Farley told me. "I believe that I have become a judge of men especially of men of prominence in government. And I'm happy to say that these leaders impressed me with their sincerity, their desire to advance their countries, and their people.

"President Vargas is modest and unassuming and like most big men I've met, easy to approach. I felt he was a kind of man one can know on short acquaintance. I'm in hopes that he can find time to pay a visit to the United States, so that our people can see what a really fine friend we have in him."

All down the west coast of South America, Mr. Farley found an intense friendship for the United States, evidenced not only by desire to do business with us, but also by tremendous enthusiasm for a united hemisphere against European ideas.

He attributes this happy situation to two interlocking developments—the wiseness of businessmen from the United States in getting and caring for orders on the west coast and the facilities for rapid transportation that the Pan American-Grace Airlines have afforded since they took over from the German-controlled lines in Bolivia and extended service to the other Pacific nations.

"The planes are always crowded," Mr. Farley said. "They enable American firms' representatives to get around swiftly, keep in contact and these representatives are in truth real ambassadors of good will for our nation."

He did find plenty of evidences of Nazi activities all through South America, but he found no evidence of such efforts having any effect upon Government leaders.

"Government officials," he told me, "all realize that their interests are identical with ours and that close relations must be kept if this hemisphere is to go on in freedom and happiness; that European ideologies have nothing to offer us.

"We are particularly fortunate, too, in our Ambassadors and Ministers to all South American capitals. Norman Armour, in Argentina; Jefferson Caffery, in Brazil; and Claude G. Bowers, in Chile, are doing exceptionally fine jobs and enjoy the fullest confidence of the governments to whom they are accredited. It is hardly fair, though, to single out any particular representatives; all of them are doing great work.

"All in all, I think that the whole South American attitude toward attempts to influence thought toward nazi-ism or fascism were pretty well summed up in an editorial run during my visit by the Diario Carioca in Rio: 'All the nations of America feel that the moment is grave and that only together can they keep to the road that they have set for themselves.'"

Steel Scrap and National Defense

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1941

ARTICLE BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which I wrote on steel scrap in national defense, published in the Philadelphia Inquirer on April 6, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer of April 6, 1941]

STEEL SCRAP VITAL, SENATOR DAVIS SAYS—EARLY COLLECTIONS TO BEAT PRICE RISE URGED FOR DEFENSE

(By Senator JAMES J. DAVIS)

WASHINGTON, April 5.—Since the World War the United States has been the world's reservoir for metals.

Export of steel scrap has loomed large in the public mind; but for every ton of scrap exported 10 tons have been consumed at home. Much of the scrap that is exported originates along the seacoasts. About one-quarter of all exports moves through the port of New York and an equal amount leaves Gulf ports. Only about one-fifth leaves Pacific coast ports.

STEEL SCRAP IN SPOTLIGHT

As we move forward in our national-defense program, steel scrap holds the center of attention. It has been estimated that the steel mills of the country will purchase approximately 30,000,000 tons of scrap iron during 1941. Railroads, automobile factories, and large industries will provide approximately 13,000,000 tons of this amount.

The remaining 17,000,000 tons must be produced by collectors scattered throughout the country, who no only collect the scrap but prepare it and transport it to the steel-producing centers. Your junk dealer is now the key man in the national-defense program.

IN REMOTE AREAS

Approximately 5,000,000 of the total 1941 requirement of 30,000,00 tons is located in remote areas—places so far removed from steel-making centers that the cost of freight to the consuming market is prohibitive.

In addition to this remote scrap, there is dormant scrap; that is, steel and iron products that have outlived their usefulness but have not been prepared or made ready for the scrap market. These difficulties of collection will have their inevitable influence on price levels.

URGES AID OF AGENCIES

In order to get much of the dormant scrap to the markets, it will be necessary to enlist the good offices of interested Government agencies, the R. F. C., W. P. A., and the municipalities. Dormant scrap should be made available at the present time when prices are at normal levels. Voluntary national-defense activities should include aid in the collection of this vital defense metal.

It is conservatively estimated that in the Eastern States (New England, New York, Pennsylvania, New Jersey, Delaware, Maryland, and Virginia) there are approximately 300,000 tons of tee and girder rails remaining in streets from abandoned street railways. W. P .A. labor can remove the rails and resurface the streets, while the scrap dealer can clean and prepare the material for markets.

In these same Eastern States there are approximately 300,000 tons of scrap in railways, bridges, and equipment of short and branch lines, applications for whose abandonment are now pending before the I. C. C. One mile of railroad laid with 90-pound rails, plus fastenings, equals 156 gross tons.

In Ohio there are thousands of tons of scrap in abandoned streetcar lines and old blast-furnace dumps. In the upper peninsula of Michigan much scrap will be found in abandoned mines. In West Virginia one-time flooded mines now abandoned will yield large quantities.

IN ABANDONED MINES

Kentucky has scrap in abandoned mines blast-furnace dumps, and some quantities of light scrap. Indiana has between 30,000 and 40,000 tons of scrap in abandoned streetcar and interurban lines, most of which is now being liquidated.

Wisconsin has about 40,000 tons in unused equipment in sawmills and lumber camps. The Rocky Mountain region has approximately 200,000 tons in abandoned mines. Steel mills are adjacent to all of these areas prepared to use this scrap.

CARRY EXCESS RESERVES

Nation-wide we find that railroads, municipalities, and States are all carrying excess reserves of parts for equipment which should be returned to circulation. The R. F. C. and municipalities have taken over old buildings for taxes and default on loans which are a loss without tenants and should be scrapped.

Many corporations are carrying old industrial plants for which there is no use in the defense program.

National defense now calls for their demolition, not only for their scrap value but for other materials that can be salvaged. Altogether, some 1,200,000 tons of dormant scrap can be realized in this way if the national-defense needs for this vital metal shall have the right-of-way.

I have been informed that 18 months ago the city of New York paid a contractor in excess of $100,000 to raze the Ninth Avenue Elevated, which contained approximately 60,000 tons of scrap plus other useful materials. Three months ago New York City received from a contractor $40,000 for the privilege of razing the Second Avenue Elevated, which contained only 20,000 tons of scrap.

These instances illustrate how wide-awake citizens regard the importance of scrap. Scrap now brings $20 a ton. While this price can be obtained, now is the time to act.

As a boy I would have jumped at the chance to get such a price for the old iron I collected. Now national-defense duty is combined with the price to call the youngters to do well their usual job of feeding their back-yard collections to the junk man.

As James E. Earle, of the United States Bureau of Mines, has well said, "The service performed by the secondary metal industry in collecting the metal objects discarded by the population and returning them to use is perhaps the most real contribution to conservation actually being accomplished today."

Tolerance in Time of Crisis

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1941

ADDRESS BY CHIEF JUSTICE MARVIN B ROSENBERRY, OF THE WISCONSIN SUPREME COURT

Mr. WILEY. Mr. President, because in these trying times particularly it is vital that we exhibit a spirit of tolerance which will make for unity, I ask unanimous consent to have inserted in the Appendix to the RECORD an address on this subject by Chief Justice Marvin B. Rosenberry, of the Wisconsin Supreme Court.

This is Justice Rosenberry's inaugural address, and it is entitled "Tolerance in Time of Crisis."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We meet today formally to induct into office the constitutional State officers chosen at the recent November election for the ensuing 2 years. For each of these officers it will be a continuation of a service to the people of the State, begun 2 years ago. After 2 years of service they are thoroughly familiar with the duties of their respective offices and the obligations which they will assume and continue to discharge upon the taking of the constitutional oath, which I shall shortly administer to them.

Under the circumstances it would not be fitting for me to comment upon matters that are much more within their experience than mine and I shall therefore address myself briefly to the general public upon a matter which it seems to me is, especially at this time, an appropriate subject for the consideration of every thoughtful citizen.

The shadow of a great world conflict has fallen across our land. Our young men are being called to the colors, our material and spiritual resources are being mobilized to repel a threat to our democratic way of life. While there is a difference of opinion as to the reality and seriousness of this threat, it is apparent that a decisive majority of the people of this country accept it as genuine and think we should prepare for the future accordingly.

All thoughtful people will agree that if we are effectively to resist this threat and maintain our way of life we must have unity of purpose and coordinated and harmonious effort in every field of national endeavor supported by a like unity of purpose and effort on the part of each of the several sovereign States. Both in the State and the Nation the personnel for carrying on for at least 2 years more has already been chosen. You who are about to take the oath of office are a part of that personnel. The power of decision both in the State and the Nation is now committed to these chosen officers. There are, however, within the body politic individuals and groups who passionately disagree with the plans and proposals of those to whom the reins of government of presently entrusted.

In this situation the question arises, How far may these persons and groups go in opposing and frustrating the plans made by those who are charged with the responsibility of directing our national effort? Already one may feel the rising tide of resentment of the majority group toward those who question the soundness of or the necessity for the steps which the Government is taking and is about to take in preparation for future contingencies. The right to discuss and debate public questions is one of the vital principles of democracy, a right specifically protected by the Constitution. Are there then no limits to this right, and if there are limits are they altered by the fact that at a particular time our whole way of life, including our constitutional system of government, may be threatened by subversive forces both from within and without? It should be said at this time that the standards which obtain in politics are widely different in their nature and applicability from those which obtain in the field of art or in the domain of the spirit, including religion. In these spheres tolerance has an entirely different connotation.

In a democracy the essence of tolerance is the recognition of the fact that those who entertain views opposed to the dominant group are not necessarily lacking in intelligence, in honesty, or sincerity of purpose or that they do not seek to serve the common good. Tolerance implies no abandonment of the soundness of well-considered views and no compromise with principle. Its function is to temper the tone of opposition, to substitute political discussion for invective, to the end that such constructive suggestions as the minority may submit shall be fairly considered and if found useful fitted into the program of the majority. Tolerance tends to produce on the part of the majority group such reasonable concessions as make valuable additions to or modifications of the majority program. By this process democracy is made to work more perfectly because the matured and final plans will be the result of a composite judgment and in the end will be more readily and promptly accepted by the group as a whole. Judgments arrived at by such a process must in the majority of cases be sounder than that of any individual or of a limited group.

Tolerance is in the main related to the process by which decisions upon public questions are reached. When decisions have been made as to plans and objectives and the executive officers of the State and Nation are putting them into effect, does tolerance require that the minority be permitted to use such means as are within its power to thwart the will of the Government? In other words, does there come a time when tolerance ceases to be a virtue?

The use to which the word "tolerance" is put in another field may aid us in answering this question. In mechanics there is an allowable amount of variation in the dimensions of a machine or its parts which is called tolerance and is, according to some authorities, one four-thousandths of an inch. In machines of precision it is reduced to one ten-thousands of an inch or even less. When the limits of tolerance are exceeded in a machine the usefulness of the machine is impaired and if the allowed tolerance is greatly exceeded the machine will go to pieces when put to work.

It will break up because the play of part upon part is so great that the power which would otherwise be spent in doing the work the machine was designed to do will be lost in internal friction and dissipated by lack of coordination of its parts. It is destroyed from within because of too much tolerance. Upon the same principle, when a nation is required to put forth a maximum effort to maintain its life, it cannot endure internal strife or tolerate discord and lack of unity among the people beyond certain limits. The point where the right of free speech ends and overt acts of obstruction begin is difficult of definition. In this address no attempt will be made to do more than indicate that there is such a point. Harmonious as well as vigorous action in accordance with an established plan is absolutely essential to self-defense in a democracy just as it is in an autocracy or in any other form of government.

One of the principal weaknesses of democracy in a time of crisis is that so many proposals are made that valuable time is lost in coming to a decision and in bringing discordant elements in the body politic into harmony with each other and with the government. Lack of power in the government to compel obedience and conformity makes it necessary to convert the public to one way of thinking. This consumes valuable time. Impatience upon the part of those who quickly recognize the need of action with those who are hesitant or unconvinced often leads to what we call intolerance. However, we must not forget that in such situations there are always present those who are not actually in doubt but are really in determined opposition. They obstruct the government not for the purpose of gaining insight and understanding, but for the purpose of defeating its ultimate aims.

To illustrate, two groups of men may appear to be equally anxious to put out a fire. If they disagree as to how the fire shall be extinguished, that is one thing; but if, as a matter of fact, one group delays and interferes because it does not want the fire put out at all, that is a radically different thing.

Naturally, the greater the crisis the less time there is for debate and the greater the need for unity the less tolerable opposition to the Government becomes. When under such circumstances antagonism to the methods and objectives of the Government has reached a point where it halts or substantially interferes with the Government it can no longer be tolerated, and we have reached the point where tolerance has ceased to be a virtue and has become a source of weakness.

It is one of the paradoxes of democracy that in the preservation of its life necessity may compel it for a time to limit or even to deny the liberties which it was created to preserve. In order to maintain itself in a world of conflict a democracy must make use of those procedures and weapons which are best calculated to defeat its enemies. It is as true of governments as of other organisms that survival is the first law of nature. Liberty as we know it can live only in the framework of a democracy; if democracy dies, what we call liberty dies with it.

How is the average citizen to determine when and under what circumstances his right to loyal opposition ceases? It must be admitted that this is a difficult thing to do.

In the course of preparing for and putting forth a supreme effort by the Government it is inevitable that many difficult and delicate situations will arise as to which there may be honest differences of opinion. There is no rule of thumb by which the true answer can be found in every case. We shall not be able in every case to distinguish between opposition and disagreement as to method. One thing is certain—in the solution of these problems we should not permit passion to usurp the function of reason. Individually and collectively we should be slow and careful in our judgments and act only when we are certain that action is called for. We should not be too ready to condemn those who disagree with us and the hurling of epithets and insults will do our cause more harm than good. On the one hand, we cannot be too tolerant, on the other, we should not be too dogmatic and bigotted. We will not have much difficulty in determining the proper course to pursue when the moment for decision arrives if we give the conduct of others that deliberate open-minded consideration which we would like them to give us under the same or similar conditions. It is true that we ought, as far as we can, to forget our differences, political, religious, and racial, and unite our energies in the interest of the common good. We will accomplish more by pursuing a common plan even though it is not the best possible plan than we can accomplish by a diversity of plans however excellent they may be.

It may well be that within the year now beginning we, the people of the United States, and that means each and every one of us, may be called upon to decide anew whether we really and genuinely believe in a government ordained and established to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity. Most of us are willing to talk for our Government, but what we may have to decide is whether we are willing to sacrifice for it, to fight for it, and if necessary, to give our lives for it.

Japanese-Russian Pact

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1941

EDITORIALS FROM THE NEW YORK TIMES, BALTIMORE SUN, AND NEW YORK HERALD TRIBUNE

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in

the Appendix of the RECORD three editorials commenting on the Russian-Japanese pact and its effect on America. I think the pact is one of the more important recent happenings, and I think it wise that the people of this country should have some idea of what this particular pact means.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 14, 1941]

THE JAPANESE-RUSSIAN PACT

From the Japanese side there is little mystery concerning the reasons for the neutrality pact with Russia. The interests of Japanese aggressive expansion have shifted to the south. Before she can attempt to seize or make demands upon the rich colonies of the Netherlands Indies and Malaya, or to undertake any bold move in the South Pacific, such as an attack on Singapore, she must do everything to minimize the possibility of a Russian attack from the north. Many Japanese militarists, therefore, have long wanted such an agreement. It has been reported that among the secret clauses of the tripartite pact is one under which Germany agrees to use her "fullest political and diplomatic good offices" to help effect the conclusion of precisely such a non-aggression pact with Russia. This would go far to explain what Japan got out of the pact with Germany.

The reasons why Stalin has signed the new treaty with Japan are less obvious. Coming immediately after Russia has signed a friendship pact with Yugoslavia, has scolded Bulgaria for capitulating to the Germans, and Hungary for attacking the Yugoslavs, the Japanese agreement looks at first sight like a baffling reversal. Certainly, it is a jolt to all those who hoped that, with the German menace to her own security growing every day more near, Russia's diplomacy would emerge from the fog of ambiguity that has hung over it for the last 2 or 3 years, and that she would unmistakably line herself up against the Axis Powers. From this standpoint the one crumb of comfort that can be extracted from the pact is a hope that it may have been done to free Russia from a Japanese attack in the east if Stalin should at last decide that he was forced to defend his country against German aggression from the west.

Against this hope the new pact definitely imperils the position of China. Even if there should be no immediate division of China into Russia and Japanese spheres of interest, the agreement may free more Japanese ships and men for the attack on China, at the same time as it may deepen the division within China between the Communists and the Chungking Government. The agreement will also force the British to maintain as much strength as possible near Singapore. It creates a problem for the United States regarding how much of our naval strength must be kept in the Atlantic or the Pacific. On the surface, in short, the new pact is a new diplomatic victory for Hitler, though with at least a possibility that it could prove the reverse.

[From the Baltimore Sun of April 14, 1941]

THE RUSSO-JAPANESE PACT AND AMERICA'S POSITION

Russia's conclusion of a pact of "neutrality and nonaggression" with Japan is a development of major, it may be of critical, importance. But it cannot be considered a surprise. Japan's efforts to adjust its relations with the Soviet have been many and persistent. And from the moment that it became known that Foreign Minister Matsuoka would sandwich his visits to Berlin and Rome between discussions in Moscow, it was apparent that the clinching of an arrangement with Russia might be his primary mission.

Now that arrangement has been made. The significance of the new undertaking is to be inferred from the background of recent events rather than from its own terms. Of course, it need not be more binding than any of the agreements into which dictator states have entered, and recent history is littered with their wreckage. But as it stands today it could have either of two results. On the one hand, it could serve to free Japan's hand in the Pacific and South Seas. On the other, it might remove Russia's anxieties over her Siberian backdoor and thereby free the Soviet's hand in western Europe.

The background indicates that the first of these two possibilities must be considered far more seriously than the second. Russian policy is wholly enigmatic; Japanese policy, while obscure in some details, seems reasonably well defined within the framework of the triple Axis alliance. Japan has openly staked its ambitions and destiny on the success of Germany and Italy. Moreover, Mr. Matsuoka has just concluded talks with those powers, and no reports of his visit have pointed to any rift between Berlin and Rome and their far eastern partner.

It seems distinctly unlikely, then, that Japan has suddenly reversed its policy and undertaken to support a Russian move looking to collision with the Axis in Europe. Rather it is more probable that Japan has sought a stabilization in the Far East that would permit of a more active Japanese cooperation with the Axis in the one region where Japan could play its part—the Pacific.

Yet Russia would hardly have signed a pact to serve this end unless it was under pressing need to do so or unless it was promised something in return. What need exists; what price could be paid? There is no question but that Germany is now deeply entrenched in the area that Russia once regarded as a vital security zone. Russian reaction has been vague and timid, but the reproach to Bulgaria, the pledge of benevolent neutrality to Turkey, the friendship pact with Yugoslavia, and the warning to Hungary have been construed as signs of anxiety and maybe of changing policy.

On the other hand, it is probable that Stalin has been greatly impressed by the latest demonstration of Nazi military power. The chance that Moscow is preparing itself to oppose Germany is, therefore, much slighter than the chance that she is striving to maintain an uneasily peaceful position in the hope of sharing in some division of spoils as a reward for good behavior.

But while the Russian course defies prediction, Japan's interpretation of the pact is highly meaningful. Tokyo calls it an agreement to prevent "extension of war." That means that it regards the pact as a way of strengthening Japan vis-à-vis the United States and thus softening American policy in the developing world crisis. It hardly need to be said that on this matter Japan's calculations are incorrect. American policy will be affected no more than it was affected by the Japanese-Axis alliance last fall. For likelihood of a Russian-Japanese pact must have been fully considered by Washington when our basic policy was formulated.

Doubtless we shall watch the Pacific with greater vigilance and concern. That does not, and cannot, imply that we shall cease to support our own interests and safety by increasing aid to Britain or by such other moves as events may require.

[From the New York Herald Tribune of April 14, 1941]

THE RUSSO-JAPANESE PACT

From the German and Italian propagandists we shall undoubtedly be hearing for many days to come that Mr. Matsuoka's negotiation of a neutrality pact with the Soviet Union is a great diplomatic triumph for the Axis Powers. Certainly it is as much as Germany has been trying to get from Moscow for Japan, for 6 months past, and lately with little prospect of success. It is certainly all that the Japanese press has been clamoring for, ever since Mr. Matsuoka set out for Europe. In some respects it seems to cover more ground than the simple nonaggression treaty for which the Japanese have been asking. It provides very interesting food therefore for speculation; but whether or not the Axis will derive from it all the advantages which will now be claimed depends upon the circumstances under which it was signed, and the use that Japan is prepared to make of it.

Axis spokesmen will assure their peoples that this pact, which not only pledges Soviet Russia to respect Japan's territories (including Manchukuo, according to the supplementary declaration) but binds her to neutrality if Japan is involved in hostilities with one or more other powers, now frees Japan to launch ventures in the Far East which will divert American attention from Europe, make it impossible for the United States to move much of the Pacific Fleet into the Atlantic for convoy purposes, and may even limit the percentage of war supplies which can be spared Great Britain. It will be suggested that Mr. Matsuoka and his nation needed nothing but the assurances from the Kremlin which this pact now gives them to enter into active cooperation with Japan's European partners. If this were true the pact would be very important indeed; but we are inclined to doubt that it is wholly true.

Japanese opinion lately has seemed averse to making trouble in the Far East which might challenge the attention of the American fleet. We doubt that Mr. Matsuoka had authority to promise Hitler and Mussolini that Japan would make that kind of trouble, whether Stalin adopted a neutral attitude toward it or not. It has been our impression that Japan has been keenly anxious to get nonaggression pledges from Stalin, so that if the trend of events made it certain that Germany would defeat Britain and put the United States on the defensive Japan could reap her South Sea harvest with an easy mind. It would therefore be our guess, for what it is worth, that Matsuoka has secured these comforting pledges without binding himself in any quarter to take immediate advantage of them.

If this guess is anywhere near the truth, the Axis Powers may not only have little reason to crow over this diplomatic victory but may on second thought have some reason to feel that Japan has just given comfort to a potential Axis victim. The Kremlin has been openly critical of German policy in the Balkans, reprimanding Bulgaria, encouraging Turkey, congratulating Yugoslavia on her anti-German coup, and scolding Hungary for a breach of faith with Yugoslavia. The Kremlin evidently fears a German drive into the Ukraine. Here the Kremlin has a pledge from Japan that, should Russia become "the object of hostilities on the part of one or several third powers," Japan will not take advantage of her involvement to attack Siberia or Outer Mongolia, but will maintain her neutrality and give no aid to her European Axis partners. It can therefore be said with as much justice that Japan has given Soviet Russia freedom to conduct a more aggressive anti-German policy as that Russia has made it safer for Japan to conduct a more aggressive anti-British and anti-American policy.

It may, of course, be objected that if this pact prompts Japan to adopt a policy which will immobilize the better part of the American Navy in the Pacific, it may make a decisive German victory over Britain shortly possible and thereby make the German threat to Russia imminent and very serious indeed. But how then was Stalin persuaded to sign this pact, after stolidly resisting all German efforts

to get it for Japan during the months when Russo-German relations were at least ostensibly friendly and cooperative? We don't know, and we don't expect to know for quite some time; but we find it hard to believe that Mr. Matsuoka got his pact by persuading Stalin that it would forward the German cause in Europe and be a diplomatic victory for the Axis. It must always be borne in mind that if the Kremlin thought that a little encouragement would send Japan to her swift ruin and thence prompt a wholesale American withdrawal from the Pacific to the Atlantic, leaving the Far East to Russia, such encouragement would be a logical policy.

Committee Jurisdiction of Civil Aviation

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1941

Mr. LEA. Mr. Speaker, now and then a suggestion is made that the House create a standing committee on aviation. Some suggest that it be given separate jurisdiction over both Army and Navy aviation, and others suggest the committee have jurisdiction over Army, Navy, and civil aviation. In the debate on the resolution to investigate air safety on the 6th of March a couple of the Members of the House suggested a special committee on civil aviation to have jurisdiction over that subject now exercised by the Interstate and Foreign Commerce Committee. It was freely admitted that this committee, which now has jurisdiction, has done a good job in legislating on the subject.

In my judgment, the President made a mistake when, by an order of reorganization, he changed the set-up of the regulatory body from that established by Congress. Under that legislation civil aviation had attained its greatest and unquestioned success from the standpoint of accomplishment, expansion, and safety. The reorganization order was an attempt to improve a 100-percent safety record. That was an impossible thing to be accomplished, regardless of the reasons that may have occasioned the change.

Before we make any changes in legislative procedure, and take jurisdiction away from that committee which has successfully handled it for 14 years, we should carefully consider what we may expect to gain by such a change.

It was suggested that members of a general committee are not experts on aviation matters. It takes an expert man to operate airplanes, and experts are needed to carry out the details of regulatory authority. Legislation, however, deals not with these details but with the policies that are to control the administrative agencies. Committee responsibility calls rather for common sense, reasonable ability, and industry. A broad background of experience and a proper conception of the perspective of legislation are much more important than expertness.

Any substantial criticism of the lack of progress in civil aviation or administration has never been directed at the Committee on Interstate and Foreign Commerce of the House. Its members are not without experience in this subject of which they have jurisdiction.

In 1922 the gentleman from New York, Hon. JAMES W. WADSWORTH, then a Senator and now a member of this committee, introduced a comprehensive regulatory bill. The first measure introduced in the House for the regulation of civil aeronautics was by the then chairman of this committee, Hon. Samuel A. Winslow, in 1923. The Air Commerce Act of 1926 came through this committee. The chairman of the Committee on Interstate and Foreign Commerce was a member of the War Investigating Committee and served on the subcommitteee which had charge of air safety in the war period. He was a member of the special committee appointed by Congress to investigate aircraft matters in 1924. A former chairman of this committee was a member of the Morrow committee of 1926. The chairman of this committee was a member of the subcommittee which reported the bill that finally became the Air Commerce Act of 1926.

Members of the Interstate and Foreign Commerce Committee gave much time to the Civil Aeronautics Act, under which aviation has made distinctly the best progress in civil aviation in this or any other country.

On December 4, 1795, the House of Representatives created a standing Committee on Commerce and Manufactures. That committee was the original predecessor of the present House Committee on Interstate and Foreign Commerce. This committee was 91 years old when the Interstate Commerce Commission was created and is now in its one hundred and forty-sixth year. It has been the primary committee on transportation during that whole period.

Civil aviation, from the Government standpoint, primarily involves a problem of transportation. The airplane is becoming an important agency of our transportation system. In recent years we have made an intelligent, consistent effort to unify the regulation of our transportation agencies with a view of coordinating them into an efficient national transportation system. All branches of domestic transportation have been placed under the jurisdiction of this one committee. All these agencies, except air transportation, are under a common regulatory body—the Interstate Commerce Commission. While all these agencies are under the jurisdiction of one committee, we deliberately created a separate regulatory body for civil aviation primarily on account of two considerations. Air regulation involves two features of special importance as contrasted with other types of transportation. One is the promotion feature of aviation and the other is its problems of safety.

Civil aviation still operates largely on a subsidized basis. It is still in a progressive stage of development. Its development is essential for military purposes and of growing importance from the standpoint of civil transportation. For this reason we have the subsidization and promotive features of the Civil Aeronautics Act. The effectiveness and utility of the airplane from the beginning has been limited by its transportation cost and its factor of hazard.

The utility of the airplane compels national interest in its advancement.

This committee reported legislation which established a civil air-pilot training program. A large number of schools distributed throughout the country furnished instruction and primary flying training. The system does not contemplate finished flyers, but rather widespread basic instruction and knowledge of air operations.

Nothing that has been done has laid a better or a broader foundation for airmindedness, which promotes widespread, intelligent, and growing interest, and knowledge of air transportation than will result from intelligently following out this program for some years to come. Thousands of young men have taken these primary flying courses and several thousand of them have entered our Army and Navy training forces.

This primary course serves to weed out many young men who are not qualified to become expert flyers.

The training course under the Civil Aeronautics Administration costs only a few hundred dollars per student. Since the initiation of these flying courses our military situation has changed the training picture. The plan, however, without further legislation is by administrative cooperation readily adapted to the more pressing need of military training.

Legislation as to safety does not require a committee of experts. Any idea that Congress is going to assemble a committee of 21, or any other number of real experts on aviation, is encouraging a hope of the impossible. The suggestion of giving such a specialized committee control over air transportation ignores the fact that we would thereby break up the system of coordinating transportation that we have been carefully developing and sacrifice the growing air transportation need to the supposed advantage of military or safety regulation. Military aviation has no place in controlling civil aviation, although the latter should function so as, in the face of necessity, to serve military needs.

SPECIAL STANDING COMMITTEES

My observation in Congress has been that the fewer special standing committees we have, the better is the quality of legislation. There are few specialized activities of so large import that they should be handled by a committee of limited jurisdiction. A special standing committee, with jurisdiction only as to a specialized subject, as distinguished from a general subject, is like a hen with one chick or a lawyer with one case.

One characteristic of specialized committees is the inclination to become subservient to and expressive of group interests. Men seek membership because of particular interest. The membership of the House Committee on Interstate

and Foreign Commerce is not selected with a view of any particular class of legislation over which it has jurisdiction. We have jurisdiction over a large number of important phases of Government activities. Our membership is widely distributed geographically, and, in my judgment, a committee so constituted is better prepared to bring in well-balanced legislation than any special standing committee which deals only with one subject.

Civil aviation does not require extensive and continuous legislation. The basic act being now well established, it will hereafter be only intermittently that changing conditions and experience will require legislation of importance. There is no prospect of any such volume of legislation as justifies or requires the appointment of a special standing committee.

On the 12th of October 1925 Hon. Martin B. Madden, then chairman of the Appropriations Committee of the House, appeared before the President's Aircraft Board, at the request of that committee, to give information concerning the question of improving the air service of the country.

In answer to a question if he thought there should be standing committees in both House and Senate on aviation, Mr. Madden replied:

No; I do not.

Mr. Madden said:

A committee, I presume, for example, the Naval Committee of the House, could have a subcommittee on aviation, and has, and the Military Committee of the House would have a subcommittee on aviation, and I presume it has, and they are the responsible legislative agents of the Congress on that subject; but to make a special committee, here is what you do: The less specialization you have in committee work in Congress the better the country is off. They deal with only one subject, and then they find themselves with not much to do a great deal of the time, and not having much to do, they are trying to find some way they can spend a little more money, and they work out some legislation, no matter how much it is going to cost, and then they say, "You know we ought to get consideration of this, because we have devoted ourselves to the consideration of this problem for a year." It is not a question of merit. It is a question of such gentlemen wanting to be recognized for the work they have done. The gentleman sitting on your right understands that thing very well.

We can reasonably expect that the time is coming when civil aviation will be on an economic self-supporting basis. When that time comes special promotion in its behalf will become unnecessary. As time goes on experience and improvements will minimize hazards which are now civil aviation's particular problem. Therefore it is going to become increasingly important that the regulation of civil aviation be under that committee which has experience, background, and training to help coordinate air commerce with our other transportation agencies. Every year the need and importance of coordinating our various transportation agencies and developing them into a consistent system of national transportation becomes of increased importance to the country. To lift air transportation out of the picture and give it a separate and perhaps conflicting status would be a backward step.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. LAMBERTSON. Mr. Speaker, what the strikes need is a Grover Cleveland.

How to stop strikes and when to start convoys are perplexing.

Settling these strikes and settling them right are two alternatives.

My people are praying that the President will see a new light on Easter.

Just a year ago the first Willkie Club was started. It has now gone to Halifax, too.

Seizing Danish ships and then offering to buy them does not make the heart grow fonder for us there.

A constituent suggests that the Chief is holding off the war till May just to break another precedent.

A church belfry on April 18—a horse and rider. Paul Revere, the Germans may be coming now, but the redcoats are already here.

Following seven billions to keep war away from our shores, a British ship with a black eye comes in, announced by Secretary Knox as a secret. The rearing convoy should take a good look.

Ocean Air Cargoes

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1941

ARTICLE BY GROVER LOENING

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article of value to the Congress in developing its aviation policy. It is entitled "Ocean Air Cargo in the 'Predictable Future'," by Grover Loening, appearing in the April 1941 issue of National Aeronautics, the official publication of the National Aeronautic Association.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From National Aeronautics of April 1941]

OCEAN AIR CARGO IN THE "PREDICTABLE FUTURE"

(By Grover Loening, B. Sc., A. M., C. E.)

Fourteen years ago this May, Colonel Lindbergh demonstrated to the world that he could carry one-tenth of a ton (himself and some supplies) at an average speed of between 90 and 100 miles an hour, on a couple of hundred horsepower, a distance of 3,500 miles, which was enough to fly him nonstop from New York to Paris.

By May 1941 the Douglas B–19 will be in the air. While the exact figures on its performance are not yet available, and probably will be kept secret when tested, we all know enough in a general way to say that it will demonstrate that aeronautical science has advanced in these 14 years to a point where the same distance traversed by Lindbergh 14 years ago can be negotiated with an aircraft that will carry 20 tons of load at well over 200 miles an hour on 8,000 horsepower.

Let us stop a moment and realize that in these 14 years the load capacity that can be carried in the air this distance will have increased 200 times. The speed will have increased over twice. The ton-miles will have increased, therefore, over 400 times—and what is more important, the ton-miles per horsepower-hour will have increased 10 times. It is in the latter figure that significant economy comes, particularly when we realize that accomplishment of this mission by the 1941 aircraft requires half the time that it did in 1927.

In the face of these figures, Colonel Lindbergh stated in his testimony before Congress in connection with the lend-lease bill on January 28, 1941, "An air invasion across the ocean is, I believe, absolutely impossible at this or in any predictable future. * * * Aircraft alone are not capable of carrying a sufficient quantity of material."

GROUNDS FOR OPPOSING LINDBERGH

It just so happens that despite the respect one continues to have for Colonel Lindbergh as an aviation technician (and incidentally as an observer of world conditions due to his wide air travel in all nations) there is ground for complete disagreement with his statement. This goes for Al Williams and anyone else who scoffs at the ability to develop aircraft in the immediately "predictable future" to carry sufficient cargo tonnage to figure as a transport medium for invasion.

Let us see what we are reasonably justified in assuming will be the progress in the next 14 years—that is, by May 1955 (which is a short "predictable future," according to what we have seen since Lindbergh first opened the air lanes of the Atlantic).

1. There will be without any question the development of boundary layer control, which will reduce the drag of aircraft and greatly increase the lift. An increase in lift alone can conservatively be estimated at 50 percent at least. If a development similar to the *B–19* weighs around 70 tons, an increase in lift of 35 tons is likely. Assuming that 5 tons of this increase in lift will be necessary for increased structural strength and provision for boundary layer control mechanism, we finish up with a net increase on this exactly similar plane of a cargo load (no military fixings or seats) to 50 tons for a 3,500-mile range.

2. The boundary layer control development will also decrease the drag and there will be further refinements in shape and surface smoothness—all tending to increase the speed very materially.

3. In addition to the above, we have in the immediate offing the introduction of a jet-propulsion system to recover lost power from the exhaust. We have further improvements in fuels. Obviously, further improvements in propellers are within reach. We have also constant improvements in power-weight ratios of engines.

4. Taking any of the charts showing the increase in speed by years and the increase in the speed of load carrying aircraft that we have seen in even the last 3 years, we can safely predict that this same general B-19 type, which will cruise presently at 200 miles an hour, will find itself cruising at well over 300 miles an hour within the next 14 years.

5. We have still other untapped sources of increased load carrying for aircraft—for example, catapulting will allow heavier loads than the above by assisted take-offs either on water or land. We have completely ignored possible changes in structure which are certain to come and materially decrease the dead weight of aircraft.

AIR CARGO VERSUS SURFACE CARGO

The 1955 version of the 1941 B-19 will, therefore, be an 8,000-horsepower airplane which will carry a load of 50 tons at 300 miles an hour with ample range to fly nonstop from New York to the continent of Europe. The speed of this aircraft means that such a trip will take about 12 hours and that a round trip can be made in 2 days with ample time for maintenance and 3 round trips can be made in a week—or 150 round trips can be made in a year and still leave a period of some 60 or 70 days for yearly overhaul.

Now, the reasons one can differ with Colonel Lindbergh and anyone else who does not think that aircraft are going to carry tonnage and cargo can only be appreciated if we delve with a cold and appraising eye into the merchant marine, and the freight ship, and look at what they actually do. The average freight ship of 10,000 tons will carry about 6,000 tons of cargo.

These ships average anywhere from 10 knots for the old ones to 18 knots for the new ones, but it appears that they go across the Atlantic under war conditions in convoys. This little matter of convoys means that a freighter to Europe takes anywhere from 15 to 30 days to get over. First, the convoy has to be assembled in some place like Bermuda or Halifax. Next, it takes a very zig-zag course. Then it has to wait to unload because of the limited port facilities due to bombing injuries to harbors.

So let us face the facts. And the facts are (as anyone can verify who wants to go into the matter with men in the shipping world) that the average freighter, under present war conditions can only make about 8 round trips a year. Let us give this a benefit of improvement and say that the average is 10 trips a year. This means that the freighter carries to Europe in a year a total of 60,000 tons.

COMPARISON AND CAPACITIES

We can forget ton-miles; we can forget the great gaping maws of the huge holds of the freighter; we can forget its obvious large capacity in taking on 6,000 tons at one filling, because what interests us, essentially, is how many tons it gets to Europe in a year.

Now, let us take a look at that "predictable" 1955 aircraft. It can carry 50 tons of load to Europe 150 times a year, which, by anybody's arithmetic, is 7,500 tons a year. As shocking as it may be to shipping men, it happens to be a fact that only eight of these little 1955 aircraft would be required to carry the pay load of one freighter in a year!

Placed in quantity production by 1955, this predictable plane should cost about $300,000 apiece; and since the 10,000-ton freighter costs about $2,000,000, there is no great discrepancy in first cost.

The 8 aircraft would each be run by a crew of not over 4 men; probably only 3—pilot, copilot, and mechanic—any one of whom can use the radio, and 2 of whom can navigate. So to carry this same load the aircraft cargo operation needs 24 men. Giving about 100-percent allowance for reserve crews, say 50 men in all, we still have a total that is less than the crew of the freighter. To be sure, they get paid more, but maybe by 1955 everyone will be in the employ of the Government, and pay will not count any more.

It is not proposed in this short study to go into full details of a comparison of these operations but only sufficiently to say that when Colonel Lindbergh made a statement "that in the predictable future * * * aircraft alone are not capable of carrying sufficient quantities of material" he apparently was talking through his hat.

It has always been interesting to note in the last thirty-odd years in which some of us have seen this dizzy aviation business grow from nothing to what it is now that in many cases the least imagination and appreciation of the progress in their own field is frequently shown by the very people in it. Why this is so one does not know, except that aviation, like other fields, develops its crabby old men.

The military mind today reflects ponderously as to whether Germany can or will invade the United States by air.

This is called air defense. But for the real defense of America against this aggressor this is not the question at all. The first and foremost question to be considered at once is, Can America invade Germany?

With enormous and skillful aviation development, it is our great Nation itself that can shrink the Atlantic to a lake, and for our security we should set about building an air force to do this now. This is an absolutely sure way of scaring off Germany or of being completely ready to eliminate her or any other transoceanic troublemaker when the time comes.

AIR CARGO THE LIFE LINE

Envisioning such a future for our prestige and protection, it is important that everyone realize that the development of cargo carrying is the foundation of air-fleet operations exactly as has been the case in merchant-marine operations. No matter how many fighting planes we have we cannot conduct our offensive operations overseas, which we must be able to do to live in the world to come, without being able to supply our advance bases by air and we cannot do this without laying the foundation in this country by the development to the utmost of any and all kinds of air cargo carrying, whether they pay or not.

If early in 1918 we had said, "Let us not build any merchant ships or even encourage them because Germany has none and cannot invade the United States" where would we have been in that war? I fail to see why the supporters of the theory that we do not need air-cargo carrying now would not be making as great a mistake in this war and certainly in any war of the more distant future.

Not only can disagreement with Colonel Lindbergh's view be stated with ample justification, but a consensus of really far-seeing voices would go further and say:

That in the immediately "predictable future," transportation of most armament materials, of all troops and personnel, and practically all light or heavy loads of destructive munitions, will have to be transported and deposited by air in order to win a war across the Atlantic.

And it will take a real air force to do it.

Meanwhile, we still do nothing about real air-cargo carrying.

The People of Belgium Are Eating Cats and Dogs—Christians, What Are We Going To Do About It?

REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. LUDLOW. Mr. Speaker, the people of Belgium have been reduced to such a stage of starvation that they are eating cats and dogs. With the tightening of hunger's grip even the supply of cats and dogs is getting scarce in Belgium. For a time sea gulls and sea-gull eggs partially satisfied the ravenous hunger of the starving Belgians, but of late they have been forced to eat cats and dogs. This is not a mere assertion on my part but it is based on authentic information received by the National Committee on Food for the Small Democracies, of which Herbert Hoover is the head, and communicated by a member of that committee to me.

Does the fact that the good people of Belgium are so far on the road to starvation that they are compelled to eat cats and dogs mean anything to us?

Does the fact that at this moment little children by the thousands in Belgium and other subjugated countries of Europe are crying for food mean anything to us?

Does the fact that 37,000,000 defenseless, noncombatants in Belgium, Norway, Poland, and Finland are face to face with dire hunger and starvation mean anything to us?

If we can contemplate with composure the condition of these poor, unfortunate, suffering human beings and the fate that awaits them the coming winter, then I say, What in God's name, has become of our Christianity?" We profess that we are a Christian nation, but if we are, how can we enjoy our big square meals and repose peacefully on downy pillows at night while our fellow beings are enduring such extreme agony? I would think that the food would stick in our mouths and that we would rise in the morning fatigued by restless, wakeful hours when warm covers and downy pillows failed to drive away the haunting horror of wan and pleading faces across the sea.

That is to say, if we were real Christians.

If we were real Christians, we would be thinking of what Christ would say in the circumstances. Nearly 2,000 years ago there was written what He would say:

Suffer little children to come unto me, and forbid them not, for of such is the kingdom of heaven.

For I was an hungered, and ye gave me meat; I was thirsty, and ye gave me drink; I was a stranger, and you took me in;

Naked and ye clothed me; I was sick and ye visited me; I was in prison and ye came unto me.

Verily, I say unto you, inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me.

Let us evaluate the conditions among these starving peoples and our duty in respect to them in terms of Christianity, or else let us cease to boast that we are a Christian nation. Let us vignette on the surface of our memory, where it will never fade, the wan, pinched, pale, pleading faces of the little children of Belgium, Norway, Poland, and Finland many of whom, according to well-authenticated reports, are too weak from hunger and malnutrition to go to school.

When I contemplate this awful specter of mass starvation my first thought is of the little children. I could not get them out of my mind, even if I wanted to. Have you ever seen emaciated little children looking up to you with pleading eyes, begging for something to eat? Herbert Hoover has. He fed the Belgians once before when starvation stalked in their land, and he knows what hunger is.

The sweetest smile I ever saw on the face of a human being was a smile that lighted the wan features of a little girl in a restaurant in Habana, Cuba, when I was visiting there last fall. My wife and I were eating at a popular Chinese restaurant on one of the main thoroughfares. Time after time we were interrupted by children who came in off of the street to ask for money. I had already responded to three separate "touches" of this kind by boys, when a little girl appeared, shabbily dressed, pale, and evidently from the ranks of the very poor. Coming the last, she fared the worst, as I had only a small piece of change left. I gave it to her, and she vanished into the kitchen of the restaurant. I had forgotten all about her when she reappeared, and as she walked rapidly out of the restaurant she turned toward me, and with a smile of thanks and gratitude I never shall forget she held up in her little hand for my inspection the food my trifling contribution had enabled her to purchase—about a dozen slices of stale bread. Slowly the sad consciousness came over me that I owed that little one something more than some slices of stale bread that probably were left-overs at the best. Her smile radiating thankfulness over such a little favor had captivated me, and I rushed out to overtake her, hoping to learn something about her, but she had disappeared in the milling throng. I shall never see her again, but that smile will linger with me forever. And when I think of that smile I can visualize how gratefully the boys and girls of Belgium, who are forced to eat cats and dogs, would smile just now if they could only have a little stale bread.

Surely it is our duty, our Christian duty, to feed the starving people of the subjugated countries; who are starving through no fault of their own, and especially the children.

If we would use part of our bountiful surpluses to relieve starvation in these stricken lands we would truly justify our claim to the role of "good neighbor" and would broaden and strengthen our moral influence throughout the world. If the great United States, the greatest Nation in the world today, and almost the last citadel of Christianity, were to go farther in extending its ministrations of love, we would not need so many battalions and battleships. There is no starvation in Germany. As a matter of fact, the children of Germany do not need any aid and, of course, would not receive any from the United States. Hitler, merciless despot that he is, has been farsighted in looking after German interests. He has been cannily preparing for war for a long time, and, while plotting his ruthless course, he has built up the food reserves of Germany so that the food situation in that country is the best among all of the nations that have been affected by the European debacle. Germany has enormous potato surpluses at this time. The Dutch also have been very careful in the conservation of their foodstuffs, and they have some food reserves. It is in Belgium that the most awful conditions of hunger and starvation exist, and next to Belgium the food problem is most acute in Norway and Poland. During the last few weeks limited amounts of food have gone into Finland, due to a modification of the British blockade, but the blockade is still rigidly enforced against the subjugated countries of continental Europe.

The wisdom of the Anglo-American policy in reference to the blockade that is keeping food away from the starving people of Europe may well be questioned. The people who are suffering are the friends of Britain and the friends of America. Their blood relations in the United States comprise a large cross section of our people, estimated to be 15,000,000 of our population, at least. If we get food to the starving, we will be saving the lives of our friends, for which they will be eternally grateful. It seems to be increasingly evident that if Britain insists on enforcing the blockade, it will run counter to the public opinion of the world, build up needless odium against the democracies, and play into the hands of Hitler, who is already trying to impress upon the subjugated countries that Britain, by refusing to let food come in, is prolonging and magnifying their misery. It should be obvious, it seems to me, that if Britain and America save these countries from their awful plight, Britain by releasing the blockade and America by shipping in food, the cause of democracy will be immeasurably strengthened throughout the world.

To those who make the point that charity begins at home; that we should look after our starving people first; and that we should not tax the already overburdened taxpayers at home to provide relief for those abroad, the answers are plain. In the first place, nobody in the United States is eating cats and dogs. Our worst conditions here are like heaven compared with those in Belgium.

In the second place, we have ample supplies of food to care for our own and at the same time assist other hungry people. The Commodity Credit Corporation in the United States owns or holds under loans 283,000,000 bushels of wheat; Argentina has 175,000,000 bushels in storage; and Canada has a surplus of 672,000,000 bushels. Argentina and the United States between them have 1,160,000,000 bushels of corn. We also have a surplus of pork, lard, fresh fruits, milk products, eggs, and meats. This should prove that we can afford to send some food to Europe without causing hardship to our own people. And in addition, our farmers are well prepared to raise far more food than we could possibly use ourselves.

In the third place it would not cost the taxpayers of the United States anything to furnish this relief, as the afflicted countries have enough frozen assets in this country and other resources to pay for every pound of food we would send to them. A plan of delivery has been prepared which gives complete assurance that all of the food shipped from America would go to the subjugated countries and no part of it would reach Germany.

In the National Committee on Food for the Small Democracies we have an organization set up and ready to function for the relief of our distressed friends across the sea. If we furnish the aid their tragic situation calls for, these peoples will be more than friends; they will be bound to us with hoops of steel. In the field of relief Herbert Hoover is an administrator without a peer, who demonstrated his capacity to cope with colossal problems of this character in the wake of the first World War. He is a great humanitarian whose sympathies are as far-reaching as humanity itself. His plan to succor starving millions is about the grandest vision of humanitarian service the mind of man ever conceived, and in his devoted, unostentatious efforts to carry it into execution he deserves the sympathy and support of every American citizen.

The Public Debt and the New Deal's Program for Financing Defense

REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. REED of New York. Mr. Speaker, I have requested time to recapitulate facts heretofore presented to the House relating to the loose fiscal policy of the New Deal and to give the membership some new facts which may be useful in the formulation of a new revenue bill.

It may be that even in the face of our national debt, present and prospective, some comfort may be found in the assurance of Thomas Babington Macaulay that:

No ordinary misfortune, no ordinary misgovernment, will do so much to make a nation wretched as the constant progress of physical knowledge and the constant effort of every man to better himself will do to make a nation prosperous.

It has often been found, said Macaulay—

that profuse expenditure, heavy taxation, absurd commercial restrictions, corrupt tribunals, disastrous wars, seditious persecutions, inundations have not been able to destroy capital so fast as the exertions of private citizens have been able to create it.

I hope Macaulay's philosophy can stand the test of the New Deal spending machine, which has spent $59,000,000,000 in 7 years, of which only $6,800,000,000 has been used for national defense. I shall go more into detail with reference to these expenditures in the course of my remarks.

We all know that a rising public debt and heavy taxes go together. No country has ever greatly increased its debt without being obliged also to raise more by taxation. It has also been true, particularly in our own national history, that taxes have been reduced as the debt was redeemed.

One reason for this relationship becomes clear if the public debt be thought of as a first mortgage on the earning power of the people. Every day in the year is tax day for all of us. The taxes to service the public-debt first mortgage fall not only on all who work but on all who eat.

How much is this Federal debt mortgage? On March 4, 1941, it was $46,132,000,000. This was $10,000,000,000 more than the total value of all farm land, buildings, and livestock as reported in the farm census of 1935. If all of the property in all of the States west of the Mississippi River could be sold today for its assessed value, as last reported by the Census Bureau, the total amount realized would not pay off all of this debt mortgage.

The interest on the Federal debt mortgage in 1941 will be about $1,100,000,000, or more than $300,000,000 in excess of the total ordinary expenditures of the Federal Government in any fiscal year prior to 1916. To pay this interest bill in 1941 will require almost all of the revenue that will be collected during the year from all of the following taxes: Liquor, capital stock, and estate taxes.

The Federal debt has increased rapidly in the last 8 years. On March 4, 1933, the total was approximately $20,200,000,000. This was a per capita Federal debt mortgage of about $163. Eight years later, on March 4, 1941, the per capita debt was about $352. In the first 8 years of the present administration the per capita debt has increased by 116 percent. This is the most rapid increase of debt in a like period during peacetime that has ever occurred in our own country or in any other country not afflicted by an uncontrollable inflation. That fact, as the President would say, "deserves a headline."

This is not all. In addition to the direct Federal debt of $46,130,000,000, the Government has guaranteed bonds and notes issued by its corporations and credit agencies to a total of $5,937,000,000. Under existing laws these corporations are authorized to issue a total of $14,900,000,000, which will carry this guarantee. None of these obligations are included within the statutory debt limit of $65,000,000,000.

There is yet another chapter in the story of the public debt. To the Federal debt must be added the State and local debt. On June 30, 1932, the State and local debt was $19,576,000,000, representing a per capita of $155.78. As of June 30, 1940, the total was $20,000,000,000, equal to a per capita of $150. Thus, in 1932 the total public debt represented a burden on each man, woman, and child of $312.42, but 8 years later this burden was $502. The per capita increase has been caused almost entirely by the growth of the Federal debt.

This debt is a first mortgage against every citizen. All actually pay taxes, whether they realize it or not. Every baby born in the United States begins life with a public-debt charge of $502 against his future earnings. Every couple that marries starts housekeeping with a public debt of $1,004 in addition to what they may owe on the furniture. Every family with three children is carrying the equivalent of a mortgage of $2,510, or enough to pay for a modest home.

We had already accumulated this tremendous national debt when, on May 16, 1940, President Roosevelt finally informed Congress that additional expenditures for national-defense purposes were a dire necessity. At that time the President believed that the national-defense requirements could be met by an additional appropriation of but $1,500,000,000 for that year, and that the total cost of the emergency defense effort would be only $4,000,000,000. But at least three additional requests for national-defense funds were made by President Roosevelt before the Seventy-sixth Congress adjourned.

The total amount of money appropriated for national-defense purposes for the fiscal year 1941 was $8,000,000,000, plus $4,000,000,000 of contract authorizations. Of this sum, $8,600,000,000 was for the Army and $3,400,000,000 for the Navy. In the President's Budget for the fiscal year 1942, that was submitted to Congress on the 8th of January 1941, it was estimated that the total cost of the defense program for the fiscal years 1941, 1942, and 1943 will be approximately $28,000,000,000. It was estimated that $6,464,000,000 will be spent in the fiscal year 1941; $10,811,000,000 will be spent in the fiscal year 1942; and the balance (approximately $12,000,000,000) apparently would be spent in subsequent years. As a consequence of the defense program, the cost to the Federal Government for the fiscal year 1940 was $9,127,000,000; for 1941 the estimate is $13,302,000,000. For 1942 it will reach the startling figure of $17,585,000,000, according to the last Budget message. Thus, in the 4-year period from 1938 to 1942, the cost of the Federal Government will have increased from $7,526,000,000 to $17,585,000,000, or 133 percent.

But this is not all. After Congress passed the lease-lend bill and it became law on March 11, 1941, President Roosevelt asked Congress for $7,000,000,000 of additional funds for national defense and aid to England in the period ending June 30, 1943. This, of course, is in addition to the $28,000,000,000 that was considered in the Budget message of January 8, 1941. Thus, despite the fact that President Roosevelt has repeatedly said that he has seen this defense emergency coming for years, he has failed to make financial plans to meet the situation. For first the New Deal believed that adequate defense would cost only $4,000,000,000, then $28,000,000,000, and now $35,000,000,000, all within a period of 10 months. One can well wonder whether the estimate will not be further increased in the next few months.

Undoubtedly we are confronted with a real emergency in the field of national defense. The present unsettled world situation makes it necessary for us to engage in vast defense expenditures in order to insure our own safety. Both political parties are agreed on that. We are confronted with a real emergency for which the New Deal has not adequately prepared the country financially. Financial preparedness for the current emergency is in many ways as important as preparedness in terms of armaments. The New Deal during 7 years has been engaging in a long continued spree of spending. Every year since the New Deal came to office there has been a deficit. The total expenditures of the Federal Government under the New Deal increased from $6,011,000,000 on June 30, 1934, to $9,636,000,000 on June 30, 1940. The revenues have increased from $3,115,000,000 to $5,703,000,000. In fact, in 1938 they reached $6,241,000,000, the highest tax collection in any peacetime year. Nevertheless, the Federal Government accumulated a total deficit of $22,662,000,000 during 7 years, or an average of slightly more than $3,000,000,000 a year. As a consequence, during 7 years the public debt has increased from $20,000,000,000 to $42,000,000,000; that is, it has more than doubled. Now it is actually in excess of $46,000,000,000.

On what did the New Deal spend $59,000,000,000 in 7 years? Almost 50 percent of this amount, or $29,000,000,000, went for purposes of recovery and relief, so-called, including agricultural benefit payments. Only approximately $6,800,000,000 went for national-defense purposes. In fact, in 1929 national defense accounted for 20.5 percent of the total expenditures of the Federal Government; whereas in 1936 national defense accounted for only 9.3 percent of the total expenditures of the Federal Government; and despite increases in defense expenditures in recent years, in 1940 expenditures for this purpose were but 16.34 percent of the total expenditures. According to the Budget, expenditures for national defense in 1941 will constitute 47 percent of the total expenditures of the Federal Government, and for 1942 they will constitute 63 percent of the Federal Government's expenditures.

President Roosevelt has proudly boasted that he saw this defense emergency coming for years ahead. In the light of his unusual foresight, and despite the fact that he believes we have a tremendous problem of spending money at home for the sake of spending it—supposedly to provide for relief and to

bring about recovery—one would imagine that a large part of such funds would have been utilized for defense purposes. Funds were made available by Congress for utilization for relief that could have been used on defense undertakings. This was especially true of the National Industrial Recovery Act of 1933 making available $3,200,000,000 of public funds, the emergency Relief Act of 1935 making available $4,880,000,000, and the Public Works and Relief Act of 1938 making available about $1,800,000,000 worth of funds. Other acts made small sums available for the same purposes. Only $253,411,000 of such funds were allocated to the Army for defense purposes, and $427,721,000 were allocated to the Navy, or a total of $681,132,000 was allocated for defense purposes. The New Deal spent for public works and relief approximately $22,000,000,000. Thus, of all of the funds to be spent by the President practically at his free discretion for public works and relief only 3 percent was utilized for national-defense purposes.

Over a year ago, and several months before President Roosevelt gave vocal evidence of his awareness of a national-defense emergency, the study committee on national defense of the Republican conference of the House of Representatives pointed out the need of financial preparedness as an integral part of military preparedness. This statement declared relative to this matter:

> Such a possibility should convince us that the most serious weakness in the armor of our national defense today is the existence of a national debt of $44,000,000,000. There it stands, towering, ominous. Much as we should like to, we cannot consider our problem solely in terms of soldiers and sailors, of divisions and battleships.
>
> To deny that a healthy economic condition is vital to our national defense would be absurd. Our ability to mobilize and maintain the resources of the country in a major effort depends fundamentally upon the strength of our national economy. True, we need soldiers and sailors, divisions and battleships, with adequate modern equipment, but to secure their effectiveness in a long, gruelling struggle, and at the same time to preserve our institutions, we must mend our ways.
>
> It will not be an easy task. We have acquired a habit difficult to cast off. Many of our people, thoughtless of the consequences, laugh at debt and demand that spending shall go on. But it must be curbed, for we cannot go on this way and be secure in this troubled world.

STEPS TAKEN BY THE NEW DEAL TO FINANCE DEFENSE

What specific steps has the New Deal taken to finance the defense program? In June 1940 Congress enacted legislation which increased the debt limit from $45,000,000,000 to $49,000,000,000. This legislation provided for the issuance of $4,000,000,000 worth of United States Government securities to be repaid within a period of 5 years. Through the sale of these securities it was at that time naively believed that the entire national-defense program could be financed. In order to pay the interest on the securities and to amortize their retirement internal-revenue taxes were increased approximately 10 percent for a period of 5 years. It was believed that these taxes which were earmarked for the retirement of the previously mentioned bonds were to continue for a period of 5 years, and it was estimated that they would yield approximately $900,000,000 a year, or a total of $4,500,000,000 during the period they are to be in force. The second step that was taken was the enactment of an excess-profits tax in October 1940. This tax was enacted for two purposes: (1) to increase revenue, and (2) to tax the excess profits resulting from the defense program. It is estimated that this tax would yield between $300,000,000 and $400,000,000 on earnings made during the calendar year 1940, and twice that on those for 1941.

The third step that has been taken by the New Deal was in February 1941. This was to increase the debt limit from $49,000,000,000 to $65,000,000,000. It was said that this legislation was required at the present time because by May of this year the present debt limit of $49,000,000,000 would be exceeded. It is estimated in the Budget for 1942 that at the close of the fiscal year 1941 the total public debt in the United States would be $49,130,000,000, and by the close of the fiscal year 1942 it would be $58,367,000,000. Thus, of the total increase in the public debt that occurred in February 1941 all but $6,633,000,000 will have been taken up by the close of the fiscal year 1942. Of course, as was said earlier, all these figures are based on the 1942 Budget which was submitted previous to President Roosevelt's request for $7,000,000,000 to be spent under the so-called lease-lend bill. How these added expenditures will affect these debt estimates depends on the speed with which this money is spent. There has not as yet appeared any official estimate of the rate of expenditures under this bill.

WHAT IS THE NEW DEAL'S PROGRAM?

The three pieces of legislation that just have been mentioned do not by any means constitute a program of defense financing. They only meet a small part of the problem. What does the New Deal really contemplate doing about it? This is still largely a matter of conjecture, and it will continue to be so for several weeks to come, for the Treasury Department will not present its suggestions for additional revenue to the House Ways and Means Committee until after April 1. There is some evidence tending to indicate what is actually the New Deal's plan for financing national defense. Before this is examined a few fundamentals of national-defense financing ought to be considered.

SOME FUNDAMENTAL CONSIDERATIONS

It should always be remembered that whatever way the defense program is financed, the costs will be borne by the present generation; it cannot be shifted to the shoulders of a future generation. Whatever devices are used the defense program will be paid for by goods and services produced at the present time. The defense program will require extensive reallocation of the Nation's producing capacity. This will result in a reduced real income for some groups in the community or a reduction in capital accumulation for other groups. The devices used to finance the program are important because they largely determine what groups in the community will pay for the defense program.

Primarily there are four ways by which the defense program can be financed. These four methods are reduction in ordinary nondefense expenditures, increased taxation, borrowing, and inflation. These four methods cannot be considered as completely separate and unrelated. Obviously, with the defense program of the size we have at present it could not be financed entirely by reducing the normal nondefense expenditures of the Government, for the defense program is much larger and much more costly than the total ordinary nondefense expenditures of the Government. Financing the defense program through borrowing would have a distinctly inflationary tendency on several grounds. If the borrowing was done through banks, the Government securities could be used as the basis for additional note issue by the banks that invest in the bonds. This is the easiest way to proceed. Any form of borrowing, wherein the money borrowed does not come out of current savings, would tend to be inflationary. The reason for this is that the amount of circulating medium will tend to be increased faster than production, and as a consequence prices would increase.

If the inflationary tendencies are to be minimized, several things would have to be done. Normally when a large portion of the national income is being diverted to the production of munitions and similar defense articles there would be a tendency for the production of consumers' goods to decline. If the amount of money in circulation tends to increase and the amount of consumers' goods produced decreases, there will be a strong tendency toward inflation. Consequently it is necessary either to take away through taxation a large part of the additional money coming into the hands of consumers through increased total wage bills, or to attempt to increase the production of consumption goods at the same time that the production of goods for national defense is also increasing. From the standpoint of the Government it is much more painless to insist upon duce the added supply of consumers' goods than to levy a tax upon the consumer to remove his added purchasing power. For thereby the consumers' enmity toward the Government would not be incurred. The taxpayer would not be disturbed, and if industry fails to produce the added supply of consumers' goods while still producing necessary armaments, industry can be attacked by government for failing to do its part. This is one of the simplest methods so far as the Government is concerned and is one of the most disastrous for the national economy as a whole.

Another method of financing part of the defense expenditures is through decreased expenditures for nondefense purposes. President Roosevelt in his Budget message for the fiscal year 1942, said that this was being done, but, as will be pointed out, the estimates do not bear him out. Likewise in a press conference on November 26, 1940, he urged the need for

economy. This portion of the press conference was reported in the New York Times, as follows:

WASHINGTON, November 26.—President Roosevelt said today that all public-works expenditures except those directly connected with munitions production would be cut to the bone.

Nonmilitary projects were being eliminated so far as possible from the next Budget, the President stated at a press conference, because the Government expected that by spring the defense program would employ a great number of those who are now unemployed.

Remarking that the Government was spending large amounts of money for defense and must economize somewhere, he made clear that he would not permit the defense program to act as a shield for carrying on domestic-works projects. He was establishing a strict rule that national defense meant munitions and not other developments, such as roads.

Under the rule, he said, the Government will shelve many types of programs which have consumed large parts of the Federal Budget—river and harbor improvements, highway construction, public-land acquisitions, additions to national forests, and other projects of a similar nature. * * *

The President said that he was enunciating his Budget principles at this time because by doing so he would clarify a point which certainly was of interest to Members of Congress.

Indicating his belief that some Members of Congress will try to push projects for their districts, Mr. Roosevelt asserted that if a Member from the Chesapeake Bay region wanted a creek deepened 4 to 6 feet to let oyster boats through, all kinds of briefs would pour in to prove that the project was vital to the national defense.

Secretary of the Treasury Morgenthau, in testifying before the Senate Finance Committee on February 12, 1941, on the bill to increase the debt limit, declared:

Our whole economy and effort should be concentrated on national defense. I once again want to urge economy in Federal expenditures. I believe, therefore, that all Federal nondefense expenditures should be reexamined with a magnifying glass to make certain that no more funds are granted than are absolutely essential in the existing circumstances. (Hearings before a subcommittee of the Committee on Finance, U. S. Senate, 77th Cong., 1st sess., on H. R. 2959, February 12, 1941, p. 4.)

When he applied the magnifying glass, with the aid of the Bureau of the Budget, to his own Treasury Department, he found it was necessary to increase expenditures by $7,000,000 from 1941 to 1942, and not reduce them.

Total expenditures for non-defense purposes in 1941 will be $6,839,000,000 as against the Budget estimate of $6,772,000,000 for 1942 for such purposes, or a reduction of only $67,000,000. The only sizable decrease in the estimates is for work relief (the need for which will be reduced by more than 50 percent) where the 1942 estimate is $1,034,000,000 against $1,477,000,000 for 1941. This amounts to a reduction of $443,000,000. Since the net reduction of nondefense expenditures is estimated to be only $68,000,000 it is evident that there were many other bureaucrats who applied their magnifying glasses with results similar to those of Secretary Morgenthau.

Another way that at least a part, if not all, of the added national defense expenditures could be financed is through increased taxes. To what extent the New Deal is going to use additional taxes as a method of financing the added expenditures is far from clear. But, as will be pointed out later, President Roosevelt in his Budget message for 1942 is not greatly interested in this method of financing the increased expenditures. Secretary Morgenthau in testifying before the House Committee on Appropriations in December 1940 said that he believed that at least two-thirds of all the expenditures of the Federal Government should be financed through taxation and no more than one-third through borrowing. When he was pressed to be more specific in the Senate Finance Committee hearings on the bill to increase the national debt (February 12, 1941) he said that revenue should be increased by $3,000,000,000 for the fiscal year 1942. According to the budget, $1,600,000,000 of this would come from increased yields of present taxes as a result of the increased national income. Secretary Morgenthau refused to be at all specific as to what new taxes would be used to produce this additional $1,400,000,000. Even on this basis total revenue would be only $9,675,000,000 as against $17,483,000,000 expenditures. Taxes would be only 55 percent of expenditures and not 66 percent as the Secretary said he desired.

Of course, another method of financing the defense program would be through direct inflation. The New Deal has plenty of devices at its command to enable it to use this method. For example, Congress in 1933 conferred upon the President the power to issue $3,000,000,000 of greenbacks without any security. The President could further devaluate the dollar to 50 percent and make some money. The present silver stocks could be monetized and devalued, making a great paper profit. All told, President Roosevelt has at his command devices whereby he can increase the currency by no less than $11,000,000,000. Of course, such an inflation would absolutely ruin the national economy.

THE NEW DEAL'S PLAN FOR FINANCING DEFENSE

The New Dealers have what they regard as a slick plan for financing defense. The President does not directly state it, but it is implicit in his Budget message. Here, in commenting on the need for new taxes, he said:

There is no agreement on how much of such an extraordinary defense program should be financed on a pay-as-you-go basis and how much by borrowing. Only very drastic and restrictive taxation which curtails consumption would finance defense wholly on a pay-as-you-go basis. I fear that such taxation would interfere with the full use of our productive capacities. We have a choice between restrictive tax measures applied to the present national income and a higher tax yield from increased national income under less restrictive tax measures. I suggest, therefore, a financial policy aimed at collecting progressive taxes out of a higher level of national income. I am opposed to a tax policy which restricts general consumption as long as unused capacity is available and as long as idle labor can be employed.

We cannot yet conceive the complete measure of extraordinary taxes which are necessary to pay off the cost of emergency defense and to aid in avoiding inflationary price rises which may occur when full capacity is approached.

However, a start should be made this year to meet a larger percentage of defense payments from current tax receipts. The additional tax measures should be based on the principle of ability to pay. Because it is the fixed policy of the Government that no citizen should make any abnormal net profit out of national defense, I am not satisfied that existing laws are in this respect adequate.

I hope that action toward these ends will be taken at this session of the Congress. (Message transmitting the Budget, Jan. 3, 1941, p. xi, xii.)

Supposedly the defense program is to be financed primarily through added borrowing. Additional Government expenditures resulting from the national-defense program will increase the national income. The additional national income that will be produced in a year or two thereby will yield a higher return on the present taxes. Consequently, in later years it is alleged that the additional national income will yield higher taxes and thus ultimately some time in the future national defense will be paid for. This is simple and painless, for it will not require the taxpayer to bear an added burden resulting from defense in the form of higher taxes. In this above-mentioned quotation the President is adhering to nothing but the same New Deal policy of deficit financing that we have had during the depression. It is essentially based on the premise that through Government spending additional income can be produced; additional national income will yield higher returns from the present taxes and enable the Government to pay off the debt. This is nothing but the old pump-priming theory.

That this is the policy of the New Deal is evident from a quotation of Mr. Jerome Frank, then Chairman of the Securities and Exchange Commission, before the Army Industrial College on April 6, 1940. This quotation is as follows:

Until the stage of full employment of resources is reached, we should give preference to those methods of war finance which induce a net increase in production, not merely a shift in production. In that period, as I see it, we should not, therefore, seek to cover the cost of armament by new taxes or forced loans, but mainly by borrowing, primarily from the banks and from the idle reserves of individuals. Under such conditions, it is even conceivable that we might finance part of the cost of armaments by issuing additional currency without inducing more than a moderate rise in the level of prices—a most important consideration as I shall presently indicate.

The situation is quite different, however, once the level of practically full productive capacity is reached. Then armament expenditure should be financed largely through taxes or through loans placed outside of the banking system, if we are to avoid a rise in the price level. A rise in prices in such a situation obviously would not lead to a further increase in production. (In Time of War Prepare for Peace, Jerome N. Frank. Address before the Army Industrial College, Washington, D. C., April 8, 1940.)

Dr. Gerhard Cohm, principal fiscal analyst in the United States Bureau of the Budget, expresses a similar view in the March 1941 issue of the Annals of

the American Academy of Political and Social Science. Here he even contended that the defense program will not cost us anything really, for our national income will be increased more than the total cost of the defense program.

These expenditures have stimulated the use of idle resources to such an extent that production for civilian consumption has increased in addition to the increase in defense production. * * *

It seems reasonable to assume that within 1 or 2 years national production can be stepped up to at least $90,000,000,000 (in terms of 1940 prices). That would be an increase of almost $20,000,000,000 over and above the annual rate of the national income in the first 6 months of the calendar year 1940. If such an increase in national income should be achieved and if the total defense program should absorb as much as $15,000,000,000 in that year, it would still leave an increase of $5,000,000,000 for consumption and investment over and above the level of the first 6 months of the calendar year 1940. (The Cost of Arming America, The Annals, March 1941, p. 11.)

For this theory to work successfully and not involve inflation at the same time that industrial production of goods for national defense increases tremendously there must also be an increase in the production of consumers' goods. If industry is to accomplish both of these objectives, there must be a tremendous plant expansion. After 8 years of uncertainty of the New Deal it would not be surprising if industry will fail to expand its plants as the New Dealers contend it should. If, instead of producing this added increase in the real national income, inflation should result, the industrialists will be blamed for the failure of the program. The President has definitely shown repeatedly that he has believed that increased production could go hand in hand with the defense program. In his speech of May 26, 1940, he said:

And, finally, this emergency demands that the consumers of America be protected so that our general cost of living can be maintained at a reasonable level. We ought to avoid the spiral processes of the World War. The soundest policy is for every employer in the country to help give useful employment to the millions who are unemployed. By giving to those millions an increased purchasing power, the prosperity of the whole country will rise to a much higher level.

And, according to the New York Times at a press conference held on May 28, 1940, the President expressed a similar view:

The President said that there was no reason for the country to become "discomboomerated" in apprehension of what may come to pass. The women of the country would not have to give up their cosmetics, lipsticks, and chocolate sodas in consequence of the preparedness program. It was the intention not to upset the normal trends of American life any more than necessary.

It is quite fashionable among New Dealers to point out that Germany has rearmed and is carrying on a war without inflation and supposedly with an increase in the national income. Thus the Annual Report of the Secretary of Agriculture for 1940 said:

Germany got ready for war without inflation, with prices and wages under strict control and with all surplus materials and labor taken for arming (p 34).

The German statistics on production and national income are open to question as to their accuracy. It is generally known that German statistics under Hitler have been most inaccurate. Further, Germany has most extensive and rigid controls over the national economy that would tend to limit inflation.

This same annual report of the Secretary of Agriculture also presented the New Deal theory of financing defense as above outlined:

How the defense program affects prices and the demand for farm products and the extent to which it does or does not promote inflation will depend largely on the methods used to finance it. We might avoid inflation altogether. This would require heavy consumer taxes to restrict consumption and the buying power of consumers, and possibly other means of stabilizing wages and prices. In fact, in recommending the preparedness program the President recommended an increase in taxes.

As we go ahead with fiscal measures of this type, however, it is important not to increase the tax rates too rapidly. With millions of men still idle and with great factories only partially active, we can produce great quantities of tanks, airplanes, armaments, and munitions without reducing our production of food, clothing, or other articles for civilian use. As long as we have unused labor and plant capacity the danger of inflation is not imminent.

Eventually, however, competition may begin between the Government and the consuming public for labor and materials. The danger of inflation will begin at that point. We shall need a carefully worked out fiscal program which will maintain the purchasing power of the low-income groups and yet not encourage excessive civilian consumption. It will be difficult to hit the golden mean between production for defense and production for civilian use. Failure to hit it, however, will either prolong the unemployment or cause inflation. Hitting the mark will obviate both perils (p. 35).

Dr. Cohm does envisage that a tax program would have some place in this system. His tax program is outlined in a monograph published by the Temporary National Economic Committee entitled "Taxation, Recovery, and Defense." This program of taxation is set forth in the following quotation from that monograph:

1. The beginning period: This is characterized by the present economic conditions of widespread unemployment, large unused resources of material, plant, and equipment. In this period, while the entire economy is still operating on a peacetime basis and with its attention focused on peacetime needs, the center of attention is shifted to military preparedness, and the demands of the peacetime civil sector of the society become secondary.

This initial period necessitates making great sums of money immediately available for plant expansion; part payment of industrial orders; reorganization of the military services; continuation and expansion of public works vital to preparedness, and for which, later on, no surplus manpower will be available; large-scale projects for training skilled workers; and adjustments between the preparedness program and the requirements of the civil sector of the economy.

Neither the present tax system nor any proposed revisions which could be made immediately effective would bring in sufficient current revenue to meet the cost of initial expenditures for the preparedness program. * * *

Borrowing becomes essential to meet the immediate needs of the preparedness program. In the present capital market such borrowings can be made on most favorable terms. The debt limit must be raised substantially to make this possible.

During this period of change-over to a preparedness economy, when full employment has not yet been attained, an increased excise-tax program adversely affects the buying power of the people. * * *

2. The second period: This second period, dependent upon several incalculable factors, is characterized by a very substantial measure of employment and use of our resources, principally for preparedness purposes.

In this stage of developing the preparedness economy a large proportion of its costs should be paid for out of taxes in income and wealth. Care should be taken to avoid undesirable social consequences resulting from wartime profiteering and millionaire making without setting up any barriers to the attainment of the central purpose of an adequate preparedness program.

Specifically, the rate structure of the personal income tax should be revised, with well-graduated rates, and the loopholes removed. Such loopholes seriously impair the income tax, and particularly in such a time of national emergency cannot be defended. * * *

3. The third period: In this period of the preparedness economy full employment will have been achieved, the preparedness or actual war program will be under way, and the maximum resources of the economy will be in use, and incipient or actual scarcity will be noticeable. In this phase of the economy the pressure for price rises and inflation are to be expected.

Consequently the fiscal policy and tax program should be made to fit these changed economic conditions as nearly as possible.

The personal income tax should be altered once more, broadening the tax base by lowering exemptions and increasing rates.

Depending on the economic situation at this time the excess-profits tax should be revised to curtail profits drastically.

A selected list of commodities, including such things as automobiles, radios, gasoline, refrigerators, etc., which can be safely dispensed with, should be subjected to high excise taxes definitely intended to curtail mass luxury consumption, and the limitation of supply would beneficially affect the efforts devoted to the preparedness program.

A general "turn-over" tax should be enacted, based on the "value added by manufacture," with tax credits allowed for Federal and State pay-roll taxes in force, and tax exemptions for the necessities of life. The proposed tax rate is 4 percent to begin with, but if more money is needed to supplement other revenues, then the rate should be advanced to obtain the required sum. * * * (pp. 247-248.)

Of course, for such a program to work according to its proponents, the various taxes contained in it would have to come into operation at exactly the right time or it might have undesirable results. The author of this monograph, Mr. H. Dewey Anderson, pointed out that for Dr. Cohm's plan to work, Congress would have to give up its power to the President, for only he would have enough intelligence to carry it out:

The fullest effect of this somewhat complicated tax program and fiscal policy cannot be achieved, providing vast sums of money as

needed and preventing undesirable effects on the economy, unless the program is closely geared to the entire administrative policy and defense program. As this must necessarily be under the supervision of the executive branch of Government, which is in the best position to know the needs of the moment, it seems desirable to have the Congress empower the Executive to apply one or another of these taxes and fiscal controls as they are required (p. 249).

Thus, in order to provide for defense, according to this theory, it would be necessary to sacrifice our democratic institutions.

A report of the Study Committee on National Debt of the Republican Conference of the House of Representatives in May 1939 reached the conclusion that the similar pump-priming program that the New Deal had adhered to for 6 years had failed; its conclusions were:

We have now had 6 years' experience with the New Deal pump-priming or spending theory. We believe that this is sufficient time to test any theory, especially a theory the validity of which has always been questioned, and which, if invalid, can result in economic disaster. As a result of a careful and thorough study of all factors we reach the conclusion that a spending program as such has no place in a well-grounded and general recovery plan. Our condemnation is complete and emphatic.

The best proof that spending has failed to promote recovery is the fact that eleven to twelve million unemployed American workers are looking for jobs. In the face of this alone, it is folly to contend that spending has worked, for in the words of the President, "to put people back to work" was the one purpose of the first spending bill as well as every bill that has since been passed.

It is equally evident that the stimulation of consumption-goods spending has not led to a revival of capital-goods spending. While there is no doubt that some stimulation of capital expenditures may be accomplished in this way, whatever amount has occurred has not been sufficient to promote a sustained recovery. Statistics contained in a study published recently by the National Bureau of Economic Research indicate that while total expenditures for durable goods and for private construction dropped from about 14.5 billion dollars in 1939 to 3.3 billion dollars in 1933, that they increased to only $6,000,000,000 by 1935, after 2 years of heavy spending. The figures in this study only go through 1935, but if one allows for a further increase of capital-goods spending from 1936 to 1938, it is clear that the total still remains far short of the amount spent before the depression.

By merely drifting we are adopting the slick New Deal method of financing defense on the basis of the discredited pump-priming theory. Now it is highly doubtful if it will work because it is generally realized that the production of consumers' goods cannot be increased as fast as purchasing power in the hands of the consumer is increasing. This failure will constitute the groundwork of inflation unless price-control mechanisms are developed. If we have runaway inflation it means that the cost of defense was borne by those patriotic persons who bought Government bonds.

The Shelterbelt

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

EDITORIAL ARTICLE FROM THE MAGAZINE AMERICAN FORESTS

Mr. HOPE. Mr. Speaker, when the proposal to construct shelterbelts in the Prairie States was made a few years ago it met with a great deal of skepticism. There were many who went further and denounced it as a wild, harebrained scheme which had no possible chance to succeed. I must confess that in the beginning I was one of those who doubted its practicability, although conceding its great value if it could be made successfully.

Now, beginning the seventh year, this project has become a notable conservation effort and one of the greatest forestry projects ever undertaken in this or any other country. It is stating it mildly to say that the success of this program has far exceeded the expectations of its proponents and has astonished those who were sincerely skeptical in the beginning.

My district is one of those included in the area of shelterbelt plantings. I have watched the progress closely from the very beginning. I have seen it develop in an amazing way. It is a success from every standpoint.

In carrying on this project the Forest Service, with its usual skill and thoroughness, has done a piece of pioneering work in a superb manner and under very adverse conditions. It must be remembered that the 6 years following the initiation of this project were among the most unsatisfactory from a climatic standpoint ever encountered in the plains country. No worse years could have been selected for beginning a project of this kind. Furthermore, the Forest Service has no regular appropriation for this work, but has been compelled to rely upon W. P. A. and other emergency funds. The restrictions surrounding the expenditure of these funds have made it extremely difficult to operate in many instances. Furthermore, in the beginning it was not always easy to secure the cooperation of farmers and local officials, because they doubted the practicability of the program. Suffice to say, however, that since the results of the program became apparent the cooperation of farmers and local officials has been splendid and this cooperation, of course, has had much to do with its success.

Notwithstanding the fact that every obstacle up to date has been met and overcome, the place has now been reached where the work will be severely handicapped unless a regular appropriation for its continuance can be made. Such an appropriation is authorized under the Norris-Doxey Act passed a few years ago. The Senate has recently adopted an amendment to the Department of Agriculture appropriation bill providing $300,000 for the shelterbelt during the coming fiscal year. I do not know of any way by which $300,000 can be better spent for conservation than this.

In the April number of American Forests, published by that splendid conservation organization, the American Forestry Association, appears an editorial entitled "Prairie Tree Banks." I believe that Members of Congress will be interested in reading this endorsement of the shelterbelt program by such a high authority in the forestry world. For that reason, I include it herewith:

[From the American Forests for April 1941]

PRAIRIE TREE BANKS

Within a year after Franklin Roosevelt was first elected President he proposed, among other conservation measures, the planting of trees on a large scale in the Prairie States of the Middle West. His thought was that belts of trees properly located and spaced would protect farm lands against droughts and wind erosion and would help make farm life more secure. The proposal was a daring and imaginative one. Immediately it became a target of wide criticism and ridicule. The idea of gridironing the prairie with strips of trees from the Canadian border to Texas was branded as idealistic, impracticable, and a waste of money. Nevertheless, the President designated the United States Forest Service to formulate and initiate the project as a cooperative undertaking with the farmers. This it did in 1934 with a million dollars made available from Federal emergency funds.

During the 6 years which have intervened, the project has been carried forward, although subjected from year to year to uncertainty of Federal operating funds. The results shown are impressive. By study and selection of planting sites and of species of trees adapted to prairie conditions, foresters and farmers working together have successfully established belts of protective trees on over 22,000 prairie farms. Joined together, these shelterbelts would extend for nearly 14,000 miles and would embrace 110,000,000 living trees. Some of the early plantings are now affording adjacent croplands protection against the blowing away of soil and planted seed and thereby yielding the farmers substantial benefits. In addition, the trees are holding moisture in the surrounding soil, protecting stock from winter winds and summer heat, providing wood products and recreation areas for the rural community, attracting wildlife, and in general making the prairie farm more hospitable, livable, and dependable. They are indeed a bank on the farm, paying interest not only to the farmer and his family but to the whole community.

The Prairie States planting project is no longer an impractical scheme. By its own showing and results after only 6 years, it ranks as the most notable example of forestation to be found in America. It has redeemed the faith of the President in trees and in the ability of American foresters to

make trees grow under adverse conditions. The weakest point in the undertaking today is uncertainty of its continuance. From the beginning, the Federal Government's share of costs has been provided largely from W. P. A. funds, which may be curtailed or cut off any year. In the light of the demonstrated services which these shelter forests are rendering in making more secure the economy of the Prairie States and through them the economy of the Nation as a whole, a sounder and more permanent method of financing seems now justified. Otherwise, the full potential benefits inherent in the project may be lost.

National Defense

EXTENSION OF REMARKS
OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

RADIO ADDRESS BY HON. HATTON W. SUMNERS, OF TEXAS

Mr. SUMNERS of Texas. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address which I delivered over the radio on April 10, 1941:

People of America, comrades in a great responsibility, I come to you tonight as one who wants to be useful in this tragic hour of the world when our Nation faces the gravest perils in its history, and in some of its major attitudes is following in the footsteps of so-called democracies which tonight no longer exist.

For 28 years I have been a Member of the Congress. I have some familiarity with our present situation and of the tragic developments abroad. All my life I have been interested in the facts rather than in the theories of things. I have studied your business here while my people have taken care of the politics of our relationship. I have not been distracted by any concern for prestige or position because I have, I believe, a fairly accurate notion of the relative values of things. I believe I know something of the nature of government—how it operates, what happens when certain things are done to it, the natural laws which govern it, and I know human nature as it is related to government. I have searched for a knowledge of this business in the experience of the ages, not in the theories of men. Having been deprived of the opportunity of institutional education and thrown upon my own resources, I have developed, I trust, some capacity for examining the facts of things and how things work. I have no delusions about human greatness nor craving for hero worship. Only God is great in this great economy. These things I state to persuade your consideration of what I shall say to you as one of your "watchmen on the tower."

Immediately following the World War we, and the other democracies, swung rapidly from a high peak of unselfish patriotism, to the other extreme—the distinctive characteristics and inevitable consequences of which were clearly discernible then to any detached student of current developments. I tried to make our people realize what we were doing then and the inevitable results, but nobody could be bothered. People listened only to what they wanted to hear. It was the grand age of the jazz—jazz music, jazz literature, jazz philosophy, and jazz statesmanship. Each of the developments which followed, one after the other, was equally visible but the people would not listen. They would not see, they would not be warned. The historian of the future will probably classify that period as the most freakish, the most nonunderstandable part of the history of our culture and civilization, ending for others already, and for us certainly, in the greatest tragedy of the ages, unless we in America, now as a united people, will be warned by the experience of others and by common sense before it is too late; unless we equip ourselves quickly—physically, morally, patriotically, and in every other way, to meet the impending test of our ability to endure we will fail at the test unless we do. Such a preparation, such a fitness, might prevent us from having to meet the supreme test. Nothing short of it can. Don't permit anyone to fool you about that. A soft people internally weak, looking for opportunities for profits and gains rather than for sacrifice and service, unwilling to pay the price of liberty, cannot survive in these times.

With great rapidity we are moving toward actual fighting contact with this World War, unprepared either to win or to defend ourselves. Wars are won or lost in the factories now. Frenchmen in the factories of France were winning the war for Germany long before the Maginot Line broke. These people now conquered and enslaved, finally came to realize that fact, but it was too late.

The things we are promising to one group of the belligerents, which groups are one by one being conquered, and our challenge to the other group, constituting the most thoroughly equipped and efficient fighting machine the world has ever seen, considered in the light of what we are doing to make good our promises and preparing ourselves to meet the challenge if we are attacked, do not make sense. That is what I am trying to get across to the American people, and I am having difficulty in doing it. When I tender the services of the Committee on the Judiciary to the executive agencies of the Government, I am charged with trying to "put them on the spot." When I try to get an acceptance of the attitude that nobody ought to profit from the necessities of his Government in the time of its greatest peril, there is no general reaction. When I try to separate the great bulk of loyal labor from individuals who are not, to protect labor against the loss of public opinion, through these paralyzing strikes I am called a labor baiter. When I try to arouse the States to a sense of their responsibility and duty, I am charged with trying to "pass the buck." When I try to arouse the people to a sense of their responsibility, their duty, and their power, and their peril, I am told that it is the Government's business. I am trying to get every agency, every influence aroused and conscious of our danger, solidified by that consciousness and unitedly on the job, before it is too late. I want your cooperation and your help, because in this country public opinion is our supreme law.

We are all in the same boat. We face the same dangers—laborers and capitalists, the people in the factory and the people in the office, the people in the field—everywhere. Promising planes to Yugoslavia, promising planes to Greece, promising things to England, and needing with great urgency everything for our own defense that we can produce by working 24 hours per day every day; and all the while having factories idle or slowed down does not make sense. For American citizens, whether owners or operatives, who are sharing in the common peril, actually to be stopping the wheels of industry, the operation of which is absolutely essential to make good our promises to people whom we have induced to resist aggression, and absolutely essential in order to give us even a substantial chance to escape the common disaster of the democracies of the world, does not make sense. This paralysis of productive energy, however, is not the fundamental thing—not the fundamental cause. I want to talk to you about that now. I am one of your watchmen on the tower reporting to you tonight what I see. The cause lies deeper. We have to examine deeper than merely making munitions of war and getting factories into operation. We have been doing too much talking about preserving the gains of labor and the profits of business. That is about all we have heard for a long time. We have not been hearing much about service and sacrifice, preparation for the supreme effort, in the present situation when only a people willing to give all if necessary, willing to die if necessary in order to preserve those things which make life worth living, have a chance to survive. There come such times. Such a time has come to America. It is now. It came to France. They responded to the challenge, but it was too late. The Maginot line had been broken.

In America each group is looking at its own perfections, looking to see what is wrong with the others. If each would turn the spotlight upon himself it would help. "What is wrong with me?" "What is my attitude?"

It is unbelievable when we really look at the situation we are in, that any American citizen in this tragic hour in the history of all time, in this time of his Nation's, his own, his children's greatest peril, would be considering "What advantage can I personally get out of this situation directly or indirectly from my Government?"—willing to make merchandise of his own interests, the perils of his Nation and the hope of peoples to have a chance to be free. It does not make sense.

We have but one business in America today, and that is to save this country as a place where men may remain free. What business do they have now in England and in many other parts of the world? Just one business. If they had attended to that business when they should have done it, they would be living in peace instead of in the midst of dread and ruin and death. They got on the job too late. If we will attend to that business now, we may not have to go through what they are going through on the other side. That is our only chance to escape. Has anybody little enough sense not to know that? In this country at this time is centered the hope of the ages for all the world. It does not make sense what we are doing. As a people we are not under the solidifying influence of a consciousness of our common danger, the shadow of which grows thicker each day as we move closer and closer toward the battle line of this war, utterly unprepared, spiritually, patriotically, or physically to win the war or to defend ourselves. What I am saying may not be agreed to now—I will be misquoted and misunderstood now, but I would wager my life that if we do not agree upon these things essential to our security now when we can do it, we will wish we had before we get through. We have not a chance to do what we are doing and escape attack unless we can back it up with a military preparedness so complete, a people so powerful in their union, high purpose, courage, unselfish devotion and patriotism, that nobody will risk the attack. We have been making noises like an eagle but we ought to be doubly certain that we are not strutting our stuff like a fat chicken before as hungry a hawk as ever swooped to the kill.

Great epochs come to the world which try the souls and test the fiber of people. This is such a time. We are not going to escape the test. We are not going to escape the consequences of our failure to meet it, either, if we fail. I know that. That is why I am driving so hard these stressful, dangerous days, doing everything I can to arouse, unite, and prepare my people before it is too late.

I am convinced that if the American people should become conscious of the facts of

our situation we could do the job. We would not be fighting for profits and advantages now. They quit fighting for profits in England, but it was too late for them to escape the rain of death from the skies. The French people quit, everybody did, employers and employees; they worked until they dropped, men, women, and children, but the Maginot line was broken. It was too late. We are going to be willing to give all we have to our Government before this thing is over. The things we are fighting for now will seem mighty insignificant before we get through. The French people can tell you. The English people can tell you. The blood-soaked lands of the world can tell you. The vision is before our eyes; the warning is before our eyes. We are now walking in their footsteps toward the same doom. It does not make sense. We have our Maginot line, too—a thin line of battleships afloat upon the seas. What if it should break. There is no margin of safety still left for us to squander.

We have to swing away from selfish, self-centered, group-concerned, short-sighted self-interest, which now, unfortunately, is blighting our souls and making us unfit to win. I am not singling out labor. All of us equally. The fuller life we have heard so much about has not been a greater courage, a greater patriotism, the greater fitness to be free, greater fitness to live, but the fuller of gasoline, moving-picture shows, prize fights, and things of that sort. Such a people cannot win. It is not written in the book of destiny that such a people can hold the line against the combined influences of the world that challenge today the right of men to be free.

We have been doing a lot of mighty big talking considering what we are prepared to back up, telling everybody to stay out of the Western Hemisphere or fight. From the tip of Cape Horn to the frozen seas of the north we say to the rest of the world, "stay out." Besides this hemisphere, we are having much to say about what is happening in every corner of the earth today, in the conflicts in Europe, in Africa, in Asia—all over the world. I state this not in criticism but as a fact which an intelligent people cannot afford to ignore in this world aflame with the passions and the horrors of war. Everything we have or can hope for we put at stake in this world at war.

We must reach and solidify through the realization of a common danger and a common interest the loyal patriotic people of this country in the factories, in the fields—everywhere. We must agree that we have but one business that is now worthy of consideration and that is the preservation of this country as a place where people will still have a chance to be free. We must agree that we will see to it that any just grievance of labor will be attended to and that some better method than that of paralyzing these plants necessary for our security must be resorted to. We must agree that this Nation shall not be left impotent in the presence of its enemies. We must agree that its young men who are being called to the colors shall have the best equipment which a grateful people can provide for these young men who are preparing to give their lives if need be for their country—for the rest of us. It shall not be allowed by the people, by the Federal Government, or the government of the States that these boys in uniform shall be deprived, by strikes or lockouts in the factories, of the best that the genius and effort of a people fit to live in the same world with these young men, can give, to insure a national preparedness most calculated to prevent any attack, or if attacked, the best equipment to protect themselves and defend this country. Anything less than that will not long be tolerated by any people fit to win. I warn the Nation that the morale of these boys in uniform cannot stand the strain of such spectacles as we have been seeing in this country lately. Their hearts cannot sustain, their courage cannot survive to inspire the supreme sacrifice for a government which stands by passively permitting those who will not operate these factories necessary to equip these boys, beat up and prevent those who would.

I absolve the rank and file of labor. The things some of these leaders are responsible for is more unfair to the loyal, patriotic laboring man than to anybody else. Their boys are in uniform the same as anybody else. Their stake in this Government, in its security, in the opportunity to escape being driven as a slave by a dictator is as great as that of anybody else. In addition to this, their hard-earned support of public opinion, the thing which they have earned through years and years of struggle and upon which they must depend, is being driven away from them by these leaders who recklessly disregard what the people think or will stand for or ought to stand for—people whose boys are in uniform.

My time is about expired. I discussed these matters more fully in a recent speech in the House under the title "Strikes in Defense Industries—What They Did to France—What They Are Doing to Our National Security—What They Are Doing to Labor," including the testimony of William C. Bullitt, recently Ambassador to France, and of Merrill C. Meigs, Chief of the Air Division, Office of Production Management. If you will send me a postcard, with your name and address plainly given, I will send you a copy of it—HATTON W. SUMNERS, House of Representatives, Washington, D. C.

In this closing minute will you pledge with me, each one, that so help me God, insofar as I can make it possible, regardless of the cost, this country of ours shall remain one place where people have a chance to be free. I wish to thank you and the National Broadcasting Co. for affording me this opportunity.

National Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

RESOLUTION OF THE KANSAS SENATE

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks I include a resolution memorializing the Congress of the United States to enact a law which will provide for national old-age pensions, adopted by the Senate of the State of Kansas on April 2, 1941.

Senate Resolution No. 26

Resolution memorializing the Congress of the United States to enact a law which will provide for national old-age pensions

Whereas no provision is made for the retirement income for those who have reached retirement age, or who will attain that age, who have, as farmers, business or professional men, or in other capacities, created jobs for themselves and others, nor for those who have been employed on farms, in homes, churches, public offices, or in other employment excluded by the Federal Social Security Act, except by submitting to poverty registration of themselves and all of the members of their family, while retirement income and widows' pensions are made available to all employed in business and industrial establishments without question as to their economic status; and

Whereas there is an adequate need for old-age pensions for aged persons in this country; and

Whereas it would be more practicable for persons to be paid on a national basis rather than on a State basis: Now, therefore, be it

Resolved by the Senate of the State of Kansas, That we respectfully urge and request the Congress of the United States to enact some legislation which will provide adequate old-age pensions on a national basis; be it further

Resolved, That a copy of this memorial be made a permanent record in the proceedings of the senate, and the secretary of the senate be directed to have copies of this resolution sent to each Member of the Kansas delegation in the House of Representatives and Senate of the United States and to the Vice President of the United States and to the Speaker of the House of Representatives of the United States.

Adopted April 2, 1941.

CARL E. FRIEND,
President of the Senate.
CLARENCE W. MILLER,
Secretary of the Senate.

Resolutions of the Japanese - American Citizens League

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD I have been requested to insert the following:

Whereas in these times of unrest and uncertainty because of world conditions it is vitally necessary for the national welfare to have national unity; and

Whereas national unity is not possible when American citizens are discriminated against on grounds of race or color: Therefore be it

Resolved, That the Japanese-American Citizens League go on record as being unalterably opposed to any form of discrimination against any group of citizens based on race or color, and that every effort be made to bring about national unity of all American citizens in order to be able to face any emergency or crisis from within or without.

Whereas in the cause of national defense it is the duty of every able-bodied citizen to be willing and ready to sacrifice his life for the defense of his country; and

Whereas American citizens of Japanese ancestry are always ready and willing to do their utmost for the welfare of their country; and

Whereas it has been called to our attention that unnecessary rules and regulations have been set up to discriminate against citizens of Japanese ancestry to join the Nation's armed forces, thereby making it impossible for them to fulfill their duties and responsibilities as American citizens for the defense of their country: Therefore be it

Resolved, That the Japanese-American Citizens League call to the attention of the President and the Congress in order that such unnecessary and restrictive rules and regulations be eliminated in order that American citizens of Japanese ancestry may prove their loyalty to the United States and be enabled to participate in the defense of their country by being able to enter any branch of the armed forces necessary for national defense; and

Whereas American citizens of Japanese ancestry, by unanimous thought and action, are loyal citizens of the United States; and

Whereas it is the desire of all American citizens of Japanese ancestry to show their allegiance to the United States: Be it therefore

Resolved, That the Japanese-American Citizens League in general assembly in Portland, Oreg., this 2d day of September 1940, reaffirm without any reservation our allegiance to the Constitution of the United States and to our American ideals and institutions.

A Practical Peace Measure

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

EDITORIAL FROM THE FORT WAYNE (IND.) NEWS-SENTINEL

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Fort Wayne (Ind.) News-Sentinel, of April 11, 1941:

[From the Fort Wayne (Ind.) News-Sentinel of April 11, 1941]

A PRACTICAL PEACE MEASURE

Representative GEORGE W. GILLIE, of the Fourth Indiana District, and Senator CHARLES W. TOBEY, of New Hampshire, in the House and Senate, respectively, are sponsoring a joint resolution of high national importance, which calls for "prohibiting the use of the armed forces of the United States and American vessels and aircraft for transporting, delivering, or convoying articles or materials to all belligerent countries."

Here is a definite, concrete measure upon which the people can register anti-war sentiment in letters and telegrams addressed to Representative GILLIE, Senator RAYMOND E. WILLIS, Senator FREDERICK VAN NUYS, and President Franklin D. Roosevelt, Washington, D. C.

This Gillie-Tobey resolution, designated as House Joint Resolution 158, has been referred to the House Committee on Foreign Affairs and the Senate Foreign Relations Committee; and it will slumber there forever unless the people immediately rise up and demand that it be brought out for debate and enactment.

The Gillie-Tobey resolution provides that—

"Except in a time when the United States is engaged in war, hereafter no part of the land or naval forces of the United States, and no vessel documented, or aircraft registered or licensed, under the laws of the United States, shall be used, directly or indirectly, beyond the limits of the territorial waters of the United States and its Territories and possessions, to transport or deliver, or in connection with the transportation or delivery of, or for convoy purposes in connection with the transportation or delivery of, any articles or materials to or for the use of any foreign country with respect to which the President has issued a proclamation under section 1 of the neutrality law of 1939, or which is engaged in actual hostilities with one or more foreign countries even though a state of war has not been declared or recognized in any such proclamation."

That resolution is short, simple, plain, explicit.

It gives clear expression to the opposition to convoys. And its enactment is the only means by which the people, through their Congress, can now possibly stay the hand of anybody in the executive branch who may be interested in precipitating war for this country by resort to a system of American convoys and deliveries.

In order to expedite consideration and enactment of this extremely important legislation, every interested citizen—and what citizen is not interested?—should immediately send letters not only to the President, their Representative, and their Senators, but also to Representative SOL BLOOM, of New York, chairman of the House Foreign Affairs Committee, and to Senator WALTER F. GEORGE, chairman of the Senate Foreign Relations Committee.

Representative GILLIE has urged all his constituents to continue sending him expressions of their views on all major issues. He has rightly stressed the importance of such public participation in the democratic processes of translating public sentiment into public law.

He deserves your cooperation in this practical Christian undertaking to implement the preponderant will for peace in the form of your expressions endorsing the resolution which he and Senator TOBEY have drafted to prohibit courses of action which will render peace impossible.

Accordingly, The News-Sentinel now urges both those who have previously written to Washington and those who for any reason have heretofore failed to write, to do so this very evening, without another hour's delay.

The St. Lawrence Seaway As a National-Defense Project Is a Myth

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

RADIO ADDRESS BY HON. JAMES E. VAN ZANDT, OF PENNSYLVANIA

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks I include therein an address delivered by me over the red network of the National Broadcasting Co., April 3, 1941, entitled "The St. Lawrence Seaway As a National-Defense Project Is a Myth":

Good evening, ladies and gentlemen. For months America has been engaged in the greatest defense effort in the history of this Nation. Tonight we have under arms 1,400,000 men, while our defense industries are working day and night in a gigantic effort to reach peak production so that our national-defense program may be made effective to meet any emergency.

Despite the fact we are at peace with all nations, Congress has appropriated since September 1939 approximately $40,000,000,000 in the name of national defense, while during the World War our actual defense expenditures were only $19,000,000,000.

The American citizen is conscious of the fact that the legal debt limit has been raised to $65,000,000,000 to meet the problem of national defense, and that it is freely predicted the debt limit may exceed $100,000,000,000 in the near future. It is common knowledge that this increased cost of Government will be paid through the medium of taxation.

The American people are proud of their heritage and no sacrifice is too great on their part to insure continuance of liberty and freedom. To those of us who have been elected as Representatives of the people, it is our duty to closely scrutinize every proposal that is labeled as necessary for our national defense.

While we are quick to recognize legitimate defense measures and support them wholeheartedly, as revealed by the overwhelming approval given appropriations requested as necessary, we are loathe to put our seal of approval on pet ideas that have been tagged as necessary defense legislation when their alleged usefulness to national defense is an insult to the intelligence of the American people.

Since the beginning of the present war in Europe priority rights have been given numerous projects on the assumption that they were necessary to our national defense. Such measures were recognized as purely domestic, and while their relation to national defense may have been questionable, many of us gave our approval because of the resulting benefit to the Nation as a whole.

When the President of the United States on March 21 sent a message to Congress telling of his intention to ask approval for the construction of the St. Lawrence seaway and power project as necessary to national defense, Congress immediately recognized the return of a political pet idea defeated by the Senate in 1934 and now garbed in new regalia—the armor of national defense.

The St. Lawrence seaway is not a new idea. Since the turn of the century it has raised its head many times only to be subdued by calm deliberation and sound reasoning. On March 19, 1941, after 5 years of negotiations, President Roosevelt authorized the signing of a treaty with Canada for the construction of a Great Lakes-St. Lawrence deep waterway and the development of the hydroelectric resources of the International Rapids section of the St. Lawrence River.

We are told that the St. Lawrence seaway project, which cannot possibly be completed and in operation before 1947, 6 years hence, is a necessary adjunct to our defense of the Western Hemisphere.

In the same breath, industries within the Great Lakes region are promised cheap power; Great Lakes shipbuilding yards are promised huge contracts to build oceangoing vessels, inland cities, such as Duluth, Chicago, Cleveland, and Detroit, are to become great inland ports, and the midwestern farmer is offered cheap transportation rates for his products.

The treaty contemplates that the project be divided in two parts, one for the construction of dams on the St. Lawrence River to be used in the development of new sources of cheap hydroelectric power subsidized by the Government, and the other for the construction of a 27-foot channel from Montreal to the head of the Great Lakes, a distance of 1,200 miles, 90 percent of which is wholly within the Dominion of Canada, and at an eventual cost of $1,200,000,000.

The initial appropriation to be asked from Congress will be applied to the construction program for the International Rapids section. For this section alone the combined cost of both the navigation and power development

programs will amount to approximately $267,000,000, the United States paying $206,000,000, since Canada is to be given credit for the cost of construction of the Welland Canal, which will be a component part of the proposed St. Lawrence seaway.

The average American is being led to believe that the St. Lawrence project is being wholeheartedly accepted by not only this Nation but likewise by our Canadian neighbors. On the contrary, it is common knowledge that not only high-Government officials in Canada but the people in general have opposed this project for years as being economically unsound.

This is evidenced by the following statement made by the Canadian Minister of Finance to the House of Commons on February 19, 1941, when he said, "The St. Lawrence Waterway Project is beyond the realm of financial possibility so far as Canada is concerned."

Canadian opposition to the St. Lawrence Waterway Project has become stronger since the Dominion of Canada became engaged in the present war. They frown upon this project since it will be the means of depleting their finances and dividing their efforts to win the war.

Despite the wild assertion by the advocates of the St. Lawrence Seaway that Canada recognizes such a project as necessary to their national defense, let me read you a direct quotation from Dr. Thomas H. Hogg, Chief Engineer of the Hydro-Electric Commission of Ontario, the Canadian agency which would develop and have at its disposal one-half of the St. Lawrence power. Dr. Hogg stated, "It is quite evident that this development cannot be classed as a war measure for even if it were undertaken tomorrow it would be 6 or 7 years before it could become of use. Yet the project is persistently misrepresented as a war measure which far from helping would actually handicap war work."

We can well appreciate the position the Canadian people have been forced to take on the St. Lawrence seaway project. Were it not for the American program of aid to Great Britain our Canadian neighbors would be as militant in their opposition as millions of Americans who recognize this project as a destructive influence because of its devastating effect on the economic stability of both nations.

It is not difficult for us to agree with our Canadian neighbors that the proposed St. Lawrence seaway is of little value and cannot be justified as a national-defense measure. Since we as a Nation are building our own defenses and engaged in a superhuman effort to aid Great Britain the digging of an international ditch and putting the Government of the United States in the power business on a larger scale and at a cost of over $1,000,000,000 is not only ridiculous when Great Britain needs ships and implements of war, but it is likewise an undreamed-of folly.

It has been repeatedly pointed out that this seaway and power project will require at least a period of 7 years before it can be placed in operation. During the construction of the locks, dams, and generating plants and after completion the entire project, both from a power and seaway standpoint, will prove an easy target for enemy bombers or "fifth columnists." Even the ships using the seaway would be open to attack from the air.

Little has been said of the gigantic task facing the United States in defending the St. Lawrence seaway and power project. Military experts predict that it will cost over a billion dollars to erect and maintain suitable defenses since the St. Lawrence seaway from the mouth of the St. Lawrence River to Duluth, Minn., at the head of the Great Lakes will require military posts at strategic points.

Keeping in mind that this so-called national-defense project will require at the utmost 7 years of intensive effort to insure completion let us consider the argument that our defense industries are in immediate need of additional electric power.

If we are in immediate need of electric power, tomorrow may be too late. At this moment the Adams Electric Plant at Niagara Falls, N. Y., is standing idle because of a treaty between Canada and the United States regarding the diversion of water. Revision of this treaty can make possible the operation of the Adams plant overnight, and immediately generate 307,000 kilowatt-hours of electricity. At Oswego, N. Y., a plant is being constructed to provide 80,000 kilowatt-hours, which is capable of being increased to 160,000 kilowatt-hours within a year.

It is beyond contradiction that existing water and steam generating plants both on the American and Canadian side of the Niagara River can be expanded within a 2-year period to enable generating 3,000,000 kilowatt-hours of electricity. In addition steam generating plants can be constructed within a period of 2 years adjacent to coal mines in coal-producing States, such as Pennsylvania at one-third the cost of hydroelectric plants and not only provide millions of kilowatt-hours of electric power but likewise give steady employment to thousands of good Americans.

To further prove that the St. Lawrence seaway as a national-defense project is a myth, let me call your attention to the fact that this seaway which is intended to provide a 27-foot channel from the head of the St. Lawrence River to the head of the Great Lakes will be closed to navigation for 5 months of each year, since the St. Lawrence River is ice-bound and the surfaces of the Great Lakes are solidly frozen.

This seaway will cost the American taxpayers millions of dollars and will be open for navigation only 7 months of each year. During this 7-month period foreign tramp vessels manned by foreign crews and paid a scale of wages far below the standard of American shipping will carry their cargoes to inland ports instead of discharging them at Baltimore, Philadelphia, New York, and Boston as is the present custom. Thus millions of tons of traffic will be diverted from the American transportation systems.

As previously mentioned, industries within the Great Lakes region are promised cheap power; Great Lakes shipbuilding yards are promised huge contracts to build ocean-going vessels; inland cities such as Duluth, Chicago, Cleveland, and Detroit are to become great inland ports, and the midwestern farmer is being lulled into silence by glittering promises of the rich harvest he will reap in cheap transportation rates.

Were these fanciful dreams to come true, the nonbenefiting citizens of our country will pay 85 percent of the cost of this project which I have already stated will be in excess of $1,000,000,000. In addition, the annual maintenance cost will be $15,000,000 on the seaway alone, which will mean that every ton of freight estimated by the advocates of the seaway will be subsidized by the Government at a cost of $2.50 per ton.

Do you realize that from the reports of American life-insurance companies, it is revealed that one-fourth of the assets of these companies are invested in Ameriacn railroad securities and other utilities and as a result the St. Lawrence seaway will affect every life-insurance policyholder in the United States?

Yes, there is much idle talk about these so-called benefits from this St. Lawrence seaway and power project. On the other hand, there is a strange silence over the thousands of American citizens who will be driven to the relief rolls of the Nation by the destruction of their jobs.

What is to become of the coal miner whose job will be destroyed by hydroelectric power and the importation of cheaply mined foreign coal?

How about the railroader whose job will vanish when millions of tons of freight are carried to Great Lakes cities by foreign vessels?

What about the plight of the American seaman whose ships will be idle while foreign tramp steamers carry cargoes diverted from American vessels?

What about the employees of the shipyards on the east, west, and Gulf coasts of our country, who, with thousands of stevedores, in times of peace have always found it difficult to exist because of part-time employment?

Time will not permit me to enumerate the number of jobs in related industries destined to feel the devastating effect of this economic monstrosity known as the St. Lawrence seaway.

Ladies and gentlemen, this attempt to saddle the American taxpayers with an unnecessary expenditure of public funds is a direct challenge to every American citizen.

In the name of those men whose jobs are destined to be abolished as a result of the St. Lawrence seaway and power project, I ask you to join with us in Congress in opposition to this politician's golden dream and the taxpayer's hideous nightmare. Your assistance can best be rendered by joining us in revealing this project in its true light as economically unsound.

A letter to your Congressman and Senator stating your opposition to this project will merit the prayers of thousands of men, women, and children whose means of livelihood will be seriously jeopardized.

Public Demands Action on Strikes

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

EXTRACTS FROM LETTERS REGARDING STRIKES IN NATIONAL-DEFENSE INDUSTRIES

Mr. HOPE. Mr. Speaker, the people of this country are becoming aroused over strikes in national-defense industries. They are not satisfied with the policy which the national administration has followed on such matters up to date. They are not satisfied with the attitude of some of the leaders of organized labor. They do not think it right or proper for the Federal Government to draft hundreds of thousands of young men into the service at $1 per day and at the same time permit well-paid workers in defense industries to strike over jurisdictional and other technical questions. They have a feeling that many of these strikes are inspired by Communists and other subversive elements and are called for the purpose of undermining our national defense.

During the past few days I have received many letters on this subject from the good people in my district. These people are not opposed to organized

labor. They know that the overwhelming majority of the working people of this country, both organized and unorganized, are loyal, patriotic American citizens who want to do their part in carrying out the national-defense program. They believe, however, that in many cases the leaders of these organizations do not fairly represent the splendid rank and file comprising their membership.

I am submitting herewith as a part of these remarks extracts from some of the letters I have received on this subject. I am personally acquainted with the writers of practically every one of these letters. They are fine, outstanding American citizens, representative of the best in their communities. I do not subscribe to all of the views which are expressed in these letters, but I am submitting them because I think they express the viewpoint of the great majority of the people of this country. These letters indicate that there is an end to the patience of the American people, and that until organized labor cleans its house of some of its false and unpatriotic leadership, there is likely to be a reaction which will deprive labor of many of the privileges and rights to which it is entitled, and which have been won through struggle and sacrifice over a long period of years. I believe that this is a time for all of those who are interested in the welfare of organized labor to consider the results which may follow a continuation of the present unwise policies.

The extracts from the letters to which I have referred follow:

We are amazed at the policy of the administration regarding strikes in the defense industries. So far the administration has simply surrendered to the labor unions, allowing them to dictate the defense policy. The unions are making hay while the sun shines. They strike for higher wages. For any extra time they, of course, demand their time and a half. They hold up defense industries with impunity and all for their own selfish ends. It seems to us that no government worthy of the name can tolerate that sort of thing in a crisis such as this.

I saw the other day a statement which seemed to be reliable to the effect that just shortly before France fell the labor unions there were demanding a reduction of the workweek from 36 hours to 30. At that time the German workers were putting in 72 hours per week. Some of the recent acts of our labor unions are a sad commentary on their patriotism.

Compare these things with the status of the American farmer. Only 3 weeks ago the Ford Co. published figures showing that during 1940 the company gave daily employment to a little more than 113,000 men. The average yearly wage paid these men was $1,629. You know that there is not a farmer in all your district that can afford to pay more than one-fourth of that amount for the 8 or 9 months of the year during which he might employ men. Yet the unions and the Government are after Ford.

The real honest to God American citizens of Kansas are getting awful tired of these strikes. Can't understand how it is the Government can take their boys out of $75 to $150 jobs and put them in the trenches at $30 a month and can't stop strikes.

Personally, I don't know who is at fault in the present struggle between labor and capital, but I do know that I speak the sentiment of this community when I say, "They had better get together and get busy on orders."

In the previous World War I was one of the several million Americans who served our country at a considerable financial sacrifice. In the present war I am examining draftees without remuneration. Why do our efforts have to be nullified by the selfishness of the un-American labor unions? I am for as drastic legislation against them as you can propose.

We are also much concerned about the strike situation in defense industries. It is high time that the members of these industries do their share of making all-out efforts for defense a success, even if it is necessary for the Government to step in and get them started in the right direction.

I have intended to write you many days ago, but just couldn't find the right time. I am speaking for my entire community, and if you prefer I'll mail you a petition to this effect. Stop these strikes by introducing a bill giving the strikers the raise they ask with vacation pay. But no closed shops whatsoever. (Others may want a job.) If he refuses to work, raise the draft age to 55 years and take everyone into the Army, give him $1 a day and his board and clothes along with the rest of our native boys. This run through the legislative hopper will stop strikes in 48 hours.

It is my opinion that if you would contact other Representatives and Senators in Congress and get together and pass a law making it a criminal offense for laborers to strike on defense projects and contracts, then you would do the people of the entire United States a good service. The strike situation certainly should be attended to at once before the strikers rule the United States of America.

This strike situation bids fair to get out of hand, doesn't it? I see where they called a strike on Ford "not because of wages or working conditions but to get recognition." I thought wages and working conditions were the only legitimate needs or excuses for union organizations to be in existence.

I am about to join the Socialists or any other "ists" on aiding a bigger and better raid on the Treasury for us poor, sick, groveling farmers, on the theory that if the hogs are at the trough we shoats had better get in there, too. Labor tactics are pulling the plug out of the money barrel by striking to make wages higher on these Federal profit-guaranteed projects to the point that a common man couldn't pay off on. It seems to me as fair to draft labor if necessary at about $30 a month if it is fair to subject the youth of our country to a year in the Army.

I believe that public opinion is quite definitely aroused against defense-industry strikes.

In labor unions and collective bargaining, but not in those unions controlled by radicals and enemies of the democratic form of government.

That the C. I. O. is controlled by Communists and should be outlawed by Congress, because it has been either unwilling or unable to expel them, and should, therefore, be considered an enemy of the United States. You notice that they did not comply with the Mediation Board's order without delay, and some at this writing still have not done so.

That industry has not had a square deal under the N. L. R. B. and that communism has been promoted or at least allowed to grow unrestricted by this Board.

That labor should be willing to forego the 40-hour week for the sake of national defense, and it has shown no willingness to do so.

That the $1-per-day soldier who wants ammunition and equipment is interested in getting them and not in whether the workmen who produce them get the same pay as he or $10 a day. He expects his supplies and is entitled to them. A little sacrifice is in order for the ranks of labor too. I believe that labor is much more insistent than industry in demanding its "pound of flesh."

I think there should be something done to halt the strikes in the factories that are making war materials. I believe in good wages and working conditions, but are we going to let laborers and the factories halt or slow up the defense program? I think that you have given this a thought, but I think something should be done at once if possible. The people are wondering why something isn't done about the striking men or the factory owners. I think that Mr. DIES should have more cooperation from Congress and try and get rid of all the "isms" in the United States of America.

Strikes Must Stop

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

ADDRESS BY JACOB ARK

Mr. O'BRIEN of New York. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Jacob Ark, former Monroe County, N. Y., commander, American Legion, at Rochester, N. Y., April 5, 1941:

Headlines, news flashes, news reels, commentators, magazines, daily newspapers and by the spoken word, we are not permitted to forget that nations are in the maelstrom of war. Systems of government are directly challenged and free peoples overnight have been forced into bondage. Modern science and invention have become instruments of destruction and the tools of brutal aggression. No nation that wants to keep invasion from its people or its right to maintain its own way of life can be oblivious or indifferent to the outcome of the present conflict.

The fruits of constructive minds are now the vehicles of destructive ideas. The airplane and radio have forcibly brought home to us that we have a direct and vital stake in the defeat of those who physically enslave human beings by military might, and morally poison men, women, and children by ideologies repugnant to the free institutions of free people.

It is our national policy, and our insurance policy, as a nation and as individuals, that America literally arm to the teeth, so that we may successfully combat foreign arms and alien philosophies of government. It is also our declared intention that our men, material, machinery, and money, blended together, be a reservoir for those who would keep enlightened civilization from disappearing from the face of this earth. In the words of the President, "We become the arsenal of democracy."

Much has been said of the compelling necessity of national unity in the present emer-

gency. We are now at war against an idea, and if we don't hurry, hurry, we are certain, sooner or later, to be at war with men and guns and ships and planes.

National unity can mean but one thing. The cooperation between and among all of our citizens. Our resources are meaningless unless we mine our coal, build our tanks, airplanes, and ships. It requires the uninterrupted teamwork of the manual laborer and the mental worker, the employer and employee. No American is free from this responsibility. Lip service cannot replace brains, brawn, and muscle.

Plants which should be working at maximum capacity turning out the sinews of war—the only symbols that dictators can recognize—remain idle during these precious days and hours.

We of the American Legion take no sides in industrial conflicts. We do, however, insist that we shall not go unprotected as a nation because either capital or labor may seek an advantage by reason of our immediate and urgent need for life-sustaining defense.

The right to strike has been the invaluable right of labor. The proper exercise of this economic weapon has brought about untold benefits to American labor and has directly improved the standard of living of all our people.

The make-up of the American Legion is typical of our Nation. This means that most of our members work for a living—on the farm, in the shop, and in the office. Yet we do demand that present strikes must stop. Every instrument of defense that goes unmade is the exact equivalent of its destruction by those who would destroy us.

If employer and employee cannot agree, Government must step in. Let no one be fearful that if this happens our social gains will disappear. If vital national defense industries do not work, there will not only be no social gains to speak of, but society as we know it, may be but a memory to both strikers and the owners of strike-bound plants. The great tragedy would be that in that process the inncent bystanders—the great majority of the American people—would be the real victims.

One plant alone which affects one-third of all national defense has been strike-bound for many weeks. Yesterday, the President admitted that Communist activity was impeding vital defense orders.

Wake up, employees. Wake up, employers. Wake up, Congress. An aroused American people want special privilege for none and equal service and sacrifice by all.

St. Louis Government Returns to the People

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. PLOESER. Mr. Speaker, it is certainly of interest to the Members of this House to learn that the municipal government of the city of St. Louis has returned to the freely elected representatives of the people, hence to the people whence it came.

The city election campaign was unquestionably one of the most heated in the history of our great city. It attracted some national attention. The Republican Party elected every candidate on their ticket. The great national machine of the Democratic Party is beginning to decay. It has lost one of its greatest strongholds. The people, by their votes, rolled up a majority which overcame padded registration lists, fraudulent voting, machine delivery, and coercion.

The issues in this campaign were deep, an attempted governorship steal, crooked voting, machine fraud, corruption of the courts, Federal pressure to dictate municipal elections, antiwar feeling, and a general growing resentment not limited to St. Louis against the whole national, State, and local set-up of war, waste, and false promises. This election is in a measure indicative of the coming political storm in 1942. Other parts of the country have shown similar trends.

There is always hope for the country as long as the people have the courage to demonstrate their rights as they did in this election.

The following is an editorial from a very courageous weekly, not published in St. Louis, but instead, in this case, a public-spirited onlooker from St. Louis County—the Watchman Advocate:

[From the Watchman-Advocate of April 4, 1941]

JUDGE BECKER'S VICTORY

The face on the barroom floor is redder, the race horse has been retired to the green pastures, the battle cry of "bunk" has lost its savor.

Last Tuesday the city of St. Louis had an election. Last Tuesday the voters of St. Louis elected a mayor. They chose between a man who has held that office for 8 years and a newcomer so far as city management is concerned. They chose the new man—a former judge—a Republican. They chose William Dee Becker.

There must have been some reason beyond the campaign for the upset of a presumably strong machine. Surely a machine as powerful as the one operating in St. Louis could not have been upset between the time Judge Becker decided to run for the office of mayor and last Tuesday. There are some other reasons behind the vote.

The man Judge Becker defeated has never been able to divorce his name from the attempted steal of the Governor's office. He earned the nickname "Race-Horse Barney" when he raced from city hall to airport and back again to show "the Little Flower" his lordly characteristics. He suffered the handicap of having some of his campaign speakers threaten the people of St. Louis with President Roosevelt's disfavor if they did not vote for him.

Poor sportsmanship in politics, a nickname that is more truth than poetry and a threatening attitude were all that were needed to defeat Dickmann; but, not satisfied to allow just those things to do the job, his campaign advisers went a step further and answered fact with one-word sarcasm. In their advertising copy and over the air waves they used the one word "bunk" to answer a sensible well-put question. The public saw the intended insult to their intelligence and they responded with one mark on their ballot but so far as the machine was concerned, the voters put it in the wrong column.

We congratulate the people of St. Louis on what we consider a wise choice. We congratulate the Republican Party for choosing Judge Becker as their standard bearer and the men who made the race for aldermen. The election of all of these candidates indicates how well they were chosen. We congratulate the city of St. Louis for its courage and its ability to lay down a challenge to those who infer that President Roosevelt will be mad now that Barney is no longer the jockey.

We congratulate the State of Missouri, not that the State as a whole had anything to do with the election, but on the grounds that its interests can be probably better protected and served by the new mayor of St. Louis than it was served under the man whose race track was the highways, whose support of Larry nearly made him Governor and whose battle cry was "bunk."

Lastly, we congratulate Judge William Dee Becker, Republican, gentleman and scholar, and here is a wish for a successful and noteworthy administration.

The Panama Canal Is Not Safe Under the Precepts in Vogue 40 Years Ago During the Spanish-American War

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. MANSFIELD. Mr. Speaker, when we remember the heated controversies of 35 years ago as to whether the Panama Canal should be a high-level lock canal or a sea-level canal we should also remember that the decision for a lock canal was based solely on the fact that the lock canal could be built more quickly and at much less cost.

For either type of canal the control of the floods of the Chagres River is necessary. The Madden Dam has already been built with flood control as one of its major assets. Comprehensive plans contemplate another flood-control dam at Gamboa near where the Chagres River enters the canal. The Gamboa Dam is an ultimate need for the lock canal as well as for a sea-level canal. Both of the dams referred to are to be used to store water for the operation of the lock canal. A sea-level canal would need no such water supply, and the dams could be used more effectively for flood control if they do not have to be used for storing water for the use of a canal.

The slides at Culebra Cut were the result of too much earth pressure on steep slopes. They have been eliminated by the gradual removal of sliding earth, which, of course, means that nature has come into equilibrium by a natural reduction in slopes. The estimated costs of a sea-level canal amply provide for the removal of enough earth to produce slopes so that they will not slide.

In talking about conditions 35 or 40 years ago, one should be careful not to lapse into a reactionary point of view. If all the technical and scientific improvements that have been developed in the last 40 years are to be ignored, we will certainly go backward instead of forward. The offensive features of air warfare are developing much faster than the defensive features and as yet we do not

see much evidences of air defenses catching up. There must be planning for dispersion and avoidance of the dangers from offensive air warfare until we see more chance of effective defenses than is conceivable now. The populations of the cities of Europe have no sure and safe remedy at the present time except migration to the country.

Our preparations for defense would be in a sad plight if they were confined to the measures that were considered satisfactory in the Spanish-American War, when our concentrations of troops were decimated by typhoid epidemics. Our artillery consisted of old 3-inch cannon. The only rapid movements and reconnaissances we had, was by the use of horse cavalry. Think of depending upon such operations nowadays.

It is only a short time since many of us and even some of our most intelligent Army officers were ridiculing the damages that might be inflicted on naval vessels by air bombing. Now we know that every day air bombers are accomplishing a great deal more destruction than the most enthusiastic airmen were claiming as feasible only 2 or 3 years ago.

Let us not make the mistake of adopting a complacent attitude with respect to the interoceanic canal across the Isthmus of Panama. It is unthinkable that anything physically possible should be left undone for its security, because its constant use is essential to peacetime prosperity and for the passage of our naval vessels in wartime in order that they may defend the Nation both in the Atlantic and in the Pacific Oceans.

National-Defense Mediation Board

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

LETTER FROM WILLIAM GREEN

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent out by William Green, president of the American Federation of Labor:

AMERICAN FEDERATION OF LABOR,
Washington, D. C., April 7, 1941.

(Sent to city central bodies.)

DEAR SIR AND BROTHER: As you have already learned through the daily press, the President of the United States, by Executive order established the National Defense Mediation Board in order that all work necessary for national defense should proceed without interruption and with all possible speed. This action was in line with the recommendations of the executive council at its February meeting.

I urge upon all unions genuine and prompt cooperation with this and other defense agencies. Our unions must not only demonstrate their ability for responsible leadership but must be prepared to present labor's interests and welfare to defense agencies and to the public. Enemies of labor are losing no opportunity to discredit our unions or to use the mistakes or bad judgment of individuals as an excuse for repressive policies or legislation to penalize all workers.

With equal solemnity I remind you that the trade-union movement is the bulwark of democracy. Unless we maintain a free-labor movement democracy becomes meaningless to millions. Upon all union executives and union members rests a heavy responsibility and trust. The strike is our ultimate defense. The right to quit work is the inalienable right of all free workers. Let us show ourselves worthy of our rights by the wisdom and discretion with which we use them. Days of responsibilities and crucial tests lie immediately ahead. Maintain your rights as free men. Do not tolerate strike breaking by any defense or governmental agency. You have a right to contracts reached by collective bargaining specifying terms and conditions. That right carries with it the obligation of responsible, constructive, and prompt action by all unions. Mediation must provide for orderly adjustment of the causes of labor disputes, for only by eliminating the causes of injustice can we hope to maintain sustained, maximum production and unions have essential functions in achieving that objective.

Labor confidentially expects this Board will use all existing agencies and channels—public and private—for adjusting disputes so issues like minority strikes will be decided through the National Labor Relations Board and will not prevent the Mediation Board from performing its primary function.

As the final appeal in all matters is to public opinion, we owe it to our movement and our democratic institutions, to get Labor's case before the public in terms that adequately present our aims and purposes.

The American Federation of Labor is represented on the Board by George Meany, secretary-treasurer of the American Federation of Labor, and George M. Harrison, president of the Brotherhood of Railway Clerks. The Secretary of Labor is authorized to certify to this Board any controversy which threatens to obstruct defense production and which the Conciliation Division of the Department of Labor has failed to adjust. The Board is authorized:

(a) To make every reasonable effort to adjust and settle any such controversy or dispute by assisting the parties thereto to negotiate agreements for that purpose;

(b) To afford means for voluntary arbitration, with an agreement by the parties thereto to abide by the decision arrived at upon such arbitration, and, when requested by both parties, to designate a person or persons to act as impartial arbitrator or arbitrators of such controversy or dispute;

(c) To assist in establishing, when desired by the parties, methods for resolving future controversies or disputes between the parties, and to deal with matters of interest to both parties which may thereafter arise;

(d) To investigate issues between employers and employees, and practices and activities thereof, with respect to such controversy or dispute; conduct hearings, take testimony, make findings of fact, and formulate recommendations for the settlement of any such controversy or dispute; to make public such findings and recommendations whenever in the judgment of the Board the interests of industrial peace so require;

(e) To respect the National Labor Relations Board in any controversy or dispute relating to the appropriate unit or appropriate representatives to be designated for purposes of collective bargaining; to expedite as much as possible the determination of the appropriate unit or appropriate representatives of the workers.

President Roosevelt specifically requests the parties concerned give to the conciliation service and to the Office of Production Management:

(a) Notice in writing of any desired change in existing agreements, wages, or working conditions;

(b) Full information as to all developments in labor disputes; and

(c) Such sufficient advance notice of any threatened interruptions to continuous production as will permit exploration of all avenues of possible settlement of such controversies so as to avoid strikes, stoppages, or lock-outs.

Fraternally yours,

WM. GREEN,
President, American Federation of Labor.

The Drift Toward War

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

RADIO ADDRESS BY HON. GEORGE W. GILLIE, OF INDIANA

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on April 10:

Ladies and gentlemen, friends of the radio audience, Congress has been in session so much of the time for the past 2 years, dealing with grave, history-making problems concerned with our national defense and foreign affairs, that it is an unusual and surprising pleasure for me to be at home among my friends at this time.

My visit to Fort Wayne was made possible by the action of Congress a few days ago in approving a resolution for a 10-day recess. Some have described it as a "cooling-off" period—a vacation from the heat of debate over crucial issues—an opportunity for Members of Congress to return to their home districts to check on sentiment among their people.

I think you will agree with me that it is a healthy thing for Congressmen to keep in close contact at all times with the citizens they represent—especially now when we are facing, under an unprecedented third term, problems that may make or break our democracy.

It is the sworn duty of your Congressman to be truly representative, and to carry out this responsibility it is necessary for him to know what you think about war, billions for defense and for aid to Britain, taxes, strikes, and other important policies.

We learn what you think about these problems through several channels, one of which is our daily mail. And I want to emphasize that it was never more important for you to express your views to Congress, for it is only through a genuine voicing of opinion that a true democracy can function. You may be very certain that there are tremendous minority pressures brought to bear upon your representatives in the Congress. This renders it especially desirable for the great rank-and-file majority to give to Congressmen continuous expressions of views on major issues.

During my brief visit in the fourth district, I am attempting to consult with representative citizens on the issues of the hour. Unfortunately it is not possible for me to talk

personally with all of you. Through the medium of the radio, however, I am able to reach a large cross section of my constituency in the eight counties of northeastern Indiana. And through this medium I wish to convey to you the earnest hope that you will fulfill your duty in the democratic process by favoring me freely with your views and comments on legislation before Congress. I wish that every citizen would write to me.

There were many questions troubling my mind when I left Washington last week end to return for this welcome sojourn among my people. I left a capital laboring in the throes of war hysteria—ominously reminiscent of the World War days; a capital verging on an extravagant war boom; a capital seething with unrest and with loose talk about total victory, about stopping Hitler at all costs, about steps no longer short of war.

Congress had just passed the lease-lend bill, launching America on an uncharted course of intervention in the European conflict, and had voted a gigantic $7,000,000,000 "war chest" for Great Britain and her allies.

The President had ordered the seizure of German, Italian, and Danish ships in American ports, and administration leaders had begun to actively promote the use of American warships to convoy war materials to Europe.

War was in the air, and talk of war was on the lips of everyone.

As I left the Capitol and started for Fort Wayne I wondered to myself: Is this hysteria limited to Washington or has it already extended west across the Alleghenies to the very heart of America—to Indiana and the Middle West? I could not believe that it had.

This belief, I am happy to report, has been sustained since my arrival.

The people of Indiana and the Fourth Congressional District do not want war. There is no question that our sympathies lie with Great Britain. But there is also no question that we do not want to permit our emotions to actively involve us in another war across the seas.

The will for peace is still strong here in Indiana and throughout the Nation. Let us hope that it will spread from the people to their elected representatives and through them to the leaders of our Government in Washington.

Keeping in mind this strong will for peace in America, so clearly indicated in every straw vote on the subject, it is revealing to chart our rapid drift away from neutrality and toward war in the months since the start of the European conflict.

This drift has been most rapid during the last few weeks, and can best be charted through the statements of the Nation's navigator, President Roosevelt.

During the heat of the third-term campaign, on October 24, he said, and I quote him:

"I repeat again that I stand on the platform of our party: 'We will not participate in foreign wars.'"

Again at Hartford, Conn., on October 30, he said:

"The United States is today at peace and is going to remain at peace."

At Rochester, N. Y., on November 2:

"Your President says this country is not going to war."

At Cleveland, Ohio, November 3:

"The first purpose of our foreign policy is to keep our country out of war."

On the strength of these pledges, President Roosevelt was elected to a third term.

Less than 2 months later, with campaign promises apparently forgotten, we learned for the first time that we were to be the "great arsenal of democracy." We were advised that "we must apply ourselves to our task with the same resolution, the same sense of urgency, the same spirit of patriotism and sacrifice that we would show were we at war."

And in a message to Congress on January 6 we learned further that "we are committed to the proposition that principles of morality and considerations of our own security will never permit us to acquiesce in a peace dictated by aggressors and sponsored by appeasers."

Then came the "total victory" speech of March 15, in which the President said:

"And from now on that aid will be increased, and yet again increased, until total victory has been won."

What a change from peace and "no foreign wars" in the campaign of 1940 to "total victory" in the spring of 1941.

I now read from a newspaper dispatch from London, dated March 24, 9 days after the "total victory" speech:

"For the first time a London newspaper today urged the United States to convoy war supplies to Britain, in view of the menace of the German spring sea offensive. The newspaper was the Daily Sketch.

"'We need every enemy neutral ship that now lies idle in an American harbor,' said the Sketch. 'We need every American ship that America does not need for herself. We need every American captain, every American ship, every American seaman who can be spared from America's own war effort.

"'We cannot afford to wait for public opinion in the United States to mature while Germany acts with such concentrated force on our maritime resources.

"'What we need most urgently is American convoys for American supplies.'"

This newspaper story was the signal for interventionists in Washington to start an active campaign for the convoying of war supplies by American warships, the last certain step toward war.

The convoy campaign, which has the backing of high administration officials, gained headway so rapidly that President Roosevelt told his press conference last week that the question of convoys was under consideration, and had been under consideration for a year and one-half.

He made this admission in the face of a previous statement by himself that "Convoying means shooting, and shooting means war."

Senator GEORGE, chairman of the Senate Foreign Relations Committee, made a similar statement during debate on the lease-lend bill. He said, and I quote him:

"As plainly as I can, I have always stood against convoying vessels by the American Fleet and will stand against convoying vessels by any unit of the American Fleet until and unless the point shall come when I shall be willing to vote for war, because, in my judgment, convoying would lead us into actual war."

I agree, with President Roosevelt and Senator GEORGE, that convoying is the surest, swiftest path toward war for America. Convoying is war. And if that is what our leaders in Washington want, they should be honest about it and ask for a declaration of war. They should not attempt to push us into this conflict through the back door.

Recognizing, as everyone must, that shooting is inevitable if convoys are resorted to, and opposing as I do the participation of this country in a foreign war, I have introduced in the House of Representatives a resolution designed to prohibit the use of American warships and aircraft for the convoying of war supplies through belligerent waters.

This measure, House Joint Resolution 158, has been referred to the Committee on Foreign Affairs with the request that it be given prompt consideration.

A similar resolution, sponsored by Senator TOBEY, of New Hampshire, is pending in the Senate.

It is already evident that these measures have the support of large numbers of American people.

If they have your support, you may assist in bringing about their enactment by writing to me, to your Senators, and to the President, telling them of your views. Such letters have more influence than you may imagine. There should be more mail going to Washington every day.

In conclusion, I wish to state that I owe allegiance to only one country. I intend to discharge my duties in Congress at this time on that basis.

The highest duty I can perform in good faith to the people who have honored me by sending me to Washington is to preserve, protect, and defend my own country from enemies within or from without.

I shall vote with enthusiasm and with all my heart and soul for every appropriation that will build up our own national defense on land, in the air, and on the sea. I will do that for my country, and gladly.

I will vote and I will act in every way to make our arms invincible from an invading enemy.

I have pledged myself to my people, however, that not with my vote will their American sons be required to follow down the same bloody path of sacrifice that they did in the last war by participating needlessly in any foreign conflict which constitutes only an extension of Europe's centuries-old imperialistic rivalries.

This is my covenant with you. With divine help, I intend to keep it.

Thank you, and good night.

A Tribute to Clara Maass, Who Gave Her Life for All Mankind

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

ADDRESS BY DR. C. C. PIERCE

Mr. CANFIELD. Mr. Speaker—

Come at once. We need you.—Gorgas.

When this telegram came to Miss Clara Maass, a young Spanish War nurse recovering at her home in East Orange, N. J., from a service-connected illness in October 1900, she immediately answered the call and was soon at the side of General Gorgas, then leading the fight against yellow fever in Habana, Cuba. Some months later Miss Maass was requested by Dr. Gorgas to volunteer for the dangerous experiment of permitting herself to be bitten by a known-infected mosquito. She died as a result, a martyr to the cause of science.

On Palm Sunday this heroic sacrifice was commemorated at services in the Mountain View, N. J., Community Church with the dedication of a memorial window, Hoffman's conception of Christ in Gethsemane, the gift of a sister, Miss Emma Maass of Mountain View. The window was accepted by Mr. Stanley Styles and the Reverend Edgar B. Rohrbach presented Dr. C. C. Pierce, Medical Director of the United States Public Health Service, who was active in the fight against yellow fever and 90

miles away from Habana when Miss Maas died. He spoke as follows:

It is a privilege to participate in this beautiful service to honor the memory of Clara Louise Maass. It is particularly fitting to hold this service on Palm Sunday, commemorating the triumphant entry of Jesus into Jerusalem, from which He departed 5 days later to lay down His life for all mankind.

Clara Louise Maass, born at East Orange, June 28, 1876, the oldest of nine children, grew to be a charming, animated, and ambitious girl. Being one of a large family, forced her at an early age to become self-supporting. At the age of 15 she left school and went to work in the Newark Orphans' Asylum at board, room, and $10 a month. Early in childhood she showed an unusual spirit of service which constantly grew, which led her into nursing. She entered the Newark German (Memorial) Hospital at the age of 16 and graduated in 2 years.

When the Spanish-American War was declared, she promptly volunteered and was sent to Jacksonville, Fla., and later to Savannah, Ga., and then to Santiago, Cuba, from October 1898 to February 1899, when she was honorably discharged and returned home and resumed private nursing. In November 1899 she went to the Philippines as an Army nurse and endured the hardships of the veteran soldier for 8 months, including an attack of breakbone fever (dengue). She came home to recuperate in May 1900.

Late in 1900, Miss Maass returned to Cuba as a nurse for the sanitary department of Habana, Cuba, being operated by the United States Army Military Government of Cuba and was assigned to Las Animas Hospital.

Yellow fever was very prevalent in Habana that year and there was a greater death toll from this disease than that of war. The Cubans looked upon yellow fever as inevitable, but the United States military government waged a constant fight to alleviate the suffering it caused, and appointed a commission of Army doctors to study yellow fever and to determine the cause and method of spread of this dread disease which, for four centuries, had caused death and devastation in Cuba, Central America, and the Southern States of our own country.

Some work had been done at an earlier date to determine the method of spread of yellow fever by Dr. Carlos Finlay, a Cuban doctor, who in 1891 published an article in a medical journal in which he stated that he had reason to believe that yellow fever was spread by the bites of mosquitoes. Dr. Finlay's work was not controlled scientifically nor did it at that time receive much consideration from the medical profession, but now Cuban stamps are canceled with the legend "Finlay liberated the world of yellow fever." Dr. Finlay's theory was investigated by the Yellow Fever Commission established in Habana in 1900 by Gen. Leonard Wood, who was the military governor. Incidentally, when General Wood was sick he was nursed by Miss Clara Maass. Maj. Walter Reed, an Army doctor, was in general charge of this Yellow Fever Commission work, and the other members were Drs. Carroll, Lazear, and Agramonte.

This commission made an investigation of Dr. Finlay's theory about mosquitoes spreading yellow fever. A number of soldiers volunteered to sleep in the beds made vacant by the death of persons with yellow fever to see if the generally accepted theory that the disease was contagious had foundation. These men were thoroughly exposed to all sorts of material infected with yellow fever, but mosquitoes were very carefully excluded from the rooms they occupied. None of the men developed yellow fever. This work proved that it was not possible to transmit the disease by contact with materials soiled by the discharges from yellow-fever patients.

Experiments were also conducted by the Yellow Fever Commission to transmit yellow fever by letting mosquitoes that had previously fed on the blood of persons sick with yellow fever bite other persons. Drs. Carroll, Lazear, and several other persons were bitten by these infected mosquitoes without result, so that the theory of mosquito transmission was gradually being discredited, until Dr. Carroll fell sick on August 30, 1900, but he did not know that he had yellow fever. Drs. Lazear and Agramonte suspected that Dr. Carroll had yellow fever and decided to test the mosquito that had bitten Dr. Carroll by having this same mosquito bite a known nonimmune, which was done, and the man promptly developed yellow fever. Dr. Lazear also became infected through the bite of an infected mosquito and died of yellow fever on September 25, 1900. (This yellow-fever experimental work is described in S. Doc. No. 520, 66th Cong., Yellow Fever Commission.)

The next year, 1901, additional experiments were conducted by Drs. Gorgas and Guiteras at the Las Animas Hospital in Habana. This work was done under the auspices of the sanitary department of Habana rather than those of the United States Army Medical Board, over which Major Reed presided, but the value of the work was recognized by the Army group, as is shown by the following quotation from a report of the Committee on Pensions of the House of Representatives, Fifty-eighth Congress, second session, No. 1865, dated March 23, 1904:

"The sanitary department of Habana in 1901, the year following the experiments of the Army medical board, had established at Las Animas hospital an inoculation station with the expectation of biting nonimmunes with the infected mosquitoes, giving them yellow fever and thus rendering them immune, much as was formerly done by inoculating smallpox before the discovery of vaccination. The great success in entirely eradicating yellow fever by mosquito control work was not at that time thought probable. Nonimmunes were invited to apply for inoculation and several of the employees about the hospital responded to this invitation, Miss Maass among others. She was bitten, had a severe case of yellow fever, and died as a direct result of the intentional mosquito bite.

"While these cases were not directly connected with the experimentation of the Army board, they had much more effect in the city of Havana in convincing the physicians and people generally that yellow fever was conveyed by the mosquito than did the work of the Army board."

Miss Maass was requested by Dr. Gorgas to volunteer for the dangerous experiment of permitting herself to be bitten by a known infected mosquito and in volunteering for this service, she became a martyr to science. Others who allowed themselves to be bitten by infected mosquitoes were eight Spanish immigrants and one Englishman. Of this number, two of the Spanish immigrants and Miss Maass died.

Miss Maass knew the danger she was incurring from what she had observed of the experiments with the Yellow Fever Commission in 1900, and before submitting to this test, she wrote to her mother and said, "Do not worry, mother, if you hear that I have yellow fever. Now is a good time of the year to catch it if one has to. Most of the cases are mild, and then I should be an immune and not be afraid of the disease any more." Dr. John W. Ross, of the United States Navy, who was in charge of Las Animas Hospital, said that Miss Maass was one of his very best and most faithful nurses. She knew she would be more useful as a yellow fever nurse if she was to become immune so her young life was given from a high sense of duty. Miss Maass died on August 24, 1901, and was buried in Cuba. Her sister, Miss Sophie Maass, also a nurse, who had left for duty in Cuba, was at sea when Clara Maass died, but she arrived at Habana in time to attend the military funeral of her sister.

Clara Maass' body was returned to the United States by the Government and interred at Fairmount Cemetery, Newark, N. J., on February 20, 1902.

In 1912, a room was set apart in the Newark German (Memorial) Hospital to the memory of Miss Maass. A portrait of her was hung in the nurses' home at the hospital and at the unveiling of this portrait, the late Dr. Edward Stachlin made an address from which I quote:

"We admire the hero who falls in battle, but he is urged on amid countless numbers to the tune of martial music to fight the cause of the oppressor's wrong, hopeful ever of being spared. We admire in any walk of life the one who succumbs to duty's call, yet the outcome here is usually unlooked for and rarely anticipated. They are all hallowed endings, but not to be compared with the ending of the one who solitary and alone avows a cause whose issue brings self-destruction for the benefit of all posterity. So toil the workmen who repair the world."

In May 1930, Miss Maass' grave was marked by a beautiful, unpretentious, dignified memorial of polished pink Milford granite, with a bronze plaque bearing an excellent likeness of this heroic nurse, and a suitable inscription showing that Miss Clara Maass laid down her life for science and humanity.

We honor her memory today and throughout the future by this beautiful memorial window, in a building dedicated to the service of our Master. Reproduced from one of the great paintings by Heinrich Hoffman, born in Darmstadt, Germany, in 1824, and died the year following Miss Maass' sacrifice. Heinrich Hoffman painted many scenes from Christ's life, all showing refined beauty and harmonious coloring and delicacy.

Miss Maass gave her life for her country in the turbulent period following the war. We of this country are now in a more disturbed condition and inclined to meet greater problems than confronted those who were trying at that time to make the world a better place in which to live. The present period of world history now demands a national preparedness unprecedented in any other war or threatened war in which this country has ever been involved. Nothing should be done at this time which does not contribute in some way to the strength of our country and no resource or skill which we have in store should remain unused if it can be made by any means to contribute to our security and our liberty and our American way of life.

One of the risks to national unity of action lies in the idea that defensiveness alone is all we need to preserve our form of government, yet our liberty is a thing we must constantly fight for. All recorded history shows that no nation has arisen to strength, as we have, or remained strong, as we hope to, no human rights have been established or liberties maintained without dynamic, aggressive action. St. Paul and the Apostles were not defensive when they established the Christian faith. All of us have seen how the perversion of the physical and chemical sciences has brought more brutal, more rapid, more devastating destruction, both on unprepared armies and unarmed civilians, but we have not yet seen how the developments of science must be made to contribute toward building up our national strength so that we will not be as helpless as were the other countries which have been overrun by the dictators.

To develop this national strength, upon which the entire effectiveness of our other defense efforts depends, we must build up the physical fitness, the morale, and mental stamina of all the people of this country so that they will be physically tough, mentally sound, and morally strong. It is on the home

front where the danger is greatest in these days of modern total war.

Fundamentally, the deficiencies that exist in this country do not depend upon any serious lack of material resources. The deficiencies exist among our human resources and are physical, intellectual, educational, and spiritual defects, though each is in some degree dependent upon the others. The spiritual aspect of our population is the one now most in need of stepping up. We have seen the spirit overcome severe physical handicaps. We have seen it overcome the difficulties of lack of educational opportunities, of poverty and environment, and it is a primary concern of ours to elevate the spiritual concepts of the people to whom we give service. It is our duty as citizens of this Republic and, above all, as servants of our country to intensify the efforts that all of us should make at all times, but particularly in these times of stress.

A field of activity in which each one can participate to some degree is in strengthening the morale and protecting the physical and moral health of young men called up for military training. Not only should we interest ourselves in these men who are wearing the uniform of the Army or Navy, but we must also bear in mind the physical and spiritual needs of those thousands of men and women who are engaged in defense activities in industrial occupations.

During all wars and all periods of preparation for military effectiveness one of the great problems has been to protect armed forces and civilians from the devastating effects of venereal diseases. These infections can be prevented to a great extent through the provision of wholesome recreational facilities in the vicinity of concentrations of population and through the regulation of the abuses of alcohol, and by preventing vicious and immoral persons exploiting our armed forces and industrial workers. The most effective control measures for these diseases is the development in the men themselves of that attitude which prevents infection. The records of the last World War showed that the factors that were most important were inherent in the men rather than in the antivenereal campaign. Factors such as character, religion, love, loyalty, and self-respect kept the men in France in 1918 and 1919 from exposing themselves to diseases which would render them incapable of performing service to their country. It is obvious that here is a field in which every one of us can play some part.

None of us can avoid our responsibility to do our part in this phase of national-defense work by claiming to be civilians and not responsible for the welfare of the armed forces. Patriotism is not a matter for the military forces alone. Courage is not displayed only on the battlefield; witness Clara Maass. The maintenance of our form of government depends upon each one of us giving all of what we have to give. By giving the best that is in us all the time we help to make our American way of life worth while, something to live for and, if need be, something to die for. Clara Maass gave her life for the betterment of all mankind.

Strikes in Defense Industries

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. WICKERSHAM. Mr. Speaker, Members of the House, you will never know how much I appreciate this opportunity which has made it possible for me to be presented to and to speak to this legislative body.

I think I have a new appreciation and a better understanding of your legislative problems than I have ever had before, and this is true, I think, because I have just been entrusted by the voters of my district with the responsibility of representing them in the United States Congress, and when I take my place in that body my troubles and problems, at this time will be identical with those which confront the entire Nation.

It is not my purpose to make a speech—a long speech—here, but I do want to take advantage of this opportunity, and make a few remarks concerning what is, in my opinion, the most vital and pressing problem of the day: The problem of defending our homes, our liberties, and our lives. I say with all sincerity that strikes and labor disturbances ought not be permitted to disrupt our program of national defense, and that the rights of organized labor ought to be subordinate to the welfare of the whole Nation.

Those of you who know me understand that I am just a plain ordinary workingman myself, and that I can truly say, and with all sympathy, that I understand and sympathize with the man who toils for a living. I believe the workingman who produces the Nation's wealth is entitled to a living wage. I am a firm believer in the right of labor to organize, to collective bargaining, but just as firmly believe that such organization and right of collective bargaining should not ever be permitted to endanger the lives and liberties of the American people as a whole. The American laborer is the most loyal worker to his country of any place in the world.

When labor goes so far as to stop production of defense weapons which are necessary to defend our homes, liberties, and lives, then, I say that labor has gone too far, and its power ought be curbed by appropriate legislation.

In order to make sure that our defense industries operate at top capacity and produce the very maximum amount of defensive weapons possible with which to defend ourselves, if such becomes necessary, I am going to introduce a bill in Congress which will provide for the setting up of a national industrial and labor arbitration board which will have complete and absolute power to settle all disputes which might arise between industry and labor. Under the provision of this bill all industrial plants producing defensive weapons or munitions of war which fail to comply with the ruling of the arbitration board shall be taken over and operated by the Government for the duration of the emergency, and any employees in any such plants who refuse to comply with the ruling of the board, and go out on strike, or do anything else to retard the production of such materials shall be deemed guilty of felony.

This, in my opinion, is the only absolute way to stop needless strikes in our defense industries. Such legislation would find no support anywhere or at any time were it not for the general emergency confronting the Nation. We ought to continually remind ourselves of the existing world conditions which endanger not only the freedom and liberties of our people but which endanger and threaten to destroy all democracies in the whole world. This danger is manifest in the mightly mechanized army led by the power-crazy Hitler who has set himself up as a dictator with the determined intention of destroying all the democracies on the face of the earth in order that he might conquer and rule the world. We should remind ourselves daily of the sweeping successes of his mighty army. We should remind ourselves that Great Britain is fighting a stubborn and dogged fight with her back to the wall. That victory or defeat for Great Britain will depend entirely upon our ability to manufacture the necessary munitions of war in this country and send them to her. If we really cherish the ideals and principles of liberty which we preach, then we should be willing and able to make any sacrifice necessary to sustain them. Ask yourself what might happen in this country if, through our failure to furnish Britain with the necessary implements of war, she should go down in defeat and we should be left alone as the only democratic nation to face the mighty and combined armies of the totalitarian states. If Britain should lose as the result of our failure to manufacture and furnish the necessary munitions and machines of war, then I feel that the rain of bombs now falling upon and destroying English towns would start all too soon falling upon American cities. For this Nation to overcome such a combination of military might it would require that the lives of millions of our young men should be sacrificed on the field of battle; that the lives of many of our women and children would be snuffed out. God forbid that such a thing should come to pass. What happens to me is not important; what happens to my friends is important.

We, in this great land, should never let the selfish interests of a few come before the general welfare of all. I am convinced that many strikes in our defense industries are the result of direct sabotage, instigated by leaders friendly to foreign governments for no other purpose than to delay and weaken the defenses of this Nation.

We must have legislation that will stop the foreign-born un-American racketeers from calling strikes and stopping production of defense weapons and war munitions which England must have if she is to be victorious and thus keep the war from coming to this hemisphere.

This is a war of deadly machines and if we make every sacrifice necessary to produce a sufficient amount of machines of war to supply the demands of England, then we will never have to send our own men across the ocean to fight on foreign soil. I think it is wrong to permit workers in vital defense industries to strike and stop production of defense weapons at a time when our Government is drafting young men into the Army to serve at $21 a month and at a time when the heads of W. P. A. families get work 16 days a month; their families are not striking, they get just as cold and hungry the last 14 days of the month as they do the first 16 days. Furthermore, our little

farmers are not striking, and in my opinion agriculture is vital to industry and defense. Furthermore, the small businessman is bearing his portion of the defense burdens and responsibilities and he is not on a strike.

If it should become necessary in the future for us to fight, thousands of our soldiers now living might be sacrificed simply because they were not properly armed because of strikes in our defense factories. Remember, every strike which hampers the production of defense weapons is a blow for Adolf Hitler. Every strike is a stab in the back of our American institutions. Let us outlaw such sabotage. Let us declare by the law of the land that this liberty-loving people in the United States will go forward in united effort, and that no blows will be struck except blows in defense of liberty.

I have a complete and abiding faith in President Franklin Delano Roosevelt, and as a Member of Congress I will back him and support his program in every possible way, for I am sure that his efforts will bring peace to the world instead of bringing war to our doors.

In conclusion, may I say to you that I, as a young man, will humbly assume the responsibilities which have been entrusted to me and will continue to rely upon you gentlemen and other friends I have in Oklahoma to help me and advise me. Experience will come to me, of course, with time, but as I go along as a new Member of Congress I must be guided by the wisdom and the experience of others. I hope that you will always continue to consider me as your friend and feel free to extend to me your advice and your help. Thank you.

Peace or War?

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

RADIO ADDRESS OF HENRY J. BERQUIST, OF THE WISCONSIN LEGISLATURE

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a radio address by the Honorable Henry Berquist, assemblyman from my district. Mr. Berquist has served in the Wisconsin Legislature for several terms and is considered one of the most active and influential members of that body.

I feel certain that the sentiments expressed in his radio speech regarding our beloved America becoming embroiled in this World War, are the sentiments of the overwhelming majority of the people in Wisconsin. I agree with him and I hope most Members of this House will find time to read it.

The address follows:

The crucial showdown for America has come. Shall it be peace or war? This country of ours, this country which provided our ancestors with a haven of protection against the recurring bloodshed and intolerance of the Old World—this country of ours stands on the threshold of momentous decision. How we resolve the issue will determine the course of our lives and the lives of our children for years to come.

For myself, I stand firmly and unflinchingly against American involvement or intervention in the ghastly bloodshed of Europe, Asia, and Africa. As a progressive, I stand shoulder to shoulder with the leaders of my party, Bob and Phil La Follette, in their crusade against dragging the American people into warfare three to six thousand miles from our shores.

Their position and their leadership has been endorsed by an overwhelming majority of the American people. The most recent Gallup poll shows that in spite of tremendous propaganda in the press, over the radio, and in the movies, 83 percent of the people of this country are opposed to going to war overseas.

Perhaps the most tragic phase of the reckless foreign program on which the Government of this Nation is launched is the deception and trickery which have been practiced on our people. Everytime the interventionists like the William Allen White committee or the war makers in Washington have tried to sell the American people a new war move, they have first concealed that move as a way to stay out of war.

Most of us remember that only a year and a half ago we were urged to repeal the arms embargo on the fallacious assumption that it would make us more neutral. Now we can see the truth of what progressive leaders pointed out then—that such a move was only an entering wedge—that it was the first step down the road to war.

During the 1940 campaign both the old parties assured us that their foreign policy was based fundamentally on the proposition of "step short of war." The Republican platform read: "The Republican Party is firmly opposed to the involvement of this Nation in foreign war." The Democratic platform read: "We will not participate in foreign wars and we will not send our Army, naval, or air forces to foreign lands outside of the Americas except in case of attack. The direction and aim of our foreign policy has been and will continue to be the security and defense of our own land and the maintenance of its peace."

These official declarations in the platforms of the Republican and Democratic Parties were supplemented over and over again by the speeches of their respective Presidential candidates. If anything, in the closing days of the campaign, President Roosevelt was more emphatic in his promise of peace than was Wendell L. Willkie.

But soon after the ballots were counted, they embraced each other and joined forces in a program of all-out cooperation with Great Britain. The campaign slogan of "steps short of war" was thrown into the ash can. In its place came slogans like "all-out effort" and "all-out victory" and "a bridge of ships." The administration wrote its philosophy into the lend-lease bill when it hooked up the defense of the United States with the defense of any nation which the President, and the President alone, decided was vital to our own. For the first time in our history we were announcing to the whole world that we could not stand on our feet, that we were dependent on the British and the Greeks and the Chinese to fight our battles for us.

After the passage of the lend-lease bill, our Congress was presented immediately with an appropriation measure calling on the citizens and taxpayers of the United States to put up $7,000,000,000 to underwrite the provisions of H. R. 1776. And this is only a starter. Many more billions will be required before we can deliver to Great Britain, Greece, and China the all-out victories which the President has promised them.

Now that the administration has had its way in the lend-lease bill and the $7,000,000,000 appropriation, it is beginning to break ground for the next and most dangerous step on the road to war—convoy of British shipping by American naval vessels manned by Americans.

The President himself has admitted that convoys come awfully close to shooting and shooting comes awfully close to war. And yet the advance agents for the administration's foreign policy, the William Allen White Committee and the interventionist editors, are yelling for convoys today. Everyone must be alert and on our guard to voice our opposition to convoys at every possible opportunity.

Meanwhile hysteria, intolerance, and bigotry are growing by leaps and bounds in our country, all in the name of fighting a war to preserve liberty. Red-blooded Americans of all faiths and all races who dare to stand up against the rampant hysteria of the warmakers are insulted as Nazis, Fascists, Communists, traitors, etc. The La Follettes have already taken more than a taste of the abuse and vilification which was heaped upon their great father during our last effort to make the world safe for democracy. Because of my stand, backing my campaign pledge, opposing war, I, too, have been attacked. Good Americans, whose only crime is that they do not want their children slaughtered in a foreign war, are being cowed into silence by the blustering, Nazi-like tactics of politicians and editors beating the drums for war. The urban workers of America, whose only crime is that they want a little more in wages to meet the skyrocketing cost of living, are denounced as saboteurs and traitors and "reds."

Here in our State the Republican legislature and the Republican administration are passing and signing bills to suppress political freedom and to start a series of witchhunts—and all this, too, is being done in the name to preserve democracy.

Two years ago, over these same stations, I discussed this vital issue with the people of Wisconsin. Five more nerve-wracking months were to pass before war finally broke out in Europe, but I should like to recall now what I said then. I said:

"All about us in the world we see arising the awful specter of another world war. This war promises to be the most savage and costly of all. We can little realize the ultimate judgment which the new war may bring to civilization.

"We have hardly recovered from the disastrous effects of the first war to end war. Our convalesence from that catastrophe has been slow and tortuous. We spent the best blood and resources of the Nation in an obviously futile attempt to keep democracy alive on the Continent of Europe.

"However, idealisitc those principles which led us into Europe's first World War may have been, the cold, sober realism of the after years has shown us our mistake in intervening in Europe's ruthless game of power politics. We know now that we took a pretty bad beating despite our military victory.

"Let us hope now that we can profit by our lesson of the first World War and remain out of Europe's broil and build a better democracy here at home." That is the end of the quotation.

Yes; there is the challenge for America—to build a better democracy here at home. Like the overwhelming majority of Americans, I despise the foreign isms which have impris-

oned the people of Europe—nazi-ism, fascism, and communism. My sympathy goes out to the valiant, wherever they may be, who stand so ocurageously against aggression and invasion. But I am convinced with the leaders of my party that we in America cannot rectify the mistakes of a generation of Tory leadership in Europe—a leadership which, by and large, is still in control.

The disease which has ravaged Europe cannot be cured by military victory. Their isms are but symptoms of fundamental illness in the economic and social body of Europe. That illness will not be cured until the leaders of the countries of Europe come to grips with the basic unsolved problems which gave the world its Stalin and Mussolini and Hitler.

We in America have a magnificent opportunity to crush Hitler and Hitlerism, not by force of arms three to five thousand miles from our bases, but by showing to the downtrodden peoples of the world that democracy is the only way of life that satisfies mankind's craving for both freedom and economic security.

That is the job we are equipped to do. We have the men, the money, and the materials to smash the paradox of poverty in the midst of plenty and to show the whole world that democracy can meet the problems of our complex society.

This is the progressive position. This is the position of Bob and Phil La Follette. This is the position of the three Progressive Congressmen in Washington. This, I feel sure, is the position of the overwhelming majority of the plain people of Wisconsin and America.

Decentralization of Industry

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. BOGGS. Mr. Speaker, Members of the House, some weeks ago the Temporary National Economic Committee, in a special report to Congress, asserted that the Office of Production Management, set up to mobilize and organize the productive resources of the United States for national defense, was "an instrumentality of economic concentration the like of which the world has never seen."

The T. N. E. C. has spent many months studying the business and economic structure of the United States. Its main conclusions have been that the basic cause of business ills and economic disturbances is to be found in the concentration of power within a few organizations and corporations and within a comparatively limited area.

Defense contracts awarded during 1940 equalled more than half of the output of all manufacturing industries in 1939, yet these contracts, totaling more than $13,000,000,000, have been concentrated in a small area on the Atlantic coast, the Great Lakes, and the far West.

The report points out that 3 States—Idaho, Montana, and North Dakota—have not received a single contract and 32 States, including the District of Columbia, have received only 12.69 percent. Meanwhile, 4 States—California, Pennsylvania, New Jersey, and New York—got 38.70 percent of the defense work.

The report says in part:

Far from detracting from the importance of economic reconstruction the events of the past year have served only to emphasize the need for readjustments after the present crisis is over. It is quite conceivable that the democracies might attain a military victory over the aggressors only to find themselves under the domination of economic authority far more concentrated and influential than that which existed prior to the war.

Our investigations offer ample evidence of the dangers of size and concentration of plants and industries. We therefore submit to all public and private bodies responsible for industry location the desirability of decentralizing industry to the end that the maximum economic benefits can be secured from plants operated at their most efficient size, the depressing aspects of the factory system prevented, and the American way of life preserved.

Suffering most from this economic concentration has been the South. Up to January 31, only 7 percent of all defense orders had been placed in 11 Southern States. Of a total of 302 new plants, only 24 were located in the South.

The policy of centralizing these contracts and industries in a few powerful interrelated corporations located in the congested areas of the East will inevitably result, as the Southern Governor's Conference recently pointed out, in the movement of a large labor supply from the South to the areas which are already suffering from a shortage of housing, create bottlenecks in transportation to and from the congested areas, and create vast plant and production facilities in areas already overcrowded which will become idle and useless when defense production is at an end.

The South offers an abundance of loyal, well-trained labor, the necessary raw materials, an excellent system of transportation, adequate housing, and ideal climatic conditions. In addition to this the economy of the South has been more adversely affected by the war than that of any other area due to the almost complete loss of our foreign cotton market. This offers a pressing reason for necessary industrial adjustments to compensate for this loss.

Mr. Speaker, I believe that my own city of New Orleans and the other Gulf port areas, in addition to the general benefits to be found throughout the South, offers probably the most ideal place in America for the establishment of defense industries.

Some months ago the United States Army prepared a map showing the safety zone for munitions making in the United States. It includes the Mississippi Valley down to northern Louisiana and Mississippi. That map is certainly out of date today. It was prepared before we acquired a string of naval and air bases extending from Trinidad through Puerto Rica and the Panama Canal Zone to the southern coast of Florida. Completion of these bases puts New Orleans farther from sea or air menace by an enemy fleet than are the Great Lakes, and certainly makes the Gulf Coast and the Mississippi Valley the most protected area in America.

I quote from a recent editorial which appeared in the New Orleans Item in connection with and in explanation of a large map showing the protected Gulf of Mexico and the Caribbean Sea:

[From the New Orleans Item]

America's mare nostrum, the safest sea in the world—that is the body of water formed by the Gulf of Mexico and the Caribbean Sea. The panorama above shows how the West Indies, swinging southeastward from Florida to the South American mainland, all but wall in these waters, and how naval bases, old and new, add further protection to that already given by nature of these favored waters. The bases, marked by American flags, are located strategically near the main passes between these islands.

The smaller map shows in white the safest area of the United States, located snugly on the safest sea. New Orleans' position at the mouth of the Mississippi, at the head of America's mare nostrum, well indicates the importance the city should have in trade and in defense. But protected sea lanes to important countries to the south and protection against hostile navies and airplane carriers from the east and west are not all New Orleans has. Supplies from the great rich hinterland of the United States come to New Orleans over inland routes through the safest part of the continent, the Mississippi River Valley.

It follows that this great port is a logical supply and repair base for the fleet as well as for inland military operations.

A protected supply and repair base is vital to any navy. Prime Minister Winston Churchill, of Great Britain, is reported to have told American representatives that the problem of naval repairs is now a vital one for England and it is no secret that Nazi warplanes have damaged ships under repair in English shipyards, causing even further delay in resumption of service. This could not happen to ships in repair in New Orleans, as the city is over 1,500 miles away from the closest point from which an enemy could launch airplanes. And so it is that New Orleans, America's safest port on America's mare nostrum, offers her services to the Nation.

Mr. Speaker, the writer might have also pointed out that New Orleans is the ideal and logical point of embarkation and debarkation of both men and supplies for the new bases which have been established in the Caribbean. Military authorities have informed me that troops trained in Louisiana and Mississippi have been transported to San Francisco and New York to be sent to these bases. Such a course is equivalent to going from Washington to New York by way of Chicago. The long haul down the Pacific and Atlantic coasts is unprotected, yet this has been the route taken, despite the complete protection and the shorter distance of the Gulf and the Caribbean.

I have been informed that 18 or more new powder plants must be constructed along with a score or more shell-loading plants. Do we propose to establish these plants in the overcrowded industrial eastern seaboard, thus adding to the difficulties of labor, housing, and transportation, or will the authorites scatter these plants throughout the South? Already there is a great flow of skilled labor from the South to the East.

The necessity for the development of the South and Southwest was recently recognized by the National Resources Planning Board. I am including herewith an article which appeared in the New Orleans Times-Picayune on April 9:

[From the New Orleans Times-Picayune of April 9, 1941]

HUGE INDUSTRIAL DEVELOPMENT IN SOUTHWEST SEEN—PLANNING BODY FORECASTS ERA OF PROSPERITY FOR SECTION

WASHINGTON, April 9.—A bright future for the Southwest, both financially and socially, if a planned development is followed, was today forecast by the National Resources Planning Board.

Although long lacking in industrial development, the southwestern area, comprising the States of Texas, Louisiana, Arkansas, and Oklahoma, can become one of the major industrial sections of the Nation, the Board reported.

The area contains all of the requirements for industrial activity, but certain obstacles must be overcome and natural facilities developed before it takes its proper place in the industrial world, in the opinion of the Board.

How this can be accomplished was outlined in the lengthy report submitted to President Roosevelt today by the planning agency. Thirty pages of the national report recommending regional planning for the entire country were devoted solely to the southwestern region including the four States.

Glowing terms were used by the Board in its conclusions on the future of the Southwest.

MINERAL RESOURCES

"Its abundant mineral resources, its extensive areas of land that are still good for crops, forests, and grazing, its climate, and excellent recreational areas both developed and potential, all coupled with its relatively youthful and staunch population capable of assimilating a good education, which the region can afford to provide, for economic and social assets, which, if planned for, developed, and controlled, must inevitably make this region one of the most wholesome and prosperous areas in the Nation," the board declared.

The board, however, counseled the people of the area not to expect an overnight miracle.

"The attainment of that objective will be slow, costly, and at times disheartening, but it can be reached," the board declared.

"One can foresee in the future," the report said with respect to the industrialization of the area, "industry, recognizing the abundance of skilled labor provided through a comprehensive vocational education system, and desiring to locate near the source of raw materials, will have become blended in the economic life of the region."

The major obstacle standing in the way of real industrialization of the area is the discriminatory freight rates which block the movement of traffic into and out of the four States, the board declared. Although development of water transportation in the Southwest has relieved this condition to some extent, further elimination of the discriminations are necessary before industry can locate there in the extent to which the area is entitled.

FREIGHT RATES

"One of the outstanding obstacles militating against the industrialization of the region," the board said, "is the unreasonable freight rate differential, and once this difficulty is adjusted, the opportunities for industrial development will be greatly enhanced."

The region must take and fulfill six major steps if this industrialization is to be achieved, the board reported. They are:

1. Secure equitable freight rates.
2. Extend research facilities to develop new products, new uses, and new processes.
3. Disseminate authentic information and impartial advice to prospective industries.
4. Extend such facilities as electric power, gas, communication, water, fuel, transportation to areas suitable for industrial expansion.
5. Construct modern low-cost housing for industrial workers within easy access of suitable industrial areas.
6. Train native workmen in the special skills necessary to new production methods.

EVIDENCE OF FACILITIES

As evidence that the region does not have the manufacturing facilities which it deserves, the report pointed out that the four States have approximately 10 percent of the Nation's population, but has only 5 percent of the industrial establishments, 3 percent of all the wage earners in manufacturing establishments, and produces only 4 percent by value, of all the manufactured products.

Recommendations by the board on the various problems of the region, briefly, are:

Land: Take additional land out of cultivation of various sections of the region and plan for the future use of all the land in accordance with its best utilization. "There is immediate need," the report stated, "of a survey of the entire region to determine what lands are available that can support additional population and how many people such lands can support on a reasonable plane of living."

Soil conservation: Intensification of the work now being done by the local districts in the four States and the creation of additional districts to cover areas in which no planned soil conservation work is now under way.

Forests: Expand State and national forests in the area and provide for preservation of existing forest lands. Also make survey to determine what lumber supplies for commercial purposes are still available in the region and how they can best be utilized.

Farm tenancy: Additional legislation to promote better relationships between tenants and landlords and stabilize rural population. Also financial assistance should be immediately extended to between 40,000 and 60,000 tenants in region.

WATER RESOURCES

Water resources: Continuation of irrigation, flood control, and navigation projects in area now under construction or study. More adequate State water laws are needed in the region to protect and conserve underground water supplies for irrigation purposes. The urgent situation in the Grand Prairie rice area of Arkansas is a striking example of this need. Serious stream pollution of virtually every river in the region should be corrected through Federal and local cooperation.

Energy resources: Increase the facilities for water-power generation in the region, so that exhaustible supplies of petroleum, gas, and coal can be conserved. Unit operation of the oil fields in the area, resulting in a greater potential production from each pool. Existing primary transmission lines should be extended and interconnected so that there will eventually be a regional network of main transmission lines connecting all power resources and load centers.

TRANSPORTATION

Transportation: Construction of additional regional highways to completely connect all centers by good highways. Expansion of the airways network in the four States and construction of at least 200 more good airports. Secure reductions in railroad freight rates and elimination of differentials. Extension of natural gas pipe lines to provide gas in eastern and central municipalities not yet supplied with the gas produced in the area. Provide navigation on various streams penetrating the interior of the region.

Rural electrification: Extension of present program to provide electric lines for every farm in the region where electric service is economically possible.

Housing: Provide housing facilities through Federal, State, and local cooperation in both urban and rural areas.

Health: Wider distribution of hospital and clinical facilities. Health educational programs by the State and local authorities. Construction of sewage-disposal plants and elimination of stream pollution.

Education: Relocation of many schools to make them more available to all children in vicinity. More and better transportation facilities for students in rural areas. Establishment of more public libraries. Expansion of vocational educational facilities, which has been neglected in the region in the past.

Recreation: Complete the acquisition and development of the Big Bend National Park and the Palo Duro State Park in Texas. Develop the Mississippi River parkway. Develop a Gulf coast parkway between the Mississippi River and the lower Rio Grande. Develop the Texas Gulf coast beaches and lagoons for comprehensive public recreation. Create additional park units in the Ozark-Ouachita Mountain region. Develop the Arbuckle Mountain-Lake Murray-Platt National Park area in Oklahoma.

Wildlife: Expand wildlife refuges in the region. Preservation of Louisiana tidal marsh for primary wildlife area. Establish more and more migratory waterfowl areas in lower Rio Grande Delta. Establish a migratory waterfowl refuge in Texas Panhandle.

Mr. Speaker, the Members of the House know that we can ill afford to increase the economic ills of America. Yet a policy which results in the further concentration of resources, management, and industry is bound to result in chaos when the emergency period has ended.

With the established plants now operating at full capacity, the defense program offers an excellent opportunity for the decentralization and distribution of American industry. Within such a program lies the future of American security, the solution of the economic problems of the South, and the general prosperity for the Nation. I urge southern Congressmen to unite so that this program may become one of our major objectives.

Hon. Henry Tiegan

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. BURDICK. Mr. Speaker, I knew Henry Tiegan intimately for more than 25 years. When I first became acquainted with him he was operating a newspaper at Minot, N. Dak., and I greatly admired him for his fearless stand in the interest of the people as a whole. I never had occasion to change my favorable opinion of him as I came to know him better and as I saw him in action as a Member of the House of Representatives from the State of Minnesota.

Henry Tiegan was a thorough student of our economic life and had no ambition except to make this Government better than it is and to make this Gov-

ernment what our forefathers intended it to be. He, on many occasions, spoke of the evils existing in the Government and the seriousness that would result from leaving this situation unattended, but his purpose was always to right the wrongs and maintain a Government guaranteeing "life, liberty, and the pursuit of happiness" to all our citizens.

It very frequently happens that when any individual in public life points out the evils of our ways with the intent to correct them, he is falsely charged with attempting to destroy the old system of government. Those who are well grounded in the economics of our entire social life understood Henry Tiegan, but those "super-patriots" who only live in the present and are only satisfied when they are making profits, misunderstood him. Sometimes these false patriots wave the flag and shout and drown out the voices of the real friends of a free government. For these reasons Henry Tiegan was misunderstood by a great many people, but admired and loved by millions of others who would give everything they possess, even their lives to make this Government stay on the track outlined by the Constitutional Convention.

While a Member of Congress Henry Tiegan was serious and diligent and never lost an opportunity to do more than his part in the interest of a free government. I deeply regret the loss of Henry Tiegan just at this time because if this Government is to be preserved, which every true patriot prays it shall, it will remain for the rest of the honest thinkers of America to guide the ship of state through the troubled waters of a muddled economic life and avoid both Scylla and Charybdis.

Relation of National Defense to Agricultural Products and the Farmer

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

CONCURRENT RESOLUTION OF THE GENERAL ASSEMBLY OF IOWA

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the General Assembly of Iowa:

House Concurrent Resolution 33

Whereas our Federal Government has recognized the necessity of placing the control of the production, manufacture, and distribution of many of our products under the supervision of a council of national defense; and

Whereas there has been established a division of this council of national defense known as the Consumers' Division; and

Whereas in a recent report of this Consumers' Division, a statement was made that recent increases in food costs were due mainly to a rise of 4 percent in meat prices, and advice was given in this same report that the consumers of this Nation would do well to look for cheaper cuts of meat and for meat substitutes, and to secure available information on the preparation of well-balanced meatless meals; and

Whereas the Honorable Mark G. Thornburg, secretary of agriculture for the State of Iowa, has already very properly recognized that such statements from a Federal office will result in decreased consumption of Iowa farm products and has in a letter to Miss Harriet Elliott, Consumers' Commissioner of the National Defense Council, voiced his objections to such statements on the grounds that—

1. The total amount of meat in storage in the United States is 25 percent over the 5-year average and 9 percent greater than the amount in storage on February 1, 1940;

2. Hogs are now selling for less than 79 percent of parity and more than 1,000,000,000 pounds of pork and pork products are in the various storage plants of the country;

3. During the last days of 1940, an article concerning a Washington release was printed in newspapers throughout the Corn Belt, which, in effect, assured the farmers that the defense program now being inaugurated with all its new employment would more than make up for the foreign market which the Corn Belt farmers have lost. (We have lost a foreign market for 140,000,000 pounds of lard annually.)

4. It is not with satisfaction that the Iowa farmer watches a Federal department in 1 year plow under crops and destroy livestock, and in another advise increasing hog production at a time when stocks of pork and pork products in storage are abnormally high, and then hears of another Federal department suggesting meat substitutes and well-balanced meatless meals; and

Whereas the Congress of the United States has recently enacted the lend-lease bill, which contains a provision whereby Great Britain could buy or borrow farm products as well as armaments: Now, therefore, be it

Resolved by the House of Repreentatives of the Forty-ninth General Assembly of the State of Iowa (the Senate concurring), That for the reasons stated in the preamble of this resolution the membership of the Council of National Defense, the Secretary of Agriculture of the United States, and the Administrator of the Federal Surplus Commodities Corporation, be respectfully requested to so coordinate their programs as they affect agriculture so that the farmers of the Nation will have adequate recognition of their problems and that surplus farm products will be more readily consumed by the consumers of this Nation and will be made available to the people of the democratic nations of Europe; be it further

Resolved, That all sections of the Council for National Defense be respectfully requested to consider the advisability of starting from the premise that the farmer is one of the most vital factors in our national-defense program and that the important place of agriculture in national defense be recognized; be it also further

Resolved, That a copy of this resolution be forwarded to the Honorable Franklin D. Roosevelt, President of the United States; the Honorable Henry A. Wallace, Vice President; the Honorable Claude R. Wickard, Secretary of Agriculture; the Honorable William K. Knudsen, Chairman of the Council for National Defense; the Honorable Milo Perkins, Administrator of the Federal Surplus Commodities Corporation; and to the two United States Senators and the nine Congressmen who now represent Iowa in the National Congress.

Adopted by Forty-ninth General Assembly, State of Iowa, 1941.

A. C. GUSTAFSON,
Chief Clerk, House of Representatives, Forty-ninth General Assembly, State of Iowa.

A Message to the President

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

EDITORIAL FROM THE OXFORD (N. Y) REVIEW-TIMES

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from a recent issue of the Oxford (N. Y.) Review-Times:

[From the Oxford (N. Y.) Review-Times]

A MESSAGE TO THE PRESIDENT

The average American citizen, Mr. President, is somewhat disillusioned by the halt in defense production by striking members of the C. I. O. incited and abetted by members of the Communist, Nazi, and Fascist groups within our country.

Your continued urge for greater production and statements that time is the all-important element do not make sense with these strikes. If the emergency is so acute, if time is so important, why are these strikes allowed? Is it possible that you have led your fellow citizens astray, that the emergency is not so acute as you have indicated and that next year or the year after will be soon enough to keep Britain, Greece, Yugoslavia, and other democracies from falling prey to the Hitler hordes?

If these strikes can be tolerated, Mr. President, why is it so necessary to hurry our boys off into the Army, which won't have equipment enough to train them properly unless production keeps up full tilt? And, Mr. President, we don't anticipate with any pleasure the Government's great campaign to sell bonds to the little fellow to finance this defense effort, as long as that effort can be stood on its head, so as to speak, by strikes.

We know, Mr. President, that labor trouble is a knotty problem, but we feel this baby is yours, nursed and cherished for the past 8 years, and that, if you haven't entirely spoiled him, you should be able to make him behave. You have been very stern, Mr. President, with your elder son, capital. He has been made to walk the straight and narrow path and is becoming accustomed to such treatment from you. We don't say that he didn't need plenty of parental guidance, and you haven't, by any means, overlooked him in this respect.

But this baby of yours—labor—seems to be cutting up a bit and we think you should show him a little more discipline, especially if you want the American people to go along with you in that matter of all-out effort in aid of democracy.

We expect you, Mr. President, to prevent these strikes. We understand that in taking away the right of labor to strike in emergency you are robbing the workingman of his only weapon for securing fair wages and enforcing good working conditions, and that under such

circumstances it is an obligation of the Government to establish fair wages and good shop conditions by law if that be necessary.

You have lost considerable prestige, Mr. President, during recent weeks while these strikes have been raging. The American people have been with you in this defense business and we'll still be with you if you'll settle this strike business once and for all. You must do that, you understand.

America, Be on the Alert!

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by Senator STYLES BRIDGES at the Essex County Country Club on the occasion of the dinner sponsored by the Chamber of Commerce and Civics of the Oranges and Maplewood on February 13, 1941:

This Nation is today engaged in a great effort to prepare itself for any eventuality. The people have recognized the prevailing threat to their present and future security and through their representatives in the Government have accepted the task of placing their military forces in order. Billions of dollars are being appropriated for expenditures incident to the expanding program of the Army and Navy of the United States. This year and for several years we are taking upon ourselves the burden which is a consequence of this dire necessity. We do so with the hope that by shouldering this burden, we shall be relieved of even the fear of entering into a state of human bondage.

Commendable as is this effort, it is not enough. Americans possess a characteristic which in normal times is one of their greatest assets but which in such a critical time as that through which we are now passing has a tendency to become their outstanding liability. The characteristic of which I speak is the mutual trust which marks the personal and group relations of the people who comprise our population. Most Americans have such an abiding love for their country and such a firm belief in its infinity that it is impossible for them to conceive of any person or group of persons within its borders possessed of an urge to render its system of government impotent. Hence it is not difficult to understand the indifference with which they have regarded the appeals of those individuals and agencies conscious of the presence of persons who have pledged their allegiance to philosophies of government foreign to our own. Neither is it difficult to understand how persons exercising vicious influences upon our way of life have been able to effectively here espouse their respective causes.

People are indifferent either when they are not informed or when they are misinformed. It is the duty and the privilege of the many patriotic and informed Americans to hail the attention of their fellows to every existing danger to the perpetuation of our representative government. We who are aware of the truth that among us are many intent upon subversive activities and utilizing our guaranteed liberties to nurse their alien plans should accept the task of rousing all the people from their sleepy hollow and enlisting their energies in the fight against such influence. For it is also characteristic of the American people that once aroused to the need for action, their efforts are immediate and decisive.

I am convinced that we of this Nation can be as cunning in detecting the hostile activities of foreign agents and their allies as they can be in discovering our weaknesses and attempting to prosecute their program. I am convinced we can repel their acts without insulting or injuring those who have made their subscription to our democracy above reproach. I think we all agree that reason should set the pace of our attack upon the "fifth columnist"; that we should not allow our emotional reaction to his reprehensible movements to destroy the effectiveness of our counterconduct or embarrass loyal Americans. Yet in such an emergency as now exists our citizens are the essence of discretion and tolerance. We realize we have a difficult assignment and that in seeking to destroy a vicious influence it is not always possible and practical to make the treatment delicate. Prompted by such an understanding, the American people will refuse to accept as a violation of their inalienable rights temporary infringements incident to the struggle to make their future secure. We who are loyal will not complain if our toes are stepped upon by those whose assignment it is to crush the plan by which they who are afflicted with the "isms" would destroy our entire physique. Americans would be unwise to refuse the blessing of such understanding. Any who doubt its viciousness and thoroughness and the need for unrelenting action against it need only to listen to Hitler's description of his method to have reason to cast their doubt aside.

In 1933 Hitler had this to say to the then President of the Danzig senate:

"What is war but cunning, deception, delusion, attack, and surprise? What is the object of war? To make the enemy capitulate. Why should I demoralize him by military means if I can do so better and more cheaply in other ways? * * *

"When I wage war, troops will appear, let us say, in Paris. They will wear French uniforms. They will march through the streets in broad daylight. Everything has been thought out and prepared to the last detail. * * * The unlikeliest things are the surest.

"We shall have enough volunteers, men like our Storm Troops, trustworthy and ready for any sacrifice. We shall send them across the border in peacetime. Gradually. No one shall see them as anything but commercial travelers. * * * We shall have friends who will help us in all enemy countries. * * *

"Mental confusion, contradiction of feeling, indecisiveness, and panic—these are our weapons. * * * Our strategy is to destroy the enemy from within, to conquer him through himself."

In 1933 that was Hitler's plan. Today we know it is what he has done; it is what has accelerated his victories and made them so complete. In every nation he has attacked he has found traitorous citizens willing to barter their patriotism for his promised glittering treasures. If there be such in America we want to root them out and let their obnoxious spirits die under the shining submergement.

Edmund Taylor in his Strategy of Terror, describes well Hitler's new technique of total war—"to confuse by propaganda, to divide by corruption, to paralyze by intimidation, and then to destroy by blitzkrieg."

It is an accepted fact that this technique is already being employed in America. Witness of volumes of German-inspired books, magazines, and pamphlets passing through the United States mails every week. Witness the German Library of Information in New York. The Dies committee and the F. B. I. are hard at work trying to determine just how extensive corruption in favor of German ideology is.

This land has been and shall continue to be one of opportunity for peoples of all races, all colors, and all creeds. Some of our greatest patriots have been and are the sons and daughters of those who previous to this time escaped from their servitude to autocratic rulers of Europe. They are grieved by their knowledge of the conditions which prevail in their native lands. Today more than ever before they love and serve this country. They are our fellow loyal Americans and they should never be deprived of our fellowship and help. It must ever be understood that our distaste is for those who have embraced nazi-ism and communism, whatever their present or past nationalities. For those of German blood who are constantly refusing to be intimidated by Nazi agents, we have admiration. For those of any blood who today work for Nazi and Communist domination of this Nation we can find no treatment too harsh.

No less an authority than the German Foreign Office checks closely and keeps records on the daily activities of loyal Germans and friends of Germany. Personal information files are kept not only on persons of German blood but for America's public officials and prominent citizens. There is hardly a home in the United States that has not received directly or indirectly literature proclaiming nazi-ism. Outright espionage is included in the program. Camps are established as recreation centers and used to train troops. A careful study is made of social, political, and idealistic ambitions of individual citizens and groups. Wherever there is dissatisfaction Nazi agents and friends of Germany are on the ground to foment all possible trouble and create uprising if possible. There is every indication that at the present time Hitler's friends in the United States are doing all in their power to undermine the national-defense program and to foster political, class, and racial disputes. This is their program for America today. This program of the Reich involves much expense, but it is considered worth the price; and when we consider how successful it has been in the countries Hitler has already subdued we cannot but agree that such an investment pays dividends.

The Nazi program is one that has no ending. It is carried over into actual warfare, as an account of the struggle in Europe indicates. Just before the march against a nation is begun, Germans, specially trained, are sent to take charge of those within the nation who have been carefully instructed as to their part in the movement. Through the air and over the road they travel, some as businessmen, some in winter sports costume, some in the uniforms of neutral powers. Strategic points are seized, all possible ways of confusing the military and civil population are utilized, people are terrorized by false reports and false orders. Men and women who have in the years previous lived or visited in the country about to be attacked are sent back for the dual purpose of allaying suspicion and guiding the movements. The most glaring example of this can be found in the story of the attack upon Norway.

When the military forces of Germany moved into Norway, the people of that country could not understand the presence of many German officers and soldiers who spoke the Norwegian language fluently. After the blitzkrieg was over, this story could be told.

You remember that at the close of the last war there were many German children wasting away for lack of proper food and care. The people of Norway were much disturbed by that condition and, prompted by a sym-

pathy natural to them, they invited the German Government to send these children to the homes of Norwegian families. The invitation was accepted. Norse mothers and fathers nourished and reared these German youngsters at their own expense and as if they were their own flesh and blood. The German boys and girls became as brothers and sisters to the children of free and sympathetic Norway. They learned the language and customs of the Norwegians and when they reached manhood and womanhood they were sent back to their homeland.

Just a few months before the day of the German attack many of these befriended citizens of Germany were sent back to Norway ostensibly to visit the people who had made possible their health and their happiness. Norway accepted these visitors as a human gesture of appreciation. Suspicion of the real purpose of the return of these "friends" was, therefore, not aroused. When the signal was given, those who had gone into that little nation of the north as visitors turned on their benefactors and did much to expedite the German attack. That is the vicious method of assault used by Germany against a people who had been kind to them.

It is my thought that we in America should not be as tolerant as were the Norwegians of those who accept our hospitality and take advantage of our free way of life to espouse their cause.

The agents of nazi-ism are one menace to our freedom and form of government. Another, just as vicious and just as persevering, is that created by the agents of communism. Stalin is today playing a clever game. It is his hope that the cards are being stacked in his favor; that those nations fighting now will exhaust themselves and give the Communist bear the opportunity to move in and take things over. The Soviet leader is not one to be trusted. He is no more a sympathizer of representative government today than he was before the outbreak of hostilities. He is unalterably opposed to the democratic way of life, and his efforts within our borders are just as relentless as those of Hitler. The people need to be reminded of this, lest they allow the immediate threat of nazi-ism to becloud the sure threat of communism.

The Dies committee and the F. B. I. have established the fact that the Communist Party in the United States is an integral part of the international Communist movement being guided by the Moscow leaders. Like the Nazis, the Communists have a definite program. It has, unfortunately, been prosecuted in this country with some success.

In the beginning it was the policy of the Communists to establish their own labor organizations. That is the practice no more. They have found that it is more advantageous to gain admission for sympathizers to the established labor unions of the country and there, by the process of boring from within, elevate themselves to positions of control and then apply their destructive ideas. You know what the results have been. Not a few of the labor disputes and strikes have been brought about by the Communist agitation. When persons engaged in subversive activities strike at our industrial plants they strike at the heart of our national defense effort and to long tolerate such activities will jeopardize our chance of remaining secure.

The existence of front organizations for the Communist movement is a matter of common knowledge. It is unfortunate that many loyal Americans were duped into joining these groups. Yet that is no reason why we should refrain from condemning them and refuse to seek their expulsion from the American scene. The names of most of these groups are already familiar to you.

Alien philosophies are being impressed upon the minds of our young. To embitter them without reason in their early years is to guarantee their opposition to our way of life when they reach maturity. That is a common practice of the Communist. It is a common practice of the Nazi. They like to get young recruits and steep them in the doctrines of hate and destruction of moral and spiritual values.

All boring from within by Communists is not done in front organizations or labor unions. They bore within other political parties and by influencing the activities of another party influence the policies of our Government. There can be no doubt in the minds of informed people that the Communists in this country have had a measure of success along this line. Call the roll of Government officials and employees and you will find hundreds who consciously or unconsciously have sympathized and supported Communist doctrine and practices.

Communism has made a place for itself in many of our schools and colleges, public and private. In some State universities persons professing communism are employed as teachers and professors.

The most shocking evidence is that which establishes the fact that Communist influences have penetrated some of the churches of the Nation. I think it should be plain to even the least devoted Christian that a preacher who embraces communism casts Christianity aside.

I often hear patriotic and intelligent citizens say this: "Well, what of it? There are 130,000,000 people in the United States and only a very small percentage of these are in any way engaged in preaching alien doctrines. There is nothing to worry about. Those who do the shouting are merely 'red baiters' or 'Nazi baiters.'" I wonder if they realize that it is more advantageous for nazi-ism and communism to have a small number of followers in a given country. A small number can be highly trained and completely devoted. And those are the essential prorogatives to effective action whenever such is called for. The following are the words of Lenin—his description of the organizations which should be what he calls the "vanguard of the proletariat":

"Such an organization must of necessity be not too extensive and as conspiratorial as possible."

And listen to the words of Dr. Matthews, long connected with the Communist movement in the United States:

"We had an almost perfect trick for silencing any critics who suspected or knew the Communist nature of our united front. All we had to do was cry 'red baiting'! This cry of 'red baiting' is the best trick ever invented, short of a firing squad, for making short work of anybody who dares to object to Communist theories or practices. If he isn't effectively silenced, he is at least thoroughly discredited in that vast flock of citizens who like to think of themselves as liberals. A twentieth century American liberal would rather face the charge of slapping his grandmother than to be accused of 'red baiting.' And so the cry of 'red baiting' enabled us to carry on the work of Moscow in this country with little or no molestation from knowing critics."

In another well-remembered troubled time, the State of New Hampshire gave to the country a man whose memory is immortal. His life is emblematic of the service which true Americans have always desired to render to their country. Perhaps it is fitting that we here should now recall the pledge of loyalty to America Daniel Webster made. It is a pledge which every American citizen should take today. It is a pledge that any public official should take pride in repeating. In this hour when our national security is faced with its greatest threat, I count it a privilege to take the pledge made by that noble servant of the people whom I now represent.

These are Webster's words:

"I shall know but one country. The ends I serve shall be my country's, my Gods, and truth's. I was born an American. I will live an American. I shall die an American, and I intend to perform the duties incumbent upon me to the end of my career. I mean to do this with absolute disregard of personal consequences."

The work of the F. B. I. under the direction of J. Edgar Hoover deserves the commendation of every patriotic American. The agents have been carefully trained in the methods of combating subversive influences and activities and as a result of the efforts of these diligent servants of the people we have every reason to believe that at no time in this crisis will the dangers of sabotage, confusion, and division be as great as they were in previous crises.

The F. B. I. has a definite program by which it is proceeding to combat the efforts of alien agents. The industrial plants of the Nation have been surveyed and methods devised to afford them adequate protection from physical and political dangers. The leaders of subversive groups and their associates and followers have been indexed and their activities are being checked closely. All police agencies of the country have been mobilized and their combined efforts in this trying time is a heart-warming exhibition of the spirit of the true America. Known or suspected foreign agents are being watched closely. The F. B. I. is keeping a close liaison with all other similar agencies.

Yet it is not enough to pursue and apprehend spies and saboteurs. Work such as that which the Dies committee has been doing should be continued and augmented. The committee has been doing an excellent job in investigating and listing those persons engaged in subversive activities in this country. The accomplishments are a real asset to our Government today and will be of great value should the possible crisis materialize. Loyal Americans are indebted to Congressman DIES and his committee for their efforts in our behalf.

I think it is useless to appropriate and spend billions for armaments in the name of national defense and our future security if every possible and effective means of rooting out the enemies within our own borders is not employed. The F. B. I. and the Dies committee and any other branch of the Government devoted to such a worthy effort should be given whatever moral and financial support is necessary to make their work successful.

Further, when the investigations of these groups disclose glaring defects in the set-up or personnel of the Government, remedial steps should be taken without hesitation. Today there is a definite need for the dismissal of some Government officials who are in sympathy with alien philosophies of government and who serve in advisory positions to the groups who expound those philosophies. It may be necessary to tighten our immigration laws to prevent entrance into the country of additional adherents to the repulsive forms of government which exist on yonder shores. Our deportation laws need to be more strictly enforced and undesirable aliens expelled from the country. Public registration of their affiliations should be required of those who join political parties which seek to give organization to subversive activities. The custom of diplomatic immunity should not be construed as to permit Nazis and Communists to loose torrents of propaganda upon the American people. This loophole should be plugged. As long as it is open to use by those determined to rid the world of government by the people, citizens of the United States will be subject to an effectively bitter channel of influence.

The "fifth column" in this country is the first line of attack of Nazis and Communists against our form of government and precious

way of life. Our fervent desire and hope for the perpetuation of our democracy and the freedom it guarantees to us demands that we deprive those groups of that influence upon our future prosperity and happiness. In the effort to satisfy that demand every citizen must share. The cooperation between local and Federal law-enforcement agencies must be continued. There must be support for their efforts from the public and its Treasury. The same support must be given those agencies which seek to reveal the dangers which prevail as a result of the work of the "fifth columnist." Those of our number now informed as to the seriousness of the situation and conscious of the need for action must work diligently to educate those whose reactions are hesitant, and thus bring about a united front against the small but determined minority of our population.

Ridicule and unjust criticism against those who combat evil influences upon our people should by this time be familiar. Its source has long since been identified. The same forces against which these agencies work are the forces which seek to ridicule and thus eliminate them. We must make the people aware of this truth and keep them from falling into the trap being so cleverly set by the "fifth column." There is a definite need for every agency which can reveal and destroy any part of the "fifth column." Neither distrust nor false pride nor malice nor jealousy should be allowed to take root in the relationships between these agencies. That is what the Nazis and the Communists desire. It is unpatriotic for us to so accommodate them.

Employers should by careful investigation establish as fact the patriotism of all men they hire. The added expense which such a process will make necessary is as nothing when compared with the injury that an unvouched-for worker can do to the plant and thus to the country. Employees should exhibit a reasonable interest in the activities of their fellows and quickly report to their superiors any movement which casts legitimate suspicion upon another. A citizen should not seek to investigate any matter himself. He must remember, whether he be an employer or an employee, that the local, State, and National Governments have men trained for that job and who can do it well.

There is a dire need for a revival of their interest in the practice and teaching of Americanism by the Nation's schools, churches, patriotic, fraternal, and civic organizations. Every American should so conduct himself as to make his life an attractive example of the goodness which our way of life bestows. Such conduct and such an example will be an inspiration to the young men and women born under the flag of a democracy. No effort to extol the virtues of our representative government will be wasted. No vigilance on the part of the American people will be in vain.

We should start now to do what we can to extinguish the class lines which have been drawn in recent years. Nothing can more effectively breed distrust, nothing can more effectively prevent cooperative effort when such is badly needed than the segregation of our people into classes and races and religions. I feel that it is my patriotic duty to call that important truth to your attention. Some will say it is the cry of the politician. I tell you that it is the cry of the soul of America.

The spirit which has made our country great has been nourished by the American doctrine of the equality of all men of all circumstances. No person or group of persons, for a political or any other purpose, should risk the destruction of that spirit, for if it should die our way of life would be buried with it.

We who are loyal to our country are alert. We shall pass through this troubled time without making more than a minimum sacrifice of our traditional liberties. But we must remember that democracy's attributes are for those who make an offering toward their preservation. J. Edgar Hoover has rightfully said:

"Intellectual freedom is American. Intellectual license and debauchery is un-American." We should be so informed that we shall be able to distinguish the two and do what is in our power to eradicate the latter:

Lincoln once said:

"At what point, then, is the danger to be expected? I answer, if it ever reaches us it must spring up among us. * * * If destruction be our lot, we must ourselves be its author and finisher."

For men and women who utilize their freedom to make that blessing their exclusive possession, there should be no sympathy. The wails of the persons who cannot see through the acts of the unfaithful to the true light of their efforts should not receive a considerate audience. Remember that it is your job and my job, as patriotic Americans, to put down and keep down persons who seek to substitute for our glorious heritage of freedom and justice a way of life obnoxious to every principle of decency and honor. It can be done. We will do it.

Jackson Day Dinner Address

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1941

ADDRESS BY HON. ERNEST W. McFARLAND, OF ARIZONA

Mr. LEE. Mr. President, I ask to have printed in the Appendix of the RECORD a very able and brilliant address delivered by the junior Senator from Arizona [Mr. McFARLAND] at the Jackson Day dinner in Phoenix, Ariz., on March 29, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am deeply appreciative of the high honor and privilege conferred upon me by your Jackson Day Committee in extending to me the invitation to address you on this auspicious occasion honoring the memory of that great American and great Democrat, Andrew Jackson.

We Democrats usually ascribe to Thomas Jefferson the title of founder of the party, but Jackson was no less its champion and defender. It is fitting and proper, indeed, that on this day when democracy is being challenged the world over, we should hold this dinner in honor of one who, more than anyone else, helped to make our Nation the world's greatest democracy. The sentiments and aspirations of liberty and democracy of which Jefferson dreamed, Andrew Jackson made real.

Born on March 15, 1767, in the lean backwoods of the Waxhaw, in South Carolina, his father dying shortly before his birth, Jackson was forced to endure many hardships which gave him an understanding and preparation for leadership in later life. The Revolutionary War broke out when he was a mere lad. His brother, Hugh, lost his life in this war in 1779, and on the 29th day of May, the same year, Andrew and his brother Robert took part in the battle of Hanging Rock. He was then a boy of only 13 years. He and his brother were later captured by the British and Robert died from disease contracted in the prison camp. While a prisoner, Andrew was struck down by a sword in the hands of a Brititsh soldier whose boots he refused to black. His mother, while on a mission of service at Charleston, nursing prisoners from the Waxhaws, contracted yellow fever and died. At the successful end of the struggle of the Colonies, we find Andrew Jackson, a mere lad of 15, alone in the world, an orphan of the Revolution.

This early life of misery, poverty, and hardship made Jackson a true knight of the frontier. After completing his schooling, he began the study of law. In 1787 he was admitted to the bar in North Carolina and soon afterward wended his way westward to Jonesboro, now in Washington County, Tenn. There he played an important part in the early history of that State. He learned more from life than from books. He was a rugged individualist, always ready for the call of his country, either to fight her enemies in the field or to serve in the guidance of her destiny.

His life is a picture and inspiration for our youth of the possibilities in this great democracy. Although from the most humble beginning, he became not only a great warrior and a great soldier who led our country to victory in the Battle of New Orleans, but he was Attorney General, judge, Member of the House of Representatives, Senator, and twice President of the United States. He believed in his country and its Constitution and the guaranty of that Constitution to the masses of its people and to the minorities. He did not propose to see that guaranty impaired. When the Bank of the United States sought to control the politics of this Nation, Jackson had the courage to grapple with that great enemy and, by overthrowing it, made himself the idol of the people and reinstated the Democratic Party in public confidence.

I do not intend tonight to dwell at length upon the life and history of Jackson; I am sure that the details of his glorious record are as familiar to every patriotic American as they are to me. But I would make one point from his history: If I were to ask each one of you what quality or virtue of this hero, more than any other, endeared him to Americans and perpetuated him in our memories, the answer would come back quickly and unanimously—courage. His courage to face facts, disagreeable and discouraging as they might be; his courage to proclaim the right as he saw it, without regard to public favor and in the face of slander, vilification, and abuse; his courage to fight for the right, to the bitter end regardless of the cost or sacrifice.

On this occasion, when we are gathered to do honor to the memory of this great patriot, it is my fervent hope and prayer that we Americans of today will have during the troubled days through which we are passing, the courage of Andrew Jackson. It will be needed; and it may be our salvation.

I need not tell you that today America faces one of the gravest crises in her history. We have seen men gone mad come to leadership in nations across the sea. We have seen these men strike down and destroy by brutal might and force their weaker neighbors. We have seen the lights of liberty and freedom go out one by one in the Old World, until today there is left but the faltering flame that still burns in Britain. We have seen these things and we have asked ourselves, What is the future of America in this war-crazed world? And when we face the facts and consider this question courageously, unflinchingly, we come to some rather distressing conclusions.

I think all of you will agree with me when I say that it is my firm conviction that the people of our State and of our country want

the United States to live at peace with the rest of the world. But by "peace" I mean a peace that is consistent with the continuance in this Nation of liberty and freedom of thought, freedom of speech, and freedom of conscience; a peace that is consistent with our national honor and our rightful place among the nations of the world. I cannot envisage the acceptance by my countrymen of a peace at any price, a peace such as exists in France, Denmark, Holland, Norway, and the rest of the conquered and occupied nations of Europe.

With this hope and ideal of peace for our country, let us see what our position will be if England falls in the struggle that is now raging in Europe.

If the Axis Powers prevail, it is not alone a warlike and vengeful Germany that we face, but a hostile or dominated alliance of a large portion of the world. The original Axis partnership, Hitler and Mussolini, will be in control of all of Europe and Africa; the junior partner, Japan, having taken what she wants in the Pacific west of Hawaii, will be the undisputed master of the East. Picture, if you will, the military might of this unholy alliance, with the resources and manpower of the conquered nations forcibly driven to the task of producing implements of war, with hordes of soldiers flushed with the wine of long-awaited victory, with a navy double the size of ours and shipways of a capacity seven times those in our possession, with an air force of a size and potency never dreamed of by man—picture that array and tell me if you can see in it the prospect of our living at peace with the world. Does the history of the past several years, does the memory of Austria, Czechoslovakia, Poland, and the others, does the whole flaming record of Hitler, permit us to believe that with such might as I have mentioned at his command Hitler will permit us to escape his plan for world domination?

We have no need to speculate about this proposition; we have the word of Hitler and his cohorts as to the inclusion of America in the Axis plan for remaking the world.

In the New York Times for December 10, 1940, there is a report of a speech by the German Minister of Agriculture, Walter Darre, which was made at the request of Hitler, to a group of Nazi Party leaders. I quote:

"We will introduce in our new 'living space' completely new methods. All soil and industrial property of inhabitants of non-German origin will be confiscated without exception and distributed primarily among the worthy members of the party and soldiers who were accorded honors for bravery in this war. Thus a new aristocracy of German masters will be created. This aristocracy will have slaves assigned to it, these slaves to be their property and to consist of landless, non-German nationals."

Then Herr Darre describes this form of slavery, and we only have to look at the slavery now imposed upon the Poles to understand what he meant. I quote further:

"I have been asked about my opinion of America, especially the United States and the danger of this psuedo-democratic Republic's possible attempts to hinder us in our historical development. * * * We Germans have accounts which must be settled with this country. The United States also will be forced by Germany to complete and final capitulation."

He further described how, under the Nazi industrial system, the United States would have, not seven million, but thirty or forty million unemployed, and stated:

"Mr. Rosefeld will then beg the fuehrer on his knees to purchase from the United States not manufactured products, but raw materials, at prices which we will dictate. The United States is at present so demoralized and so corrupted that, like France and England, it need not be taken into consideration as a military adversary."

Now, from Rauschning's book, Voice of Destruction, let us see what Hitler himself says:

"I guarantee that at the right moment a new America will exist as our strongest supporter when we are ready to take the stride into overseas space. We have the means of awakening this Nation in good time. There will be no new Wilson arising to stir up America against us."

These statements and their past record should be sufficient to convince us of their intentions to include the United States in their plans.

But even if we could convince ourselves that an attack upon us would not certainly follow an Axis victory, are there any among us so foolish as to believe that we would not have to prepare as never before for war? I have not found anyone, even among the most rabid pacifists, who does not agree that if Hitler wins the United States will necessarily be, for untold years to come, an armed camp.

Let me show you just what this means. I shall pass over the dismal picture of a national morale developed while we are literally sitting on a powder keg; I will not dwell upon the curbing of personal rights and liberties which a constant threat of war will certainly bring about. These are horrifying, it is true, but I pass them and point out only the economic aspects of the matter. We have just begun to prepare ourselves for the threat of war; our present emergency is nothing compared to what it will be if Hitler wins and we are surrounded by his might; but we are already spending billions yearly for national defense. These billions are not produced, as are Hitler's, by the exploitation of conquered nations, the enslavement of people, the destruction of liberty; we in this country are traditionally pledged to meet even the gravest emergencies with honor, without the regimentation of our people, and without the destruction of our standards of living.

Today the Federal Government is taking one-eighth of the national income in taxes and yet is not paying its current bills. The States and local governments require sufficiently more to make a total of 20 percent, or one-fifth of the national income. It is inescapable that if we are ever forced to live at swordspoints with a victorious Hitler, the military machine we would build up would consume, with other Government costs, from twenty to forty billion dollars annually—from one-third to one-half of our national income. That is an appalling prospect; but to the most optimistic it is the best that we can expect if England falls.

Very recently our President and our Congress were called upon to decide what we were going to do about the situation which we have been discussing—the future of America. The question presented itself in the form of the decision to be made on the lend-lease bill. It was a momentous decision for anyone to be called upon to make. The advocates of "the easy way," the way of postponement and of hoping for the best and of appeasement, were organized in their effort and loud in their clamor that we adopt the policy of pretending that the dogs of war were not loose, as if by ignoring them we could escape their lust for blood and butchery. To differ with these people was to earn for yourself the name of "war monger" and "king lover" and other names not nearly as flattering.

I am happy to announce that when our leaders answered, they did so with courage. They accepted the challenge fearlessly. They told the world in no uncertain terms that America stood with the cause of freedom and liberty and justice; and that democracy embattled in other parts of the world would have at its back the strength and resources of the most powerful nation on earth. I am happy, also, to tell you that, in my opinion, this courageous answer will do more than anything else possible to keep us out of this war.

I believe that if we render effective aid to Great Britain she can turn the tide of this war and either overwhelm Hitler or force him to a reasonable peace. I believe that if we render effective aid to Britain we can keep alive the hopes and courage of the French, the Belgians, the Danes, and other conquered peoples for the day when they can throw the strength and resistance of which they are capable into the battle on the side of democracy. I believe that if we render effective aid to Britain, we can morally strengthen the resolve of the Greeks, the Turks, and the remaining free peoples of Europe not to surrender to the Axis juggernaut. I believe that if we render effective aid to Britain, even if the worst happens and she eventually falls in spite of our aid, we will have purchased invaluable time for the preparation of our defenses while the Axis has been exhausting its manpower and resources in the struggle with Britain.

This, then, is the picture which we have up to date. America has courageously faced the facts. The responsibility of leading us out of this crisis is upon the Democratic Party, and I think properly so, for our party has always stood for liberty, justice, with equal rights to all and special privilege to none. Before us lies the duty of throwing into the fight for the preservation of these democratic principles all of the strength and power of which we are capable. It is a task which will grievously try us. If we are to succeed in it, each one of us will have to make sacrifices. Each will have to give a little more than his accustomed effort. Each will have to take a little less of material gain than he has learned to expect. Those of us who have been quick to criticize must learn to be tolerant. The spirit of party unity exhibited here tonight is proof we will meet the test. We will hold the torch of democracy high. We will be proud of the principles of democracy given us by Thomas Jefferson and Andrew Jackson, those hardy pioneers who were willing to endure hardships and even die if necessary that we might have this Nation of freedom and tolerance where the will of the people reigns. We will give this job the very best that is in us and make the effort worthy of the price at stake, the American way of life. We will, by our conduct, reiterate the sentiment which more than 100 years ago Andrew Jackson put into words, "The Federal Union; it must be preserved."

Freedom and Unity

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1941

ADDRESS BY HON. GEORGE D. AIKEN, OF VERMONT

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Vermont [Mr. AIKEN] at Valley Forge, Pa., on April 6, 1941. The topic of the address is "Freedom and Unity."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an inspiration and a challenge for Americans to meet at this historic spot today. As we here give thought to the traits of men whose love of liberty was greater than love of comforts, or even life, it is timely and fitting that we also give sober reflection to the great challenge to our thinking, our ideals, and our concepts of life which is facing us today.

This is a most fitting place to give consideration to these things. We are here in one of the most historic spots of all America. We are here at the place where the heart and soul of a new and untried and even an unformed nation was put to a test, the result of which meant freedom or loss of freedom to the people of what has since become the greatest nation on earth.

On Washington's Birthday it was my great privilege to address a large gathering in New York City. In that gathering were hundreds of people who had recently become new citizens of the United States. Those people were embarking upon the great adventure and the responsibility of becoming Americans.

In addressing them I said, "The greatest test for Washington and his men came during the winter spent at Valley Forge. They could have given up at that time. They could have gone to their homes and surrendered their struggle to found a new and independent government of the people on the western shores of the Atlantic.

"They could have done so, secure in the knowledge that for a few years at least they would have had greater luxuries, as luxuries were known in those days, than if they continued fighting against cold, disease, hunger, and attacks by their enemies. But they knew too well that these greater comforts secured by surrender would be short-lived. They preferred to face temporary hardships for a few years than to endure permanent slavery.

"They faced the facts. The freedom of a people forever depends upon their willingness to face the facts and to make sacrifices. That was true in 1776; it is true today."

The victory which the American men won in the winter of 1777 was a spiritual one to an even greater extent than it was a material one. It is important for us today to realize that the things of the spirit are still paramount and most important. It is particularly essential for us to remember this at a time when we hear constantly of industrial production, materials of war and planes and guns and international intrigue and power politics and starvation and disease and death.

Our great Nation of 130,000,000 souls has been committed to a policy of world-wide involvement in the affairs of many nations and many people. It is entirely possible, and I fear probable, that we will engage in military strife and naval warfare extending to the far, far corners of this earth.

We may become involved for many years. Should we do so, I believe that we will eventually emerge among a galaxy of weakened and chastened nations with a victory of arms. But I want to say to you today that military supremacy and victory are empty and meaningless honors if won at the cost of things that really matter most.

It is inevitable in the evolutionary processes of the world that nations are born amidst suffering and hardship and sacrifice. These nations grow great and in consequence assume leadership among other nations until with time they wax soft and indolent and selfish and fall before younger and more powerful people not so far removed from hardships and sacrifices. Though nations and governments may rise and fall, yet there are ideals and principles which never age and upon a people's adherence to these ideals and principles, the life of their government may depend.

Far greater than the military conquest of a continent or of a world is a victory that is the victory which retains for us and our posterity the spirit and ideals of our democratic way.

When I think of today's challenge to democracy, then I think of the motto of my own State of Vermont, a State that was an independent republic for 14 years before it became, 150 years ago this spring, the fourteenth State of the United States. The motto of Vermont is "Freedom and Unity." The implications of this motto are pertinent at this very moment.

We are hearing incessantly the pleas for unity in this country of ours. I would not decry the advisability of unity as the shadows of war fall lengthening across our land. But unity alone is not enough for free men and free women. I would not say that unity is the most important thing for us to achieve. I would not even say that unity alone is the most necessary thing to achieve in our defense preparations.

Let us remember that if there is any country on the face of the globe where there is national unity today, that that country is Germany. Yet there is no freedom for the people there. Regardless of whether Germany wins or loses in a military strife, her people will have lost because Germany has unity without freedom.

The fundamental value of democracy is freedom to think our own thoughts, to disagree with our neighbors, or even our Government, without fear of persecution.

Let us remember that in the greatest democracy of all, the Kingdom of God, where rich and poor, the humble and the great are all alike welcome, that freedom and individual approach to the Almighty is the goal and the privilege of all.

In these trying times which remind us in their intensity and gravity of the trials at Valley Forge 164 years ago, we are going to disagree on the best methods of aiding nations, which seem most friendly to us and our ideals.

We are going to disagree on the best methods of financing and paying for the astronomical cost of our interventions in the wars of the world.

We are going to disagree on how we can best keep our country at its fullest and most complete productive capacity, with issues like strikes and subnormal income for agriculture and the proposed St. Lawrence seaway among the things which we must settle collectively in a democratic way.

Not just the President, not just the Congress, but in the last analysis the people of America must have their say in mapping the future course of our destiny.

As a people we are united as to the kind of country we want to live in. We want justice, equality, opportunity, parity, and security for all.

I believe, more firmly and more sincerely than I believe almost anything else in this world, that to unite to make secure a future for our country that includes well-being and self-respect for all people and all groups is the most important phase of our national defense. It is vastly more important that we do this than to win military victory in Africa or to sink the ships of the enemy in the Indian Ocean.

Last summer I received a report issued by the American Youth Commission. It was a fine report. It contained one sentence which I never can forget. This sentence is the keynote to the great problem which we face today. It reads: "This country can only be defended enthusiastically by people who expect just treatment from it."

As we travel along life's highway we encounter many branches to the road. It will be all too easy in the gathering dusk of confusion and propaganda and hysteria to take the wrong road. We must guard against it and to do this must preserve to ourselves independence of thought, of voice, and of legitimate action. To this end we must have unity. We must unite in the common purpose of defending the intangibles of democracy, the freedom and justice for which our ancestors paid a price in blood and hardship beyond any since paid for democracy on these shores. Unless we succeed in this, all our efforts will have been in vain.

But if we do awaken to the realization that we are defending more than trade routes, territorial boundaries, foreign investments, or international prestige; if we vow that this undertaking of our Nation is in the name of justice and humanity for the common people of this world, then we will succeed—because we will have touched the great fundamental truth and reason for man's being on earth.

Ohio Farm Bureau Mutual Insurance Co.

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1941

ADDRESS BY HON. GEORGE. D. AIKEN, OF VERMONT

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by the junior Senator from Vermont [Mr. AIKEN] at Columbus, Ohio, on April 4, 1941, at the annual meeting of the Ohio Farm Bureau Mutual Insurance Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In all the gatherings that I have addressed during the last few years, I don't believe that I have spoken on a more important subject than my topic for today. I am positive that I have never spoken at a more critical period in American history. I believe I am speaking to a group whose influence for good can scarcely be excelled.

You people here represent an activity of a great farm organization upon which it is possible that not only the future of American agriculture may depend but one by which the future of America itself may be tremendously influenced. You representatives of the Farm Bureau Insurance Cooperative represent successful agricultural endeavor and typify the ability of American farmers to do things rightly and successfully for themselves.

I am not a calamity howler. I submit there is a silver lining to nearly every cloud, and I submit that there are imperfections in all the best laid plans of men. But during the last 3 months I have participated in the deliberation of the United States Senate on matters involving the happiness, welfare, prosperity, even the liberty of every American man, woman, and child. I realize fully that there are being written today what may prove to be the darkest pages of American history. Or, perhaps, by a turn of the wheel of fortune, what seems dark today may turn out to be the brightest. Only time can give us the answer.

Only constant and concerted effort can spin the wheel of fortune that will throw the bright light of success and liberty upon these

pages now being written in gathering darkness.

In these days when the shadows of war are ever lengthening, when the Government of the United States has committed 130,000,000 people to a policy of involvement in the world-wide struggle of power politics and all it forbodes, we look back ever wistfully upon the brighter periods of our years and plan and scheme and hope to recover those things which we now realize to be precious.

There stands out among the years which most of us remember well, the period from 1910 to 1914. During these years a balance in the purchasing power of different American groups was reached and for a time maintained. The farmers' dollar bought a dollar's worth of industrial products. The industrialist's dollar bought a dollar's worth of labor. Labor's dollar bought a dollar's worth of food, clothing, and shelter. We call those years the "parity years." Since that time it has been the constant dream of agriculture to again attain by some means this stability which satisfied and secured us at that time.

We had a well-balanced national economy then, and only then, for the wheels have been spinning erratically for American farmers since 1915. For a brief period of 2 or 3 years we again attained or excelled parity prices for farm produce but most of the 27 years that have passed since 1914 have spelled discouragement and uphill fighting for us all.

America began to lose the safe balance between rural and urban population. The industrial population and industrial development of America increased. As industry became more and more influential in legislative halls, it has sought more and more protection for itself and given less and less regard to the welfare of rural America. Apparently it has not realized that its greatest market rests upon the purchasing power of the American farmer.

Tariffs have been raised against importation of foreign industrial goods until a stone wall of trade barriers keep goods manufactured in other countries from the American market The same wall effectively prevents the great American agricultural surplus from finding its way to the market of industrial nations abroad. When a new trade treaty is devised it is agriculture that pays the bill.

Our trade has been shifted from the industrial nations of the world to the agricultural nations. American economists, American financiers, American promoters have actually been engaged in developing in foreign nations new sources of farm production that are further and continually crowding the products of American farms not only out of the markets of the world but out of the markets of our own country as well.

It has been a short-sighted policy on the part of certain powerful American industrial and financial interests. To secure a dollar's worth of trade in the Antipodes, they have sacrificed several worth of agricultural purchasing power here at home, for no nation can buy our wheat, our cotton, our pork, or our apples unless it can sell us some of its manufactured goods in return to provide the necessary international exchange.

The dollar which the American farmer receives turns over many times. It goes to buy new clothes and education and boots and farm machinery and paint and a thousand things that the American farmer should use and which yield profit to many others besides the manufacturer himself.

The dollar received from foreign exports by American industrialists goes into the bank from which only a portion is withdrawn for the purchase of raw materials, which themselves may come from other countries.

It is safe to say that a dollar of purchasing power of American agriculture is worth to the Nation $4 from the export trade.

This stone wall of protection which American industry has built around itself is almost wholly responsible for the accumulation of farm surpluses and the depressed condition of American agriculture today.

Our Government knows it, our Congress knows it, and many others know it. Yet nobody is willing to undertake to remedy this situation which is causing distress not only in America but throughout the world today.

If people of foreign industrial nations could buy our farm products, there would be less surplus commodities in America today and fewer wars throughout the world. Economic strangulation has driven many a nation to take up arms. Propaganda places before the public everything but the truth.

Today approximately 20 percent of the population of America lives on farms. This 20 percent of the population receives much less than 10 percent of the national income. This condition must not be tolerated, and yet, what can we do about it?

Money is controlled in the hands of a few. Markets and consequently prices for farm products are under the unhealthy and unwise influence of those who do not know agriculture and through ignorance, lack of foresight, or pure greed, year after year destroy further our rural prosperity.

On the one hand we have big business concerned principally in becoming bigger. On the other, there is big government with an inordinate desire for power. Government today is throwing crumbs to American farmers in the form of subsidies, conservation payments, and outright relief. It is throwing these crumbs to us just as we would throw crumbs from the table to the chickens in the yard.

Big government does not seem much disturbed over the 70-percent parity prices which we receive. Labor, with 150 percent of parity, is receiving more attention from Government than is agriculture. Big business, which is receiving in many cases nearly 200 percent of parity, receives infinitely more Government attention and consideration.

Even in times of crisis when we have been committed to a policy which may eventually pit us alone against all the rest of the world in defense of our liberties, the top men in Government don't lie awake nights worrying about agriculture, except that it must be kept alive enough to produce crops for domestic consumption. They know if loyalty to flag and country should vanish from all the rest of the United States, it would still be found a dominant trait on the American farm.

I don't say this as any reflection on any other group. I simply say it because it is the incontrovertible truth that ownership of or control over acres of earth breeds a feeling of responsibility for and loyalty to orderly government.

Our farmers have been the most patient people on earth, but there comes a time when patience ceases to be a virtue. We have been too patient, not only for our own good but for the good of our country, of whose economic system we are the most important, though a diminishing part.

For the good of our country and our families, we can't go on any further complacently letting other groups in America constantly acquire advantages at our expense, if we are to escape a permanent condition of peasantry and charity.

How can we avoid this?

Twice before in the history of our country aroused farmers have settled crises and secured the liberty and solidarity of the United States. In 1776 it was the people who lived on the land, led by General George Washington, a farmer himself, who wrested the Thirteen Colonies from a tyrannical overseas empire and made possible the formation of the greatest nation the world has ever known.

In the middle of the 19th century it was the farmers, whose patience was exhausted after 20 years of lack of consideration and unfair competition, that met in a little white schoolhouse in Ripon, Wis., and organized a great political party. They chose as their leader a man bred and raised on the farm, and through him preserved the union of the States.

The crisis today is no less critical than those of the days of Washington and Lincoln. We must be no less in earnest in meeting and overcoming those things which will destroy us if we go on blindly ignoring the facts, living for today only and failing to look ahead to tomorrow.

All right, you say, maybe we are in a crisis, but what are we going to do about it? Everyone of us in this room knows that when the agriculture of a nation fails, the nation itself fails also. History is replete with instances of this kind.

The answer to our present problem is to be found in this room today. The answer is organization—or as we know it—cooperation.

Here is the Farm Bureau Mutual Insurance Co., an outstanding example of what cooperation can do for a group Here in this room is basic evidence that through cooperation we can adjust ourselves to almost any temporary economic condition and through our own efforts, if we are united and stay united, bring stability, prosperity, and security to those outside our own group.

This is not the only farm cooperative that has given such a demonstration. Up in my own little State of Vermont, which I think is as cooperatively minded as any State in the union, we have demonstrated to the fullest the value of concerted action.

Vermont is the greatest dairy State for its size in the United States. We produce over 400 gallons of milk per capita. This is many times the national average.

A few years ago conditions among our dairymen reached a point where milk producers could receive at the most less than the cost of production. The city markets were closed to them except as their products might be sold through designated channels of trade at prices fixed by the milk board of the consuming State.

Hundreds of our farmers were either sold out at auction or were preparing to sell. Thousands of them saw the time approaching when they could no longer hold on. We were about 56 percent organized then. That percentage wasn't high enough.

The proprietary dealers undertook to play one group against another, and the unorganized producers against all.

Organization continued, however, and the time came when, forced by adversity, over 70 percent of our dairymen, mostly those represented by cooperatives, voted for a Federal milk order which eliminated the closed market at one end and the open-buying field at the other. The establishment of a Federal milk order for the Boston area was a striking example of cooperation between organized agriculture and Government.

It was not forced upon our dairymen, but it was a legitimate function of government established by request of 70 percent or more of the producers.

The price became stabilized, and auction sales dropped off. Farmers' children again had decent clothes to wear to school. Our farmers are doing comparatively well today, although their purchasing power is still far below that of many other groups.

Organization has continued. Those independent producers who had been the willing or unwilling instruments of dealers in depressing the producer's price, saw the wisdom of organizing themselves. Today over 90 percent of the dairy products sold in Vermont are sold through farmers' own organizations.

Opposition to farm organization from the city dealers has diminished because they, too, now recognize the advantage of having a regular supply of high quality products at a fair price.

Cooperation is giving the milk producers of my State millions of dollars a year.

I have given you this example of what cooperation has done in my State because it is an outstanding example, but is not the only one.

Not many years ago we farmers were buying fire insurance at a rate of about $1 per hundred. A small group of farmers got together and organized cooperative fire-insurance companies. Today over half of all the fire insurance written on Vermont farms is written through cooperative organizations at a rate of approximately 45 cents per hundred.

You know what the Farm Bureau Mutual is doing in Vermont for the farm automobile owners. You know it has cut the rate practically in half.

There is no need to tell you, although I think we should all make it our business to tell the world, what farm purchasing cooperatives have done not only for our farmers but for all the people as well.

We remember not so far back when the fertilizer we purchased was largely dirt, or filler, as they called it. We remember when our grass seed contained a large percentage of weeds. We remember when some of our dairy rations were of a quality which we wouldn't have around the barn today. Through cooperation not only by organization ourselves, but with our experiment stations and other farm organizations, we have raised the quality of all these things.

We have reduced the price and made it possible to increase production and quality of the things which we sell to American consumers. We can't limit the benefits of cooperative organization to our membership. In many sections farm cooperatives fix the standards of quality and prices to all purchasers whether members or not.

I think I am safe in saying that when 15 percent of any commodity is handled efficiently through cooperation, that that 15 percent has a greater regulatory effect upon the market as a whole than do statutory laws and regulations. It is economic control with teeth in it.

Cooperation today is the protection which we have standing between us and domination either by big business or by big government.

We have demonstrated that if we will work together we can handle our economic affairs safely. We must also realize that we can do the same thing in a social and political sense.

A thoroughly organized agriculture can be the most powerful force in America. Without agriculture, commerce and industry would stagnate. But we must be on our guard today as we never have been before. Powerful forces are ever at work seeking to destroy farm organization and to corrupt its influence.

We must not let those who would profit by our disunion do this. So long as they can play one group against another, one section against another, one race against another, just so long will a large percentage of our rural population remain in a state of modified peonage and humiliation due to necessitated governmental charity.

We must not let them play agriculture against labor. Of course, there are rascals in the ranks of labor. We have them ourselves, but we must not hold all labor responsible for the acts of its worst elements. We would not want them to do that to us.

We must not let them pit the great farm organizations of this Nation against one another. Agriculture must be united. We must be united to safeguard our own livelihood, to safeguard our own Government by the people, which is fast slipping away from us. And we must be united to safeguard our country in the field of international affairs.

God knows that some force is needed in America to take the leadership in keeping a few men with power and authority from gambling all our resources, including men, in the world's great poker game.

We have the political strength to do this, and we should utilize that strength as a united force to stop the devastation of American wealth and desecration of American liberty.

Farmers can put this country on its feet again politically and economically, but we've got to get to work, and get to work fast. In unity there is strength and in strength there is safety. This applies to a nation as well as to individua's.

I personally believe that every American farmer should protest by voice and ballot against the sell-out of American farm markets and the dissemination of American armed forces over the waters of the seven seas and the lands of the five continents in an attempt to take upon our country the regulation of everybody's business throughout the whole world.

I believe our people and our country come first. I would like to see this group take the initiative in arousing the farmers of America to such concerted action that every power-mad politician and every money-mad industrialist and financier would not dare to gamble with the happiness and the security of all America.

Third Annual Conference of United States Attorneys

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD 2d

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1941

ADDRESS BY THOMAS D. SAMFORD

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Thomas D. Samford, president of the United States Attorneys' Association, before the Third Annual Conference of the United States Attorneys held at Washington, D. C., March 13, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The perilous period through which we are passing must give us pause and make us ponder.

Must give us pause, if you please, to contemplate the seriousness of the situation which confronts this country and threatens the free institutions of this Republic, and how best to obviate these dangers if possible and how to meet them and defeat them as they arise.

And make us ponder, too, the priceless heritage handed down to us by our forefathers—the founders of this Nation.

We naturally, of course, read and talk and think of our Palladium—the Palladium of our liberty, if we prefer the redundant expression for emphasis. The Constitution of our Republic, the fundamental law of the land, which guarantees to every citizen life, liberty, and the pursuit of happiness—that foundation upon which is builded all the superstructure which safeguards and guarantees to us all those things which we most dearly prize and most highly value in our social economic, and religious lives and relationships.

From and by this priceless inheritance, of course, we enjoy all those things guaranteed to us and safeguarded in the amendments comprising the Bill of Rights.

We should remember and guard well this sacred instrument "the most wonderful of its kind ever struck off in a given time by the mind of man." Not the least of the blessings provided by this wonderful document in our judiciary system. Of this we, of course, are a vital and component part.

The highest and truest exponent of the civilization of any people is, and always has been, an incorruptible, upright judiciary. It was true of Israel, of Greece, of ancient Rome, and has been the glory of the English speaking people for centuries. It is by this arm of the Constitution we are taught that every man must be a law-abiding citizen.

Let there be a Nation-wide campaign of education to teach every citizen that his highest duty is obedience to law and constituted authority. For this purpose we should utilize every family unit, for truly the hearthstone is the cornerstone of the Republic.

We should utilize every school in the land, every college, every university—teach every youth in the land that he must proudly proclaim, "I am a law-abiding citizen." Preach the doctrine from the pulpit. Print it in the press—the daily papers, the weeklies, the magazines—use the film screens and the radios. This stream of crime which threatens to deluge society and pollute our entire social system cannot be dammed up at the mouth—the source and course of the stream must be guarded and directed.

I take it to be a part of your duty and my duty, as law-enforcing officers to contribute as much as possible to such a campaign.

But I find myself digressing, taking a detour from the main thought in my mind, in fact, from the paramount purpose of this conference.

The provisions of the Constitution, the application of the principles of the Bill of Rights, and the proper administration of justice through the courts are, indeed, a very precious part of our inheritance. Nevertheless these relate mainly to the internal dangers which lurk from within and threaten our free institutions. These are perils, of course, to be reckoned with if our Nation and form of government is to last, and it is your duty and my duty and the duty of the Department of Justice to guard the home base—the "Ramparts We Watch" within.

But we are thinking now mostly of external forces which loom above the horizon to challenge and threaten this country from without. In so doing we ponder that other document, so dear and sacred to every American; that companion document, the product of the pen and thought of that pioneer prophet and apostle of democracy. We call it the Declaration of Independence. It is certainly a part of our rich inheritance. It is but a fuller expression of the sentiment proclaimed in the eloquent outburst of Patrick Henry: "I know not what course others may choose, but as for me, give me liberty or give me death."

It was signed by only 56 patriots, which prompted Benjamin Franklin, that laconic philosopher, to exclaim, "We must all hang together or we will all hang separately." The document contains only 1,359 words. The Declaration itself is contained in the last paragraph and is composed of only 159 words; the other 1,200 words are employed in the indictment against a crazy and tyrannical king.

For the purpose of these remarks, and applicable to the spirit of this conference, and appropriate to the "perilous period through which we are passing," I emphasize the last sentence, just 31 words: "And for support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge, each to the other, our lives, our fortunes, and our sacred honor."

And those pioneer patriots sealed this sacred pledge with a baptism of fire and blood for 7 long years.

This they gave to posterity—to you and to me. What are we going to do about it? Mighty armies are now making the earth

tremble beneath their march on three continents. The sea and air are resounding with bombs and death-dealing instruments of modern warfare. The priceless products of centuries of civilization are crumbling under the cruel assaults of savage despots actuated by the demons of hate and greed.

I know what you are thinking about. I know what we all are thinking about; whether awake or sleeping we are face to face with the greatest peril which has ever threatened this Republic. I repeat, what are we going to do about it? Have we forgotten the wreckage of empires and republics along the shores of time during the centuries that are passed? Are we unmindful of the fate of Finland, of Poland, of Czechoslovakia, not to mention Norway, the Netherlands, Denmark, and poor, bleeding France, China, and Ethiopia? Greece, with her art and ancient glory, I fear, is doomed to fall a prey to these monster war lords. Where is the end? What is the fate of civilization? No man can tell.

I know we are prone to undervalue what is given to us without any effort on our part. We too often fail to appreciate our inheritance—what is given to us—what is handed to us. Men do not grow strong on doles. We value what we work for, what we strive for, what we sacrifice for, what we fight for.

Have we grown fat and flabby on idleness, indolence, and ease? Have we grown weak on opulence and luxury? "Ill fares the land, to hastening ills a prey, where wealth accumulates and men decay." God forbid that we should forget the sacrifices of our forefathers, the founders of this new nation, who bought this priceless privilege with their blood.

If this Nation is ever again attacked—God forbid—if we should become involved in war, which we fervently pray to the God of Nations to avert, we shall remember our debt to the dead as well as our duty to the living. How fitting are the inspiring words of Marco Bozarus as he cheers his brave band:

"Strike till the last armed foe expires,
Strike for your altars and your fires,
Strike for the green graves of your sires,
God and your native land."

Are we willing to take the oath and make the pledge to maintain this sacred inheritance with "our lives, our fortunes, and our sacred honor?" What is life worth without liberty? What is fortune without freedom?

I have confidence in the patriotism of our people. I believe in the bravery of our men. I have faith in the courage and wisdom of our great leader and his aides. I have hope inspired by the spirit of Longfellow, when he wrote the concluding lines of the Master Ship Builder, which begins—

"Build me straight, O worthy master,
Staunch and strong a goodly vessel,
That shall laugh at all disaster,
And with wave and whirlwind wrestle."

And concluding—

"Thou, too, sail on, O Ship of State,
Sail on, O Union, strong and great,
Humanity with all its fears,
With all its hopes of future years,
Is hanging breathless on thy fate.

"We know what masters laid thy keel
What workmen wrought thy ribs of steel,
What anvils rang, what hammers beat,
In what a forge and what a heat,
Were laid the anchors of thy fate.

"Sail on, nor fear to breast the sea,
Our hearts, our hopes, are all with thee,
Our hearts, our hopes, our prayers, our tears,
Our faith triumphant over our fears,
Are all with thee, are all with thee."

Let us remember the words of Rudyard Kipling:

"Lord God of Hosts,
Be with us yet,
Lest we forget, lest we forget."

In an early year of the last century a great battle was fought off the coast of France—the battle of Trafalgar. The Spanish Armada had joined with the French Fleet to challenge Great Britain in its supremacy of the sea. The fate of Great Britain and almost of the English-speaking people for perhaps a century, was at stake. Lord Nelson had retired from has command as admiral of the English Navy, but all hearts turned to him again for leadership. He again donned his uniform and took command. As he sailed forth to meet the combined fleets of the enemy, and as his ships were drawn up in battle array, he used his code and wagged this inspiring and historic message to the men under his command: "Today England expects every man to do his duty." The battle proceeded, of course, and the God of battles fought with Nelson, and a great victory was won. Today our great leader and commander says to free men of America, "In this hour of great crisis, the Nation expects every man to do his duty," in the air, on land, and on sea.

Are we willing to pay the price to preserve our inheritance—that "Government of the people, by the people, and for the people, shall not perish from the earth"?

The Late Dr. Annie J. Cannon

EXTENSION OF REMARKS

OF

HON. JAMES H. HUGHES

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1941

ASSOCIATED PRESS ARTICLE

Mr. HUGHES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an account of the life, death, and services of Dr. Annie Jump Cannon, who in 1929 was listed by the National League of Women Voters as one of the 12 greatest living American women.

Dr. Cannon was born and raised two doors from where I reside in Delaware. I knew her very well in her girlhood days, and later, on her many visits to her home in Dover. Dr. Cannon was a great astronomer—in fact, one of the greatest the world has produced. She is credited with having classified over 400,000 stellar bodies. At the time of her death she was engaged in the work of her lifetime at Harvard Observatory. While I stood in awe of her profound learning, I greatly admired her for her simplicity, kindness, and cheerful outlook. Like others who knew her as a friend and neighbor, I loved her.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. ANNIE J. CANNON, NOTED ASTRONOMER, DIES AT AGE OF 77—SCIENTIST AT HARVARD CLASSIFIED MORE STARS THAN ANY OTHER PERSON

(By the Associated Press)

CAMBRIDGE, MASS., April 14.—Death has ended the career of Dr. Annie Jump Cannon, 77, world-famed Harvard astronomer, who refused to give up her work even though she had been officially retired.

The gentle, silver-haired scientist who had classified by their spectra more stars than any other person in the world, died last night at a hospital from a sudden relapse of a month-long illness.

She was retired by Harvard last September, after 44 years of service, because she had attained the compulsory retirement age. She had been working at the Harvard observatory on a special astronomical mission from Yale up to a few weeks ago.

In her life work at Harvard she was credited with the classification of almost 400,000 stellar bodies according to their spectra.

DISCOVERED 300 VARIABLE STARS

She also was the discoverer of more than 300 variable stars, 5 novae, and 1 spectroscopic binary, or double star.

A native of Dover, Del., she was interested in astronomy as a child, and made observations with the aid of a smoking candle from a candelabrum, which even today rests in the living room of her tiny residence—Star Cottage—close by Harvard Observatory.

She was the first woman ever to receive an honorary doctor's degree from Oxford University and was the first woman ever to be elected an officer of the American Astronomical Society.

In 1929 she was listed among 12 "greatest living American women" chosen by the National League of Women Voters.

WON HENRY DRAPER MEDAL

Her greatest single achievement was the classification of a quarter of a million stars to make up the famed Henry Draper catalog for international use—a work that won her the Henry Draper Medal of the National Academy of Sciences in 1931.

Miss Cannon since has worked on the extension of that catalog, and in her most recent work for Yale was engaged in a "wholesale" classification of stars in a selected zone extending all around the heavens.

A graduate of Wellesley in 1884, she came to Harvard as an assistant in 1897.

She was stationed at Harvard Observatory in Arequipa, Peru, for a time, and in 1911 became curator of astronomical photographs at Harvard. In 1938 she was named William Cranch Bond astronomer.

St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1941

MEMORANDUM BY H. E. KETNER, COMMERCE COUNSEL OF THE VIRGINIA STATE CORPORATION COMMISSION

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an able document prepared by Mr. H. E. Ketner, commerce counsel of the State corporation commission of Virginia, in opposition to the proposed St. Lawrence waterway. The opinions expressed by Mr. Ketner are endorsed by the entire State corporation commission of Virginia, composed of Hon. Thomas W. Ozlin, chairman; Hon.

H. Lester Hooker; and Hon. William Meade Fletcher.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

COMMONWEALTH OF VIRGINIA,
STATE CORPORATION COMMISSION,
Richmond, March 27, 1941.

Memorandum to the Commission:

This refers to the St. Lawrence waterway project which is now pending in Congress.

I have read and studied several pamphlets and surveys made by various parties respecting this proposed project. Even though it is stated in a survey made in 1940 under the direction of Hon. Jesse H. Jones, Secretary of Commerce, that "every national administration since the time of President Woodrow Wilson has been in favor of proceeding as expeditiously as possible with plans to construct a seaway for oceangoing vessels from the Great Lakes to the Atlantic," and "President Coolidge and President Hoover were particularly active in promoting the cause of a seaway," and "the new administration which took office in 1933 was equally desirous to see the seaway constructed," I am unable to see that the project would be beneficial to this country. I think it would be most unfortunate to undertake a project of this kind at the present time when all of our efforts, cash as well as skilled labor, are urgently needed for national-defense purposes.

There appeared in the March 26, 1941, issue of the Richmond News Leader an article headed "Defense needs to hold up last leg on James (River) project." The article read, in part, as follows:

"The projected completion of the last leg of the 12-year project for straightening and deepening the James River channel below Richmond gave way tentatively to national-defense measures today when the War Department notified Congress that no new rivers and harbors work could be undertaken in Virginia during the fiscal year beginning July 1."

Testimony had been submitted by Public Works Director Gamble Bowers that the completion of the James River project was considered essential to the preservation of the river for large ships. In the annual report of the Chief of Engineers, recently sent to Congress, it was stated that $280,000 profitably could be expended during the year for the James River improvement, but it was excluded because of national-defense needs. From the beginning of the advocacy of the St. Lawrence waterway project, more than four decades ago, transportation was given as the principal benefit to be derived from the construction of the project. If the defense needs are to hold up the last leg of the James River project, the value of which has been demonstrated, certainly the same needs should preclude the beginning of the St. Lawrence project which would be, to say the least, of doubtful value.

Even the advocates of the project do not contend that it would be beneficial to the States located along the Atlantic Seaboard, including Virginia and the other southern, southwestern, and western States. It is stated in a pamphlet recently released by the National St. Lawrence Project Conference, of Washington, D. C., that 85 percent of the cost of the project to the Federal Government would, in all probability, be paid by taxes collected from those living in an area which would receive no benefits and would even be damaged by its construction. Virginia, with her coal mines, large and important coal-carrying railroads, important ports, shipbuilding facilities, etc., falls within the latter category. That is, taxes would be collected from Virginians to help build a project that would be peculiarly harmful to the State. I have in mind particularly Virginia's ports, coal-carrying railroads, coal operators, and shipyards.

During the year 1940 coal dumpings at the Hampton Roads ports amounted to 19,941,874 tons. More than 16,000,000 tons of this traffic was coastwise movement, principally to New England, and approximately two and one-half million tons was export coal. While it is impossible to give actual figures showing the probable effect that the St. Lawrence project would have on the Hampton Roads ports or on the Pocahontas Lines, it is obvious that the construction of the project would affect the coal tonnage handled by the Pocahontas Lines, both as the result of the generation of cheap power in the affected area and by the importation of coal through the proposed canal to the territory served through the Lake Erie ports. Not only would the Virginia ports and the Virginia railroads be adversely affected by the construction of this project, but the Virginia coal operators would likewise be adversely affected because a considerable portion of the coal moving through the Virginia ports is produced in Virginia, although the greatest portion of it is produced in West Virginia. In addition the construction of the canal would, in my opinion, affect the amount of tonnage of numerous commodities that now move through the Hampton Roads ports to or from the area which would be served by the canal. For example, a substantial tonnage of imported wood pulp has been moving through the Hampton Roads ports and over the Virginia railroads to industries in the Miami and Kalamazoo Valleys located in central territory. The other imports that would most likely be affected are ores, iron and steel products, and crude rubber. Also, a substantial volume of coffee has been shipped by water-and-rail from the port of New York through the Hampton Roads ports.

As to exports, it is my opinion, which is concurred in by the representatives of the Pocahontas lines, that overseas ships using the canal would find potential tonnage in agricultural implements, grain and flour, and iron and steel articles, as well as other numerous commodities which now move through the Hampton Roads ports, and/or other north Atlantic American ports. To the extent that tonnage would be diverted to the canal, it would be at the expense of the Hampton Roads ports and other American ports.

The three main points made by the advocates of the project are: (1) Navigation—transportation; (2) power; (3) national defense—shipbuilding on the Great Lakes.

All of these questions are answered in a convincing way by those who oppose the project. They contend, first, that during 42 percent of the year the St. Lawrence seaway could not be fully utilized due to the fact that the route would be closed because of ice conditions, and that even during the summer months, when the route would be open, 95 percent of the passenger-cargo ships engaged in overseas trade could not use the channels because of navigation limitations, nor could 81 percent of the American cargo vessels or any of the tankers engaged in intercoastal trade; that of the total world tonnage, only 30 percent could navigate the seaway, and that of this 30 percent only 5 percent would be United States tonnage. The reason for these low percentages is that the channel would not be deep enough to take care of the great majority of the large ocean-going vessels.

Second, that ample power is available at the present time on contract and more could be had in a short time by a much smaller expenditure of capital than would be necessary under the project. Third, there is plenty of room on the seacoasts to build all of the ships the United States can build; there is no difficulty in finding room at the seacoasts to build the ships and there is no difficulty in getting parts and materials to the seacoast shipyards. Further, that ships which are built at seacoast yards can reach the seas in which they are to sail without having to navigate 2,000 miles through channels which would be blocked with ice for nearly half of each year, and which might be blocked during the rest of the year by a bomb, whether dropped from a plane or planted by a saboteur at any one of a score of critical points among the dams, locks, spillways, and sluice gates upon which the maintenance of the channel would depend; that the ships America needs, she needs on the seaboard, not at places where one attack or one act of sabotage might bottle up whole fleets 2,000 miles from the sea; and that she needs them now, not in 1947 or 1948 or 1949 when the project would be concluded, if undertaken in the near future.

Of all the literature I have read dealing with this project, I consider that the major findings made by the Niagara Frontier Planning Board which appear in a pamphlet released by that Board in 1940 entitled "the St. Lawrence Seaway Project," are the most complete and the best of any that I have read. A copy of these findings is attached hereto, marked "Appendix A."

CONCLUSION

It appears that through widespread propaganda, composed mainly of generalities, unsupported statements, misleading and irrelevant statistics, the St. Lawrence Waterway project was made so popular that it was regarded as one way for political success in a rather large section of the country. It has received support from both political parties, but if the project is approached from a plain common-sense point of view one must inevitably reach the conclusion that it is economically and otherwise unsound.

Its construction might conceivably unjustly benefit a few citizens both in the United States and Canada, but at the expense of the country at large. I believe that the greatest advantages which would result from the project would go to foreign interests, namely, shipping interests and the importers to this country and Canada of such commodities as coal, pulpwood, wood pulp, ores, iron and steel products, and crude rubber. And in this connection it must not be overlooked that this country now sells many millions of tons of coal to Canada each year. This business would be imperiled by foreign competition with the opening up of the St. Lawrence Canal. The principal damage would be suffered by American labor, agriculture, and capital. I cannot escape the conclusion that the construction of this project would be an outright waste of public funds, at a time when the national debt is higher than it has ever been and increasing all the time.

The project, in my opinion, has no merit either as an economic or defense measure.

Respectfully,

H. E. KETNER,
Commerce Counsel.

APPENDIX A

MAJOR FINDINGS

General conclusion: This economic survey of the St. Lawrence seaway and New York State-Ontario power project conclusively demonstrates the proposed development, considered in its entirety as an undertaking which includes navigation as well as power works to be unsound. The seaway would be so generally ruinous to American commerce and industry, labor, and capital that its Nation-wide deleterious effects would far exceed whatever claimed advantages might redound to certain special interests from the waterway or to New York State and the Province of Ontario from the power plan. The following findings tell why:

The minimum total cost of the whole St. Lawrence project for both the United States and Canada would be $1,120,588,000. This figure is founded on Government estimates. It is about three times the cost of the Panama Canal.

The St. Lawrence project, on the basis of experience with similar works, probably would cost more than the $1,120,588,000. A total of $375,000,000 was spent on the Panama Canal, although it had been estimated to cost only $160,000,000; the Chicago Sanitary and Ship Canal cost $53,000,000 instead of $16,000,000; and the Suez Canal cost $80,000,000 instead of $30,000,000.

At least 85 percent of the United States' share of the project's cost would be borne by American taxpayers who would be the victims of unfair discrimination: These taxpayers live in the region which could not be benefited by the St. Lawrence seaway even if claims of proponents were valid.

American labor, transportation, and industry, on the Government's estimates of probable seaway traffic, would lose $109,647,000 a year: Diversion of business from American transportation systems to foreign carriers, diversion of Canadian export grain movement from the United States, and loss to American coal producers account for this figure.

The net loss to the United States would be $76,595,000 each year on the basis of the Government's estimates of seaway traffic: This sum represents the difference between two factors: One is the loss to established American commerce and industry plus the expense to American taxpayers; the other is the possible rate saving by shipping via the St. Lawrence.

During 42 percent of the year the St. Lawrence seaway could not be fully utilized. The route would be closed because of ice conditions.

The American farmer would not gain from the St. Lawrence seaway. Export grain would be the chief American agricultural product to be shipped through the waterway. Even if a possible maximum saving of 3 cents a bushel were realized, this would be absorbed by the foreign purchaser and vessel owner.

American manufacturers who have cultivated this country's great inland market would be seriously damaged by foreign competition resulting from the St. Lawrence seaway. Alien tramp steamers would dump cheaply produced commodities on this currently protected Great Lakes market.

Foreign tramp ships would have almost exclusive use of the St. Lawrence seaway. American-owned vessels of sufficiently shallow draft to ply the proposed waterway comprise only 5 percent of the world's merchant ship tonnage.

No route for more profitable trade between American ports would be offered by the St. Lawrence seaway. The location of the St. Lawrence is such that no appreciable coastal or intercoastal commerce would occur.

The St. Lawrence seaway would not carry the volume of traffic nor bring the savings in shipping rates to the exaggerated degree cited by many proponents. They have set the probable tonnage at 11,496,000 and the probable savings at $45,516,000 annually. The more accurate estimate is 3,873,000 for tonnage and $8,822,000 for savings.

The net loss each year to American commerce and industry and to the American taxpayer, on the basis of more accurate figures for estimated tonnages and savings, would be $42,233,000. The United States investment in the St. Lawrence waterway would result in lower earnings and higher taxes.

Maintenance of wholly cordial relations between the United States and Canada might be endangered by the St. Lawrence seaway. Serious questions could arise as to responsibility for defense of the waterway in times of war and as to preservation of water levels in Canadian harbors on the lower St. Lawrence River.

Surrender of United States sovereignty over Lake Michigan would result from any treaty which, like the proposed treaty of 1938, limited the withdrawal of water from the lake at Chicago. It would prevent further development of the Great Lakes-Gulf of Mexico waterway by the United States.

The proposal for restoration of Niagara Falls beauty and for further power generation there has been inexcusably made contingent on the whole St. Lawrence project. There is no engineering demand for tying up the needed Niagara Falls project with the St. Lawrence development.

The United States would subsidize Canadian power to the extent of $48,860,000. This figure is reached by taking the minimum cost ($90,000,000) for the Canadian share of the power, under the least expensive plan yet advanced and deducting costs strictly chargeable to power ($41,140,000) under the present plan.

It is perfectly practical to divorce the seaway and power portions of the general St. Lawrence plan. There is no justification for burdening the proposed power development with the unsound seaway proposal.

The amount of power which would be created on the United States side of the river for $206,065,000 under the present St. Lawrence scheme could be produced for only $90,000,000 without the navigation project. The St. Lawrence Power Development Commission set $90,000,000 as a reasonable cost of power works on the American side of the International Rapids section.

Whatever power benefits might result from the St. Lawrence project would affect only the State of New York and eastern Canada. The St. Lawrence plan does not envision sale of United States power beyond the confines of New York State.

Neither New York City nor western New York is a practical market for St. Lawrence power: Under existing delivery conditions, power from nearer sources is more practical and economical for these areas.

Previous estimates of increased power demand in New York State are too optimistic: The Niagara Frontier Planning Board finds that the demand in 1952 probably will not exceed 21,000,000,000 kilowatt-hours.

Overdevelopment of hydroelectric power is a dangerous policy to pursue: When generating plants are built without an adequate market for the power, the capital charges accumulate to such an extent that the project never pays.

Adequate and economical power potentialities, apart from the St. Lawrence River, exist today in New York State and eastern Canada: Two outstanding examples are the Ottawa River in Canada and Niagara Falls.

Progressive development of Niagara Falls power potentialities independent of the seaway and in step with power needs is the most practical plan: This would eliminate economic hazards to the new developments and to existing plants.

Bruce Barton Writes About War

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

ARTICLE BY BRUCE BARTON

Mr. MUNDT. Mr. Speaker, the other day one of my constituents sent me the following article by Bruce Barton, of New York, on the timely subject of the endlessness of war. Those of us who had the pleasure of serving with Bruce Barton when he was a Member of this House and a member of the Foreign Affairs Committee recognize how faithfully Mr. Barton's activities in Congress conformed with his public statements as an author and speaker. Bruce Barton was a Congressman who ably practiced what he ably preached.

It will be recalled that Bruce Barton was one of the leaders in the fight against repealing the arms embargo, as he predicted it was the beginning of an organized attack upon the neutrality of the United States. He frequently warned Congress and America that pursuing a course of steps short of war toward involvement of this country in foreign wars might result in war shortly for America. He consistently stood for making the defenses of this country impregnable and for maintaining the twofold policy of the Monroe Doctrine by keeping foreign influences out of the Western Hemisphere and by declining to meddle ourselves into the endless wars and political intrigues of the Old World.

It is fortunate for this country that even though Bruce Barton no longer serves in Congress his speech and writing still echo through the land in defense and support of protecting and preserving representative government in this Republic and in opposition to those who would force America into sending another expeditionary force into foreign theaters of war and destruction.

The article follows:

UNKNOWN

(By Bruce Barton)

From the grave of the Unknown Soldier the crowds melted away. The great men of the nations, who had stood there bare-headed, stepped into their cars and were whirled back to town. The music of the bands grew faint and ceased.

All afternoon little parties of curious, reverent folk came and stopped, and went on again, until finally only the guard remained. The day ended. Night came silently and threw over the grave the healing mantle of darkness.

Then a strange thing happened.

Three dim figures from nowhere gathered and stood uncovered beside the tomb. No word of greeting passed between them; they seemed to know each other well. Slowly, one after another, they stooped and read the freshly carved inscription. Then the oldest spoke.

"Things are improving a bit for us Unknowns," he said. "I fought with Leonidas at Thermopylae. We fell side by side, we and the other two hundred and ninety-nine. Our bones are mingled with the dust and rocks. No one marked our resting place. Our names have perished, but we held the pass.

"My mother wept when I failed to return," he continued. "Night after night she waited at the window, until it was foolish to hope any longer. Then she, too, wanted to die. But the neighbors came in and cheered her. 'You have given a son to save your country, to save your country,' they cried, 'the Persians are driven back, and Greece is freed. He died, but he left us a better world!'

"So my mother took courage and held her head high. It was fine to have given a son to make the world a better world."

The Unknown paused for a moment; his voice grew dull and hard.

"The Romans swept over the Greece that I died for," he said. "The barbarians swept over Rome. I sometimes wonder whether it

was worth while to die at 28—to sleep at Thermopylae, unknown."

"I fought with Charles Martel at Tours," the second soldier said. "We turned back the Arab hosts; we saved Europe from Mohammedanism; we kept it a Christian continent.

"'It is splendid,' they said to my mother, 'splendid to sacrifice a son on the altar of peace and good will.'

"That was 1,200 years ago," the second soldier said. "And where is the peace that we died for? Where is the faith? The good will?"

The third Unknown had stood with Wellington at Waterloo. It was a high enthusiasm that had carried him there—the vision of a world free from tyranny and wrong. He fell and was buried in a trench, under a rude cross marked Unknown.

"We thought it was to be the world's last great battle," he said. "There would be no more wars, no more youthful lives snuffed out, no more mothers waiting and weeping at home.

"But a century went by, and there came a war beside which ours seemed a little thing. Our friend over whom the bands played today was one of millions who gave their lives. Men have heaped honors on him such as we never had. Do the honors mean that the hearts of men have changed, I wonder: They broke faith with us; will they keep faith with him?"

The three dim figures disappeared. The moon stood guard above the silent grave. In the East the first rays of the morning crept into the sky. They reached out vaguely, hesitatingly, touching the city of Washington, where men were to gather that day to speak of peace—touching an inscription which a Nation had cut in the stone above the body of its Unknown Soldier. A solemn inscription; a nation's promise that he who lies there dead shall not have died in vain.

The world has made that promise before; all its unknown dead have died in that faith. And the promise has died with them.

Will it die again? That is the question for you and me to ask ourselves beside the soldier graves on this Memorial Day.

We told that boy when he marched away that he was fighting a war to end all wars. He fell, believing; and we have buried him and carved an inscription over his tomb.

But the real inscription will not be written on any stone; it will stand in the dictionaries of the future. Only by writing it thus can the world keep faith with the long, sad procession of its unknown heroes whom it has lied to and cheated and fooled.

This will be the inscription: "War—an armed contest between nations, now obsolete—unknown."

Present and Proposed Legislation Regulating Labor Relations

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

ADDRESS BY LEE PRESSMAN

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Lee Pressman, general counsel, Congress of Industrial Organizations:

Before we can intelligently approach the problem of analyzing proposed legislation regulating labor relations, we should examine the facts pertinent to labor relations. This method of approach is rarely adopted by those who write the headlines for newspapers or by many of the alleged representatives of the people in Congress.

At the present time there are three acts of Congress which are of vital importance to the working people of the Nation. They are the National Labor Relations Act, the Wages and Hours Act, and the Walsh-Healey Act. Their provisions are undoubtedly quite well known to those assembled at this conference this afternoon. The National Labor Relations Act, in addition to providing machinery for the holding of elections among the employees, also restrains employers from committing certain specifically designated unfair labor practices which in any way interfere with the right of workers to organize into unions of their own choosing and to engage in collective bargaining.

The Wages and Hours Act provides for a minimum wage and for the payment of time and one-half for work performed in excess of 40 hours per week. The Walsh-Healey Act simply provides that all employers receiving Government contracts in excess of $10,000 must pay the prevailing minimum wage for the industry as determined by the Secretary of Labor and time and one-half for work performed in excess of 40 hours per week.

At no time since its enactment has the National Labor Relations Act or its administrative agency been permitted to operate in peace. This legislation and the National Labor Relations Board has been subjected to a constant barrage of vilification, denunciation, and litigation in courts, legislative inquisitions and congressional attacks, including the attempted destruction, through serious cuts in administrative appropriations. For 2 years the employers of the Nation, upon the advice of the kangaroo court of corporate lawyers, simply flouted the law openly and flagrantly by stating that the statute was unconstitutional. After the Supreme Court humbly disagreed with these outstanding corporate attorneys, the large corporations in the Nation did not hesitate to continue their flagrant violations. Lower courts and the Federal judiciary have openly disregarded the express provisions of the act and have substituted in judicial opinions their own interpretation as to what they thought Congress should have adopted for that which Congress enacted in the National Labor Relations Act. Several of these courts had to be severely admonished by the United States Supreme Court in highly critical opinions.

For weeks and months legislative committees consumed the time, energy, and money of the National Labor Relations Board. Newspapers cooperated in printing the most unfair and non-factual criticisms that were leveled against the Board in these hearings. Accurate facts which disproved the accusations never received the attention of either those who wrote the headlines, or those who censored the news columns or the editorial writers.

Consistently the Labor Board has been accused of misinterpreting the law and the members of the Board have been charged with severe dereliction of duty and with flagrantly violating the provisions of the act. However, the record of the Board before the courts of the Nation, including the United States Supreme Court, has not been surpassed by any administrative agency.

To the contrary, those who did the accusing have actually been the law violators. I cite one specific example: The New York Times, which has been most fervent in its denunciation of the Labor Board and the Labor Act at the present time is charged with violations under the act in having interfered with the freedom of its employees to choose their own union.

The large corporations of the land are still refusing to obey the law. The Ford Motor Co. has been found guilty by the Labor Board not only in one but at least half a dozen cases of having violated practically every provision of the Labor Act. The United States Supreme Court has upheld the order of the Board in the case involving the largest Ford plant at Dearborn, Mich. But is the Ford Motor Co. complying with the law? It is not. At the present time, since the Supreme Court sustained the conviction of the Ford Motor Co., it still continues to discharge its employees because they dare to join the union. Frequently discharge is not the only punishment meted out to the employees. The punishment includes beatings, tar and feathering, and in one Ford case in Dallas, Tex., gouging out a man's eye because he dared to believe that he had the right to join a union.

I refer to this background of abuse and vilification directed against the Labor Board and the Labor Act in order that we might be in the position to evaluate the charges of those who claim that the Labor Act has worked so unfairly and might prove to be so burdensome in our national-defense program. I say that where the Labor Act has actually been permitted to operate it has made one of the greatest contributions toward the establishment of peaceful relations in our economy. It is in the very situations where the Labor Act cannot operate because of the flagrant, lawless violations by the corporations, that we have the threat of industrial strife with its resultant dangers to our national-defense program. I shall subsequently analyze this point in greater detail.

The Walsh-Healey Act was enacted in 1935 in order to afford relief to those employers who desired to bid for Government contracts and who were establishing fair labor standards. Their competitors, who were imposing substandard conditions through low wages and long hours, were thereby enabled to underbid their competitors and assume an unfair share of the Government contracts. The Walsh-Healey Act has placed all business competitors on an equal basis as far as labor standards are concerned. Such legislation is not solely for the benefit of labor but also serves to aid businessmen in assuring them decent and fair competition.

The Wages and Hours Act cannot be attacked on any basis of decency or logic. It never has been. Prior to its enactment it was stymied in Congress by being buried in committee. A group of reactionaries from southern States where wages were horribly low, placing employees on a starvation basis, were sufficiently powerful in Congress to prevent the Members of Congress from voting on this legislation. Finally, over the opposition of this sit-down strike by the Southern Tories, the bill became law. It does not place any maximum prohibition upon the working hours. This point is extremely important to note. The act simply compels an employer, if he chooses to work his employees longer than 40 hours in any one week, to pay time and one-half. This penalty was intended to cause a greater sharing of the available work in order to absorb many of our unemployed. In addition, it has been recognized by all intelligent leaders in industry and finance, as well as labor leaders, that the efficiency of workers in industry decreases as they are required to work longer hours. The work week established in the Wages and Hours Act sought to prevent this evil, thereby bringing to a maximum the efficiency of the American worker.

These three acts represent the legislative protection which labor has received during the past 8 years. When analyzed they really do not present outrageous burdens upon industry. They merely succeed in doing the following:

(1) Permit the workers of the Nation to join any union they choose, free from interference from their employers. This is merely

intended to give back to the American workers the economic freedom which was intended to be established under our American Constitution.

(2) Prevent employers bidding for Government business from entering into cutthroat competition at the expense of the workers.

(3) Establish a minimum wage, which at present is 30 cents per hour, and in several years will reach 40 cents per hour, and a maximum workweek of 40 hours, with provision for only time and one-half for work performed in excess of this limitation.

It would appear that these standards are reasonable and not too much for American workmen to expect and anticipate from industry. But about a year ago our Nation entered a new phase. We were compelled because of events abroad to begin thinking of our own national defense. In the spring and summer of last year this defense program was formulated and initiated by Congress. A large-scale program was initiated for the production of guns, tanks, and airplanes.

Immediately from certain sources arose the hue and cry that national defense required the elimination of our labor standards and the repeal and destruction of our labor legislation. The enemies of labor, who for 8 years had sought to accomplish this end, but to no avail, because of the decision of the people at the polls, grasped the opportunity afforded by the hysteria of national defense to accomplish their desired end.

For instance, in the first bills submitted to Congress on behalf of the Army and Navy departments for certain enabling legislation in connection with the national-defense program, the attempt was made to eliminate the Walsh-Healey Act so far as contracts executed by these two departments were concerned. No economic justification was offered. No evidence was adduced that the Walsh-Healey Act was in any way hampering the effectiveness of industry. Only through the forceful opposition of organized labor and the intervention of the President of the United States was this antilabor attack prevented. The proposed legislation had to be amended in order to safeguard the meager protection afforded by the Walsh-Healey Act.

While this was going on, industry itself was demonstrating that certain of its leaders did not have the national-defense program at heart. When the national-defense program was first formulated by the President of the United States, and the people of the Nation urged to give their fullest cooperation, what kind of response did we receive from industry? The people of the country were advised that manufacturers in many industries were refusing to take Government contracts until Congress passed legislation to give greater leeway in regard to tax-amortization provisions, and to repeal then-existing legislation which limited the profits that could be received under Government contracts relating to shipbuilding and aviation. For several months American industry refused to take Government contracts until this legislation was enacted, regardless of the effect that such delay might have on the execution of our national-defense program. This information was given to the Nation by representatives of our Army and Navy departments before congressional committee hearings. It would appear that certain portions of our American industry were far more interested in their profits and in their financial returns than they were in national defense.

When these same individuals or corporations who sabotaged national defense in this cold-blooded manner seek to repeal or set aside labor and social legislation under the guise of protecting national defense, labor is fully justified when it questions the motives and intent of the demands. But of even greater importance, labor challenges the social wisdom of any such antidemocratic program and states categorically that it would result in undermining the very institutions which all Americans now seek to preserve and safeguard against attack.

Prior to concentration of public interest in national defense, and when domestic issues were being considered carefully and searchingly by the American people, the democratic forces of the Nation proved to be highly successful in preserving and extending our labor and social gains. Slowly but steadily labor was increasing its strength and influence in public affairs. Labor and social legislation was being enacted both in the Federal Congress and in the several States. The social security, health program, and housing programs, were receiving the attention of the American people and opposition to these socially desirable ends was being slowly but surely stricken down.

Unfortunately today a national hysteria is in the air. Enemies of democracy and of labor are fully prepared to damn any institutions or individual as an enemy of national defense where this might further their end.

The problems of labor relations which have been given the greatest degree of publicity and the repressive legislation which has been suggested and furthered to meet these problems might be said to fall in the following categories: (1) The imposition of excessive dues and initiation fees by unions upon those who work on national-defense projects; (2) the elimination of strikes through the curtailment of the present rights of labor through various means such as imposition of "cooling off" periods, compulsory mediation, compulsory arbitration, elimination of the right to strike, repeal or emasculation of the National Labor Relations Act, and the elimination of closed or union shops in national-defense industries; (3) enactment of legislation to allegedly prevent sabotage, but which actually seeks to deprive labor and other progressive groups of their constitutional rights and civil liberties.

These numerous suggestions are contained in several bills, a few of which I shall attempt to summarize.

Congressman SMITH has introduced a bill to amend in several respects the National Labor Relations Act. This bill incorporates the same provisions which were enacted by the House of Representatives at the last Congress but which received no action in the Senate. These provisions were described by the two minority members of the Smith investigating committee as "ripper amendments," in that they would completely emasculate the basic provisions and purposes of the National Labor Relations Act. These provisions were also vitriolically condemned by Senator WAGNER, the father of the legislation.

Congressman DIRKSEN has introduced a bill which would outlaw the union hiring-hall system in the maritime industry, thus breaking down the standards won by the maritime unions and going back to the conditions in the maritime industry which existed before the organization of the Maritime Union. A cooling-off period before strikes or lock-outs can be called in the maritime industry is provided for. The bill would require maritime workers to carry a "continuus discharge book" which is a record of employment filled out by the employer with space for comments, including, of course, notes on union activity which might well become a compulsory blacklist.

Congressman COX has introduced a bill which makes illegal any union or closed-shop collective-bargaining contract in a plant which has national-defense orders. Of course this bill also applies penalties to anyone encouraging or discouraging members in a labor organization.

Congressman SMITH has also introduced another bill which would practically destroy the basic rights of labor to organize and bargain collectively. This bill seeks to amend the criminal code so as to curb strikes in defense industries by imposing a life sentence on those who interfere directly or indirectly with national defense which would undoubtedly include strikes. It also makes it unlawful to change wages, hours, or working conditions until 30 days after written notice to the Secretary of Labor. A waiting period of 30 days is provided for strikes in plants having defense contracts. Unions must accept compulsory mediation and arbitration by the Department of Labor. Closed shops in industries connected with national defense are made unlawful with criminal provisions to be imposed for violation.

Congressman VINSON has introduced a bill which provides for compulsory mediation of disputes in all industries under the control of the Navy. Compulsory waiting periods are imposed before unions may strike. Mediation machinery is established which contemplates the imposition of compulsory arbitration.

Congressman HOFFMAN has introduced a bill which provides up to $5,000 fine, 5 years' imprisonment, or both, for any person, union, or other organization which induces persons working in any industry connected with the national-defense program or financed by the Government to join any organization as a condition to being employed. This is aimed to eliminate the union or closed shops.

Another bill of Congressman HOFFMAN provides that all persons employed in any place where anything is being produced for use in national defense shall enter into a contract of employment with the Government. Likewise, all persons engaged in employment in any place where any such product is being produced for any private enterprise shall enter into a contract with that enterprise. Such contracts are to fix hours of work, wages, and the duration of employment. They shall also provide that the terms of the contract may not be altered without the consent of the other party to the contract. This bill, of course, deprives all defense workers of the right to strike or even to attempt to improve their conditions.

Congressman HOFFMAN has introduced a third bill which repeals the National Labor Relations Act outright and sets up new machinery which incorporates all of the worse provisions of the Smith amendments, together with more drastic restrictions upon labor.

One Congressman has introduced a bill which would subject any person engaging in a strike in a national-defense industry to a penalty of death. One must express deep appreciation for his restraint in not including "quartering."

Considerable publicity has been directed against the alleged abuse of imposition of excessive dues and initiation fees upon persons seeking work on defense projects. Recently Senator NORRIS addressed a communication to President Green of the American Federation of Labor and President Murray of the Congress of Industrial Organizations pointing out this fact and calling upon labor to eliminate this abuse if it existed in order to avoid the enactment of repressive legislation which would have a far-reaching effect upon organized labor.

Mr. Philip Murray, president of the C. I. O. replied to Senator NORRIS on the same day that Senator NORRIS' letter was published in the press, and even before it was received by Mr. Murray. His reply was to the effect that we challenge anyone to point to a single instance in which a C. I. O. union has been accused of imposing any excessive initiation fees or dues. That challenge has not been accepted by anyone in this entire Nation. The reason for it is that the C. I. O. unions do not engage in this practice.

It is undoubtedly true that the building trades-unions of the A. F. of L. are indulging in a most reprehensible practice of imposing excessive initiation fees and dues. This, however, is not a recognized practice on the part of bona fide labor unions. It is merely

part of a vicious racketeering practice on the part of the A. F. of L. building trades-union officials who should not be identified with bona fide labor organizations.

However, this abuse should not be eliminated through repressive legislation. Any such attempt would involve the Government in the internal affairs of voluntary organizations such as labor unions which would establish a very dangerous precedent in our Nation. This would necessarily be followed by further and further entanglements by Congress with the internal affairs of labor unions which would lead us inevitably down the path of labor fronts under the Nazi regime instead of democratic American labor unions.

However, it should be brought to the attention of all Americans as to exactly how this vicious abuse continues. The Departments in our National Government which are involved in construction work have definite understandings with these very A. F. of L. building trades unions that prevent contractors from entering into agreements with any other labor organization. It is with the aid of our own Federal officials that the building trades union officials of the A. F. of L. are permitted to continue this most vicious and reprehensible practice. This abuse can be eliminated within 24 hours if our own Federal officials would release the contractors who are doing the construction work for the Federal Government and permit them to enter into agreements with the United Construction Workers Organizing Committee of the C. I. O., which carries out the standard policy of the C. I. O. unions that initiation fees and dues are to be at a very minimum in order to best serve the interests of our members. Certainly, this would be a far more simple method to attain the desired end than complicated and dictatorial legislation.

The various legislative proposals to restrict the rights of labor are justified under the claim that strikes are rampant and industrial strife has reached the point of endangering our program of national defense. Let us examine this charge under the piercing light of cold facts.

The growing acceptance of collective bargaining in the basic industries reflects itself in the increased stability of industrial relations and the decreasing number of stoppages.

The United States Department of Labor recently published material showing that strikes in 1940 were substantially fewer than in 1937, 1938, and 1939. A continual decrease in the number of strikes from 1937 is shown by the following table:

Year	Strikes	Workers	Man-days idle
1937	4,740	1,860,621	28,424,857
1938	2,772	688,376	9,148,273
1939	2,613	1,170,962	17,812,219
1940	[1] 2,450	575,000	6,500,000

[1] Estimated.

The same downward trend is apparent in the number of workers involved and the number of man-days idle, except for the year 1939 when the great coal lock-out caused more than 7,000,000 man-days of idleness. This indicates increasing stability of industrial relations in almost exact ratio to the increase of established collective-bargaining relationships

A most significant comparison can be made between the year 1940, a period of growing intensity of defense preparation, and the year 1917, when this Nation was at war. In 1917 there were 4,450 strikes, compared to 2,450 in 1940. In 1917, 1,227,254 workers were involved, while in 1940 only 575,000 participated. This occurred in spite of the fact that there were 22 percent more workers employed in nonagricultural pursuits in 1940 than in 1917.

It is axiomatic in labor relations that during periods of rising production it is usual to have many more difficulties in industrial relations than in periods of stable production and employment. This is due to the fact that during such periods workers see the opportunity of improving their conditions in line with improved industrial conditions. One would expect, therefore, in the period of great rises in production of the first 6 months of the defense program, beginning June 1940, there would be corresponding increase in industrial disputes. However, the number of man-days idle due to strikes was only half as great during the first 6 months of the defense program as in the corresponding period for 1939.

This record is a testimony to the effect of collective bargaining on stabilizing industrial relationships. It is particularly important to emphasize the fact that nearly three times as many workers are now under collective-bargaining agreements in 1940 than in 1917. This is the principal cause for the excellent record of uninterrupted bargaining relationships.

The production losses due to strikes are insignificant. Stoppages of work due to industrial disputes are a very minor cause of lowered production. C. I. O. economists have calculated that during 1940 only one-tenth of a day per worker was lost through strikes. Much more serious, indeed, was the loss of approximately 5 days per worker due to injury and about 8 days per worker through illness during the same year.

Put another way, these figures mean that 130 times more man-days of production were lost through injury and illness last year than by strikes. There is 130 times more justification for concentration on the reduction of injury and illness than upon reduction of strikes.

Of course, the most serious losses in production arise from the inefficient use of our present productive facilities and labor, and from our vast unemployment. For example, there was an average of 10,280,000 unemployed during 1940. If each of these workers had been employed an average of 250 days, the country could have had 2,570,000,000 additional man-days of work. This amount of lost production is substantially more serious than the loss of 6,500,000 man-days through strikes.

Mr. Knudsen a short time ago estimated it would take 18,000,000,000 man-hours of work to complete the national-defense program. This is approximately 9,000,000 man-years of work. About 10,280,000 man-years of work were lost through unemployment in 1940, more man-years of work than will be required to complete the national-defense program.

One proposal which is made for legislation with regard to strikes is that there be required by law a 30-day notice or waiting period before strikes.

This is clearly unrealistic since most of the defense industries that are organized sufficiently for any union to be held responsible already are operating under contracts which provide for advance notice of any changes in the contract and also for an extended period of negotiation of from 30 to 90 days. Furthermore, most of the contracts provide that there shall be no stoppages of work during the life of the contract, and that all grievances and differences should be made a matter of arbitration. As the following paragraphs will show, most of the workers in industry now especially concerned with national defense are working under such contracts.

In plants where such contracts are in effect such legislation is useless and superfluous. In plants where there are no collective bargaining relationships and collective unions, the 30-day waiting period is completely ineffectual since there is no effective organization of the workers to be held responsible for enforcing it.

It is my estimate that more than 2,000,000 workers in the coal, steel, rubber, automobile, electrical, radio and machine manufacturing, men's clothing, and shipbuilding industries are working under contracts which have provisions for extended periods of negotiation and for the elimination of stoppages during the life of the contract. This includes the major portion of American defense production.

More than 600,000 coal miners producing nearly 100 percent of America's bituminous and anthracite coal operate under contracts which provide for an extended period of negotiation before the contract terminates and which prevent stoppages during the life of the contract. More than 500,000 steel workers are working under contracts with similar provisions to those in the coal industry. A typical clause in the contract is that in the agreement signed with the Carnegie-Illinois Steel Co., which reads:

"SEC. 7. Adjustment of grievances. Should differences arise between the corporation and the union or its members employed by the corporation as to the meaning and application of the provisions of this agreement or should any local trouble of any kind arise in any plant, there shall be no suspension of work on account of such differences but an earnest effort shall be made to settle such differences immediately in the following manner * * *."

Nearly 500,000 workers in the automobile industry work under contracts which have these same provisions. These contracts cover the major producers in the industry except, at the time this was written, Ford.

The men's clothing industry is almost completely organized under similar contracts. The major producers in the electrical, radio, and machine manufacturing field have agreements with like provisions with a C. I. O. union. One hundred similar contracts covering maybe 65,000 are in effect in the rubber industry.

Prohibition upon the free process of collective bargaining would not only have a serious adverse effect upon the morale of labor but also would be economically unsound. Free collective bargaining is the one way in which Americans have to raise their wage levels. Both a rapidly falling labor cost in industry and a rising cost of living for workers make it imperative that the wage share of the American workers be increased during this period. As the national income has risen during the past 8 years, a continually decreasing percentage of the national income produced has gone to wages and salaries. The percentage in 1932 was 77.2; in 1936 it had decreased to 60.6; it rose slightly in 1938; and has now turned downward, according to preliminary figures, to between 60 and 61 for 1940.

This falling percentage of national income going to workers as the national income rises is most significant. It indicates that with a rising national income the capacity of the working people to consume what is produced declines progressively. Only by maintaining a much more substantial ratio of the national income going to wages and salaries can we have a stable national economy, an economy safe from terrible depression. One of the essential ways to maintain this ratio of workers' income to national income is by extensive wage increases.

The profit records of the major corporations in 1940 already indicate clearly that the coming year will be one of fantastic profit levels in spite of some increases in taxation. Very substantial wage increases can be given workers without reducing these profits below reasonable levels and without necessitating price increases. For example, the United States Steel Corporation has reported a profit of one hundred and two million for 1940—100 percent higher than in 1939. This rate has

occurred in spite of the fact that very unusual amounts have been set aside for tax purposes.

The General Motors Corporation has announced a profit of $195,500,000 for 1940 after deducting $125,000,000 for taxes. The company employed on an average some 220,000 employees. At the rate of profit announced each worker earned for the company an average profit of $890 in 1940.

Certainly out of these profit levels it is possible to pay substantial wage increases without any price rises.

The National City Bank has estimated that the 1940 profit rate of 390 leading industrial corporations was 10.2 percent compared to 7.8 in 1939. The 1940 figure would obviously be much bigger. It is clear that these major industrial corporations can pay substantial wage increases out of profits.

One of the things that has occurred and will continue to happen in the various industries is the steady fall of the labor cost. An example is the steel industry. It has been recently computed that the index of output per man-hour in that industry rose from 96.8 in 1938 to 121 in 1940. As a result the index of labor costs per unit of output fell from 112.8 in 1938 to 92 in 1940. At the same time the index of hourly earnings rose 2 points. However, hourly wages in 1940 would have had to have been 20 percent above those of 1938 to make the wage costs in the 2 years equal.

This drop in wage costs will be even more noticeable in the coming year, when the operation of the steel industry will be near capacity. Capacity operations greatly reduce the wage cost below levels prevalent when the industry operates at 50 or 75 percent. Substantial wage increases are necessary to offset this tendency.

Any interferences with the right of free collective bargaining would prevent the proper wage adjustments from being made and would thus intensify a situation of exorbitant profits that is wholly contrary to announced administration policy.

One of the most serious causes of strikes in the past has been the refusal of employers to recognize the genuine collective bargaining agencies of their employees. For example, it may be very properly assumed that where the National Labor Relations Board has held elections to determine the proper collective-bargaining agencies, and also where it has otherwise certified such agencies that had this machinery not existed there would have been sooner or later strikes at these plants. Up to September 1, 1940, 3,492 elections, in which 1,261,130 valid votes were cast, had been held by the N. L. R. B. An additional 6,459 requests for certification covering 1,715,768 workers have been filed with the Board. These cases have been disposed of through certification, consent, dismissal, or withdrawal. Thus, if such an agency for the peaceful determination of collective-bargaining representation had not existed, sooner or later a great part of the 9,951 requests for certification, covering 2,976,898 workers, would have been strikes for recognition.

Progressive organizations and labor particularly are justified in greeting with suspicion the hue and cry over the danger of sabotage. Under this hysteria Federal antisabotage legislation has been enacted and at the present time a model Sabotage Prevention Act has been tendered to the 44 State legislatures now in session. This type of legislation is pregnant with the most serious danger for organized labor and other progressive organizations.

At the last Congress the World War Sabotage Act was supplemented by legislation to cover similar crimes in peacetime. While this bill was going through Congress, John L. Lewis, then president of the C. I. O., submitted to certain Members of Congress an amendment that "Nothing in this act shall be construed so as to interfere with or impede or diminish in any way the right to strike." This amendment was rejected, with Senator TAFT specifically stating that the bill under consideration was intended to provide that the right of labor to strike in defense industries should be restricted. However, generally, labor was assured that this legislation was not aimed at its existing rights. No sooner did the bill become law than Chairman Sumners, of the House Judiciary Committee, stated publicly that the act could serve to prevent strikes in national defense and therefore practically all industry.

The model Sabotage Prevention Act, which is under consideration in all State legislatures now in session, makes it a criminal offense for anyone to—

"Impair or interfere with real or personal property with reasonable ground to believe that such act will undoubtedly delay or interfere with the preparation of the United States or any of the States for defense."

Further, the bill provides that—

"Whoever intentionally * * * omits to note on inspection any defect in any article or thing with reasonable grounds to believe that such article or thing is intended to be used in connection with the preparation of the United States or any of the States for defense"

shall be subject to criminal penalties.

Further, the bill permits the closing and restriction of the use of streets and highways upon which property used in defense production abut.

This bill is probably the most serious attack ever directed against organized labor. The enforcement of this legislation by innumerable States and local officials presents the greatest danger of abuse. Even if we are to have this sort of legislation, certainly it would seem to be much more advisable to have the control over its enforcement centralized in the Department of Justice at Washington. The experience of the Federal Government in the first World War in the enforcement of the Espionage Act, the treason statute, and in dealing with alien enemies confirms this view.

The proposed bill does not in any way give a reasonably definite description of what is meant by "sabotage" of national defense. Who is there that can determine beyond a reasonable doubt just when one will impair or interfere with property with reasonable grounds to believe that such act will interfere with the preparation of the United States for defense? The closing down of a plant impairs the property right, frequently enunciated by the courts, of operating a business, of making profits.

The provision regarding the intentional omission to note upon inspection a defect in an article virtually renders the ordinary worker a warrantor of the fitness of the product for use. An antilabor employer can use this threat against unorganized workers and assure himself freedom from any union in his plant.

Consider the threat to basic liberties which this bill holds. The attempt to embrace within the vague and sweeping language of the foregoing prohibitions any possible act which any person might concede to be detrimental to what is currently accepted by some persons to be national defense of necessity encompasses so many innocent acts that these sections really make for an ideal frame-up and witch-hunt statute.

There is also the unconstitutionality of the provision prohibiting the use of streets and highways. Recent Supreme Court cases, starting with the Hague case, have attempted to recreate for Americans the enjoyment of elementary constitutional rights and liberties. It is now proposed to circumvent these decisions by State legislative action which would open the door to the very practices which have been declared unconstitutional. In other words, we are being offered a model "denial of free speech, free press, and freedom of assembly" bill which will insure a rich harvest of local Hitlers.

The bill attempts by means of the provisions of one section to safeguard the rights of labor. The provision was taken bodily from the language of the National Labor Relations Act and provides that "nothing in this act shall be construed to impair, curtail, or destroy the rights of labor and their representatives to self-organization, to form, join, or assist labor organizations to bargain collectively through representatives of their own choosing and to engage in concerted activities for the purpose of collective bargaining or other mutual aid or protection."

This protection is completely illusory. The model bill menaces fundamental rights such as the right to strike, to picket, and to assemble. This menace is not eliminated by the foregoing provision. Even assuming that after many years of litigation appellate courts might wring from this section some protection to labor, such decisions would be of small comfort in the immediate situations out of which they arise. In labor disputes the immediate availability of basic civil rights may be a matter of life and death to the organizations involved. Often, as a result of the denial of these rights, a union may be destroyed and unable to carry an appeal to the courts.

CONCLUSION

The basic problem in considering any legislation affecting labor relations should be whether it is conducive or detrimental to the defense of the Nation. All reasonable arguments and facts would seem to point to the conclusion that the proposed legislation which I have discussed are menaces to the defense of the American people.

Labor peace and the resultant steady flow of production can best be achieved through fair dealing, not repressive legislation. Legislation proffered in good faith but capable of perversion is at least as dangerous as laws avowedly aimed at curtailing labor's freedom. Our experience during the first World War with attempts to prevent labor from striking indicates that such attempts tend only to bring on strikes. It should be clear to any patriot that the defense potential of our people is not raised by the reduction of their living standards, through confiscation of their bargaining weapons, and the stealing of their basic liberties. Defense demands diametrically opposite policies and programs.

What, then, should be embraced in a program of defense legislation? The C. I. O. supports fully a proper defense program. We are also in favor of legislation which will effectively carry out such a program. We agree with the proponents of the legislation criticized by us that the continuance of production is essential to defense. Our effort, however, is to discover the basic causes for interruptions in production, with a view to eradicating them.

Impartial investigation over many years has indicated that the refusal of industry to permit labor to organize into unions of its own choosing and to bargain collectively has been the most frequent cause of strikes; this truth is embodied in the declaration of policy in the N. L. R. A. There can be no doubt that violations of this right, as well as of others guaranteed by that act, are being committed daily and by leading figures in defense industries. This is the first and most important form of sabotage of national defense which must be disposed of. And what would be more effective and more in the interests of national defense than the enactment of legislation, adding criminal penalties for violations of the N. L. R. A.? With one stroke we should thereby have created the legal machinery whereby we might really put a stop to the sabotage of defense on a colossal scale. This done, we could add a further ounce of prevention through the Presidential issuance

of an Executive order denying Government and defense contracts to such violators.

Other changes to further the defense of the Nation might include vigorous enforcement of antitrust laws to keep prices down; extension of the application of the wage-hour law and the Walsh-Healey Act; furtherance of work relief and youth training; extension of social security and public housing; passage of the Coffee National Guard bill prohibiting use of the National Guard for strike-breaking purposes; and revival of the quiescent Civil Liberties Unit of the Department of Justice. And with the enactment of the La Follette oppressive labor practices bill outlawing the use of industrial spies, guns, and munitions by employers against their employees, we should be so far on the road to industrial peace as to have a practical assurance of uninterrupted defense production.

We feel confident that with the effectuation of the program of legislative and executive action outlined, the American people can be assured of safety from attack from any source.

Decentralization in Shipbuilding

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. PITTENGER. Mr. Speaker, recent newspaper items prompt me to comment on the so-called decentralization of industry, about which there was much discussion last fall. At that time we pointed out to responsible Government agencies what would happen if various industries filling orders in the national-defense program were to be permitted to expand. We indicated that skilled labor would be taken from the Midwest and located in overcrowded areas and that irreparable damage would follow such development.

In the State of Minnesota, the decentralization program has been lacking 100 percent in the location of new war industries. Skilled workmen are being taken elsewhere and the communities stand to suffer.

Take the shipbuilding program, for example, and you will find that Minnesota has been completely overlooked. Responsible Government officials who insist that they are following the decentralization program may have good intentions, but I am afraid that is all. I note in a recent newspaper item a statement that 65,500 tons of ships had been sunk by planes and submarines of the Nazis. I also note that the Navy Department had awarded $100,000,000 in contracts for small craft on the Great Lakes. It is only a question of time until all available facilities will have to be used. With unemployment at its highest point in Minnesota, and with no new war industries being located there, the people whose district I represent in Congress are entitled to ask questions and they have justification for complaints against expanding industries now located in the East or elsewhere, which program is directly contrary to the decentralization plan.

It has also been pointed out that private industry has a duty in the national crisis. Further, it is not giving consideration to the unemployment problem or to the fact that the Midwest is entitled to consideration. I quote the following interesting editorial written by Walter B. Brown, Sr., publisher of the Tribune-Herald of Chisholm, Minn. Mr. Brown says:

The Pittsburg Steamship Co. has placed contracts for construction of five of the largest ore freighters ever built on the Great Lakes. The boats are to cost $2,000,000 each and two of them will be built at River Rouge, Mich., and the other three will be built at Lorain, Ohio.

Not one of these mammoth vessels will be built at the head of the Lakes, but they will be paid for out of "tax earnings" now in the process of becoming effective by special-privilege legislation before the State legislature.

So here is $10,000,000 in boats to increase the transportation facilities for Minnesota high-grade iron ore, which is rapidly reaching the depletion stage and that the State would lower taxes on to pay for the boats to haul it, and the State labor does not even have an opportunity to build one of the boats.

His discussion of the problem of building ships is a most interesting one and furnishes much food for thought and leads me to ask the question, What is industry doing in efforts to bring about a decentralization so that products needed in national defense may be made in the Midwest?

The Encirclement of America

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1941

ARTICLE BY WALTER LIPPMANN

Mr. BRIDGES. Mr. President, I ask to have inserted in the RECORD an article by Walter Lippmann entitled "The Encirclement of America," which should be of interest to every thoughtful citizen.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW—THE ENCIRCLEMENT OF AMERICA

(By Walter Lippmann)

It would be reassuring to be able to deny that in the Soviet-Japanese pact the Axis has won a diplomatic victory which prepares the way for some exceedingly dangerous developments in the Pacific Ocean. In form, the pact seems to say that if Russia is at war with Germany, the Japanese will not attack Russia in Siberia and that if Japan is at war with Britain and the United States, the Russians will not attack Japan. But while this looks like a kind of equalized arrangement which might become inconvenient for Germany, in fact Russia has gained nothing and has done exactly what the Axis wants most to have her do.

For Russia in Siberia was in no real danger of an attack by the Japanese Army. The Chinese are engaging so much of the Japanese Army that another war on land would be as pointless as it would be costly for the Japanese. But the Japanese Navy is not involved in the China war; it cannot be used against Russia; it can, however, be used most dangerously against the British-Dutch-American position in the Netherlands Indies, Singapore, and the Philippines. Whereas Russia had nothing to fear from Japan, there was every reason why Japan should fear Russia. The Soviet air force at Vladivostock is a menace to Japan; the Russian Army in Siberia is a menace to Manchukuo; the Russian support of China is a menace to Japan. It is too early to say whether Stalin's declaration of "neutrality" in Asia means that he will now abandon China, or even disrupt her by internal Communist revolt, and then partition China with the Japanese. But at the very least, Stalin has assured Mr. Matsuoka that Russia will not intervene if Japan goes to war in the Pacific.

This assurance, like the Stalin-Hitler pact of August 1939 is certain to strengthen the Japanese war party of which Mr. Matsuoka is a leader and to weaken greatly the more moderate party in Japan. The risks of Japanese aggression in the Pacific are sure to seem less in Tokyo, now that Russia, the nearest neighbor to Japan, has been neutralized. We must expect, not perhaps an immediate frontal attack upon the British or the Dutch in the southwest Pacific, but a rapid concentration of Japanese power for such an attack, and a series of aggressive moves designed to test the defenses of the region, to test the will to resist, and to undermine the power to resist. This Soviet-Japanese pact removes one of the chief practical and psychological obstacles to Japanese participation in the world war.

The fact that Japan has also promised not to help Hitler attack Russia means nothing. For Japan cannot help Hitler attack Russia and Hitler does not need Japanese help anyway. Whether European Russia is to be conquered by Hitler or forced to capitulate or driven, like Hungary, to help Hitler, are questions which will be decided in Europe and in the Middle East. The fact that Stalin has made it so much easier for Japan to enter the war against the Allies can only weaken him still further in Europe. He has gotten nothing out of this agreement except an even greater isolation in the face of the Nazis. He is not safer merely because the Japanese, who never meant to attack him, have said they will not attack him, and he is much weaker because he has seriously increased the pressure upon Great Britain and the United States.

That this pressure is being exerted according to a well-considered plan devised by Tokyo and Berlin is less than ever open to serious doubt. As the Nazis move into Africa toward Suez on the one side and toward the Atlantic ports on the other, the Japanese are moving toward the South Pacific. If the two operations succeed, and if concurrently the assault on Great Britain can be carried forward or even intensified, the totalitarians will have cut to pieces the Anglo-American position in the world. They will have done on a grand scale what they have done on a smaller scale in their Polish, their French, and their Balkan campaigns.

By their Asiatic campaign they will have isolated China, India, Australia, the Netherlands Indies, and the Philippines, and rendered impossible any effective resistance. By their African campaign they will have isolated Russia, Turkey, and the French Empire, and from Dakar and Casablanca they will have isolated North America from South America. By their campaign against Great Britain in the North Atlantic they will have isolated North America from the British Isles.

This is the strategical plan, now plainly in actual operation, for the domination of the world. It is not a new plan. It has been

the plan for years—since the conclusion of the so-called Anti-Comintern Pact of 1936—and it has been carried out step by step under the eyes of the whole world because the free peoples could not and would not believe that a plan of conquest which took time and did not therefore touch them immediately would ever touch them. They have preferred not to believe the evidence: to say while the peril was distant, that it did not exist, and when it became imminent, that it was too late to do anything about it.

The fact of the matter is that the European war is expanding into a world war, and that in 1941 it is going to be decided at Singapore, in the Mediterranean, and West Africa, and finally in the battle of the Atlantic, whether the United States, cut off from Asia, from Europe, from Africa, from South America, and from the British Isles, is to be left alone, entirely isolated, incompletely armed, and encircled by the world-wide totalitarian alliance. To say that the President's measures and gestures are moving the United States into this world war is the exact contrary of the truth as it is actually being disclosed. This world war is closing in on the United States from all directions, in the north Atlantic, in the south Atlantic, and in the Pacific.

How ill-prepared are our people to grasp what is happening is demonstrated by the approval which the isolationists have given to the commitment to defend Greenland. Because that land is within the imaginary limits of the Western Hemisphere, they approve the project to place American troops in Greenland and the pledge to defend it. Yet, if they will look at a map, or better still at a globe, they will see that Greenland can be defended if the fortress of the British Isles and the might of the British Navy and Air Force stand between Greenland and Europe. But if they do not stand, then the troops we send to Greenland will be placed in deadly jeopardy and the pledge we have given to the Danes can be carried out only by one of the most difficult and dangerous operations it is possible to imagine.

Anyone who approves the occupation of Greenland and does not redouble his willingness to give support to Britain is too innocent to have learned the elementary facts of life. And in their state of dangerous innocence, the people are given false assurance that we have another "base" from which to defend the Western Hemisphere and, in consequence, are encouraged once more to believe that they can be satisfied with the existing plans and the existing tempo of the American production and of the American mobilization.

In fact, the situation is much more critical than the administration has yet dared to say, and the prospects for 1941 are much more serious than the President has as yet made plain to the people of this country.

Something About the Strike at Ford's

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

ARTICLE FROM THE LEGAL COURIER, DETROIT, MICH.

Mr. HOFFMAN. Mr. Speaker, under permission granted, the following is quoted from the Legal Courier, published at Detroit, Mich., on April 4, 1941:

INSULT AMERICAN FLAG—FORD RIOTING STRIKERS, BY ATTACKING THE NAVAL SCHOOL, A FEDERAL TRAINING UNIT, BESMIRCHING THE NATIONAL COLORS, SHOWED THEIR COMMUNISTIC TRAINING

Just a few weeks ago, when high-ranking officials came to Detroit to accept the training school Henry Ford had built for the education of mechanics for the airplane service and presented it to the Government, it was heralded as the greatest gift of any American to the present defense program. Here more than 1,000 young men, selected by the Government, and an official unit of the Navy, are housed and educated at the Rouge-Ford plant.

During the wild rioting of the Hitlerized unit of the C. I. O. on Wednesday this school was raided, the American flag town down and trailed in the mud, while rioters stormed the buildings with bricks and stones. The hundreds of young men who have sworn to defend their country with their lives were vilely insulted by these rioting C. I. O.-ers led by rank Communists and "reds."

When this great gift to the Navy was accepted by Secretary Frank Knox, he pronounced it the most valuable and beneficial to the defense program of any Federal unit. The C. I. O.-ers, insulting the young Americans of its personnel, were told that when the Ford-Rouge plant was under their control, these boys now training to defend the Nation would not be allowed inside. They were termed "scabs."

Less than 8 percent of the Ford employees at the Rouge plant participated in the strike. More than 5,000 loyal workers remained at their posts during all of the internal rioting and are still inside. Some of the fiercest fighting was inside the plant and occurred when strikers attempted to wreck machinery.

The Ford plant will be opened and the big defense manufacturing for the Nation in the present war crisis will be resumed just as soon as the Michigan highways and public roads are opened for traffic. So far Governor Van Wagoner has made no attempt to clear the highways and protect the public.

The Federal Government will come to the rescue of the munitions plants in this State only upon request of the Governor. The strike situation and plans to seize property and wage civil war could not have been any secret to the Governor, as he had been invited to secret meetings, at which the plans were fully discussed, and the thugs, a majority of whom never were Ford employees, were told how to create street riots, block highways, and assault the women and children.

When the State police did arrive in Dearborn no attempt was made to clear the highways. This apparently was orders and showed conclusively that Van Wagoner had gone sled length for the Hitler program to curtail the defense production in Michigan. Probably, on the eve of an election, it was too much to expect that Van Wagoner will suddenly turn American.

If there is any spot around the Ford works that the C. I. O. hates worse than the Navy training school it is the Ford trade school. Here high-school boys are given jobs and educated in industrial work along the lines in which they show the most interest. Thousands of workmen in Detroit industries came from the Ford trade school. So it was evidently the part of the C. I. O. thugs to beat up and slug these lads who were getting a chance to start life with both feet on the ground. In the brutal language of the underworld these boys were told to "get the hell out" and warned never to come back.

To prove their loyalty to not only the Ford Co. but to their country, all members of A. F. of L. units not only remained at work but have notified the company that they are ready to return to their jobs. Many of the A. F. of L. workmen tendered their services to Mayor Carey as special policemen.

What really started the final effort of the C. I. O. to take over the Ford Rouge plant? Well, a couple of weeks ago eight men were reinstated at the direct request of Mediator Dewey of the Federal Government. They were known Communists and agitators. These men never went back to work, but inside the plant just raised hell and secured stoppage of machinery whenever possible. They were fired.

"What is more," it is explained by Mr. Bennett, "they never will be employed again at any plant of the Ford organization."

All A. F. of L. units, some of whom have had members in the Ford plants for years, are out getting new members during the C. I. O. riots. President Green has not only his secretary, but also key organizers, in Detroit, just to keep posted and also take advantage of the situation.

Evidently aiming to aid and assist the C. I. O. in its illegal and stupid acts, it was Governor Van Wagoner who ordered the Ford-Rouge plant closed. The company under the Wagner Act could not shut down due to its heavy defense commitments. The Federal authorities on the job call the act of the Governor stupid.

The Governor ordered 350 State police to Dearborn but they are not in charge of law enforcement. The State police take their orders from the C. I. O. This is not stupid; it is asinine.

Now the C. I. O. leaders are putting up a howl that the Government take over the Rouge plant and start production of war material. This the Government has the right to do under the law and such a step probably would not be contested.

There are in round numbers 90,000 men employed at the Rouge plant. Of this number less than 15 percent are employed in defense work. That is all that would be employed under Government operation. Under the law all private jobs would be dropped. The other 75,000 men would be idle for an indefinite period.

These facts are well known by Mr. Knudsen.

The less than 15,000 employed in turning out defense jobs are veterans in Ford service, two-thirds World War veterans which means that they are not affiliated with the C. I. O.

The American Federation of Labor has quite a staff of its field men in Detroit. They have been carrying on a persistent drive for weeks in all Ford units. The bludgeon, gangster system, was not used. The A. F. of L. has had locals in Ford plants for years. John J. Murphy, national chief of staff of the A. F. of L. drive in the auto industry, this Friday made the following statement:

"We now have 30,000 members in the Ford-Rouge plant. All of our craft unions are represented. The American Federation of Labor is entitled to full credit for the benefits the workers of America now enjoy. If the A. F. of L. wins the bargaining rights at the Rouge plant, the public and the employees have my assurance that the federation policy will be diametrically opposed to the strike method used so disastrously by the C. I. O."

Members of the Michigan Legislature went home for the week-end and the election, to check public pulse in regard to labor legislation. Right now they are ready to put teeth into the Michigan labor laws. Here are some of the probable results of the Ford-Rouge riots and closing down of the super arsenal of the Nation in its defense program:

Law to compel all labor unions to become duly incorporated so that they would have legal responsibility; be under State control, making reports as to membership and finances.

Outlaw the check-off system in payment of dues.

Restrict pickets to plant employees and men desiring to work must be protected.

Bar unemployment compensation for workmen involved in strikes.

Truth About Former President Hoover's Action In Connection With Bonus Marchers in 1932

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

Mr. MICHENER. Mr. Speaker, at times and on occasions since the unhappy visit of the bonus marchers to Washington in 1932, inaccurate, if not malicious, statements have been made by some writers and speakers concerning the participation of former President Hoover in that unfortunate affair.

On March 23, 1941, the American Forum of the Air discussed the question Shall the Small Invaded Nations Be Fed? One of the speakers upholding the negative side of the question was a Mr. Rex Stout. In the discussion, and in an apparent effort to discredit former President Hoover, who advocates the feeding of the small invaded nations, Mr. Stout repeated these incorrect statements concerning Mr. Hoover and the bonus marchers.

On the American Forum of the Air program of April 6, 1941, the Mutual Broadcasting System, in a spirit of fairness and truth, caused its announcer to make a statement to the American people in an effort to correct any erroneous impression made by Mr. Stout's statement. Therefore, pursuant to the permission granted to me by the House, and in the interest of accuracy and fair play, I include the statement of the Mutual Broadcasting System, which is as follows:

The Mutual Broadcasting System regrets the attack made upon the character of former President Hoover by Mr. Rex Stout, on our American Forum of the Air, on March 23, 1941.

Mr. Stout stated that under the order of former President Hoover Federal troops met with bullets and bayonets a horde of hungry, homeless Americans who visited Washington in 1932. The records shows that an aggregation of many thousand ex-service men and others marched on Washington to prevail upon Congress to appropriate some $2,500,000,000 for bonuses. Congress refused to make the appropriation, and adjourned. Before adjourning Congress had made provision to pay the transportation of the bonus marchers to their homes. After the adjournment of Congress a number of bonus marchers and alleged radical agitators remained in Washington. On the morning of July 28 the civil authorities of the District of Columbia, acting through the police department, requested the bonus marchers to evacuate certain old buildings which they were occupying in the vicinity of Pennsylvania Avenue and Tenth Street. This the bonusers declined to do. A riot ensued in which 1 policeman and 1 bonus marcher were killed and more than 50 people were injured. Thereupon the Commissioners of the District of Columbia advised the President that a riot was in progress, and that the District of Columbia police were unable to maintain law and order, and requested the President to assist in reestablishing civil authority by bringing Federal troops to the scene of the riot.

In the afternoon of that day, while the riot was still in progress, the President, through the Secretary of War, did bring Federal troops to the scene of disorder. After the arrival of Federal troops, although tear gas was used not one shot was fired, not one person was bayoneted, not one person was seriously injured. If Mr. Rex Stout intended to imply that the facts were otherwise, he was in error.

Fallacies of Propaganda Against St. Lawrence Project Exposed

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

EDITORIAL FROM THE DULUTH (MINN.) HERALD

Mr. PITTENGER. Mr. Speaker, across the water the nations of the earth are now engaged in a program of destruction. Here in America we are engaged in a program of national defense, which calls for constructive development of every project that will contribute to greater efficiency and to the welfare of our people. Within this category the agreement between Canada and the United States to utilize the St. Lawrence for power and navigation purposes becomes paramount. The foes of the St. Lawrence are busy, however. Many of their objections are noted and answered in an editorial in the Duluth Herald, of Duluth, Minn., for Tuesday, April 1. The editorial is as follows:

[From the Duluth (Minn.) Herald]

THE FOE'S BIG GUN

Probably the ablest arguments against the St. Lawrence waterway that we can expect to see come from the New York Times. The Times argues that the completion of the seaway make take longer than the President thinks it will; that the President exaggerates our need for power and minimizes the other sources of it; that the construction of the waterway will use labor, materials, and power in huge quantities; that there are immense engineering difficulties; that Great Lakes harbors must be improved at staggering cost before those ports can build ships for the oceans of the world, and that those now guiding the destiny of Britain would probably prefer more planes, more ships, more guns, and more direct material aid if they could choose between that alternative and the seaway.

To begin with, the President and many others who have studied this project believe that it is an indispensable part of any long-range program of national defense. The longer the job, the sooner we should begin it, in their opinion. Millions can see the need of the seaway now who could not see it in 1934. All may be able to see it in 1945, even the people in New York and the editors of the Times. And by that time it may be too late to complete the seaway in time to use it as it should be used in national defense.

The President is thinking of our need of power next year and the year after that, especially if this proves to be a long war. The Times talks of the present power situation, of surpluses that may be wiped out in a few months.

Of course, there will be engineering difficulties and a great expenditure of labor, materials, and power in building the waterway; but this at most could be only a tiny fraction of our potential national effort, and we could be sure of getting that back many times over when the waterway was completed.

As to those Great Lakes harbors, many of them could build fair-sized merchant and fighting ships today with little additional dredging if only there were some way to get them from Lake Ontario to the sea. After all, New York Harbor needs a little dredging now and then, too.

Oddest of all the Times' arguments, though, is the implication that construction of the seaway will mean fewer ships, fewer guns, and fewer planes for Britain. The evidence is all the other way; that in the end it will mean more ships, more guns, and more planes, and that for the time being it will not mean one ship, one gun, or one plane less for Britain. But the Times comes close to hinting that the seaway might be a subtle Nazi plot.

Unfortunate, too, is the Times' hint that such great decisions as this might be referred to those directing Britain's war effort. The Americans and Canadians are doing a great deal to help Britain and preparing to do a great deal more, but they are not quite ready to have a little group in London decide whether the hour is right to begin such a great improvement. And to their credit those men in London have not, so far as anyone knows, attempted to interfere with this natural development of the western world.

The Cotton Outlook

EXTENSION OF REMARKS

OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

STATEMENT BY I. W. DUGGAN

Mr. MILLS of Arkansas. Mr. Speaker, under leave granted to extend my remarks I include a statement delivered by Mr. I. W. Duggan, Director, Southern Division, Agricultural Adjustment Administration, on a transcribed radio program with Members of the Arkansas congressional delegation, Friday, April 11, 1941, entitled "The Cotton Outlook":

THE COTTON OUTLOOK

The cotton situation can be summed up briefly in this fashion:

We have on hand a tremendous world supply of American cotton—25,000,000 bales at the beginning of this season. We are going to end this season on July 31 with one of the largest, if not the very largest, carry-over in history—about 14,000,000 bales—which will mean an even larger supply next year if a normal crop is raised. This will be due in large measure to the sharp curtailment of our exports because of the war abroad. There is, however, one bright spot in the cotton

picture. That is, that this year our domestic consumption is expected to be the highest on record. It is expected to run more than 9,000,000 bales.

We are consuming more cotton at home because our vast national-defense program is giving more work to more people and they have more money to spend for cotton goods. The increase in domestic consumption, as helpful as it is, still lacks a lot of making up what we have lost through the temporary disruption of our foreign trade. In addition, farmers should bear in mind that the increase in cotton consumption at home is due almost entirely to the general business activity brought about by the defense program. They should not be too optimistic about holding all of this increased domestic consumption after the war is over.

With a continuation of the present defense program and a consequent increase in consumer purchasing power, it is anticipated that the present high rate of consumption will continue through the 1941 season and possibly longer. In January of this year, domestic mills consumed more cotton than has ever been consumed in this country in any single month in the past. The daily rate of mill consumption was even higher in February.

The high rate of mill consumption is very gratifying to all cotton farmers as it means that we are using more and more of our surplus cotton. However, there is one angle of this phase of the cotton situation that is puzzling to farmers and that is the sharp increase that has taken place in mill margins while the cost of raw cotton has shown only a very slight advance. The mill margin, as most of you probably know, is the difference between the price the mill pays for cotton and the price for which it sells the manufactured cloth. The constant widening of this margin, with no comparable increase in cotton prices, apparently is causing serious concern among cotton farmers—and I think justifiably so. If the price of cotton had increased as much as the mill margin has in the last year, cotton would be above parity for the first time in 17 years.

Now that we have had a brief look at the cotton situation, suppose we try to see what the average cotton farmer can do to offset the temporary loss of his foreign markets and to try to make a go of it in spite of the fact that the things he buys are likely to increase in cost. Most people familiar with the southern situation probably would agree that one of the best things the cotton farmer can do at a time like this is to produce on his own farm as much of the things he needs at home as it is possible to do. We all know that's an old story—this business of living-at-home—but this year more than ever before cotton farmers are going to find it a wise thing to do. They are going to need that home-grown food and feed very much because when the time comes to buy, they are going to find that it will take more and more cotton to buy less and less food and feed. In other words, the world situation is such that the price of things cotton farmers buy are very likely to increase faster than the price of the cotton they sell.

The Department of Agriculture, and the State land-grant colleges and extension services, are doing everything possible to help farmers increase production of the things they need at home.

The Department recently announced a program designed to increase the supplies of hogs, dairy products, chickens, and eggs. An increase in the production of these products is being asked in order that we may have ample supplies for the United States, Great Britain, and the other democracies. Under the expanded program, the production of these products is being stimulated through the support of prices at or near parity levels for a period extending through June 30, 1943.

These changes in no way affect the provisions of the triple-A farm program in Arkansas. For cotton, wheat, and rice, it is still necessary to limit the production to present acreage allotments in order to give price support to these crops.

These new developments, however, do remind us of the urgent need for every producer in Arkansas to make full use of the provisions of the present triple-A program. They serve to put additional emphasis on the importance for every farmer to produce enough home-grown food and feed to take care of all of his own needs on his own farm.

The triple-A program from the very beginning has encouraged the production of food and feed for home use in the South. In 1940 the program was broadened to include a small garden payment. That payment, $1.50, is barely enough to pay for seed, but it serves to call attention to the value of the home garden, and we believe it has helped considerably in getting home gardens in the South. A farmer may be broke, but with home-produced food and feed, there is no need for him to be hungry.

A few weeks ago the Department announced a supplementary cotton program as an addition to the existing triple A farm program. The supplementary program encourages additional voluntary reduction of cotton in 1941, plus increased consumption of cotton goods, by compensating cotton farmers for their additional acreage reduction with cotton stamps which can be used to purchase cotton goods. Each family participating in the supplementary cotton program also is eligible to earn a special payment of $3 in addition to the regular garden payment for carrying out a specified food-production-for-home-use practice.

We hope that Arkansas farmers will take full advantage of all of the provisions of the triple A program, particularly those which encourage production of food and feed for use at home. In this way they can work with their Government to partially offset, for a while at least, the effect of the temporary loss of foreign markets due to the war.

Has Unemployment Been Solved?

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a self-explanatory newspaper dispatch, printed in a Pacific coast daily, which indicates conclusively that unemployment is still an acute and formidable problem in our midst. It is said that he who runs may read. Let nobody be deluded into the erroneous conclusion that because of our huge national-defense effort the unemployment problem has been solved and there is no need for a further program of public works, such as the W. P. A. What are we going to do for the widows and spinsters, particularly those over 40 years of age? Shall we close up the W. P. A. and precipitate them back into the nonexistent soup lines? Shall we cut the tenuous thread by which the Sword of Damocles of insecurity, worry, and want is suspended over their graying heads? What are we going to do for the men of 45, who have been dumped upon the economic scrap heap by the efficiency experts and technological improvements of modern industry?

It has been said that the Rhine or the British Empire is our first line of defense. I venture the suggestion that the morale of the American people is our first line of defense. We should restore or inculcate a burning faith in democracy in the hearts and minds of all the American people without exception. The most effective way to do this is to eliminate want and insecurity, and forever eradicate the specter of unemployment.

The clipping is as follows:

7,000 WAIT IN LINE FOR $14.42 A WEEK JOBS

NEW YORK, March 11.—"Wanted: 1,000 laundry workers and hospital helpers. Salary: $14.42 a week."

When New York's Municipal Civil Service Commission advertised those jobs, some 24 hours before the board was due to take applications the line-up of job seekers started forming outside its Long Island City office.

By 9 a. m. the day applications were taken the line blocks long had at least 7,000 men and women waiting.

First in line was 32-year-old Charles G. Rubin, a chemist graduate of City College, who shamefacedly told reporters:

"It is a sad commentary of conditions when a college man has to apply for such a job. But I have to eat."

Decentralization of Industry

EXTENSION OF REMARKS

OF

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

Mr. MILLS of Louisiana. Mr. Speaker, it would appear the President of the United States and the members of the National Defense Council should take into consideration the necessity of decentralization of industry in the interest of national security.

FOR THE GOOD OF THE NATION

We, the Governors of the Southern States, call to the attention of the President and others in authority the dangerous and unwarranted centralization of national-defense production in the older and more congested industrial areas.

Up to January 31, seven and one-half billions of national-defense contracts (excluding ship building) had been let, of which only 7 percent were placed in 11 Southern States. Of a total of 302 new plants, only 24 were located in the South.

Of the eleven and one-half billions of prime contracts awarded up to February 15, a total of 80 percent has gone to 62 companies or financially interrelated groups of companies. This short-sighted policy of centralizing national-defense contracts is dangerous to the welfare of the Nation because it will inevitably result in—

1. A shortage of labor and therefore the movement of large labor reserves out of the

South into highly industrialized areas, making for more congestion and creating vast economic problems when the emergency is over.

2. Create intolerable bottle necks in transportation of both raw materials into the congested industrial areas and in the shipment of finished products.

3. Create vast plant and production facilities in areas already overbuilt industrially, which will become idle and useless when the need for defense production is at an end.

We believe that it is to the best interest of the Nation to decentralize production for national defense, to establish plants where raw materials supply and loyal labor are readily available, where power and transportation facilities are ample, where climatic conditions are most favorable for year-round production, and where such plants will be needed for other production uses when the needs of national defense have been fulfilled.

The South offers these and many other industrial advantages and is ready and willing to use its full resources for national defense.

The best interests of the Nation can be served only if full use is made of the South's resources by industrial plants established in this area. And the same holds for other sections of the country where resources and labor are plentiful and where industrial congestion is not a liability. We further believe immediate steps in this direction are necessary.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

EDITORIAL FROM THE DETROIT NEWS AND LETTER FROM THE NEW YORK TIMES

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Detroit News, Detroit, Mich., entitled "Unsound Opposition," as well as a letter in the public press written to the New York Times, on the St. Lawrence seaway project, showing its value as an aid in after-war competition:

[From the Detroit News]

UNSOUND OPPOSITION

One of the arguments made by Senate opponents of the St. Lawrence seaway is that before its construction is completed the defense emergency will be over.

It is a sufficient answer to point out that the seaway's contribution to national efficiency will be great in either war or peace. Even if Britain wins the war, as we hope and trust, this great waterway, admitting ocean ships to the heart of our continent, will be needed. The competition in world markets will be no less keen, certainly, than it has been in the past.

However, there is another answer, which President Roosevelt himself has made on at least two occasions. The United States, he said, is building and planning to build war vessels that will take longer to complete than the seaway. If they are justified—and no one questions that—how can it be said the seaway would take too long?

It might be added, moreover, that unlike war vessels, which become obsolete, the seaway would remain as a defense asset as long as the Great Lakes remain.

We think, however, that we already have said enough on this point to demonstrate the complete fallacy of the argument in question. It is not, in truth, an honest argument, sincerely made, and in that respect it shares the character of all other arguments we have seen in opposition to the seaway.

The reason is that, as we pointed out the other day, the real objections of those opposing it will not bear inspection. The source of this opposition, now as always, is the utility and rail interests primarily and their satellites, their motives wholly selfish.

We do not admire those who front for these private interests, helping to cloak their narrow selfishness in pretended concern for the national welfare. For 40 years every Government inquiry, every statement by the Presidents, every military report on this subject has held the seaway vital to the national welfare. Were it not for the above-named opposition, the seaway would be open now, available for defense.

SEAWAY VIEWED AS ASSET—ST. LAWRENCE PROJECT HELD VALUABLE AS AID IN AFTER-WAR COMPETITION

TO THE EDITOR OF THE NEW YORK TIMES:

Your recent editorial on the proposed St. Lawrence seaway hinges on a premise on which there appears to be general misunderstanding, largely because late information has not yet been made generally available. Your premise is that too many years would be required to complete the seaway for effective aid to come from Great Lakes shipyards to the benefit of England in our present program.

You observe that President Roosevelt places 1945 as the probable date of completion, which you say other competent engineers place at 1947 or 1948. This time element was adequately dealt with by Pierrepont Moffat, United States Minister to Canada, who early in March stated that "if the full burden of our expanding ship construction must fall on seaboard shipyards, the time required to complete the vessels themselves must, in many instances, be increased by the period necessary to construct new shipyards and facilities. With this in mind, it is apparent that the deep waterway could be completed in time to provide an outlet to the sea for many of the new vessels included in the present program."

WORK FOR SHIPYARDS

Navy officials also point out that Great Lakes yards could take over the long-range phases of the construction burden, freeing seaboard facilities for concentration on the type of craft for which there is an immediate and urgent need.

Great Lakes shipyards could not only be building fighting craft for convoy duty but cargo ships to sail within those convoys. The capacity of the Great Lakes yards would allow for the present handling of a billion dollars of defense materials if the seaway were assured. Today less than a tenth of that capacity is being utilized for either fighting or cargo ships. One Wisconsin firm is building submarines, but unless a deepened St. Lawrence channel offers free passage to the sea, the submarines will have to be cut into sections and reassembled at a seacoast port.

Another impression readers of your editorial may have obtained is that the St. Lawrence project is new. It is not. It seeks to modernize an existing channel outmoded by the demands of present-day ocean-going commerce. Ships with not more than 11-foot draft can now get through in increasing tonnages every year. The project calls for deepening the channel to 27 feet, which would admit all but the largest liners.

Large liners do not carry cargo in volume, which is the main purpose of the St. Lawrence project. We want to get our merchandise out to the sea at low cost so that we will be in a favorable competitive position in the world's export markets after the war. Beyond question, whichever side wins, competition will be intense, and if we can help the automobile and related industries in the Midwest to better their competitive position in world markets, we will benefit all America.

ICE HANDICAP DISCOUNTED

Your editorial also touches on a familiar argument advanced against the seaway—that it will be ice-bound for several months of each year. So it will. But so is the St. Marys River, connecting Lakes Superior and Huron, one of the northernmost points on the entire St. Lawrence route. Despite the ice, the St. Marys River in one season handled the same approximate tonnage as the Panama and Suez Canals and the ports of London and Liverpool combined, and this before the present war cut into world tonnages. What can be done on the St. Marys can be done throughout the seaway.

I commend to the attention of every one sincerely interested in the seaway the results of Government studies made under Dr. N. R. Danielian and published within recent weeks by the Department of Commerce. If there is a single specious argument against the seaway not factually answered in those studies, I have yet to hear that argument.

To me the most convincing generalization in favor of the seaway is the fact that every President—Republican and Democrat alike—in the past 30 years has endorsed it. In fact, it was sponsored in a plank in the Republican platform of 1932. Our Presidents have seen it from the large perspective of national welfare, above sectional and political prejudices.

W. C. COWLING,
Chairman, Detroit-Great Lakes-St. Lawrence Seaway Committee.
DETROIT, MICH., *April 4, 1941.*

Resolution Against War

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

RESOLUTION VOTED AT DETROIT ANTI-WAR RALLY

Mr. SHAFER of Michigan. Mr. Speaker, 5,000 American citizens gathered in an America first committee antiwar rally in Detroit April 7, voted unanimously to respectfully submit the following resolution to Members of Congress as a sincere indication of their earnest desire to keep the United States out of war:

Whereas Franklin Delano Roosevelt, in seeking election as President of the United States for a third consecutive term, made the following specific pledge to the American people: "The United States today is at peace and is going to remain at peace," and also "I repeat again that I stand on the platform of our party: 'We will not participate in foreign wars' "; and

Whereas the people of this country, in reliance upon that assurance, reelected President Roosevelt to the Presidency in November 1940; and

Whereas the course of events since that time, certain public statements of the President, and the attitude of the administration have given just cause for grave apprehension respecting the intention of the President to abide by this solemn engagement with the American people: Now, therefore, be it

Resolved, The people of this country, as appears from repeated polls and tests of public opinion, are overwhelmingly opposed to involvement in the present European war. We therefore insist that this administration has no legal or moral right to risk our involvement in that war by acts which would invite or provoke an outbreak of hostilities: Be it further

Resolved, That we commend the Members of Congress who, by their activities and their votes, have truly reflected this desire for peace, and we pledge to them our continued support and allegiance.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. JOHN A. MEYER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

LETTERS AND STATEMENT RELATIVE TO ST. LAWRENCE SEAWAY

Mr. MEYER of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters and statement:

BALTIMORE ASSOCIATION OF COMMERCE,
Baltimore, Md., April 2, 1941.

The Honorable JOHN A. MEYER,
House of Representatives,
Washington, D. C.

DEAR MR. MEYER: The Association of Commerce, acting for the commercial and maritime interests of Baltimore, is opposed to the Great Lakes-St. Lawrence navigation and power project, which has been submitted to Congress in the form of a United States-Canadian agreement.

The attached statement describes our position and gives supporting data. We believe the project is unsound on a national basis, opposed to the best interests of Baltimore and Maryland, and unjustified as a national-defense measure.

We hope that you and the other members of the Maryland congressional delegation will oppose the ratification of this agreement, and that you will advise us of your intention to vote against it. In our opinion this project would have adverse effects of a far-reaching character on the welfare of this city and State.

We would appreciate hearing from you on this subject, and will be glad to furnish any additional data you may require.

Very truly yours,

G. H. POUDER,
Executive Vice President.

THE ST. LAWRENCE SEAWAY PROJECT—STATEMENT IN OPPOSITION BY THE BALTIMORE ASSOCIATION OF COMMERCE

1. POSITION OF BALTIMORE

The commercial and maritime interests of Baltimore are opposed to the Great Lakes-St. Lawrence navigation and power project. They regard it as economically unsound on a national basis and as extremely menacing to the future welfare of the port and city of Baltimore. They believe that this project, which has lacked economic justification through the years and is now urged as a defense measure, is contrary to the real and immediate needs of national defense.

2. STATUS

A United States-Canadian treaty to effectuate the seaway was defeated by the Senate in 1934. Now, 7 years later, with every resource of the two countries strained to meet vital emergencies of the present, it is again advanced. On March 19, 1941, at Ottawa, the United States and Canada signed an agreement for the development of power and navigation facilities in the International Rapids section of the St. Lawrence waterway, and this was transmitted by the President to Congress on March 21. Ratifying legislation is to be introduced, involving the appropriation of funds. The agreement has been referred to the Committee of the Whole House on the state of the Union, and it is hoped will be referred later to specialized committees for handling in orderly process. Although the agreement appears to be a treaty in everything but name, it does not require the two-thirds Senate consent necessary for treaty ratification.

Congress will thus be asked for the authority and the funds to inaugurate a waterway with channels of minimum 27-foot depth and 450-foot width, over a distance of 1,300 miles between Montreal and Duluth, including 67 miles of canals and 18 locks. Involved will be an increase in depth of the St. Lawrence River in Canada and along the border of the United States, the deepening of the channels and canals connecting the Great Lakes and the installation of hydroelectric plants on the St. Lawrence. A Great Lakes-St. Lawrence Basin commission, with the two countries equally represented, would be established.

The President on October 17, 1940, appointed a St. Lawrence Advisory Commission, and allocated $1,000,000 from emergency funds to the Corps of Engineers and the Federal Power Commission to undertake preliminary investigations and surveys. A St. Lawrence survey was set up shortly thereafter by the United States Department of Commerce to conduct economic studies, under the direction of Dr. N. R. Danielian. By the end of March several reports dealing with various phases of the project were issued, and others will follow. No attempt is made in this statement to refute the arguments in behalf of the proposal which are advanced in these documents. The statement is also confined largely to navigational and transportation aspects.

3. BACKGROUND

The feasibility and desirability of constructing a deep-draft waterway between the Great Lakes and the Atlantic Ocean have been debated for 45 years. Many commissions and boards have discussed possible plans, and much of the study has been theoretical and produced little practical data usable for sound conclusions. Opinions of commercial engineers have varied widely regarding technical aspects of costs, routes, dams, locks, etc. Throughout the period there has been continued and growing opposition from civic and business interests in the United States and in Canada. This is now widespread, based particularly on the danger of diverting needed war funds to a vast project of uncertain value which cannot under any circumstances be applied to present defense needs, and which would injuriously affect the future of United States industry, seaboard harbors, and transportation agencies.

The United States Senate in 1934 defeated the St. Lawrence Seaway Treaty by a vote of 46 ayes, 42 nays, 3 paired, and 5 not voting. Both Maryland Senators opposed the project. The treaty required a two-thirds affirmative vote and thus failed of ratification.

4. COST

The actual total cost of the proposed St. Lawrence seaway project is unknown. Previous proponents have estimated that it would involve expenditures of at least $550,000,000 divided between the two countries, and with Canada receiving credits for improvement work already performed. The total cost of the project in the International Rapids section is now estimated at $266,170,000 to provide for the 2,200,000-horsepower power project and waterway improvement in that section. The necessary expenditures in other sections are not specified.

It is likely that the final cost would reach $1,000,000,000 and possibly more. Past experience has shown that the actual cost of waterway construction is usually greatly in excess of the estimates. The Panama Canal cost $375,000,000 and was estimated at $160,000,000. The Suez Canal, $80,000,000; estimate, $30,000,000. In all events the seaway cost will be astronomical, and a large part of it will come from taxpayers of the United States, who will be adversely affected.

5. NATIONAL DEFENSE

The St. Lawrence project is being currently advocated for national defense. The principal arguments are: (1) Construction of ships in a protected inland area; (2) development of hydroelectric power for emergency needs and processing of strategic materials.

By the lowest estimate of time, the project would require from 5 to 6 years for completion. The present requirements of national defense, particularly those involving ship construction and power production, could not be held in abeyance for that period, nor is it conceivable that our pressing needs for preparedness could in any way be supported by this project. Meantime, vast sums of money which is essential for defense measures now possible of accomplishment, and skilled labor vital to the present defense program, would be diverted. The construction itself must be considered highly vulnerable in war, for the intricate system of locks and dams would offer bombing and sabotage objectives, with resultant closing of the route and bottling up of ships and cargoes.

New construction of large additional shipyard facilities are now under way at United States seacoast ports, including a sizable program at the port of Baltimore. Existing facilities, and those now contemplated at such ports, would seem to be adequate for the Nation's normal and emergency shipbuilding requirements.

Dr. T. H. Hogg, chairman of the Ontario Hydro-Electric Power Commission, is quoted as saying, "It is quite evident that this development cannot be classed as a war measure, for even if it were undertaken tomorrow it would be 6 or 7 years before it could become of use. Yet the project is persistently misrepresented as a war measure, which, far from helping, would actually handicap war work."

6. USAGE

Because of prolonged ice conditions on the St. Lawrence River and canals, the proposed seaway would be closed to navigation for approximately 5 months of the year, from December 1 to May 1.

Foreign- and domestic-vessel traffic, the launching or movement of vessels built or repaired, and all similar marine operations would be suspended during this period. For the handling of this 5-months traffic the railroads would have to maintain year-round facilities and equipment, which might be forced to operate far below capacity during the 7 months of open navigation. Atlantic and Gulf ports would be similarly affected.

The extent to which the long and tortuous St. Lawrence seaway route, with frequently

adverse weather conditions, would be used by regularly scheduled deep-draft cargo vessels is unknown. The hazards of the voyage and the time element, when placed beside the value of ships' time and the need for safe and expeditious handling of vessels and cargoes, would probably influence insurance cost and ocean rates, and in some cases might bring them to prohibitive levels. But foreign-flag vessels of the tramp type, engaged in the movement of bulk cargoes where the time factor is not controlling, would employ the facility and would undoubtedly divert large tonnages from established United States and Canadian transportation agencies and ports. While the seaway's limited field of attraction for certain ships and cargoes reduces its national economic justification, the volume of bulk freight which would be diverted presents a serious issue for American railroads and their investors, and for ports such as Baltimore, which specialize in such cargo and have built up expensive facilities and services to handle it.

It has been said that millions of tons of freight annually would be diverted from existing transportation routes to this waterway. Seaboard ports and American transportation agencies have made tremendous investments in order to provide facilities for handling the business of the central industrial and agricultural sections which are described as the project's tributary territory.

7. EFFECTS ON BALTIMORE

The port of Baltimore, and this city's maritime, transportation, financial, and industrial activities would be adversely affected by the proposed seaway.

While actual traffic diversions from this port cannot accurately be estimated, they would unquestionably be in large volume. A national undertaking, for which the citizens and business interests of Baltimore would pay proportionately in taxes, would penalize the initiative which has been displayed and the capital which has been invested through many years in developing seaboard harbor facilities to handle the interior freight tonnage now proposed for seaway routing.

As the closest port geographically to the interior cargo areas of the United States, with economical through-shipping costs for rail-and-water freight, and modern and diversified handling facilities and equipment, Baltimore has long been a principal seaboard service harbor for the central west. Much of the total of $155,000,000 invested in facilities and equipment in this port has been based on this through-shipping business, originating in or destined to the interior. This applies particularly to the investment of $100,000,000 in water-front terminals and warehouses. In shipyards, harbor craft, and miscellaneous equipment there is an investment of $35,000,000. Baltimore City has invested $15,000,000 in piers, and $3,000,000 in channels, and the Federal Government has spent $16,000,000 for the dredging of channels and anchorages, largely based upon the handling of interior business as economic justification.

Of the port's present annual commerce of about 20,000,000 tons, valued at a billion dollars (of which 10,000,000 tons, valued at $300,000,000 is foreign trade), a substantial percentage is inland rail-haul business. The Government collects approximately $10,000,000 yearly here in customs duties, based to an appreciable extent on goods shipped to interior points. Four thousand deep-sea ships visit the port yearly, their operations involving average revenue to Baltimore of over $20,000,000, and their calls here are influenced largely by inland traffic movement.

The port employment factor is of tremendous local consequence. Approximately 15,000 port workers in many classifications gain their livelihood directly from harbor activity, and the needs of interior traffic movement. Many more probably are indirectly dependent on the port and its steady operation. A large number of port jobs are at stake in the St. Lawrence proposal.

Special local groups, contributing to the welfare of the community and its surrounding area, such as those handling grain, coal, and other specialized commodities would be directly penalized, and the results of diverting any appreciable volume of interior traffic would in some measure be reflected in every field of Baltimore business.

As specified earlier, many low-priced, nonperishable basic commodities moving by slow freight might be lost to the seaway. These include basic imports such as wood pulp, sulfur, coffee, and sugar, which are now handled in large volume at Baltimore, and furnish extensive harbor employment. The present routing of much export tonnage in wheat, corn, iron, and steel via inland waterways indicates the possibility of further loss to the seaway in important port commodities of this character.

There is little question that the port's rail differential structure to and from the Middle West would be partially nullified in practical effect, by the operation of the proposed seaway.

Baltimore's manufacturers would find increased competition in the Middle Western market from economic changes brought about by the seaway as proposed. Attraction of plants to Baltimore would be rendered more difficult if the port situation were weakened. The association's studies have developed potentially adverse effects on Baltimore manufacturing plants, and on State natural resources, such as coal.

8. CIVIC ACTION

On December 20, 1940, the Board of Directors of the Baltimore Association of Commerce reaffirmed the organization's previous opposition to the seaway. This action was taken on recommendation of the administrative committee of the association's export and import bureau, which has long considered this matter from the aspects of national policy and port welfare.

On March 20, 1941, the board of directors of the Baltimore Chamber of Commerce, a long-established grain, flour, and maritime exchange of Baltimore, stated in a resolution that "The passage of the proposed Canadian-American plan to deepen the St. Lawrence River—so-called St. Lawrence waterway project—will eliminate Baltimore as a shipping port for much of its present foreign commerce, especially in grain, packing-house products, steel, steel materials, and many other commodities."

On January 4, 1941, the Propeller Club of the United States Port of Baltimore, by resolution opposed the seaway project as detrimental to the maritime interests of this harbor.

On March 26, 1941, the executive committee of the Baltimore-Maryland Coal Exchange opposed the project as harmful to the industry they represent. The Georges Creek & Upper Potomac Coal Association, representing 90 percent of the coal operators in that district, took similar action in March.

Many other Baltimore groups, business establishments, and individuals strongly oppose the seaway undertaking, as do hundreds of national and regional organizations located in the eastern, southern, and middle western areas of the United States.

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 8, 1941.

MR. G. HARRY POUDER,
Executive Vice President, Baltimore Association of Commerce,
22 Light Street, Baltimore, Md.

DEAR MR. POUDER: This will acknowledge with thanks your letter of April 4 relative to the proposed St. Lawrence seaway and power project and enclosed statement in opposition by the Baltimore Association of Commerce, which I have read with much interest.

Complying with your request for an expression of my views on this subject, I should first like to state that I have been gathering all available information and data on the proposal over a period of several months, and after careful analysis of this material, am convinced that this project should be opposed.

In reaching this conclusion, I considered largely the tremendous scope of the defense program which we are now undertaking, and the vast burden of debt and taxes the citizens will be called upon to assume for these noncontroversial measures.

It is imperative that expenditures on nondefense activities be curtailed and consideration for projects which are not immediately necessary to the National Defense or vital to the domestic economy be deferred until such time as the proposals can be studied from the standpoint of their actual economic advantages or disadvantages.

A study of the St. Lawrence seaway and power-project proposal and available reports of the St. Lawrence survey fails to justify such expenditure as necessary to national defense and, in my judgment, it is perfectly clear that the enormous sum of money required could, if appropriated, be invested to much better advantage in other directions for more pressing and immediate objectives, such as the necessary defense requirements of the great ports along the Atlantic seaboard.

Other grounds for objection to this project are well argued in the statement you have submitted and indicate with what thoroughness the situation has been reviewed. I am especially concerned by the thought that skilled labor, material, and machinery so vital to the present defense program might be diverted from work on facilities urgently needed; and in viewing the proposal in a more restricted sense, I am wholeheartedly in accord with your opinion that transportation, financial and industrial activities of the port of Baltimore would be adversely affected. Only recently I stated in a letter directed to you that it is my sincere desire to protect in whatever way I can the interests of our port and its industries.

It has been my policy during this emergency to lend my support to those measures which tend to strengthen our country economically and build up its defenses and to oppose any reckless pouring out of money on less essential measures—this because I realize that we cannot spend these enormous sums building up our defenses and at the same time make additional expenditures without weakening our national structure.

The proposed St. Lawrence seaway and power project has been presented before on its merits and defeated. Its proponents now urge it upon us as a "necessity" to national defense. I can see no justification for reviving this project as a defense measure, and am happy to assure you and the distinguished members of the Baltimore Association of Commerce that you may count on my vigorous efforts toward defeat of this project.

Sincerely yours,

JOHN A. MEYER.

[From the Baltimore Sun of April 10, 1941]

ST. LAWRENCE PLAN OPPOSED BY MEYER—REPRESENTATIVE PLEDGED TO FIGHT AGAINST WATERWAY PROJECT—SEES NO JUSTIFICATION FOR REVIVING PROGRAM AS DEFENSE MEASURE

Representative MEYER yesterday pledged his opposition to the proposed St. Lawrence seaway and power project in a letter addressed to G. Harry Pouder, executive vice president of the Baltimore Association of Commerce.

The association is on record against the project and has issued a brief summarizing its attitude.

Representative MEYER said he has been gathering all available data on the proposal

over a period of several months and, after careful analysis of this material, is convinced the project should be opposed.

CITES PREVIOUS DEFEAT

"The proposed St. Lawrence seaway and power project has been presented before on its merits and defeated," Mr. MEYER's letter said. "Its proponents now urge it upon us as a 'necessity' to national defense.

"I can see no justification for reviving this project as a defense measure and am happy to assure you [Mr. Pouder] that the distinguished members of the Baltimore Association of Commerce that you may count on my vigorous efforts toward defeat of this project."

Representative MEYER declared that, in studying the project, he took into consideration the "vast burden of debt and taxes the citizens will be called upon to assume" in the carrying out of the "noncontroversial" defense program.

URGES ECONOMIC FACTOR

"It is imperative that expenditures on nondefense activities be curtailed, and consideration for projects which are not immediately necessary to the national defense or vital to the domestic economy be deferred until such time as the proposals can be studied from the standpoint of their actual economic advantages or disadvantages.

"A study of the St. Lawrence seaway and power project proposal and available reports of the St. Lawrence survey fails to justify such expenditure as necessary to national defense and, in my judgment, it is perfectly clear that the enormous sum of money required could, if appropriated, be invested to much better advantage in other directions for more pressing and immediate objectives, such as the necessary defense requirements of the great ports along the Atlantic."

EFFECT ON PORT OF BALTIMORE

In this connection the Maryland Congressman expressed his agreement with the position taken by the Baltimore Association of Commerce that the project would have an adverse effect on the economy of the port of Baltimore.

"Other grounds for objection to this project," he said, "are well argued in the statement you have submitted and indicate with what thoroughness the situation has been reviewed. I am especially concerned by the thought that skilled labor, material, and machinery so vital to the present defense program might be diverted from work on facilities urgently needed.

"And in viewing the proposal in a more restricted sense, I am wholeheartedly in accord with your opinion that transportation, financial, and industrial activities of the port of Baltimore would be adversely affected."

According to Mr. Pouder, Representative MEYER is the second Member of the Maryland congressional delegation to express his opposition to the St. Lawrence seaway and power project. Representative SASSCER already has announced his opposition.

According to the statement of the association, all Members of the Maryland congressional delegation have been circularized on the matter.

POINTS TO GREAT COST

The association charges that the cost of the project would "involve expenditures of at least $550,000,000," divided between the United States and Canada, with Canada receiving credits for improvement work already done.

"The total cost of the project in the International Rapids section now is estimated at $226,170,000, to provide for the 2,200,000-horsepower project and waterway improvement in that section," the statement declares.

"In all events, the seaway cost will be astronomical, and a large part of it will come from taxpayers in the United States who will be adversely affected."

Distribution of Surplus Commodities in North Louisiana

EXTENSION OF REMARKS

OF

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

LETTER FROM DONALD C. GALEHOUSE, DIRECTOR OF THE INTAKE AND CERTIFICATION BUREAU, BATON ROUGE, LA.

Mr. MILLS of Louisiana. Mr. Speaker, as a result of excessive rains in 1940, northeast Louisiana had practically a complete crop destruction, and as a result we were forced to call upon the Federal Surplus Marketing Administration and they were kind enough to extend direct food recognition to my section, for which we are very thankful.

The following is a letter showing number of families served during January 1941:

INTAKE AND
CERTIFICATION BUREAU,
COMMODITY DISTRIBUTION DIVISION,
Baton Rouge, La., February 15, 1941.

Hon. NEWT V. MILLS,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN MILLS: This acknowledges your letter of February 11 with reference to the highest number of families receiving commodities during the winter season 1940–41.

We have had an unprecedented monthly increase in the number of certified recipients since September 1940. In the congressional district which you represent the peak was reached in January 1941, and almost without exception each parish in the district had a larger number of eligible cases in that month than in any previous month since the inception of direct distribution of surplus commodities in Louisiana.

For your information, I am glad to list the number of families, by parish, that were served during the month of January 1941:

Union	2,792
Richland	4,657
Concordia	2,797
Catahoula	2,018
La Salle	1,488
Caldwell	1,427
Franklin	5,288
Tensas	3,420
Morehouse	4,023
Ouachita	4,657
Jackson	1,799
Madison	2,640
East Carroll	4,467
West Carroll	3,456
Lincoln	3,275

Since the average family is represented by approximately 3.9 persons, you can readily realize that a large proportion of the general population in each parish is eligible to participate in direct distribution.

In the event you may wish more detailed data or further information on any phase of our operations, please do not hesitate in letting us hear from you.

Sincerely yours,

DONALD C. GALEHOUSE,
State Director.

Labor and the National Defense

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

EDITORIAL FROM THE PROVIDENCE (R. I.) VISITOR

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Providence (R. I.) Visitor of Thursday, March 27, 1941:

WHO IS ON STRIKE?

The stories about industrial strikes in various sections of our country are justifiable ground for suspicion that labor's recent gains are in danger. The stories, we repeat, and not the strikes. A nation which is being geared up to high-speed production of war materials might easily be turned against labor by an unfriendly press. To prevent this calamity both capital and labor must do a part, and they must do it quickly.

Where is labor itself at fault, and what must it do? The racketeer and Communist must be outlawed. The first because he is not interested in the workingman. He is a profiteer who takes advantage of the present trying situation to exploit skilled and unskilled workers who finally have a chance to make a decent week's pay. He is not striving to better their condition but solely to enrich himself. The Communist must go because he is a troublemaker by profession, a man who will never be satisfied that labor receives its due until capital is destroyed. Such men will never bring anything but disorder and confusion into labor's ranks. At all times but especially now they are a menace.

We hasten to add, however, that this phase of the situation, labor's faults, has been exaggerated and overdone. While there are racketeers and Communists and strikes, all three are scarcer than they were, and union leaders are making an effort to make them fewer still. And as far as the strike as a technique is concerned we must not forget that it is not essentially unlawful. Nor is it unlawful or unpatriotic or anything else even in the present emergency as long as it is justifiable. To say that this emergency makes the worker's right to strike invalid is to use the vicious argument that the end justifies the means.

An able economist, Rev. John F. Cronin, S. S., of St. Mary's Seminary, Baltimore, writing recently on this problem points out that labor's present strikes are not half as detrimental as the "sit-down strike" staged by capital ever since Federal legislation gave the workingman a decent share in the profits of his labor. On this point the press has been singularly silent, thereby presenting only one side of the story.

Where, therefore, is capital at fault and what must it do? The industrialist must stop whining because the laborer wants a fair return for his work. The old days are gone and the facts might as well be faced. The man who puts up the money must not take advantage of the current crisis to reap abnormal and excessive profits. If sacrifices are to be made, the capitalist is to make them as well as the worker. What the present situation needs more than anything else is good will. Both sides must show it. But, in all fairness

to labor, it must be said that capital's "sit-down strike" of 1940 and earlier makes us suspicious, to say the least, that the industrialist is not now entirely blameless or as holy and magnanimous as the public has by journalistic inference been led to believe.

Dedication of Federal Post Office Building at Alvin, Tex.

REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

Mr. THOMAS of Texas. Mr. Speaker, a post-office building was dedicated at Alvin, Tex., with impressive ceremonies on December 28, 1940. My colleague, the gentleman from Texas [Mr. MANSFIELD], delivered the dedicatory address. Alvin is situated in Brazoria County, in which was located the capital of Stephen F. Austin's colony, the first American settlement in Texas. It is also within a few miles of the imposing monument marking the battlefield of San Jacinto, where Texas independence was achieved, in one of the most brilliant victories ever won upon a field of battle. The address of the gentleman from Texas [Mr. MANSFIELD] makes reference to the early postal history of Texas, which is of general interest. I ask unanimous consent to extend my remarks in the Appendix of the RECORD to include the ceremonies of dedication, as published in the local newspapers—the Sun and the News—on January 3, 1941.

The matter referred to follows:

[From the Alvin (Tex.) newspapers, the Sun and News, of January 3, 1941]

CONGRESSMAN MANSFIELD DEDICATES NEW ALVIN POST OFFICE—LARGE CROWD ATTENDS IMPRESSIVE CEREMONY HERE SATURDAY

Alvin's attractive new $70,000 post-office building was dedicated here Saturday afternoon by Congressman JOSEPH J. MANSFIELD at impressive ceremonies attended by an unusually large crowd. Postmaster Ben Borskey served as master of ceremonies and introduced Congressman MANSFIELD, whose influence was largely responsible for the construction of the fine brick building.

Following the invocation by Dr. F. G. Deis, of the Episcopal Church, Maj. E. H. Rackley, commander of the American Legion of the Ninth District, officiated in flag-raising ceremonies. A salute to the flag and singing of the national anthem followed. Postmaster Borskey was presented with a plaque bearing a picture of the flag and the pledge of allegiance by Major Rackley.

Mayor E. C. Kimmons then delivered an address of welcome to the visitors, which was followed by a patriotic reading by Miss Nan Strickland.

Among the guests and visitors introduced by Postmaster Borskey were W. S. Watkins, postal inspector, of Houston; Robert I. Cohen and E. S. Holliday, of Galveston Chamber of Commerce; Louis Eibert, publisher of the Galveston News-Tribune; W. J. Aicklen, Galveston; Fred C. Pabst, collector of customs, Galveston, and Sam T. Zinn, assistant collector; Mayor Carl Nessler, of Texas City; John Dunlop, postmaster, Houston; A. R. Rucks, of Angleton; Raymond A. Stewart, postmaster, Galveston.

A historical sketch of Alvin's first post office as of 1881 was given by D. Lee Slataper. Mr. Slataper stated that among the original patrons of this boxcar post office still living here were Mrs. Alice Morgan (widow of Theodore Savell), the Thomas and Uzzell families.

In his address dedicating the new post office, Congressman MANSFIELD pointed out the geographical advantages enjoyed by Alvin and the many advantages enjoyed by this community in oil, sulfur, industrial, agricultural, and other developments. His speech in full follows:

"Mr. Mayor, Mr. Postmaster, distinguished guests, ladies and gentlemen: I wish to express my appreciation for the privilege of being with you today to take part in the dedication of this splendid building which marks another milestone in the history of your Postal Service. I had planned to be with you at the laying of the cornerstone of this building, but official duty in Washington at the time prevented.

"I am advised that the Alvin post office was established April 12, 1881. As a coincidence, that happened to be the day I first arrived in Texas from the State of West Virginia. The lifetime of your post office and town being simultaneous with my residence near you for many years has afforded me every opportunity to observe your material progress and development.

"The records in the Post Office Department show that domestic money-order business was established in the Alvin post office January 2, 1893, and international money-order business about 9 years later. The records also show that rural-delivery service was inaugurated March 15, 1900, and that the carrier received a salary of $400 per annum. The postmaster for the fiscal year 1883 received the munificent sum of $35.04 for his services. A caretaker now usually receives an average of more than that for a single month's service.

"The small amount of compensation paid to the postmasters in the early period of your postal history shows conclusively that the office was conducted primarily for the public benefit and that the postmasters were simply performing a patriotic service, practically without compensation.

"From your modest beginning 59 years ago, your community, with its postal service, has grown to enormous proportions. You now have a population of 3,500 with a substantial commerce, a high-school enrollment of 1,040 pupils. Your postal receipts, constituting the best possible barometer of business generally, have increased enormously, giving you the advantage over many other places in the allocation of funds for the construction of this splendid building.

"In my early days in Congress, I was a member of the Committee on Public Buildings and Grounds. This was during the World War period. I then introduced a bill for a post-office building for Alvin and secured a favorable report of the committee, but our Government expenses for national-defense purposes were so great that it was found to be impossible to obtain money for public buildings.

"For about 15 years following the World War, Congress made no appropriations for post-office buildings. Finally, a public building program was inaugurated and kept in operation until some 2 or 3 years ago. Alvin, on my recommendation, was allocated funds for the construction of this building. It is understood, of course, that it may be many years before another post-office building is erected, as our preparedness program will require enormous expenditures.

"Since the establishment of your post office in 1881, eight persons have been appointed and served as postmaster:

"Alvin Morgan, April 12, 1881.
"Samuel N. Richardson, March 26, 1883.
"William S. Hart, June 5, 1891.
"Richard H. King, February 10, 1894.
"Bert I. Osgood, December 20, 1898.
"Marion G. French, February 19, 1903.
"R. H. King, May 22, 1913.
"Scott F. Benson, April 18, 1922.
"Benjamin A. Borskey, January 25, 1935.

"From the dawn of history, postal service in some form has been in operation in nearly all or quite all countries of the world. In the United States, it dates from the colonial period. Benjamin Franklin was placed at the head of the system and served until his removal by the British Government at the outbreak of the Revolution. He was again placed in charge by the Americans in the revolutionary period and served until appointed Minister to France, when he was succeeded by his son-in-law, Richard Bache.

"Speaking of the American colonial administration of Mr. Franklin, the Encyclopaedia Britannica pays him the following compliment. It says:

" 'In the American colonies, postal improvements may be dated from the administration of Franklin, who was virtually the last colonial postmaster general as well as the best.'

"When the Constitution was adopted in 1789, a provision was inserted, authorizing the construction of public buildings and public roads for the Postal Service. While we all adore the Constitution, that provision should be especially endearing to the hearts of the people of Alvin. It is the same authority under which you were granted this beautiful and useful building, these splendidly paved highways, and the excellent postal service you now enjoy.

"I am advised that the first piece of mail carried through our mails after the adoption of the Constitution, was dated October 3, 1789. We then had 75 post offices, and approximately 1,800 miles of post routes, consisting principally of dirt roads, trails, and horse paths. We now have more than 45,000 post offices, and over 250,000 people employed.

"Mail is now carried over nearly 200,000 miles of railroad; 265,000 miles of star routes; more than 21,000 miles of powerboat routes, and 63,000 miles of airplane routes. Our air mail now extends across the Atlantic and Pacific and to Alaska, Central and South America. The Department also sends mail by ship to all ports of the world.

"Every known method of transportation is brought into service in the movement of our mails, which now consist of more than 20,000,000,000 separate pieces in the various classes. Airplanes, pneumatic tubes, steam and electric railroads, ships and motorboats, busses, trucks, automobiles, wagons and buggies, horses and saddles, snowsleds and dog trains. Wherever there is need for mail service for the enjoyment of the American people, some appropriate method of transportation will be found for its systematic movement.

"Our Post Office Department now constitutes perhaps the largest business enterprise in the world, public or private. The cost of its operation is more than three-fourths of a billion dollars annually.

"Besides its particular functions of collecting, distributing, transporting, and delivering mail, various other services are performed by the Department. It maintains a Postal Savings System, deposits in which increased $80,000,000 from 1933 to 1937. It conducts a money-order service for the transfer of

money for its patrons from one point to another. It insures and registers valuable mail. It is a sales agency of the Treasury Department for United States savings bonds. It was the agency through which the Government handled the payment of the veterans' bonus. It was the agency through which the Social Security Board registered more than 29,000,000 workers and aged persons throughout the country. It has recently been charged with the registration and fingerprinting of all aliens in this country.

"The postal history of Texas is different from that of other States of the Nation. Though Texas has at various times paid allegiance to six different flags, it was not a part of our colonial system. Neither was it in the Union at the time of the adoption of the Constitution and establishment of our national postal system.

"Texas fills a unique place in history. It was long claimed by both France and Spain by right of discovery. In 1763 it was ceded by France to Spain. Spain ceded it back to France in 1800. It was claimed by the United States under the Louisiana Purchase from France in 1803, but all our rights, if any, were quitclaimed to Spain in 1819 in part consideration of the purchase of Florida. Texas became a part of the Mexican Empire under Iturbide in 1821 and of the Mexican Republic in 1824.

"Texas became an independent republic in 1836 and a State in the American Union in 1845. In 1861, Texas seceded and shared the fate of the Southern Confederacy. From the close of the war in 1865 it was under the military rule of the United States until 1870, when, complying with the requirements of Congress, it was readmitted to statehood.

"Notwithstanding its varied history, Texas remained practically unsettled and undeveloped until the establishment of Austin's colony in this good county of Brazoria, at a time almost within the memory of men still living.

"So far as we know, neither France nor Spain ever made any material efforts as to colonization of Texas, and no postal service was ever established here by those countries. Only a very crude system, if any, was possible during the period of Austin's colony under the Mexican Government.

"Under the Texas Republic, every possible effort was put forth to establish a practical postal system. President Houston and the Congress of the Republic had great difficulties to contend with, chief of which was how to raise money enough to pay the cost of operation. In his message of November 21, 1839, President Houston said:

" 'Heretofore, difficulties insuperable were presented to the establishment and regular conveyance of the mail, but by indefatigable attention and labor the Postmaster General has been enabled to give efficiency to the department, and hereafter, with suitable aid from Congress, there will be but little difficulty in the regular transmission of mails and the circulation of intelligence throughout the Republic. It is not to be expected that any revenue can arise to the Government from this department, but it is thought that a higher rate of postage might be established without oppressing any portion of the community, but with advantage to the revenue, as it will be seen by a report of the department herewith submitted.'

"In his message of June 27, 1842, President Houston complained as follows:

" 'A matter of the liveliest interest to the community is the regular transportation of the mails; but, for the want of appropriations by the last Congress, their transportation throughout entirely ceased. Communication between the different sections, and the circulation of intelligence, have been wholly obstructed. On account of this state of things, the Executive has found himself greatly embarrassed in dissemination, as well as receiving, correct and speedy information, for he had not $1 at his disposition for the employment of expresses, even under the most urgent circumstances.'

"In his message of December 1, 1842, President Houston caustically stated:

" 'Nothing is better calculated to present the deplorable financial condition of Texas than the situation of our post-office and mail establishment. * * * For the service of the present year Congress appropriated only $5,000 in exchequer bills, without making any allowance for their depreciation, nor did they leave any discretion with the Executive to sustain this important branch of the Government. Texas, at this time, furnishes the singular fact of a government without the means of conveying intelligence, or distributing the laws throughout the Republic. It is, doubtless, the only community on earth at this time purporting to be a nation that is similarly situated.'

"The Texas Republic met with the same difficulty that has perplexed our American Government * * * that of trying to make the Postal System self-sustaining, without detriment to the public interest. The matter was referred to more than once by Mr. Houston when making recommendation for additional postage rates and appropriations.

"The cost problem under our present system was graphically referred to in a radio address by Mr. Farley on August 25, 1937. He said:

" 'Congress has provided free use of the mails for the various departments and agencies of the Government, for Members of Congress, and has extended to newspapers free use of the mails for delivery of their papers in the county of publication. Also, the law extends free use of the mails to certain matter for the blind, and preferential rates to newspapers and periodicals.

" 'These free and below-cost services, together with the losses in handling second-, third-, and fourth-class mail, result in an aggregate annual loss of more than $150,000,000.

" 'For the fiscal year 1936 there was an excess of cost over revenue of $90,000,000 for second-class mail, $23,000,000 for third-class mail, and $18,000,000 for fourth-class mail.'

"First-class mail, consisting of letters and post cards, is the only class that has been self-sustaining. If consistent with the public policy to charge rates on a cost basis of second, third, and fourth classes of mail, then letter postage could be materially reduced without loss to the Government.

"Under the Southern Confederacy, Texas was given the best postal service possible under existing conditions of war. John H. Reagan, the Postmaster General under the Confederacy, was a distinguished Texan, of great ability, whose constructive achievements were not limited to his records as Postmaster General. In later years he, as a Member of the United States Senate, was the author of the law creating the Interstate Commerce Commission, still in force for the regulation of interstate commerce. He was also the first chairman of our State railway commission, under the appointment of Governor Hogg.

"Alvin is most strategically located in the heart of the commercial South. You have splendid rail and highway connections, and in close proximity to the ports of Houston, Galveston, Texas City, and Freeport, where approximately 50,000,000 tons of commerce are annually handled. Within a few miles of your doors a very large proportion of the world's sulfur is produced, and the oil production is enormous. Agricultural products are also in great abundance.

"This building is in keeping with the life and progress of your city and surroundings. Not only as to your business and material growth and development, but as to your social and cultural advancement as well. Your churches and your schools have kept pace with your industrial pursuits, and Alvin is today as much noted for its religious and educational activities as for its commercial progress. It is especially appropriate that the Federal activities here should be housed in a building commensurate with the times and place * * * a structure of dignity and character, combining utility and convenience with beauty and symmetry of architectural design. Such a building you now have. I am pleased to announce that this edifice is now dedicated to the purposes for which it is intended, for the use, benefit, comfort, and enjoyment of the people of Alvin and surrounding territory."

Sports for Soldiers

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

EDITORIAL FROM THE JACKSON (MICH.) CITIZEN PATRIOT

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks I desire to include an editorial from the Jackson (Mich.) Citizen Patriot, relative to the need of recreational facilities at Fort Custer, Mich. The editorial follows:

[From the Jackson (Mich.) Citizen Patriot]

SPORTS FOR SOLDIERS

One of a series of questions answered by selected service men at the reception center in Fort Custer or any of the other similar Army posts concerns sports. Has the selectee participated in baseball, football, basketball, wrestling, boxing, or any other similar sport? That suggests a recreational program in keeping wih the accepted conviction that a better Army morale is accomplished when men are permitted to go in for sports and to support company, regimental, or post teams.

But the difficulty, so far as Fort Custer is concerned, is that there are no adequate facilities for many of these sports.

The Fort Custer basketball players must play in a Battle Creek auditorium. The hockey players must do the same, and likewise the wrestlers and boxers. There is no gymnasium or field house suitable for such sports.

Fort Custer now has been made a permanent Army post. That is the significance of the change in name from "camp" to "fort." Such being the case, it becomes obvious that some facilities are required for all-year indoor sports. All military authorities appreciate the value of such diversion.

Of course, everyone realizes that the defense program has been hurried. Barracks, mess halls, and hospitals are far more important than recreational buildings; but the War Department or the congressional committee should make a memorandum of the need at Fort Custer and should see that the necessary facilities are provided as soon as more urgent needs are met.

Sons of Italy, a Patriotic American Organization, Praise Speech of Hon. Joseph E. Casey

ARTICLE FROM THE SONS OF ITALY MAGAZINE

Mr. ELIOT of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include portions of a very fine article which appeared recently in the Sons of Italy Magazine. The article is noteworthy not only because of the merited praise which it gives to one of our distinguished colleagues, but also because it emphasizes the very important fact that the Italo-Americans are loyal citizens of this country who have made, and are making, great contributions to the industrial, cultural, and social life of the United States. The article follows:

[From the Sons of Italy magazine for March 1941]

CONGRESSMAN JOSEPH E. CASEY—OUR JUNIOR DIVISON ORATOR

(By Augustus Loschi)

Congressman JOSEPH E. CASEY, of Clinton, addressed the members only recently at one of its most important affairs and delivered an address that will go down in the annals of the Sons of Italy of Massachusetts as one of the best and most appreciative talks that it has ever been the privilege of the order to hear.

All of us Italo-Americans who heard the speech of the distinguished Congressman were edified and felt satisfied that it took the sting out of the abuse and hard feeling we have been subjected to at the hands of our fellow Americans for the something that is happening in Europe over which we Italo-Americans or Americans of any other race have no control.

Faneuil Hall in Boston has been the scene of the most outstanding events in the history of the American Nation. It was there that the men of Boston, the leaders in the movement for independence, held their meetings, day after day, night after night, listened to the foremost patriots of the time, and finally charted the course that led to the freedom of the country. It was appropriately named the Cradle of Liberty. Ever since it has been a forum for the discussion by free people of political, patriotic, and social matters.

It was there also that on February 23 of this year took place perhaps the greatest meeting ever held by the Massachusetts branch of the Sons of Italy, a meeting that will remain in the history of our order as the most momentous and most highly successful one ever sponsored by it. The occasion was the tenth anniversary of the foundation by the order of the junior division.

The day before at the Statler Hotel the junior division had put on its finest exhibition in its years of existence. Thousands were in attendance, applauding and marveling at the precision and grace of the different drill teams in competition. The competitors showed how well they had profited from the instructions given them by their drillmasters.

The next day the scene shifted to Faneuil Hall. The metropolitan press of Boston covered the meeting and gave ample space in their papers in reporting it. To them the meeting was very important and the result very satisfactory. It inspired the Boston Post to print the following editorial in its issue of February 24, 1941:

"ITALO-AMERICANS

"Not in any one thing, but in the tone and content of the whole, the 2-day celebration just ended of the tenth anniversary of the Junior Division, Grand Lodge of Massachusetts, Order of Sons of Italy, was a heartening demonstration of loyalty and character. There was hardly a moment in the proceedings when the warmth and unadulterated goodness of these American citizens of Italian birth did not manifest itself in expressions of devotion to their country. It is no credit to certain groups of American citizens that those of Italian origin here have been made to feel on the defensive during recent months. But the answer which the Italo-Americans are giving by their conduct, their intelligent restraint, and such meetings as that of the Order of Sons of Italy cannot possibly be excelled."

Those who heard Congressman CASEY'S speech over radio station WBZ on Sunday, February 23, 1941, are witnesses to the splendid delivery and eloquence he possesses. It is regretted that there is not enough space available in this issue to print the entire speech for the benefit of those who did not hear it.

The Congressman showed much familiarity with Italian history, its great men, and their contributions to the art, industry, and social life of the United States. To him they were not men of a past day. They are men who live in spirit today—men whose living works form a part of our everyday life. The high light of the speech was his plea for tolerance:

"We are all tolerant," he said, "in times of peace and calm; then we are wont to state that America's greatness is due to the combined contributions of not one particular people but all the races of mankind that have come to these shores. Today I want the people of Massachusetts to keep repeating that sentiment, because now is the time to practice what we have preached. Today there seems to be a movement to place Americans of Italian extraction in an unfavorable light. Sometimes this is done in a subtle manner by extolling the superiority of the Anglo-Saxon over the southern European. Let us be done with suspicion and false propaganda. Our job is to prove to the world that men of all races can live together and work together in peace and security under a democratic form of government. I am pleased to be at this assembly this afternoon, because I believe that now more than ever is the acceptable time to acquaint all Americans with the splendid contributions of the Italo-Americans to the greatness of our country."

Congressman CASEY is a member of the House Navy Appropriations Committee and recently returned from an inspection trip to the west coast, where he found the construction program for the defense of America proceeding in the most satisfactory manner. His years of experience in the House of Representatives and his qualifications practically necessitated his appointment to that committee. He is also a member of the Dies committee investigating subversive activities in the United States.

Ever since the days of Lincoln the district represented by Congressman CASEY had been served by a Republican. The voters were conservative and chose a conservative Congressman. CASEY, in 1934, campaigning as a Democratic and Progressive candidate, caused a sensation when he defeated his Republican opponent. It was the outstanding achievement of the campaign in Massachusetts. In the House, CASEY has continued his progressive program and has been a leader in the passage of legislation which led to the many social reforms we now enjoy.

Congressman CASEY was born in Clinton, Mass., December 27, 1898. He is the son of John Edward Casey and Winifred M. Casey, and the seventh child in a family of seven, consisting of five brothers and one sister besides himself. He attended the Clinton public schools, and from high school immediately entered Boston University Law School, from which he graduated in 1920 with the degree of bachelor of laws. In the same year he passed the bar examination and entered the practice of law in his native city of Clinton. His education was interrupted during the World War, in which he served as a private.

* * * * *

The popularity that CASEY won in Clinton spread rapidly through Worcester County, and, next to DAVID I. WALSH, he is the biggest political power of that county. With the wonderful record he has so far established as a Member of Congress, his popularity has spread throughout the State.

Much has been said about the loyalty of the Italo-Americans, with the implication that they are not loyal. The Italo-American needs no defenders against this underhand slur. Yet Congressman CASEY answered that mean charge in his speech in the following manner:

"Wars in which America has been engaged since its birth found the Italo-American outstanding in his loyalty and devotion to America. Ever since the days of Lexington and Concord they have contributed more than their share, in proportion to their population, in winning America's battles. During the Revolutionary War many Italians enlisted under George Washington and served the cause of freedom. They served in the Army and Navy in the War of 1812. During the Civil War hundreds of Italians enlisted in the Union Army and distinguished themselves for valor and sacrifice.

"The role played by Italian-Americans during the World War may be best stressed by the fact that the Italians were awarded a much higher share of Distinguished Service Crosses than their number in the United States would warrant. Most of the decorations were awarded to privates, corporals, and sergeants.

"As a member of the Dies committee, I can state that there has not been a single act of sabotage or, indeed, any other subversive action by either natural-born Americans of Italian descent or by naturalized citizens born in Italy. Of course—and quite understandably—there have been expressions of sympathy for Italy, the land of their ancestors. These expressions do not detract from their loyalty to America and its democratic ideals, which are as much a part of the Italo-American as they are of any other group.

"The Stars and Stripes is his flag as surely as it is the flag of any citizen. He will follow it whether he be rich or poor, to the death if need be, when he is called upon to prove his fidelity. He must not and will not forget that prejudices can be most surely confounded by conduct that may defy the barbs of slander.

"To the people of Massachusetts I say, in this time of high-pitched emotions, we ought to prove to not only the other States in the Union but to all other countries of the world that men of many races can live and work together in peace and security as freemen.

"We are proud to be Americans upon the stage of life at this time. Between our entrances and our exits may be only a brief period of time, but it is ours long enough to do our part to make democracy work at home and make it beloved and respected abroad."

We feel we have deserved those kind words. We are going to prove that Congressman CASEY did not exaggerate. At the same time, we are not going into the business of hating anyone. British, French, Greeks, Germans, Spaniards, all are our friends, no matter what the propagandists will say.

Congressional Headlines and Bylines

EXTENSION OF REMARKS
OF

HON. CHARLES S. DEWEY

OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

ADDRESS BY HON. CHARLES S. DEWEY, OF ILLINOIS

Mr. DEWEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address which I delivered on April 2 before the Chicago Association of Commerce:

From the dictionary of the press I deliberately borrowed the title for these remarks. What I have in mind to say today pertains not only to Washington events now headlining the news; but also, by way of a byline, I think you will be interested in general comments on the manner in which the machinery of Congress operates. Out of these operations momentous decisions are reached, news is made and history is written.

I do not intend to go into the intricate details of the formal rules and practices of the House, which are patterned after the English Parliament and amended over the years to suit the American personality. It would serve no useful purpose to take the time to explain how and when a point of order may be made, what is meant by the House Calendar, the Union Calendar, and the Consent Calendar, or to outline the circumstances under which a Member may rise on a question of personal privilege and be recognized by the Speaker for an hour. You may well leave those things to your Congressman, as you would leave to your attorney the technicalities of procedure in court.

However, I think it would be of some assistance, particularly if you ever have any specific business before Congress, if I point out the importance of the committees that make up the organization of the House. The function and power of the committee unit, each handling a particular type of legislation, cannot be too strongly emphasized. It is the most important phase of the whole legislative machinery.

The oratorical noise and give-and-take of debates on the floor of the House quite naturally appeal to the public imagination. Oratorical controversies have color. We all enjoy a good fight, the matching of skill and wits, whether it be with gloves, a pigskin, or with words.

I do not mean to imply that the debates on the floor of the House are unimportant. They are very important, particularly for the molding of public opinion for or against a proposition. But it may very well be that the battle was won or lost when it was quietly fought out in committee some time before the legislation came before the House as a whole.

Any Member may introduce a bill on any subject. He simply drops it in the little box attached to the Speaker's rostrum. The Speaker immediately refers it to the proper committee. Sometimes a controversy arises between committees as to which should get some particular bill. Such a controversy arose between the Committee on Foreign Affairs and the Committee on Military Affairs over the so-called lease-lend bill. Each claimed jurisdiction. The one on the ground that it pertained to foreign policy and the other on the ground that it pertained to defense.

After a bill is introduced and referred to the committee having jurisdiction over its subject matter, it may there remain, as so frequently happens, quietly and peacefully. There it gracefully dies or will die unless proper pressure is brought upon the chairman of the committee, who is always of the majority party, to give it consideration. You will note that I said "proper pressure," not just "pressure" that is brought to bear. You know the complexion of Congress and its temper; and I leave to your imagination as to what constitutes "proper pressure."

Suppose our bill has the "proper backing" and the chairman calls the committee into session. Witnesses appear before the committee and they are examined by the members. Upon a basis of this evidence, always with due regard for the executive recommendations, the committee acts on the bill. It may amend it. It may vote to table it. It may vote to report it adversely. Or it may vote to report it favorably.

The important fact to bear in mind is that as a general rule the House accepts the bill in the form reported by the committee. At any rate the position taken by the committee members when the bill comes before the House exerts considerably more influence on the House as a whole than the position taken by some one individual Member not a member of the committee handling the specific bill. The House membership feels that the members of the committee which heard the testimony and had the opportunity to examine the witness know much more about the subject than any other Member.

You may not think so but I am giving you a very valuable tip. Whenever you find yourself in the position where you feel the provision of some pending bill should be changed, the first question that should come to your mind is, What committee is handling that bill and what Member from Illinois has a seat on that committee? He is the party to contact, either directly or indirectly through your own Congressman.

Our bill is reported and placed on the appropriate calendar. There it may remain for weeks, months, or maybe for an entire session of Congress. The House has another committee which is in the nature of a traffic officer in directing legislation. It decides what legislation gets the right-of-way and what does not. I refer to the Committee on Rules.

Let us assume that my committee, which happens to be the Committee on Banking and Currency, reports our bill. It is on the calendar. The next step is for the members of the Committee on Banking and Currency to go before the Committee on Rules and ask its permission to bring the bill up on the floor of the House. If it is granted, the Committee on Rules will report a resolution, sometimes called a rule, for the special consideration of the bill. The rule will stipulate the number of hours of debate and whether or not any amendments can be made to the bill on the floor.

On the day assigned the rule is presented to the House by the chairman of the Committee on Rules. For 1 hour the House debates the rule. If approved by a vote of the House, the chairman of the Committee on Banking and Currency or some other committee, as the case may be, moves that the House resolve itself into the Committee of the Whole House for consideration of the bill made in order by the rule just adopted.

The Speaker appoints a Member from the majority side to preside as chairman of the Committee of the Whole, and the debate follows with the time controlled, one-half by the chairman of the committee reporting the bill and the other half by the ranking minority member of that committee. If a Member wishes to speak for or against the bill, he must go to either of these gentlemen in control of the time to ask that he be given so many minutes. One may ask for a half hour but only get 5 minutes. After all, there are 435 Members, and now and then each wants to speak his piece.

Just a few days ago I heard one of the gentlemen in control of time say: "Mr. Speaker, I yield the gentleman from North Carolina the remaining 15 seconds on this side." The gentleman from North Carolina rose in his place and said: "Mr. Speaker, I think my reputation for brevity in the House is such that the gentleman has put those 15 seconds into perfectly safe hands."

Great formality is observed during the debates, but sometimes there is some good-natured repartee between the Members. I recall that during the debate on the lease-lend bill two old cronies got into an argument near the microphone in the well of the House, whereupon a third good friend rose in his place and said:

"If the distinguished gentleman from Massachusetts and the distinguished gentleman from New Jersey would get out of their huddle I could hear what they were saying."

The gentleman from Massachusetts promptly retorted, "If the distinguished gentleman from Minnesota would extend his ears to their fullest extent our conversation would be quite audible to him."

Upon the conclusion of the general debate on the bill it is then read for amendment under what is known as the 5-minute rule. Any Member may offer an amendment. He is recognized for 5 minutes to explain it and to urge its adoption. Likewise, a Member may rise in opposition to it. The presiding Chairman, incidentally, always tries to recognize the chairman of the committee in charge of the bill whenever he seeks recognition If he states, "The committee accepts the amendment," the House will invariably adopt it. If, on the other hand, he should vigorously oppose it, the House will invariably reject it. Here again is an illustration of the power of a committee and its chairman. And it is hardly necessary to tell you that the party in power has a majority on every committee of the House. It controls the entire legislative machinery.

But it must not be forgotten that the minority, however small it may be and however much of an "underdog," so to speak, it may appear to be, plays a very vital part in the functioning of this legislative machinery. Indeed our system of government could not properly operate without a minority party. It can be demonstrated that it would be better for the Nation as a whole if the majority in Congress were not so overwhelming. The best laws are those which are hammered out on the anvil of legislative debate and not rushed through with a chorus of "yeas."

An overwhelming majority makes for indifference on the part of the majority Members. They are inclined to absent themselves from meetings, making it a point to be present only when a vote is to be taken. They feel so secure in their positions that they are inclined to ignore the suggestions of everyone except those that come from their own leadership, not even taking the time to inquire into the merits of a proposal that may be offered. Too large a majority makes for both indifference and arrogance. An effective check is lacking.

It is the role of the minority to serve as this check. As I conceive the proper function of my party in Congress, it is dual: On the one hand, to oppose; and on the other hand, to propose. I do not believe in opposition simply for opposition's sake. But I do believe that it is the duty of the minority to point out mistakes, to serve as a warning to the people of the dangers of any suggested policy or course of action. Not only is it the duty of the minority to point out mistakes and to warn the people. It is also our duty, as I see it, to propose an alternative course, to be cons ructive.

The basic issue between the majority and the minority is on the centralization of

power in an ever expanding bureaucracy. If you analyze all the arguments for and against every major piece of legislation that has come before Congress in the last 8 years you will find that the question of delegation and centralization of powers has been the central point at issue.

Generally speaking, this was the dividing line between the proponents and the opponents of the so-called lease-lend bill. It was not so much a question of extending aid to the democracies at war as it was a question of whether our country should enter upon such a program without anyone being prepared to say how far we would be able to go and without the people's representatives in Congress having any effective control over what is done.

Today our people are willing to approve policies and methods of carrying out those policies which only a short time ago they would have most vigorously opposed. Through their representatives in Congress they have given their approval of the program by which this country becomes the arsenal of the democracies of the world under the sole direction of the Chief Executive. They have approved a program which the administration has characterized as an all-out program.

Let us consider for a moment what this "all-out" program may mean. I think we should be realistic about these things. Indeed, I think we should be intelligently selfish. That is to say, we must prepare ourselves now to meet a very trying future. We must prepare ourselves now for tremendous sacrifices. We must recognize that we are entering upon a program which may mean complete bankruptcy and possibly the destruction of our own democracy. It is an "all-out" program. At the very least, we are setting in motion economic forces certain to cause a complete dislocation of our economy and certain to confront us with a difficult period of readjustment. But no one seems to give much thought to where we are going. we simply say, it is an "all-out" policy.

I do not want to be understood as addressing myself here in opposition to the "all-out" program. That is now the committed policy of our Government. I merely desire to contribute whatever I can for some appreciation of what this may mean to all of us.

Last week I sat in the Congress during the debate upon 2 bills, 1 in connection with the storage of some 6,000,000 bales of cotton taken into ownership by the Government in connection with loans to farmers by the Commodity Credit Corporation. The arguments concerned a possible saving of $1,825,000 by a reduction of storage rates. The debate lasted 3 days, and at all times a large percentage of the Members were in attendance.

The second bill was the fifth supplemental defense bill, representing appropriations totaling $4,073,810,074. The arguments on this bill were concluded in one afternoon of not more than 4 hours.

The figures mentioned in connection with our national defense are just too fantastic to be digested by the human mind. Congress and the man on the street can appreciate a million dollars, but when it comes to a billion it is just an expression without meaning.

I do not wish to clutter your minds with figures, but I feel it a duty to try to translate into some understandable form the sums that are being expended in order that the United States may become the arsenal of the world.

The total sums appropriated and in the process of being expended for national defense since January 1, 1940 (15 months), amount to $31,554,000,000. To this must be added the seven billion appropriated under the lease-lend bill, making a sum of thirty-eight billion five hundred and fifty-four million. And to this sum must also be added $8,000,000,000 for the ordinary nonmilitary expenses of running the Government during the period in question, making a total of $46,554,000,000.

Such an astronomical sum means nothing to me, but I shall by comparison try to translate it into items of our national wealth, with which we all have some familiarity. The figures I now present were compiled by the Legislative Reference Service of the Library of Congress and represent the classification of national wealth in 1937.

I refer again to the figure of forty-six billion dollars of defense and ordinary Government expenses for the past 15 months. That you may appreciate what this means, let me point out that all of the agricultural property, including farm dwellings, were valued in 1937 at about the same amount, namely, forty six and eight-tenth billion dollars. Take another comparison—all of the household goods, including private automobiles. These were valued at $45,000,000,000. All of the railroads in the United States were valued at only $27,000,000,000. All of the public utilities were valued at twenty-six and one-half billion dollars. And the total wealth of the entire country was $323,000,000,000. Thus the forty-six and one-half billion dollars which we have appropriated in only 15 months is 14.7 percent of our people's national wealth. And the end is not yet.

Let us look at it another way. It is estimated that the national income of the United States in the next year, due to defense activities, may increase to $90,000,000,000. This sum of forty-six and one-half billion now appropriated is equal to 50 cents out of every dollar earned by our fellow citizens and the country at large. And I again remind you that the end of such expenditures is not in sight. What does 50 cents out of every dollar mean to the average man? Each one of you take his own case and think it over.

At no time has the administration given us the slightest indication of how far we might go without completely bankrupting our Nation and impoverishing our people. At no time has any of our Government heads suggested a sound comprehensive fiscal policy and tax system to support this "all out" program. It is to this that I urge serious thought. A strong defense necessarily depends not alone upon men, tanks, guns, and ships. It also depends upon our having a fiscal policy that will enable us to finance the defense machinery.

There are only three ways by which our Government can handle this increasing burden on our economy: (1) By inflation; (2) by a capital levy, and (3) by taxation. Of course, there is a possible combination of all three.

It is hardly necessary to discuss the matter of inflation. All of us are familiar with what took place in the countries of Europe following the exhaustion of the World War. It is recorded many times in history that inflation impoverishes a people. Prices rise so rapidly that men are unable to buy the mere essentials of bread and butter for their families. Wages in terms of dollars may be greater but in terms of prices are less.

The beneficiaries of insurance policies suffer. While their policies are paid in dollars, the dollars received on the policies may have but a fraction of the purchasing power of the dollars paid as premiums. Endowed institutions, such as hospitals and colleges, would also suffer because of a decline in the purchasing power of their income. Inflation is like a drunkard who, having started on the course of dissipation, is hard to control and cannot control himself.

The second possibility is what I referred to as a capital levy. This has already taken concrete form in a bill, H. R. 3105, introduced by Congressman B. FRANK WHELCHEL, of Georgia. In his bill, pending with the Ways and Means Committee, he proposes a graduated tax from 5 to 75 percent on net wealth. It is not a tax on net income that he proposes; nor is it a tax on gross income. It is an expropriation of capital.

Wealth is generally the source of income, but there are many forms of wealth that are unproductive. Take a piece of machinery producing shoes; both the machine and the shoes are wealth. But the one is productive and the other unproductive.

The bill I refer to is obviously intended to compel every citizen to participate in the "all-out" program by what amounts to a direct gift to the Government. A census of individual gross wealth will be taken. Then the President will establish what offsets are to be allowed to arrive at a figure of net wealth, and the citizen will either pay to the Government a certain percentage in cash, depending upon the particular tax bracket in which he falls, or will give a mortgage bearing 6-percent interest to the Treasury Department. These mortgages are to serve as a basis for a currency issue, which, together with the cash received, will help defray the cost of the "all-out" policy.

This type of legislation is nonsense, but to be taken seriously. There have been many examples of capital levies in the financial history of the world.

The third way by which our Government can meet these extraordinary expenditures is by greatly increased taxes. This we cannot avoid. No one seems to be much worried about it at the present time but when we do begin to meet the costs we will then appreciate how far we have gone and what sacrifices must be made.

There are a number of proposals presently being considered in Congress. For instance, it has been suggested that the income tax be changed from one on net income to one on gross income. That would eliminate all exemptions and all deductions. Having recently filed your income-tax returns you can readily appreciate what that would mean to you personally and to your business. It would also mean that every man who earns a dollar would be obliged to pay a tax on it, in addition to the hidden taxes he now pays on items he purchases.

It is also being seriously proposed that a flat tax of 5 percent be placed on all pay rolls under a "check-off system." This levy would be handled in somewhat the same manner as the social-security taxes are handled and would naturally be in addition to that levy. A man who received $20 a week would have another dollar deducted each week by his employer for payment to the Federal Government.

As you may know, there are immediate prospects of a sharp increase in the corporate excess-profits tax to apply to all business whether or not that business is actually engaged in defense production. And there are immediate prospects of a sharp increase, as high as 50 percent, in the excise taxes on such commodities as tobacco and liquor and possibly all down the line.

Every citizen and the head of every business should bear in mind that even if we are fortunate enough to escape what is popularly known as a shooting war, there is not one of us—from the lowliest workman to the highest-paid executive, nor one mother of a family—who will not bear their share of the fantastic financial burden that will be ours.

I have this advice to offer. When you hear or read of any proposal to spend Federal funds for other than absolute routine services of the Government or for our national defense, protest. Protest not once but con-

tinually. Write your Congressman. Write your Senator, and if you are sufficiently interested—and I hope you will be—write the President.

There are and there will be many pet projects of politicians which, having been heretofore rejected, have now donned the uniform of a defense measure and paraded as being a vital necessity. Because of our intense loyalty to the cause of defense, such projects may become an additional load on the necks of the taxpayers unless we scrutinize their real purpose and true worth.

The St. Lawrence-Great Lakes ship and power project is a perfect example of this. It will cost about $1,000,000,000, and cannot possibly be completed before 1947. Yet this project is now being pushed on the basis that new shipyards can be developed on the Great Lakes for the construction of ships to supplement the hard-pressed English mercantile fleet.

Defense projects should be classified as to their importance and none should be brought to the Congress for appropriation of the people's money that do not serve an immediate and vital purpose. Only in this way can we, in our sincere desire to help other democracies, forfend the dangers of destroying our own.

If we of the minority in Congress accomplish nothing more, we will have served our country well if we continue our fight for an orthodox financial policy and make the people of America aware that there are grave dangers ahead. This is an "all-out" program. By all means be realistic about it. Calculate the costs. Remember that it is your wealth and your standard of living that are being jeopardized. Be practical. Demand that the administration and the Congress be practical. In this way only can we do our duty to ourselves and to civilization.

Distribution of Defense Industry

EXTENSION OF REMARKS

OF

HON. LE ROY D. DOWNS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

ARTICLE FROM DANBURY (CONN.) NEWS-TIMES

Mr. DOWNS. Mr. Speaker and my colleagues, under leave to extend my remarks in the RECORD, I wish to insert the following article which appeared in the Danbury News-Times, Danbury, Conn.:

[From the Danbury (Conn.) News-Times]

DISTRIBUTION OF DEFENSE INDUSTRY

Representative LE ROY D. DOWNS has a grasp of the defense situation. He has presented Danbury and Norwalk as sites especially suited to defense industries.

Mr. DOWNS says that additional defense plants ought to be distributed to cities which are not heavily engaged in defense production. Danbury falls into this category and is a city rather difficult to get at from the air. The principle of wide distribution of defense industry has been worked out in Great Britain under pressure of experience and necessity.

The R. E. A. Program

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, the Rural Electrification Administration is holding its sixth annual staff conference in Washington this week. The 200 field men and women of the R. E. A. are meeting with the Washington staff for another of those yearly interchanges of information and ideas that have done much to make possible the phenomenal progress of the R. E. A. program of making central-station electric service available to unserved areas of rural America.

The R. E. A. was set up in the spring of 1935. At that time, only about a tenth of the farms in this rich and great country had electric service. The electric-power industry had been in existence since 1882, and during all those years—more than half a century—the best that it had done was to get service to a tenth of American farms. During the 6 years since the start of the R. E. A. program, electricity has gone into the American countryside so rapidly that today, instead of a tenth of our farms having electricity, a third of them have it. And more than half of the farms connected during the last 6 years are served by R. E. A. lines. In other words, the R. E. A. alone has made one and a half times the progress toward electrifying rural America in 6 years the private utilities had made in more than 50 years.

Nor is that all; most of the new rural lines that the private utilities have built since the spring of 1935 would not have been built if it had not been for the stimulus provided by the R. E. A. program and for the demonstration by the R. E. A. that it is possible to build safe, sturdy rural electric lines at costs well under half of those prevailing in the pre-R. E. A. days.

The R. E. A. program was conceived primarily as a means of helping the American farmer to attain parity with his urban cousin—parity in the comfort and convenience of his home, parity in the educational opoprtunities open to his children and in the social and recreational opportunities open to his whole family, parity in economic well-being. During the 6 short years of its life, the R. E. A. has made substantial progress along these lines. Its experience thus far has shown that even in the humblest farmhouse electricity is a necessity and not a luxury. Of course, the field of electrified farming has barely been scratched; but even so, it is already possible for a surprisingly large proportion of farmers, even in the lower brackets of farm income, to make electricity pay its way and invariably yield a profit. This condition will become increasingly general as further progress is made in bringing about lower prices for factory-built electrical equipment and, perhaps even more important, in preparing simple plans from which farmers can build simple electrical devices at home.

The application of electricity to farm operations is a fascinating subject. There is scarcely a type of farming practiced in the United States today to which electricity cannot be applied to advantage. And new uses are constantly being developed by specialists of the R. E. A., the T. V. A., the research bureaus of the Department of Agriculture, and the various land-grant colleges.

But it is not merely the farm family that benefits when a new R. E. A. cooperative electric-power system goes into operation. The whole agricultural community is revitalized and strengthened, both socially and economically. Electricity makes it possible to provide rural schools with running water and modern plumbing, as well as with efficient, up-to-date laboratories for classes in shopwork, vocational agriculture, and home economics. It makes rural schools, churches, and halls more effective community centers. It makes possible the modernization of rural stores, blacksmith shops, garages, and filling stations.

One of the most important contributions that the more than 700 R. E. A. cooperatives are making to the well-being, not only of their own communities but of the Nation itself, is found in the extent to which they are facilitating widespread decentralization of industry. By running electric power lines into the open country the cooperatives are freeing many types of industry of the need for locating in urban centers. The result has been a distinct trend toward returning the processing of many commodities back toward the communities that produce them.

The R. E. A. cooperatives are providing power to several thousand small industrial plants scattered all over the country. And the number is increasing constantly. During the present emergency, many of these plants are producing materials vital to national defense—ramrods, precision tools, engine parts, and many others. Oil-well pumps and coal-mine machinery are being operated by R. E. A. power. In Arkansas, a group of cinnabar mines, from the ore of which mercury is produced, have been reopened, thanks to the availability of R. E. A. power, and are contributing to relief of the mercury shortage which was threatening to hamper our national-defense effort.

As the R. E. A. program continues to expand, it will contribute still further to decentralization of industries vital to defense in the present emergency and adapted to strengthening the economic foundations of the rural community when normal times return. And, as I said, this program is expanding, and expanding rapidly. Let me quote a few

figures to show the progress that has been made since July 1, 1939, the day that the R. E. A. became an Administration within the United States Department of Agriculture.

On July 1, 1939, allotments made by the R. E. A. totaled $227,800,064; by March 1, 1941, they totaled $362,011,621. The increase was $134,211,557. Funds advanced totaled $122,337,824 on July 1, 1939; on March 31, 1941, they totaled $266,337,824, an increase of $144,029,807. R. E. A. systems were operating 115,000 miles of line on July 1, 1939; on March 1, 1941, they were operating 281,231 miles, an increase of 166,231 miles. The number of consumers connected to R. E. A. lines on July 1, 1939, was 268,242; on March 1, 1941, it was 709,578, an increase of 541,336 consumers.

These figures indicate that approximately 40 percent of the allotments made by the R. E. A. to date have been made since July 1, 1939. Approximately 54 percent of all the funds advanced to R. E. A. borrowers have been advanced during the same period. Approximately 60 percent of the total number of miles of lines energized by the R. E. A. to date have gone into service since July 1, 1939. Approximately 76 percent of all the consumers now connected to R. E. A. lines began taking service since the R. E. A. entered the Department of Agriculture.

These figures, of course, are no reflection upon the able and devoted men who guided the R. E. A. while it was an independent agency. They recruited a staff of alert and enthusiastic men and women. If they had not done so, difficult, indeed, would have been the task of Robert B. Craig, who guided the R. E. A. through the trying summer of 1939, when new relationships with the Department of Agriculture were being developed and uncertainties vexed the organization; and even more difficult would have been the task of Harry Slattery, the present Administrator. As it was, when Mr. Slattery took over the direction of the R. E. A. in the autumn of 1939 he found an organization that knew whither it was heading, and that was intent on moving straight toward its goal in spite of obstacles and opposition. As a result, freed of the need for building an organization, Mr. Slattery, veteran of every power and conservation fight since the days of Theodore Roosevelt, was able to devote his attention to speeding up the program and to planning new advances from the positions already consolidated.

It is well for the American farmer—yes; it is well for all Americans—that guidance of the R. E. A. program is in the hands of an able, devoted, and incorruptible Administrator backed up by an alert and understanding Secretary of Agriculture. For the task ahead of the R. E. A. is greater than that behind it. A third of American farms are now served; a pleasing contrast with the mere tenth that were served only 6 years ago. But the unserved two-thirds present a challenge to the R. E. A. and to all friends of its program. To make the benefits of electricity available to them will tax the ingenuity of the engineers who have been constantly reducing the over-all cost of building lines; it will tax the ingenuity of operating technicians who have done wonders in reducing maintenance and operating costs; it will tax the ingenuity of agricultural engineers to devise new ways in which even the lowest-income farmers can make electricity pay its way, so that service will not be an additional drain on their meager resources.

In the years that lie ahead I am confident that the development of small rural industries to which I have referred will be important to the development of the R. E. A. program and, even more important, to the rebuilding on a sound economic basis of the depressed areas of rural America. Such industries are important to national defense; they will be, if anything, more important to the economic reconstruction of rural America after the emergency has passed. They can provide farmers with markets close to home. They can provide full-time employment for hundreds and thousands of farm boys and girls whom the land itself cannot adequately support. They can provide part-time employment during slack seasons for many, many more farm people, thus contributing to increased farm income and hence to conservation of our two most valuable natural resources—the soil from which springs the supply of food and fiber, without which we could not subsist, and the rural manhood and womanhood on which, to an increasing extent as the vital statistics show, depends the future growth and strength of all America, urban as well as rural.

Through the R. E. A. program, we have embarked upon a great adventure in democracy. It is an adventure in which we are using our natural resources of falling water, coal, and oil to develop electric energy not for profit but for service. It is an adventure from which there can be no turning back. We must electrify every farm home in America.

It is an adventure that demands, and that in increasing measure will demand, the earnest and intelligent efforts of every true patriot. It is an adventure the end of which is not yet in sight; an adventure that will not end even with the stringing of an electric line to the last farmhouse in America, because rural electrification is a means, not an end. The lower we can bring the cost of electricity, and the more practical uses we can find for it in the home, on the farm, and in the rural community, the greater will be the return that America receives from its investment in the R. E. A. program—a return measured partly in dollars and cents, but measured also in the improved health, alertness, and well-being of the rural men and women who are, and always have been, the backbone of America.

One-Hundredth Anniversary of the Establishment of the Oregon Trail

REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

Mr. PIERCE. Mr. Speaker, I am introducing today a joint resolution authorizing and directing the Postmaster General to issue a stamp to commemorate a notable celebration which will take place in 1943 in the Pacific Northwest. This event has real national significance. It is the one-hundredth anniversary of an event momentous in the Northwest and to the Nation. It marks the one-hundredth anniversary of the establishment of the provisional civil government in the far West, the opening of the old Oregon Trail, and the great immigration of a thousand men, women, and children into the Northwest. Starting in the spring of 1843 from the banks of the Missouri, going on up the Platte and over the Continental Divide across the Green River, up the valley of the Snake to the banks of the Columbia, it took 6 months for the trip which was one of the greatest migrations in all history—2,000 miles without roads, over mountains, fording rushing rivers—what hardships they encountered.

That was a wonderful group of people. It was my pleasure when I went into Oregon almost 60 years ago to meet many of the men and women who were a part of that migration of such significance to the whole country and in building the era of the Pacific.

I include, as a part of my remarks, the following editorial of February 2, 1941, from the Oregonian:

1943 CENTENNIAL

Those who have taken part in the initiation of plans to make 1943 a year of centennial celebration for Oregon, are being delighted and reassured by the manner in which the idea catches on and spreads. It should catch on and spread, without limit. The facts are clear enough that 1943 will be the year of all years for Oregon from the historical standpoint. It was in 1843 that the first wagon train reached the Columbia, rumbling down the Blue mountains under the Applegates, Martin, McCarver, and Nesmith; it was earlier that same year that the settlers divided on the line which old Joe Meek drew in the dust of Champoeg, and so brought into being the provisional government; it was later that same year that Lieutenant Fremont led his exploring party through the Deschutes and Klamath country to California.

It would be impossible to find another year in which so much of moment happened. And these happenings were well spaced over the present State—along the route of the trail, in the Willamette Valley and through

central Oregon. It is a matter of obvious logic that Oregon should celebrate, and that its celebrations should be well scattered rather than concentrated in anything resembling a central exposition.

Yet some times even the obvious does not win quick support. This time it has. Leading citizens throughout the State have signed the incorporation papers eagerly; and Governor Sprague, who long has had the possibilities of 1943 in mind, announces that he will address a special communication to the legislature approving State support. It is a program that deserves State-wide enthusiasm. We can make ourselves a greater future by such a united celebration of our past. And we seem to be getting under way.

The St. Lawrence Waterway—The Proponent's Side

EXTENSION OF REMARKS
OF

HON. CHARLES A. PLUMLEY

OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

STATEMENT PREPARED BY JOSEPH WINTERBOTHAM, OF BURLINGTON, VT.

Mr. PLUMLEY. Mr. Speaker, at the request of the Honorable Joseph Winterbotham, of Burlington, Vt., I am inserting a statement which he has prepared, covering and favoring the St. Lawrence waterway project.

As the radio announcers say: "The opinions expressed are his own, and not necessarily those of his sponsor."

Mr. Winterbotham's statement follows:

There is an agreement, signed between the United States and Canada on March 19, 1941, providing for a cooperative development and utilization of the water of the Great Lakes-St. Lawrence River basin for navigation and power. An exchange of notes preceding the agreement revealed that the construction of this project is regarded as directly associated with both the power supply and shipbuilding phases of our national-defense program, including the plan for defense of the Western Hemisphere and the determination to supply all possible aid to Great Britain, the members of the British Commonwealth, and their allies.

This agreement is of vital importance to New England farmers and industry.

During the past several years I have given almost my entire time to a close study of the conditions prevailing throughout New England with the hope that in my limited way I could get behind and support anything that would advance its interests.

NEW ENGLAND INDUSTRY

In my studies and visits throughout New England, I find that industrial New England, long recognized as the beehive of industry in the United States, is in a complete state of demoralization and decay. During the last year I have traveled over every State and almost every county of every New England State, and what do I find? An increasing number of factories of every character closed down, absolutely idle. In a great many instances machinery has been dismantled. In some instances it has been sold as scrap and in others, doors are closed, windows boarded up, with machinery going to rack and ruin.

No New Englander can travel the New England States as I have and not come away thoroughly heartsick at the industrial picture there presented. The industrial loss of New England since 1919 has been terrific. The following table taken from the United States Census reports of industry and manufacture show the fearful loss that New England has suffered in its greatest asset:

Decline of New England's manufacturing, 1919–39

Year	Number of wage earners	Wages paid	Value added by manufacture
1919	1,351,000	$1,436,000,000	$3,231,000,000
1929	1,098,000	1,346,000,000	3,235,000,000
1933	798,000	685,000,000	1,603,000,000
1939	953,000	1,024,000,000	2,430,000,000
Loss, 1919 to 1939:			
Amount	$398,000	412,000,000	801,000,000
Percent	29	29	25

In the 20 years since the war, 400,000 jobs have been lost; $400,000,000 in wages; $800,000,000 in values not created in our factories. At the same time, New England's people have increased by a million, from 7,401,000 in 1920 to 8,437,000 in 1940.

Every State in the region has shared in this loss of industry. In the two decades wage earners in Maine's factories declined 1 in 7; in Connecticut, 1 in 5; in Rhode Island, 1 in 4; and in New Hampshire, Vermont, and Massachusetts by the even larger proportion of 1 in 3.

These declines in New England far exceed those for the Nation as a whole. While wages and wage earners in our New England factories fell by 29 percent, the drop in the entire country was only about 13 percent, or less than half. Where values created in our factories declined about 25 percent, in the United States they remained substantially undiminished. And for the first time in history, in the year 1939, the States of the South Atlantic region surpassed New England in the number of wage earners.

Symbolic of New England's industrial plight was the recent failure of the world-renowned Amoskeag Co. I have visited Manchester, N. H., and I have seen row upon row of enormous brick buildings lying idle. The sight of this catastrophe was appalling.

What are the reasons for this industrial decadence? Is it that our citizens no longer are industrious? Has the New England trader, famed for his trading ability since the beginning of this country, lost his cunning, or has New England individually and collectively developed a lackadaisical ennui with reference to industrial activity? I believe that none of these conclusions are the proper solution of their problem. During the last year, in addition to my own study, I have employed the best talent available to try and find out what is wrong with New England industrially. Reports from these men, all expert in their respective fields, say New England industry is suffering from the following causes:

1. New England is geographically located too far from the center of the United States population (consuming area).

2. New England industry must bring in its raw products and ship out its finished products. Long distances and high transportation costs must be absorbed against competitors more favorably located.

3. New England freight rates have advanced from 50 to 100 percent since 1917, all of which has increased absorptions and made successful competition impossible.

A fourth factor, discussed below, might be added at this point—the urgent necessity of New England for lower rates on electricity.

All of the men who have participated with me in my study agree that the depression has been a factor in New England's loss of manufacture, but likewise all of these men agree that New England is really suffering from the three reasons outlined, and that New England's industrial supremacy is doomed unless something can be done to relieve the obstacles referred to hereinbefore.

Our study indicates that there is only one cure available that will insure a continuation of our industrial prominence. A way must be found whereby New England industry may secure its raw products for manufacture more cheaply and a way must be found under which New England industry may serve a wider consuming territory at a cheaper transportation cost with its finished products.

The cheapest mode of transportation yet developed is deep-draft water transportation. There are two water projects now under consideration by the United States Government. Both of these, if completed, will have a very material effect upon the rehabilitation, preservation, and continued growth of industrial New England. I have reference to the St. Lawrence waterway development and to the development of the so-called Hudson-Champlain cut-off. Development of these projects will not only reduce transportation costs for New England industry, but they will widen the territory which New England industry may serve with its finished products. From my study the development of these two projects furnish the only logical solution for the dilemma now facing New England industry.

OPPOSITION TO THE PROJECTS

The opposition to these projects comes largely from two sources, viz:

1. Private power interests.
2. The railroads.

PRIVATE POWER INTERESTS

Coupled with the improvement of navigation for oceangoing bottoms, the St. Lawrence project includes one of the largest power developments in the world. This is of vital interest to every New England State, for every child in our schools has been taught that cheap power once lay at the foundation of our region's industrial supremacy. But today, in the intense sectional competition for new industry—with cheap electricity the keynote—what do our New England States have to offer? The highest residential, commercial, and industrial rate structure in the entire Nation.

St. Lawrence electricity will be the cheapest in the world to generate. New England will receive this electricity—every one of her States is within transmission distance. Drawing stimulus from the example of the St. Lawrence project, it is today within the opportunity of all New England once again to enjoy among the lowest rates in the Nation.

It is a well-known fact, however, that the private power interests of the United States have combined to fight the St. Lawrence project, and more particularly to fight the ratification of the St. Lawrence agreement before the United States Congress. These private power interests not only object to public

production of electricity for public consumption but they stand in the way of lower power rates so vitally necessary for New England's prosperity.

If New England's statesmen should oppose the St. Lawrence agreement because of the electricity created, it is clear that in so doing they would be taking a position in direct conflict with the welfare of the people whom they serve. Such opposition would place New England in alliance with an entrenched combination of power companies which have fought the public interest in the St. Lawrence for nearly a quarter of a century, and which today are once again marshaling their forces to defeat the public interest in the project.

THE RAILROADS

The railroads of the United States object to the development of these two water projects, namely, the St. Lawrence and the Hudson Champlain Cut-Off. Originally the record showed that the western railroads favored the development of the St. Lawrence. However, the records further show at a meeting of the Association of Railway Executives held November 20, 1930, in New York City the railroads as a unit declared their policy to be in opposition to the development of any water development. Since that time the railroads have consistently opposed the development of any waterway project, regardless of its merit and regardless of the beneficial effect it might have upon the communities which it is intended to serve. With this unified declaration of policy, no individual railroad is permitted to speak its own mind; consequently the railroad opposition may not be classified as individual—it may not be classified as the result of individual study of the effect upon the communities served, but it must be classified as the result of its master's voice, Wall Street.

CONCLUSION

It is evident that as the population of this country moves farther west New England industry will be put to greater disadvantage with respect to transportation. Further waterways are needed by New England to insure reasonable transportation costs, not only for bringing in raw products for manufacture but for the distribution of the finished products to a wider consuming area. No one can familiarize himself with New England's industrial debacle and not be fully convinced that New England's interest, first, last, and all the time, is to throw its shoulder to the wheel in favor of any project or projects that will tend in any way whatsoever to bring back New England's industrial supremacy. No New Englander can afford to take up and support the selfish monopolistic desires of the private power interests of the United States any more than can he afford to take up the petty fights of the railroads of the United States at the expense of his own community. After all, self-preservation is the first law of nature, and it is the patriotic duty of every inhabitant of industrial New England, whether he be United States Senator or ordinary layman, to lend every effort within his power to rehabilitate New England industrially.

It is a notable fact that the farmers of New England through their national organizations—the National Grange and the American Farm Bureau Federation—have endorsed these waterway projects and are pressing for their development. It seems unusual that the balance of New England, that portion of New England which is most vitally interested in the continuance in full vigor of its industries, seems to be the only portion of New England that is asleep to the importance of the development of these projects.

Speaking as a New Englander, I am convinced after the most intensive study, that it is the duty of every New England Senator and Representative not only to support the development of these two waterway projects by his vote, but it is his patriotic duty to his section to use his influence in the United States to insure ratification of the St. Lawrence agreement, for it is only in this way do I see any possible chance for New England industry to maintain its place in the sun in competition with the balance of industrial United States.

JOSEPH WINTHROTHAM.

Federal Reclamation—Need for Thorough Survey and Development Program in Southwest Washington

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

STATEMENT BY HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE THE COMMITTEE ON APPROPRIATIONS

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me April 16, 1941, before the Committee on Appropriations:

STATEMENT BY HON. MARTIN F. SMITH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

As there are no Federal reclamation developments in my district, I feel that my viewpoint represents the sentiments of the widespread areas directly benefited by Federal irrigation projects, and which look to this program for relief at the source of many of our own problems.

First, let me call your attention to the population pressure that has been built up in the Pacific Northwest in the last 10 years as a result of migrations from the Great Plains and other States. Experts of the Department of Agriculture agencies on the basis of surveys estimate that 460,000 persons came into this region from other States from 1930 to 1939. Most of these sought farm land on which they could become self-supporting. Without sufficient irrigated land and only a limited area of cut-over land on which they could settle, far too many of these newcomers were forced to join the ranks of the migratory farm laborers seeking to eke out an existence by uncertain means.

Second, the result of this situation has been an increase in the Federal relief expenditures in this territory. The Work Projects Administration alone in the 7 years from 1933 to 1940 expended a total of $439,000,000—an amount more than the total cost of the power and irrigation features of the Grand Coulee project.

While industrial employment incident to the national defense has provided some relief, temporarily at least, in the cities of the Pacific Coast, the rural areas continue to be confronted by the problem of absorbing migrant families seeking means of livelihood. When the construction work on the Army camps is completed, there will again be a demand for settlement opportunities in the farming areas and the need will be even greater when there is a recession from activities in the coastal cities.

Had the Grand Coulee or Columbia Basin irrigation project been ready to receive farm families who have come into the Pacific Northwest in the last 10 years, thousands who are now and who will be forced to continue on relief would have been in a position to become self-supporting. I am not suggesting that all of the migrant farm families could or should have been settled in that area, but I believe the country as a whole, this section, and the individuals themselves would have been far better off had the opportunities been afforded.

March 22 marked the generation of the first power at Grand Coulee Dam. Because of the linking of Grand Coulee power with the Bonneville Project in my district, I have a direct interest in its future. I hope that within the next few years we will be able to celebrate the passage of irrigation water through the first canals of the Grand Coulee Project so we will begin putting to full use the facilities included in this great project.

I am sure I need not point out to this committee that a modern reclamation project cannot be built overnight. Neither can construction be started until the Bureau of Reclamation has made a thorough investigation. For that reason, I believe the Bureau should have a good deal more than half a million dollars annually for surveys and investigations.

Incidentally, many well-posted men in the Pacific Northwest and particularly in my district in southwest Washington, believe that the rich soil in our cut-over timber lands can be utilized for settlement of newcomers at relatively low cost. The work of the Bureau of Reclamation should be enlarged to cover this phase of reclamation, certainly to the extent of being provided with funds to investigate thoroughly the feasibility of developing cut-over lands into productive farms, and certainly to irrigate the farm lands in southwest Washington which are already in production.

For the reasons that I have cited, the Federal reclamation program not only must be continued, but it must be financed with sufficient funds to speed the completion of existing projects that are now badly needed. By providing farms for the settlement of families where they can support themselves, there will be a permanent reduction in Federal relief expenditures; substantial steps will be taken toward stabilizing areas now disturbed by conditions beyond their control; and the country as a whole will be benefited.

I am very hopeful that as a result of the recent visit to my district of Investigating Engineer C. C. Fisher, of the Denver regional office of the Bureau of Reclamation, steps will soon be taken to carry forward a real and valuable reclamation program in my southwest Washington district and other sections of the State of Washington.

Fourth Monthly Report of Government Finances, 1941

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

REPORT OF TREASURY DEPARTMENT

Mr. TAYLOR. Mr. Speaker, under authority of the House given on February 3,

last, I am presenting the fourth monthly report on Government finances. The first of these reports, for the month of December 1940, was printed in the RECORD of February 3, 1941, pages 480 and following; the second report, for the month of January 1941, was printed in the Appendix of the RECORD, pages A536 and following; and the third report, for the month of February 1941, was printed in the Appendix of the RECORD, pages A1063 and following. The report herewith presented brings these statements down to the end of March 1941. Members will find in the reports tabular matter prepared by the Treasury Department in summary form data relative to receipts, expenditures, the public debt, and so forth, for the fiscal year 1940, complete; the fiscal year 1941, now in progress; and the fiscal year 1942, the ensuing fiscal year:

TREASURY DEPARTMENT,
Washington, April 8, 1941.

Hon. EDWARD T. TAYLOR,
Chairman, House Committee on Appropriations,
Washington, D. C.

MY DEAR MR. CHAIRMAN: By direction of the Secretary and in accordance with the arrangements made with you as outlined in his letter of January 31, I am enclosing herewith the following statements:

Statement No. I, General Budget Summary—Receipts and Expenditures, comparing (1) Budget estimates for the fiscal years 1941 and 1942 and actual figures for the fiscal year 1940 and (2) actual figures for the first 9 months of each of the fiscal years 1940 and 1941.

Statement No. II, Effect of Financing the Deficit on the Public Debt, showing (1) Budget estimates for the fiscal years 1941 and 1942, and actual figures for the fiscal year 1940; and (2) actual figures as of March 31, 1940, and March 31, 1941, respectively. This statement shows the extent to which the net deficit has been met through borrowings and reductions in the Treasury's cash balance. It also shows the debt at the beginning and the close of the period.

Statement No. III, Statutory Debt Limitation, showing the amount of the debt outstanding which is subject to the debt limitation and the balance of the borrowing authority, i. e., the amount of additional debt which may be issued pursuant to existing limitations.

Statement No. IV, General Fund Balance, showing an analysis of the general-fund balance and the changes therein during the period. This statement sets forth the balances at the beginning and the close of the period classified as to working balance, increment on gold, and seigniorage. It shows how the general-fund balance was affected by (1) borrowings, (2) excess of receipts or expenditures in trust accounts, etc., and (3) the net deficit as set forth in Statement No. I.

Statement No. V, Obligations of Corporations and Credit Agencies Guaranteed as to Principal and Interest as of March 31, 1941. This statement shows the contingent liabilities of the Government, i. e., the outstanding securities issued by corporations and credit agencies which are guaranteed by the United States as to principal and interest.

Statement No. VI, Combined Statement of Assets and Liabilities of Governmental Corporations and Credit Agencies, as of February 28, 1941, based upon the latest official reports received by the Treasury. This statement shows the total assets of such corporations and agencies, the liabilities (including reserves), and their net worth. The liabilities are segregated according to obligations guaranteed by the United States and obligations not so guaranteed. The net worth is also classified as to the amounts of the Government's proprietary interest and of the proprietary interests not owned by the Government. It is also analyzed to show the portion thereof representing interagency interests.

Very truly yours,

D. W. BELL,
Under Secretary of the Treasury.

I. *General Budget summary—Receipts and expenditures*

[On basis of daily Treasury statements, i. e., checks paid by Treasurer of the United States. In millions of dollars]

Classification	Full fiscal years			July 1 to Mar. 31	
	Budget estimates [1]		Actual, 1940	Actual, fiscal year 1941	Actual, fiscal year 1940
	1942	1941

Return of surplus funds from Government corporations		[5] 339.5		[5] 203.0	
All other	517.3	583.4	533.8	372.4	406.4
Total expenditures [6]	17,485.5	13,202.3	8,998.2	8,726.0	6,681.9
Net deficit (excess expenditures over receipts) [6]	9,210.1	6,189.4	3,611.1	3,353.9	2,647.9

[1] 1942 Budget.

[2] In comparing actual receipts and expenditures for parts of a fiscal year with estimates for the full fiscal year, consideration must be given to the fact that moneys are not received and expended evenly throughout the year. For example, the larger amounts of income-tax payments are received in March and June quarters of each fiscal year. While certain expenditures occur evenly from month to month, some are seasonal and others vary according to circumstances.

[3] Actual expenditures under this item are included under "Departmental" and other appropriate classifications.

[4] Expenditures from supplemental items will be distributed during the fiscal years 1941 and 1942 to the classifications applicable.

[5] Credits, deduct.

[6] Exclusive of debt retirements pursuant to sinking fund and other appropriations.

II. *Effect of financing the deficit on the public debt*

[On basis of daily Treasury statements. In millions of dollars]

Classification	Full fiscal years			July 1 to Mar. 31	
	Budget estimates [1]		Actual, 1940	Actual, fiscal year 1941	Actual, fiscal year 1940
	1942	1941			
Net deficit (statement I)	9,210.1	6,189.4	3,611.1	3,353.9	2,647.9
Changes in cash accounts during period:					
Add: Increase in general fund balance during period	37.8	41.2	[2] 947.5	824.3	[2] 324.6
Total	9,247.9	6,230.6	2,663.6	4,178.2	2,323.3
Deduct: Excess of receipts over expenditures in trust accounts, etc., during period	37.8	41.2	135.6	[2] 27.2	222.9
Total financed by increase in public debt	9,210.1	6,189.4	2,528.0	4,205.4	2,100.5
Add: Public debt at beginning of period	49,156.9	42,967.5	40,439.5	42,967.5	40,439.5

Seigniorage (silver)	630.2	610.2	585.2	601.6	576.9
Total	1,969.7	1,931.9	1,890.7	2,715.0	2,513.6

[1] 1942 Budget. [2] Decrease deduct.

V. *Obligations of corporations and credit agencies guaranteed as to principal and interest*

[As of Mar. 31, 1941. In millions of dollars]

Corporation or agency	Limit of Authority	Obligations outstanding [1]		
		Total	Matured [2]	Unmatured
Commodity Credit Corporation	1,400.0	696.2		696.2
Federal Farm Mortgage Corporation	2,000.0	1,269.6	0.2	1,269.4
Federal Housing Administration	[3] 4,100.0	16.1	.1	16.0
Home Owners' Loan Corporation	[4] 4,750.0	2,610.5	10.7	2,599.8
Reconstruction Finance Corporation	5,655.7	1,097.0		1,097.0
Tennessee Valley Authority	61.8			
U. S. Housing Authority	[5] 800.0	226.2		226.2
U. S. Maritime Commission	[6] 200.0			
Total		[7] 5,915.6	11.0	5,904.6

[1] Exclusive of obligations owned by the Treasury.

[2] Funds have been deposited with the Treasurer of the United States for payment of all obligations guaranteed by the United States, representing outstanding matured principal amounting to $11,000,000 and interest of $2,500,000.

[3] Limit of authority to insure mortgages. Debentures may be issued and tendered only in exchange for insured property acquired through foreclosure.

[4] The Corporation was authorized to issue bonds for an amount not to exceed $4,750,000,000 to be exchanged or sold to obtain funds for financing home mortgage loans or for the redemption of any of its outstanding bonds. Its authority to make loans expired on June 13, 1936, and the above limit may only be increased for the purpose of retiring its outstanding bonds by an amount equal to the amount of the bonds to be retired, which would not affect the net amount outstanding after June 13 1936.

[5] Represents gross limit of borrowing authority. The Corporation has issued obligations totaling $376,256,000, leaving a balance of borrowing authority amounting to $423,744,000.

[6] Limit which may be outstanding at any one time with respect to the insuring of mortgages and the issuance of debentures.

[7] The total amount of assets of these corporations and agencies is in excess of the total amount of liabilities, including obligations guaranteed by the United States. See statement VI.

VI. *Combined statement of assets and liabilities of governmental corporations and credit agencies*

[As of Feb. 28, 1941. In millions of dollars]

Corporation or agency	Assets [1]	Liabilities [1]		Excess of assets over liabilities (proprietary interest) [1]	Interagency assets (+) or liabilities (−)	Net worth of organization
		Obligations guaranteed by the United States [2]	All other (including reserves)			
Commodity Credit Corporation	904.9	697.7	110.6	96.6	----------	96.6
Federal Farm Mortgage Corporation	1,523.4	1,281.7	44.6	197.1	+2.9	200.0
Federal Housing Administration	75.2	12.8	5.5	56.9	----------	56.9
Home Owners' Loan Corporation	2,699.6	2,628.4	48.3	12.9	+100.0	112.9
Reconstruction Finance Corporation	1,628.5	1,098.7	332.9	196.9	+497.5	694.4
Tennessee Valley Authority	374.9	----------	15.5	359.4	−55.9	303.5
U. S. Housing Authority	368.9	226.5	5.3	137.1	----------	137.1
U. S. Maritime Commission	256.5	----------	105.7	150.8	+10.4	161.2
Federal Land Banks	2,229.0	----------	1,807.5	421.5	+8.4	429.9
All other	3,386.1	----------	931.7	2,454.4	−115.6	2,338.8
Subtotal	13,437.0	[3] 5,945.8	3,407.6	4,083.6	+447.7	4,531.3
Deduct:						
Net worth privately owned:						
Federal land banks	----------	----------	----------	−217.4	----------	−217.4
All other	----------	----------	----------	−200.7	----------	−200.7
Proprietary interest of the United States	----------	----------	----------	3,665.5	+447.7	4,113.2

[1] Exclusive of interagency interests.
[2] Includes principal and accrued interest.
[3] Excludes $275,200,000 held by the Treasury.

NOTE.—The foregoing figures are compiled from latest reports received by the Treasury Department from the respective corporations and agencies. The amounts covering obligations guaranteed by the United States differ from those shown in table V for the reason that they are stated in this table as of February 28, 1941, instead of March 31, 1941, and include accrued interest.

Amendment of the Constitution Relative to Taxes on Incomes, Gifts, and Inheritances

EXTENSION OF REMARKS

OF

HON. FRED C. GILCHRIST

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

CONCURRENT RESOLUTION OF THE GENERAL ASSEMBLY OF IOWA

Mr. GILCHRIST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution passed by the General Assembly of the State of Iowa:

House Concurrent Resolution 15

(By Johnson of Linn)

Memorializing the Congress of the United States to amend the Constitution of the United States, relative to taxes on income, gifts, and inheritances; and providing limitations on taxes so levied; and repealing the sixteenth amendment to the Constitution of the United States.

Whereas there is now pending in the current session of the Congress of the United States proposed legislation to repeal the sixteenth amendment to the Constitution of the United States, and to amend the Constitution of the United States relative to taxes on incomes, gifts, and inheritances; and providing for a limitation of taxes thereon; and

Whereas the people of the State of Iowa are greatly interested in the passage of such legislation: Now, therefore, be it

Resolved by the House of Representatives of the State of Iowa (the Senate concurring). That the Congress of the United States be memorialized as follows:

That application be and it is hereby made to the Congress of the United States to call a convention for the purpose of proposing the following article as an amendment to the Constitution of the United States:

ARTICLE

SECTION 1. The sixteenth amendment to the Constitution of the United States is hereby repealed.

SEC. 2. The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration: *Provided*, That in no case shall the maximum rate of tax exceed 25 percent.

SEC. 3. The maximum rate of any tax, duty, or excise which Congress may lay and collect with respect to the devolution or transfer of property, or any interest therein, upon or in contemplation of death or intended to take effect in possession or enjoyment at or after or by way of gift, shall in no case exceed 25 percent.

SEC. 4. Sections 1 and 2 shall take effect at midnight on the 31st day of December following the ratification of this article. Nothing contained in this article shall affect the power of the United States after said date to collect any tax on incomes for any period ending on or prior to said 31st day of December laid in accordance with the terms of any law then in effect.

SEC. 5. Section 3 shall take effect at midnight on the last day of the sixth month following the ratification of this article. Nothing contained in this article shall affect the power of the United States to collect any tax on any devolution or transfer occurring prior to the taking effect of section 3 laid in accordance with the terms of any law then in effect: Be it further

Resolved, That the Congress of the United States be, and it hereby is, requested to provide, as the mode of ratification, that said amendment shall be valid to all intents and purposes, as part of the Constitution of the United States, when ratified by the legislatures of three-fourths of the several States: Be it further

Resolved, That the secretary of state be, and he hereby is, directed to send a duly certified copy of this resolution to the Senate of the United States and one to the House of Representatives in the Congress of the United States and to each Iowa Member thereof.

I hereby certify this to be a true copy of House Concurrent Resolution No. 15 as passed by the forty-ninth general assembly.

A. C. GUSTAFSON,
Chief Clerk.

H. R. 3871

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

LETTERS FROM THE UNIVERSITY OF WISCONSIN

Mr. BOLLES. Mr. Speaker, I ask unanimous consent to extend my remarks and include therein four letters which I have received from the University of Wisconsin in reference to H. R. 3871, a bill which prevents animal experiments of any kind on living dogs. These letters thoroughly explain the attitude of the medical profession through the investigating schools and biochemical professions in the University of Wisconsin.

The letters follow:

UNIVERSITY OF WISCONSIN,
COLLEGE OF AGRICULTURE,
Madison, Wis., April 14, 1941.

The Honorable STEPHEN BOLLES,
The House of Representatives,
Washington, D. C.

DEAR MR. BOLLES: My attention has been called to the fact that you are a member of the District of Columbia Committee, which has or will have occasion to pass upon bill H. R. 3871. As I have been informed that this bill has for its purpose imposing restrictions on the use of dogs for experimental work in medicine I want to ask you to use your good offices in the defeat of this bill. There isn't any question whatsoever that a vast array of facts of the greatest value in practical medicine has been and is being obtained by the use of dogs as well as other animals of widely differing types. It so happens, however, that the dog by virtue of its size, as well as because of other factors, is one of the most valuable animals available for the physiologist and pathologist. I have made use of dogs repeatedly with my work in connection with vitamin D and irradiation of food substances to make them antirachitically active. Recently my colleague, Professor Elvehjem, has similarly used dogs in connection with his epoch-making work on pellagra which once and for all has determined the cause of this widespread malady. Every time that I hear people plead in the interest of the dogs I am impelled to appeal even stronger in the interest of mankind in general. And in this latter capacity the dog can serve to excellent purpose.

Sincerely yours,

HARRY STEENBOCK,
Professor of Biochemistry.

UNIVERSITY OF WISCONSIN,
COLLEGE OF AGRICULTURE,
Madison, Wis., April 11, 1941.

The Honorable STEPHEN BOLLES,
The House of Representatives,
Washington, D. C.

DEAR SIR: I have been informed that there is a bill before Congress, H. R. 3871, which is

designed to prohibit the use of living dogs for experimental purposes. To pass a bill of this kind would seriously hamper nutrition work in medical schools and departments of biochemistry.

Almost all the progress that has been made in the field of experimental medicine and nutrition has centered around the use of laboratory animals, including the dog. For example, the South of our own country, as well as other countries, has suffered for years from a disease known as pellagra, due to the use of a poor diet. When this diet is fed to dogs a disease analogous to pellagra, namely, black tongue, develops. It was through the use of the dog in the development of black tongue that the solution of the problem of pellagra was worked out. That was done in our own laboratory by Dr. Elvehjem, and today there is a definite remedy for this disease which may affect a half million people in the South.

Is it better to learn how to correct human ailments, or is it better to prohibit the use of the dog in furthering the study of disease? This bill should be decisively defeated.

Very respectfully,

E. B. HART,
Chairman, Department of Biochemistry.

THE UNIVERSITY OF WISCONSIN,
Madison, April 11, 1941.

Congressman STEPHEN BOLLES,
House of Representatives,
Washington, D. C.

DEAR MR. BOLLES: My attention has been called to the introduction of bill H. R. 3871, which has been referred to the Committee on the District of Columbia, of which you are a member. This bill prevents any animal experiments of any kind on living dogs. It is the same bill that has been introduced in our Wisconsin Legislature for many years. The result of this bill would be to prevent a great deal of valuable medical experimentation. I need only to call to your attention that insulin for diabetes would never have been discovered without the use of dogs. Also that the discovery of nicotinic acid as a relief from pellagra, which was made by Dr. Elvehjem in one of our own biochemistry laboratories, depended upon experiments on dogs. Such a bill, if passed, would thwart a great deal of advancement in all of the Federally supported medical laboratories in the District of Columbia. I trust for these reasons you may find it possible to oppose the passage of this bill. If desirable, I should be glad to amplify my reasons at any time.

Very sincerely yours,

WALTER J. MEEK,
Professor of Physiology.

THE UNIVERSITY OF WISCONSIN,
STATE OF WISCONSIN
GENERAL HOSPITAL,
Madison, Wis., April 11, 1941.

Hon. STEPHEN BOLLES,
House of Representatives,
Washington, D. C.

DEAR MR. BOLLES: H. R. 3871 is a piece of vicious legislation almost identical with the bills that have been introduced in and defeated by the Wisconsin Legislature during the past two or three sessions.

As a true dog lover, I am opposed to such legislation because it first of all is backed by people who, though well meaning, are totally ignorant of the manner in which dogs are used experimentally and who, for some reason or other, fail to appreciate the important advances that have been made and are now in progress, leading to discoveries, based upon animal experimentation, for the benefit of the human race.

I hope you will use your influence against this bill and any similar legislation that may be proposed.

Believe me,

Very sincerely yours,

J. S. EVANS,
Professor of Medicine.

The Local Livestock Sales Barns Are a Valuable Community Asset

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

Mr. CURTIS. Mr. Speaker, those of us who live in rural areas, where there are the local community livestock auction barns, know their real value. These sale markets or barns are a real asset to a community. They provide a market that is close to the farmer, it is a competitive market, and gives to the farmer the best possible avenue for marketing his livestock.

There is no demand made by farmers for legislation that would destroy the livestock sale barns. The farmers not only appreciate the services that the livestock sale barns render to them, but they welcome that weekly sale where the farmers of the community gather and exchange their ideas.

In addition to providing a market for livestock, oftentimes these sale barns are places where farmers and others may sell all sorts of miscellaneous articles. During periods of drought and depression this has meant a great deal to farmers to have a place where they turn some equipment that is not needed, or other surplus personal articles into cash. Because of the sustaining volume of livestock business that is done, these sale barns are able to accommodate both sellers and buyers in these miscellaneous transactions.

If legislation is passed that destroys the livestock auction market, the regular weekly community sale will disappear.

From the standpoint of the businessmen and townspeople the local sale barn means everything. Any businessman will tell you that "sale day" is the best trade day in his community. To destroy the livestock sale barns, in some instances, will mean practically destroying the town. A fine, enterprising, and self-sustaining community will dwindle away and the farmers will be forced to sell their products in a far distant terminal market.

Mr. Speaker, I contend that we have no right to enact legislation that would destroy the lawful business of any individual or any group. In the case of the sale-barn men we are not dealing with an outlaw group or a monopoly. I happen to know many of the sale-barn operators in the State of Nebraska. Those men are honest and fair and conduct a business that is a credit to the community wherein they reside.

There is now pending before Congress a proposed amendment to the Packers and Stockyards Act of 1921. This amendment if enacted into law would completely eliminate all local livestock auction markets or sale barns. That proposal should not be passed. I wish to enter my protest against it and I urge that it be defeated.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

RESOLUTION OF THE EXCHANGE CLUB OF HIGHLAND PARK, MICH.

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Exchange Club of Highland Park, Mich.:

To the Congress of the United States:

Whereas a bottleneck of approximately 48 miles in the St. Lawrence River deprives the people of the United States of vital production and transportation facilities in the Great Lakes area; and

Whereas the deepening of the St. Lawrence channel as advocated by President Roosevelt will enable us to make our full contribution to the present needs of our Nation and to participate in the post-war program of world rehabilitation and stabilization; and

Whereas our national defense requires full utilization of the potentialities of our 21 active shipyards on the Great Lakes; and

Whereas the deepening of the St. Lawrence channel could be completed in time to aid the present defense program, and reliable investigations reveal that the proposed deepened channel could permit passage of all ships except battleships and aircraft carriers; and

Whereas engineering surveys made by our Government have approved the feasibility of the Great Lakes-St. Lawrence seaway and power project and forecast a benefit to the entire Nation; and

Whereas the Great Lakes and the St. Lawrence River provide an unparalleled natural highway of over 2,350 miles from the heart of our Nation to the Atlantic Ocean; and

Whereas a deep waterway from our great inland industrial, mineral, and agricultural region is vital to our Nation and a bulwark of strength to our defense; and

Whereas the people of Michigan and the States adjacent to the Great Lakes possess a natural right to transport their industrial products, agricultural and mining commodities to the markets of America and the world in the most economical manner; and

Whereas the midwestern section of our Nation, which is a part of the Great Lakes region, produces more agricultural commodities and has more industrial production than any other section of the country; and

Whereas the Detroit industrial area and the State of Michigan are a part of the great midwestern section of our country in which 40,000,000 people live; and

Whereas the Great Lakes-St. Lawrence seaway and power project is not only a defense measure but also a means of bringing a new era to the country's most important agricultural and industrial region: Therefore be it

Resolved by the Exchange Club of Highland Park, Mich., That we do formally and respectfully request the Congress of the United States of America to enact legislation enabling the completion of the Great Lakes-St. Lawrence seaway and power project by removing existing barriers; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States of America, to the Secretary of State of the

United States, to the Senators and Representatives in our National Congress.

Respectfully submitted.

THE EXCHANGE CLUB OF
HIGHLAND PARK, MICH.,
DON E. MAYHEW, D. D. S.,
President.
J. EDGAR FINLEY,
Secretary.

Oregon Banks Lead Nation

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1941

ARTICLE FROM THE OREGONIAN, PORTLAND, OREG.

Mr. ANGELL. Mr. Speaker, I am proud of the record made by the banks of my State in cooperating with agricultural attainments. It has established a record in this respect for 12 consecutive years, which has not been attained by any other State, I am advised. Mr. Elwain H. Greenwood, secretary of the Oregon State Bankers Association, was recently advised by Dan H. Otis, agricultural commission director of the American Bankers' Association, of the outstanding record achieved by the banks of Oregon. As a part of my remarks I include an article appearing in the Oregonian April 1, 1941, with respect to the matter:

[From the Oregonian, Portland, Oreg., of April 1, 1941]

OREGON BANKS LEAD NATION—COOPERATION WITH FARMERS "TOPS"

(By Leon B. Baketel, financial editor, the Oregonian)

Oregon continues to lead all States in the Union for bankers' agricultural attainments. It has done this for 12 consecutive years, a feat no other State has been able to equal, although Georgia is pushing hard, having won its full 1,000 points for 11 years and North Dakota for 10 years.

Announcement of Oregon's accomplishment was received Monday by Elwain H. Greenwood, secretary, Oregon Bankers' Association, from Dan H. Otis, agricultural commission director of the American Bankers' Association, who sent along a highly complimentary letter.

OREGON OVER TOP

The 1,000-point rating is based upon fulfilling the commission's requirements of banker-farmer cooperation. These include bank participation in 4-H Club work, cooperation with county agricultural agents, attendance at agricultural meetings, a minimum expenditure per bank in farm work, selection of key bankers for farm work in each county of the State, and a successful record of encouraging specific farming projects.

Oregon went over the top in each of these things, Mr. Otis said, and is 1 of the 28 States reaching or maintaining its high record. "Oregon," said Mr. Otis, "shares with the other States the reputation of having once reached the goal has maintained it thereafter."

In executing the program of banker-farmer activities, the State committee and the county key bankers have had the cooperation of the extension agents, specialists, and officials of O. S. C.

TIDY SUM EXPENDED

During 1940 the items and number of farm people contacted totaled 12,269, while special activities embraced exhibits, shows, contests, prizes, scholarships, speaking at agricultural meetings, credit files maintained for farmers and the like totaled 10,284 and attendance at agricultural meetings totaled 846. In addition the banks contributed $11,089.34 to this work, but Mr. Greenwood stated this sum represents only a part of what was actually expended and that $20,000 would come nearer to it.

The plaque to be awarded Oregon will be presented either to C. E. Williamson, Bank of Albany, or O. A. Hougium, of First National, Eugene, at Hot Springs, Va., on April 28.

Views of Southern Coal Operators

EXTENSION OF REMARKS
OF
HON. ZEBULON WEAVER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

STATEMENT FROM THE 13 BITUMINOUS-MINE OPERATORS' ASSOCIATIONS IN THE SOUTHERN FIELDS.

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

The southern coal operators submit the following as a statement of facts:

1. That there is a distinct shortage of coal in many plants and industries today.

2. That while it is probably statistically true that there is 28 days' supply of coal above ground, it is being used up at the rate of 1,500,000 tons per day. It is not evenly divided among consumers; some consumers have 6 months' supply; a few have as much as 6 weeks' supply; many have 3 or 4 days' supply; and some are already without coal.

3. Seventy-five percent of the manufacturing and transportation industry of this country depends upon coal for its fuel.

4. It requires from 1 to 3 weeks from the time the mines are started to get coal delivered from the mines to the consumer.

5. The Southern Coal Operators' Wage Conference was formed for the purpose of breaking a deadlock in the coal strike and to bring about the resumption of mining in both the North and the South. Southern coal operators have no conditions to impose upon the North, but an irremediable breach has been made between the North and South, and it is not possible nor desirable that they try again to negotiate or arbitrate their problems in a common conference or hearing.

6. The southern coal operators produce three-quarters of a million tons of coal per day going into most defense territories and markets. In their anxiety to get the mines to work and to get production back under operation on the 3d day of April they made an offer to the U. M. W. A. to increase wages by 8 to 10 cents per hour or on the average of 11 percent for both day and piece workers and have further offered to negotiate or mediate all further matters of controversy between them and their employees.

7. There is no question of union recognition, collective bargaining, dual unionism, or any other similar matter in dispute between the operators and the miners.

The southern operators in this conference employ approximately 150,000 men and produce approximately 150,000,000 tons of coal per annum.

In the opinion of the southern operators, there is not only a present danger but there is a general danger of a coal shortage throughout the country this year and no time should be lost in getting the mines back into production at the earliest possible moment.

In order to bring this about it is going to be necessary for the public to understand from proper governmental authorities that there is a serious and critical situation confronting the country; that delay is dangerous to both ordinary and defense industries and to our general lot; that the statements being given out to alleviate public anxiety are detrimental and untrue and are hindering the bringing about of the resumption of mining.

NEW YORK CITY, *April 12, 1941.*

Mr. JOHN L. LEWIS,
President, International Union,
United Mine Workers of America,
New York City.

DEAR SIR: We hereby notify you that the Southern Coal Operators' Wage Conference, representing the high- and low-volatile mines in districts 7 and 8, has been organized to deal with problems of wages and hours for the 13 southern contracting districts in West Virginia, Virginia, Kentucky, and Tennessee. The officers are as follows: L. Ebersole Gaines, chairman; L. E. Woods, vice chairman; Harry S. Homan, secretary; Stanley C. Higgins, treasurer.

After Monday you can reach us through Mr. John Luse, secretary, Bituminous Coal Producers' Board for District No. 7, Washington Building, Washington, D. C.

Our committee and the producers we represent in our 13 local contracting districts are anxious to enter into a contract with your organization, representing the 150,000 employees in those districts, the majority of whom are members of your organization. The purpose of forming this organization was to hasten the bringing about of resumption of work in the South and the flow of coal to the homes and industries of our Nation.

We now propose to you that these men be returned to work on Monday, April 14, 1941, on the basis of the contract expiring March 31, 1941, plus a wage advance of 60 cents per day of 7 hours, and an equivalent advance in tonnage rates, and that once the mines have resumed work that we negotiate any further differences that remain between us. If you are interested in this proposal and will so notify us by 1 o'clock today, we will arrange for our negotiators to devote any or all of Saturday and Easter Sunday to the work of negotiating the details with your organization. If we can reach such an agreement by 3 o'clock Sunday, we can have our mines operating Monday morning.

As you know, we have asked the National Mediation Board to assist in bringing an end to the suspension in coal mining in the southern districts. We are not withdrawing our request to this Board by this suggestion to you that we resume work with an immediate wage advance of approximately 11 percent, but in the interest of the Nation which is threatened with a serious coal shortage, we are making this proposal to you with the hope that you and we as a patriotic duty will allow these men to return to work pending final mediation and negotiation of our problems.

We are forwarding a copy of this communication to the Honorable Frances Perkins, Secretary of Labor.

Respectfully yours,

SOUTHERN COAL OPERATORS'
WAGE CONFERENCE,
By L. EBERSOLE GAINES, *Chairman.*

STATEMENT FROM THE 13 BITUMINOUS-MINE OPERATORS' ASSOCIATIONS IN THE SOUTHERN FIELDS

The 13 mine operators' associations in the southern bituminous coal fields this afternoon (Tuesday) issued the following statement:

"Today marks the beginning of the second week of idleness in the southern bituminous coal mines. Already the defense program has lost irrevocably about 12,000,000 tons of coal which, especially in the late summer and fall of this year, will be sorely needed. It is our pressing desire to get the mines back into production at once.

"As the accredited representatives of 13 districts which produce 150,000,000 tons annually, or about 50 percent of the total commercial production represented in the Appalachian Bituminous Conference, we on last Thursday (April 3) submitted the only proposal coming from any group of bituminous operators which definitely and unequivocally provides for immediate resumption of work at the mines.

"This proposal reads as follows:

"'*Resolved*, That all mines resume work immediately and continue at work pending negotiations until a contract is agreed upon, under all the terms and conditions of the Appalachian contract and the district agreements which expire March 31, 1941, except as follows:

"'*Wage-rate increases*

"'Short-wall machine-mining rates shall be increased 7.2 cents per net ton, 6.6 cents of which shall be added to the existing rates for loaders and 0.6 cent shall be added to existing short-wall cutting rates.

"'The pick-mining rate shall be increased 7.2 cents per net ton. Where tonnage, footage, or yardage rates are paid on conveyors or other mechanical loading devices, the percentage of increase to be added to such rates shall be the same percentage of increase as is applied to the basic loading and cutting rates.

"'Rates for all regular classifications of inside and outside day men shall be increased 60 cents per day; 45 cents per day for trappers and partially handicapped old men.

"'Negotiations to develop a contract to expire March 31, 1943, shall continue without prejudice to any element in the controversy due to the adoption of this resolution.'

"Stated simply, this provides for an increase of 11 percent, effective the day of resumption of operations. Acceptance of this proposal provides for negotiations to continue on such other matters as may be before the conference, and such acceptance would result in immediate resumption of work.

"A coal shortage is now threatening. We are again urging that no further time be lost in completing negotiations and getting the mines back to work. That was a vital consideration in making our proposal without any contingent guaranty from the Government that it would underwrite an increase in coal prices prior to signing a wage agreement.

"Our proposed advance represents an increase of wages in various groups in the South of from $10 to $15 a month to over 150,000 men, or a total advance of $1,500,000 to $1,800,000 per month.

"Any implication that the southern operators are obstructing or delaying a proper settlement to get men back to work is wholly unfounded. This is evidenced by the fact that our offer to go to work and pay the advanced wage still stands."

The associations uniting in the above statement are: Greenbrier Coal Operators Association, Winding Gulf Operators Association, Pocahontas Operators Association, New River Coal Operators Association, Upper Buckhannon Smokeless Coal Operators' Association, Kanawha Coal Operators Association, Operators' Association of Williamson Field, Big Sandy-Elkhorn Coal Operators Association, Harlan Coal Operators Association, Southern Appalachian Coal Operators Association, Virginia Coal Operators Association, Hazard Coal Operators Association, Logan Coal Operators Association.

Need for Navy Yard in Midwest

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

Mr. PITTENGER. Mr. Speaker, if administration officials mean what they say, there should be and will be a decentralization of industry so that activities in connection with the national-defense program will be carried on in the Midwest, as well as on the Atlantic seaboard.

In furtherance of this program, I introduced a bill providing for the establishment of a navy yard at or near the city of Duluth, Minn.

This bill provides:

That the Secretary of the Navy is authorized and directed to acquire, on behalf of the United States, by gift, purchase, or otherwise, a site in or near the city of Duluth, Minn., which he deems suitable for the establishment of a navy yard, and shall proceed to establish thereon a navy yard equipped for the construction, overhaul, repair, and fitting out of ships and providing housing and messing facilities for crews of ships undergoing overhaul, repair, and fitting out, and quarters for officers.

SEC. 2. There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this act.

In my opinion, it is important that Congress devote itself to the necessary steps which will bring about a decentralization of industry in conformity with announcements made by administration spokesmen some months ago.

We can very well make a beginning in connection with this program by constructing a navy yard at Duluth, Minn., There is a shipyard plant known as the Riverside yard at Duluth, Minn., which built many boats in World War No. 1. This yard is still available and with very little trouble or expense can again be put into operation.

With the heavy demand for shipbuilding and repair facilities for both merchant and warships, the yards now located on both the Atlantic and Pacific seaboards will be unable to continue a program of shipbuilding. Just recently a newspaper item indicated that Great Britain is sending her crippled ships to our yards for repairs. We also have the announced policy of expansion of the Navy shipbuilding program, both for this country and for Great Britain. This means that all available yards will be overtaxed.

Now is the time for administration officials to be looking for new locations for an expanded shipbuilding program.

I submit that this problem should have immediate consideration by Congress and by Government officials charged with responsibility in our national-defense program.

The St. Lawrence Waterway—Vermont Legislature Opposed Thereto

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

JOINT RESOLUTION OF THE LEGISLATURE OF VERMONT

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks I desire to insert a copy of a joint resolution recently adopted by the Senate and House of Representatives of the State of Vermont in opposition to the St. Lawrence waterway project:

Whereas the President of the United States has announced that he will propose to the Congress of the United States that it take the necessary action to authorize completion of the St. Lawrence River seaway development as an international project; and

Whereas the claim that the United States needs the St. Lawrence seaway for defense is not supported by the facts but has inspired the charge that the military, naval, and air hazards involved in the seaway project are out of all proportion to any industrial or commercial benefits that might accrue from the project; and

Whereas competent authorities have pointed out that the waterway would be icebound 5 months of the year, that no provision for tolls is contemplated; that free use of the waterway for foreign shipping would injure New York State and New England economy, ruin our railroads and our seaports on the Atlantic coast; and that the Great Lakes area would be deluged with cheap products of foreign countries to the injury of American industry, labor, and agriculture; and

Whereas, during the navigation season the comparatively narrow ship channel of the St. Lawrence would make vessels easy targets of bombers and afford abundant opportunity through sabotage or bombing to destroy the locks and dams in the St. Lawrence, thus gravely interrupting traffic; and

Whereas in view of the existing urgent national-defense production needs it would appear most unwise to divert men, money, materials, and machinery to construct a waterway which would be in disastrous competition with New York State's canal system and New England railroads; and

Whereas the United States should concentrate now upon the construction of airplanes, ships, guns, tanks, and other munitions, and not waste public funds, material resources, and effort on a waterway project against which so many seriously important and valid economic objections have been raised; and

Whereas the President's assertion that the United States "needs this great landlocked sea as a haven in which it will always be able to build ships and more ships in order to protect our trade and our shores" has been sharply challenged; and

Whereas it would seem an act of national folly to dissipate labor and resources on a

project not vitally necessary and which could not be placed in operation before 1948: Therefore be it

Resolved by the senate and house of representatives, That the people of the State of Vermont, represented in the general assembly, therefore affirm their opposition to use of the St. Lawrence River for establishment of a deeper seaway and hereby record their opposition to the construction of a St. Lawrence River seaway as highly unwarranted in the present national crisis; and be it further

Resolved, That a copy of this resolution be sent forthwith by the secretary of state to Vermont's Representatives in the Congress of the United States.

The Country Needs a Strong Opposition Party

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

ADDRESS OF HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS OVER THE COLUMBIA BROADCASTING SYSTEM ON THURSDAY, APRIL 3, 1941

Mr. MICHENER. Mr. Speaker, pursuant to the permission granted me to extend my remarks in the RECORD, I include an address by Representative JOSEPH W. MARTIN, Jr., Republican leader of the House and chairman of the Republican National Committee, over the Columbia Broadcasting System, April 3, 1941, which follows:

Fellow Americans, I want to have a heart-to-heart talk with you tonight concerning some matters which, in my considered judgement, are vitally necessary to the welfare of our country, if we are to continue as a nation of liberty, a nation of opportunity in which every man and every woman can receive equal justice. While this discussion will be in the interests of a strong Republican Party, it is not given in a partisan spirit, but because of a deep and profound belief that a strong Republican Party is absolutely vital to our American way of life.

We all want national unity wherever and whenever national unity aids in the preservation of America and the security of our people. No one wants, or should want, national unity in any policy or action injurious to the best interests of the Nation; in any policy which would destroy the two-party system of government in America.

Time and experience have demonstrated the two-party system of government to be the only system which will preserve the American way of life. It has built a strong America. It will preserve a free America.

There is a vital need today for a vigorous, virile Republican Party. We are in the midst of a great national crisis. Vast and unprecedented powers have been given to the Chief Executive. Bewildering sums are being spent for defense—and in the name of defense. Enormous taxes are soon to be imposed upon our people. We stagger along in the direction of war. We face the possibility of national bankruptcy.

This picture is not a pleasant one, but it is the realistic one. This is no hour for "echo men." It is a time demanding courage and honest thinking. Our first thought must be the welfare of our country.

A vigorous, courageous Republican Patry is essential to police and audit the New Deal administration as it revels in the spending of thirty or forty billions of dollars, and in the possession of vast and unparalleled powers granted it only because of the urgent needs of national defense. We must police and audit the New Deal administration to protect our country from financial, political, and social bankruptcy.

We must police these great powers granted the President to assure, as far as possible, their wise administration. We must be ready to fight to restore those powers to the people's representatives when the emergency has ended.

We must police the bureaus and the men to whom the fate of the Nation has been entrusted. Their work must be done efficiently, honestly, economically, and on a nonpartisan basis. We must audit those who have been entrusted with the handling of sums so vast they are beyond comprehension. Our national debt is already enormous. Today the debt is $47,000,000,000 in contrast to one and one-quarter billions when we entered the last war. We cannot tolerate extravagance or dishonesty. Racketeering must have no place in our national defense.

We Republicans in Congress must perform the thankless but patriotic and essential task of policing and auditing those in charge of our national defense.

We all recall the extravagance and inefficiency in the first World War. Billions wasted in faulty and misdirected shipbuilding, inefficient and extravagant airplane construction, graft, and corruption. We can remember the vast amount of goods purchased which never could have been honestly used. I say to you, my fellow citizens, the scandals of 1918 must not be repeated.

A grave responsibility rests upon us all, whether we be Republicans or Democrats, employer or employee, public official or private citizen. We must unselfishly contribute all we can to our national security. Those who may seek to take advantage of this perilous hour to exploit the Nation's needs to their own profit or to advance their own selfish interests will, sooner or later, find themselves condemned as traitors and outcasts by the power of public opinion.

This is no time to reward political henchmen with juicy contracts or luscious loans. Such acts would be just as dangerous to American security and freedom as a gun aimed at the breast of an American soldier. Profiteering, contract racketeering, or partisan spending will not be tolerated by a people who see their very future menaced.

This is no time for strikes or lock-outs which prevent us from achieving the earliest possible adequate national defense. No honest American workman wants to defeat the security of his country. No American worker wants to imperil the welfare of his people. Honest workers are just as unselfish and patriotic as any other class of citizens. Under honest, patriotic leadership, American workers will respond to the call of their country as readily as those men who serve under arms. Waste of time, waste of money, waste of men—these are the fatal mistakes which could end the glorious reality of free America.

The Nation demands production and more production. It demands efficiency and patriotism above selfishness. The call is imperative. As Americans who love their country; who prize its priceless liberties, privileges, and advantages; as Americans determined to remain free, let us press forward with our defense program. Let our fervent prayers be that we can avoid having to send millions of our boys to the trenches. Let us never for a moment lose sight of the suffering and the perils which would come with our participation in another world war.

We Republicans have a vastly important function in this national emergency. The safety and perpetuity of our Nation are at stake. We must guard them against mistakes and against excesses of power or excesses of spending.

We must, of course, have national unity in our defense plans. Republicans, Democrats, and independents must stand together to make our Nation invincible against any assault, whether it should come from the outside or the inside of the country. Events abroad must not be permitted to distract us from the vigilance required at home. Our greatest danger is still from insidious inside forces. That fact will be apparent to every American as we proceed with the defense program.

The Nation, my fellow countrymen, is confronted by two great dangers. The first is some groups may seek to make use of our present emergency and the great burden of debt we are piling up to destroy our economic and political system. The second is the Republican Party, suddenly returned to power through reaction against the New Deal, might lack a carefully prepared program of action.

As to the first danger, a New Dealer recently said, in private, the public debt probably could be increased to as much as $140,000,000,000, at which point the public credit probably would break and the Government would then step in and nationalize everything.

As to the second danger, any party called upon in 1944 to meet the grave problems which the New Deal administration has for more than 8 years left unsolved will have an extremely difficult task. We Republicans are busy studying those problems now. We will be well prepared for the task that lies ahead.

We must preserve the American way of consideration and respect for the rights and the views of the minorities.

When we Republicans speak of the rights of the minorities, and when we demand respect for the views of the minorities, we are not referring only to small groups. We mean also a minority amounting practically to half of the citizens of the United States. The Republican minority in the last Presidential election polled more than 22,000,000 votes. No impartial judge would deny this was a good majority of the free votes in the Nation.

The great objective of the last campaign must continue to be the objective of the Republican Party. Truth and justice will eventually triumph. As patriots banded together in a great cause, let us go forward to the battle to retain the American way of life and to build a finer and better America.

We Republicans realize that millions of Americans of every political belief are looking expectantly to us. We will justify their faith.

Colorado-Big Thompson Reclamation Project

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

Mr. HILL of Colorado. Mr. Speaker, I have in my district the largest reclamation project ever undertaken in the State of Colorado—the Colorado-Big Thompson Project. The authorization for the

investigation of this project was given by Congress in 1935 and the construction was authorized in 1937. In the past 4 years there have been appropriations totaling $8,050,000 of the $54,000,000 estimated cost of completion.

In order that the major features of the project may be completed so that delivery of water will be assured by the summer of 1945, it is necessary that a larger annual appropriation be made. It is not sound economy for either the Government or the water users to incur severe losses that will eventuate if the ultimate construction of this project be unduly delayed. The full cost of this project is repayable—the power portion with 3-percent interest. The power features will be installed only when needed to serve available power markets.

The district is now suffering an annual crop loss of $7,000,000 due to water shortage. This curtails the income of business in the district which is now taxing itself about $50,000 a year to repay the project. It is, therefore, evident that continuance of this unbalance by an unnecessarily prolonged period of construction is poor economy. It is advantageous for the Government to see early operation of this project so that the money derived therefrom may be returned to the revolving reclamation fund. As the costs on accelerated construction remain about the same, the overhead costs on the whole project will be reduced. I am informed that the progress in the boring of the tunnel is almost twice as great as anticipated. It is encouraging that plans are made to commence the construction of the Granby Dam unit this next fiscal year, but there are also canals and three reservoirs to be constructed on the eastern-slope portion of the project plus the necessity of acquiring additional rights-of-way. Unnecessary delay in the completion of the project will result unless money is soon made available to start this portion of the work.

While northern Colorado is primarily interested in the Colorado-Big Thompson improvement, the country at large is interested in the maintenance and development of the agriculture of this area. Studies show that for every dollar of farmer income, $7 are added to the Nation's income through channels of trade. On that basis, the country has been losing $49,000,000 a year for 10 years through the shortage of water supplies in this district. The aggregate amount of this loss is nearly 10 times the over-all cost of this project, and may I point out that the crops of this area are specialty crops, such as sugar beets, livestock feed, and other crops that fit into the agriculture economy of the Rocky Mountain area without interference with the agricultural products of the rest of the Nation.

Colorado, who has always consistently supported the Federal reclamation program, fully realizing that the life of the State, as well as the entire West, depends on the conservation and economic utilization of the limited water resources of the arid and semiarid regions, now asks the support of her request for an increase in the annual appropriation for the Colorado-Big Thompson project.

Parity Payments for Farmers

EXTENSION OF REMARKS

OF

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

Mr. MILLS of Louisiana. Mr. Speaker, like other Representatives from the agricultural section of this Nation, we are always thankful and happy for any extended agricultural recognition. I have contended and worked hard for parity payments on all basic commodities since becoming a Member of this honorable body.

Presently, billions of dollars are being appropriated for national defense and rightly so; however, the outlook for an appreciable price increase for cotton, corn, wheat, rice, and tobacco is not very encouraging, as we find a tremendous supply of cotton in the world today—approximately 25,000,000 bales of American cotton. Previously, one-half of our cotton and a considerable quantity of wheat has been exported; however, this has been reduced to almost nothing, as the British have declared practically an embargo upon shipping space against wheat, cotton, and tobacco.

We ought to do something more for the farmers than merely spend our time talking about the needs of the farmers. Other groups throughout the country are now enjoying prosperity, the like of which they have not known for many years. Why, the farmers' income is entirely out of proportion. The farm income, 1939, per capita in Louisiana was $155, whereas in the United States $266 per capita. Colleagues, this is pathetically low, and I particularly rise at this time calling upon each Member of this body to support the Russell amendments.

If the Russell amendments are adopted there will be available for parity payments for this year, 1941, $362,000,000 when we include the $212,000,000 voted last year and already available. In addition there will be available $300,000,000 for parity payments in 1942.

If we increase the farm income as proposed by the Russell amendments we will only be approximately guaranteeing the cotton farmer 74 percent parity; corn, 86.9; wheat, 74.1; rice, 83.2; and tobacco, approximately 84.9. Surely no Member of this body would vote against giving the tillers of the soil, the man who places his trust entirely in hope, part of a chance that life may be made a little more encouraging.

Veterans in National Defense

EXTENSION OF REMARKS

OF

HON. PAT CANNON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

Mr. CANNON of Florida. Mr. Speaker, we find ourselves all of one opinion in our anxiety to insure a national-defense program conducted and maintained free of sabotage.

The most of us believe that in and around our national-defense plants it will become necessary to use civilian guards, and in some cases undercover guards; and if we are correct in our assumption, it necessarily follows that those guards must be of the highest type of patriotic citizenry, and we can under no circumstances use untried men; and, indeed, their sympathies toward this Government, as well as every other government, must be well known.

It is obvious to me that the surest safeguard we may have in this connection is to use veterans of World War No. 1, as surely none of us can doubt their patriotism and their sympathy, and their flag is surely well known.

It is possibly unfortunate that in the majority of cases, the group to which I refer is no longer fit for active combat duty because of advanced age or physical infirmities directly traceable to active duty experienced by them in World War No. 1.

It is known to all of us that this group above all other groups is interested in the defense of this country and in saving it harmless from another curse that we call war. This group is well-founded in democracy and its workings and they have seen our country develop and wrest itself from the throes of national and international upheaval. And now they find ourselves, according to the belief of too many Americans, on the threshold of new and additional world controversies.

I, for one, believe that this country has done too little and cannot do too much for this group—particularly when it is a matter of common knowledge that more than all others, they represent true Americanism.

If I may speak of my own State in this regard, I would like it known that upward of $2,000,000 monthly is being spent in defense work under our W. P. A. program in Florida, and our able W. P. A. administrator for the State of Florida, who happens to be a veteran of World War No. 1, has advanced the theory and put into practice that in all of the key positions, such as supervisors and guards, veterans of that war should be used for the reasons above set out. As for me, it is a pleasure as well as a duty, to insist, insofar as I may, that veterans of World War No. 1 be utilized in this connection.

A Vital National-Defense Project—The Proposed Puget Sound, Grays Harbor, Willapa Harbor, and Columbia River Canal

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

ARTICLE BY REAR ADMIRAL LUTHER E. GREGORY, C. E. C., UNITED STATES NAVY (RETIRED)

Mr. SMITH of Washington. Mr. Speaker, I recently sponsored a resolution which was adopted on March 26, 1941, by the Committee on Rivers and Harbors for a review by the Corps of Army Engineers of previous reports pertaining to the proposed Puget Sound, Grays Harbor, Willapa Harbor, and Columbia River Canal. This project is clearly essential to our national defense and is worthy of serious study and favorable consideration at this time. Of course, it would also be a great aid to commerce and shipping, but first and foremost, it is of real strategic military importance. The cost of one battleship would build the canal and it would materially strengthen our defense of the entire Pacific Northwest. All these facts, and many others, are set forth in an article prepared by Rear Admiral Luther E. Gregory, C. E. C., United States Navy (retired), which reads as follows:

A DIGEST OF FACTS CONCERNING THE PROPOSED CANALS CONNECTING PUGET SOUND, GRAYS HARBOR, WILLAPA HARBOR, AND THE COLUMBIA RIVER—A PROJECT OF VITAL IMPORTANCE IN THE INTEREST OF NATIONAL DEFENSE, COMMERCE, AND INDUSTRY

(By Rear Admiral Luther E. Gregory, C. E. C., United States Navy (retired))

FOREWORD

The proposal to connect Puget Sound with the Columbia River by ship canal is not a new idea. This was first proposed by Jefferson Davis, while Secretary of War, about 1856. It was suggested as a military measure, as well as an aid to commerce.

From time to time the proposal has been revived, only to be pushed aside, as the magnitude seemed to be too great as compared with the needs of commerce. Until recent years no real study had been made of the project. Some calamity was required to bring it to the fore. That came in the form of serious unemployment and therefore extreme losses in the industry of the southwest part of the State of Washington.

Consequently, there was passed the canal act by the 1933 session of the legislature of the State. A commission was appointed to study the economic feasibility of these canals. It submitted a favorable report on June 7, 1933. The Governor of the State, the Honorable Clarence D. Martin, approved this report July 6, 1933. It has at the present time, therefore, the status of an approved project to be constructed as soon as the financial arrangements can be made. It is of vital importance to our national defense.

LOCATION AND ROUTE OF THE WATERWAY

There are three sections, as follows:

Puget Sound to Grays Harbor canal: Leaving Puget Sound at Olympia by way of Budd Inlet, thence by way of Percival Creek through Black Lake, Black River Valley to the junction of Black River and the Chehalis River, thence down the Chehalis River valley into Grays Harbor. Length, about 50 miles.

Grays Harbor to Willapa Harbor: Leaving the channel of Grays Harbor at South Bay, passing in a general southerly direction close to the foot of the bluffs, and on the westerly side thereof, for a distance of about 9 miles, entering Willapa Harbor on the northerly side of the Tokeland Peninsula.

Willapa Harbor to Columbia River: Leaving Willapa Harbor near Bakers Slough, thence in a general southerly direction along the easterly edge of the bogland and close to the foot of the bluffs for about 5 miles, thence in a general southeasterly direction, entering tidewater at the northerly end of Bakers Bay.

The routes and locations were surveyed and determined by the Canal Commission of the State of Washington.

SIZE OF CANALS

The commission recommended the construction of a lock canal from Puget Sound at Olympia to Grays Harbor with locks of not less than 60 feet by 600 feet; a depth of 14 feet over upper miter sills, and having a total lift of approximately 90 feet above mean sea level; minimum bottom width of canal section to be not less than 90 feet for light-draft seagoing ships and capable of future enlargement as tonnage develops.

The Grays Harbor to Willapa Harbor and to the Columbia River canals are recommended on a sea-level basis, with a minimum bottom width of 120 feet for light-draft seagoing ships drawing 13 feet in salt water and capable of future development as tonnage increases.

FAVORED BY UNITED STATES ARMY ENGINEERS

Several years ago the Corps of Engineers for rivers and harbors in their report to Congress recommending 1,600 projects, totaling an estimated cost of $8,000,000,000, included this canal project as meritorious.

COST OF CANAL

Careful calculations of various factors to be considered, with full allowance for the requirements of the act creating the Canal Commission, which declared its purpose to provide the greatest amount of individual employment, results in an estimate of $33,921,638 as the cost of the entire project. The cost of one battleship would build the canal.

PROTECTION FOR LIGHT-DRAFT VESSELS

There are about 30,000 craft of various classifications registered at ports along the Northwest waters—Puget Sound, Grays Harbor, Willapa Harbor, and the Columbia River.

There are more than 10,000 fishing vessels, many tugs and barges, light-draft cargo vessels, and thousands of pleasure craft which will use the waterways for business and pleasure. In time of bad weather the fishing fleets will find a safe passage through the canals.

VITAL NAVAL AND MILITARY USES

The naval forces at the Puget Sound base are at present limited to the Straits of Juan de Fuca for ingress and egress. The proposed waterway would permit more than half the commissioned vessels of the Navy to enter and depart by the canal, declares Rear Admiral Gregory, who also says that the two lower canals would accommodate three-fourths of the registered ships of the Navy with the tide a mean sea level.

The sea-level canals would allow submarines to operate from that base through either Grays Harbor, Willapa Harbor, and Puget Sound, in addition to the Columbia River entrance, and come to the relief or support of any naval unit engaged in battle at the straits. Vessels moving from Puget Sound would have three other exits into the ocean if the canals were constructed. The navy yard at Bremerton is becoming a principal base for construction of cruisers, destroyers, and such craft, and for fleet repairs. The proposed waterways would enhance its value to the Nation.

One of the largest military bases on the west coast, Fort Lewis, is a principal center of military concentration, together with Camp Murray and McChord Air Field. The safe and rapid transport and transfer of heavy ordnance and munitions between defensive points along the coast is now impeded by highway bridges of light capacity and highways which are inadequate.

The Boeing airplane factory at Seattle, one of the largest such plants in the country, produces large numbers of fighting ships. This national-defense industry deserves the extra protection a canal would give.

At Dupont is situated one of the largest powder plants in the country, and Hogum Bay, near Olympia, is a storage plant of the Giant Powder Co. These industries will provide huge war supplies in case of conflict—supplies which can best be moved by water transportation. With the canal completed, transportation would be facilitated.

The cost of one battleship would build the canal, and in the time of national danger the existence of the new waterway might easily be worth a fleet of battleships in its strategic value.

COLUMBIA RIVER AREA—BONNEVILLE

It would afford necessary protection to the growing industrial area on the Columbia River resulting from the Bonneville Dam hydroelectric project, in which the Federal Government has invested $75,000,000. It is needed to protect the new national-defense industries of the Aluminum Corporation of America and General Chemical Co. of America, at Vancouver, and the Reynolds Metals Co., at Longview. It is estimated that 30 percent of all the aluminum required for the airplanes being manufactured as part of our national-defense program will be turned out by these plants, representing an investment of many millions of dollars in this area.

ESTIMATED REVENUE

Studies made by the Canal Commission indicate a present and prospective annual revenue from tolls for the two coastal canals of $464,000 with a reasonable forecast of increased tolls to $682,000 within a period of 10 years. For the Puget Sound to Grays Harbor Canal the immediate prospective toll would be $1,585,000 with a reasonable increase to $2,560,000 within 10 years.

METHODS OF FINANCING PROJECT

By terms of the legislative act creating the Canal Commission the waterways cannot be paid for from State funds.

It is the purpose of the sponsors of the canal project to have it adopted as a Federal project and paid for by direct Federal grants of money. It is the policy of the Federal Government to assume the entire cost of waterways as development work necessary for national welfare and defense. All waterways are now owned, operated, and maintained by the Federal Government.

Revenues to be derived from tolls (as mentioned above) should in time pay the entire cost of the waterway project. These revenues will accrue to the National Government, as it is the purpose of the association

to have the Federal Government take over the entire project from start to finish.

The law of the State forbids any tax levy. There can be no cost to the taxpayers of the State for this construction program; yet the benefits to be derived will be theirs directly.

BASIC PURPOSE OF THE WATERWAY

To connect the inland waterways of Puget Sound and northern waters of Alaska to the inland waterways of the Columbia and Snake Rivers. The present barrier to inland waterway communication from the Snake River to Juneau is the natural obstacle the canals would remove, creating the greatest inland waterway in the world.

BENEFITS ASSURED BY THE PROJECT

Construction of the waterway as outlined will provide at once the greatest amount of diversified employment, especially for skilled craftsmen, offered by any national-defense project now before the Federal Government.

There will be about 60 miles of extended and correlated workings, exclusive of dredging, which will offer a job for every type of workman.

A brief outline of the tasks provided would be about as follows:

Concrete locks would employ about 2,000 concrete workers, laborers, carpenters, steel workers, hoist and pump engineers, and allied craftsmen.

Spillway construction, mostly concrete masonry, would employ an equal number of the same type of workers.

Excavation would employ large numbers of ordinary labor and men who live by the various types of water-front activity—tugboat and launch men, riggers, loggers, swampers, pipe handlers, firemen, ship carpenters, and deck hands.

Simultaneously several thousand men would be employed in clearing rights-of-way, building temporary roads, crossings, and relocating logging roads, and preparing piling and cribbing of many kinds. The formation of canal berm and the subgrading for roadways along the canal would employ many teams and tractors. The bridges to be erected constitute a major operation, employing at least another 2,000 men. A vast amount of hand labor would be used in the riprapping and protective work on the canal banks. Supplementary road building would utilize the labor of many hundreds of men.

In addition, as many more men would be indirectly employed in industries supplying steel and concrete, lumber and machinery, and other materials and equipment needed in the canal project. It is not exaggerating to say some 20,000 men would be given work, directly and indirectly, during the period of construction.

FARMERS WOULD BENEFIT

Northwest farmers would benefit directly by the project, for requirements of foodstuffs for the multitude of persons working on the project would stimulate the demand for eggs, butter, meats, flour, and produce. Clothing supplies, medical, and personal needs of the workers would also be supplied by Northwest firms in large amounts.

Supervision and direction of all these workers would absorb large numbers of technically trained persons now unemployed.

This project is so located near to centers of population that many men could work on it and still be home part of the time, their homes undisturbed, and their families intact. Simple camp accommodations will be sufficient for men at work. This project is needed to relieve unemployment; the country needs the completed canal to join two great waterways. The money paid out in wages will go into circulation rapidly, stimulating trade and industry in the Northwest.

COMMERCIAL ADVANTAGES OF THE WATERWAY

Effect on tariffs and transportation was developed before Colonel Sturdevant, United States district engineer, when it was shown that for a 20-mile haul by rail the cost per thousand feet of logs is from $2.50 to $3, depending on weight. The same haul by water would be from 50 to 75 cents. Comparative tariffs on general freight would show similar contrasts. With an annual package and merchandise movement of 450,000 to 500,000 tons flowing between Columbia River and Puget Sound points, the readjustment of tariffs would result in a big saving to shippers.

Prospective traffic through the waterway will be greatly increased as the opportunities of water shipment increase. Vast undeveloped natural resources of adjacent regions will be developable with cheap water transportation available. Known deposits of manganese, iron ore, and phosphates in the Olympic Peninsula, coal regions all along western Washington, logging, lumbering, fishing, and similar activities now existing will all respond to a cheapening of transportation when the waterway is completed.

It is proper to assume that limestone; coal; fuel; ores of all kinds; fish and fishing vessels; sand, gravel, and cement; pulpwood, pulp, and paper; logs in rafts and on barges; sulfur, phosphates, and acids; pleasure craft, tugs, scows, and mixed-cargo vessels will use the new waterway as an inside passage in preference to the outside route. For many products present high transportation rates prevent development and exploitation.

Grain transportation from the interior to the coast by way of the Snake and Columbia Rivers, along the new waterway to Columbia River and Puget Sound ports, will be increased as the waterways are improved. The records show three and one-half million tons of grain moved from the inland basin territory of Oregon, Washington, and Idaho to the coast in the 10-year period just closed. In the opposite direction would move a continuous flow of coal and other fuel, seacoast products and commodities, and imported goods to Oregon, Washington, Idaho, and Montana at greatly adjusted and cheaper transportation rates.

Canadian Government subsidized carriers are helping to build a great port at Vancouver, B. C., through cheapening transportation of grain and other products from the interior to the coast. Anything that can be done to remove obstacles to transportation and commerce between United States cities will iron out inequalities between cities and sections and will bring growth and prosperity to west-coast cities of the United States.

The use of any improvements for navigation in the Columbia Basin will be denied full value until the obstructions between the Columbia and Puget Sound are overcome. With the proposed canals built, and not before, will the waterway from the inland empire to Alaska function as a whole.

Improvements on the Columbia are going forward, through construction of the Bonneville and Grand Coulee Dams. The proposed canals are the connecting link between the Columbia and Puget Sound, necessary for the movement by water transportation of products from the inland empire to Northwest cities.

Log and timber movements will be facilitated. Logging is increasing in cost, due to limited and controlled logging roads. In addition to merchantable timber there are vast stands of pulpwood timber around Grays Harbor and Willapa Harbor, with pulp mills operating to both the north and south. The canal would make interchange of logs and pulpwood easy and cheap. Logs from this area could move to Puget Sound and Columbia points cheaply, without the danger of towing by sea or costly rail shipment. The canals will provide the needed safe and cheap means of transportation of these raw products to mills.

Coal and iron deposits would be developed with the waterway furnishing cheap transportation. The only hard-coal deposits in the Northwest which compare with eastern anthracite are found easterly of Bellingham. The gas coals of Washington are being used all along the coast. The coking coals produce the highest percent of coke per ton of coal for any State in the Union. If these fuels are to be made available, along with high-grade soft coal of the Bellingham and Seattle territories, cheap transportation must be provided. The proposed waterway is the answer to this need.

Industrial development will follow the construction of the canal. The Bonneville and Grand Coulee power dams will furnish an abundance of electrical energy at low rates for industrial uses. Raw materials in abundance are to be found in the area reached by the waterway. Where cheap transportation and raw materials abound and cheap power is available, industry develops. It is no dream to say that in the immediate future, with the canal connecting Alaska and the inland empire, the development of multiple industries in this area will be certain.

THE CHALLENGE OF TODAY

Mr. Speaker, no more opportune time for construction of this waterway could be found.

There is no question of the national-defense need, no question of the economic need, no question of the vital part the waterway would play in Pacific Northwest development. Capable engineers have found the project feasible. As a work-making project it is unequaled in the Pacific Northwest, for actual construction would be started in a few weeks and thousands could be given jobs almost at once.

The progressive development of the Pacific Northwest demands the canal. Industrial centers now established, and others certain to spring up in the territory when the waterway is completed, will furnish work for thousands, markets for vast quantities of products, and bring renewed life to west-coast activities.

The clarion call of opportunity is sounding, calling for action. The defense and future of the Pacific Northwest sways in the balance.

Thrift and War—Urge To Save Destroyed—Trend Toward Government Ownership

---

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

STATEMENT BY JAMES TRUSLOW ADAMS IN BARRON'S NATIONAL FINANCIAL WEEKLY

Mr. SHAFER of Michigan. Mr. Speaker, Mordecai Ezekiel recently expressed a philosophy held by many of the so-called left-wing New Dealers when he proposed "taxation to diminish the incentive to save."

I ask unanimous consent to extend my remarks and include an article which appeared in a recent issue of Barron's Na-

tional Financial Weekly by the famous historian James Truslow Adams, which points out that civilization was built up on saving and that there can be no progress without saving.

The New Deal administration, Mr. Speaker, in countless ways, is practicing the theories which men like Ezekiel are constantly preaching. At the same time the Government refutes this philosophy by drawing upon the accumulated savings of the past in the present national-defense effort.

In the article by Mr. Adams it is pointed out that if savings are discouraged or prevented, there can be only one result, and that is Government ownership in the form of communism or socialism. It seems to me that it is time for those who believe in America, and its republican form of government, to challenge the irresponsible theorists of the left wing of the New Deal. In my opinion, the following article by Mr. Adams is a real challenge. The article follows:

THRIFT AND WAR

(By James Truslow Adams)

Threat of the greatest war in which the United States has ever been involved has suddenly, like a flash of lightning, illuminated our entire mental landscape. It has disclosed vividly the differences between old practices and new theories.

Nowhere has this been more revealing than in the concept of thrift. The confusion of mind of the New Deal with regard to it stands naked to the sight of all. For example, an economic adviser to the Department of Agriculture, Mordecai Ezekiel, recently proposed as his first three points to cure our economic ills that there should be enough Government spending "to counterbalance the excess savings"; "taxation to diminish the incentive to save"; and "procedure so to increase individual security as to diminish the need of savings by the general mass of workers."

Within a week of this utterance, the Undersecretary of the Treasury, Daniel W. Bell, made a proposal which comes in direct conflict with the Ezekiel theory. In view of the Government's obvious necessity for money for war or defense, the Undersecretary of the Treasury urged the issue of Government bonds on such a basis as to induce the people to save in order that the Government should have funds to call upon and that inflation should be avoided.

IMPORTANCE OF THRIFT

Here is a clear divergence of philosophies, and in view of the resulting crisis it may be well to reconsider the theory of thrift. Our whole future, war and post-war, may depend on the view adopted by Government and people.

Thrift, which has been so repugnant to many of the New Dealers, new economic thinkers, and new dictators, has been throughout history one of the leading factors, with others such as religion and physical environment, in influencing the character and rise to civilization of mankind. Whatever the future may hold, history teaches that in the past the ascent of man from the savage state, which the philosopher Hobbes denominated as "poor, nasty, brutish, and short," has been due to man's instinctive desire to acquire private property and to his discovery of the advantages of thrift. It is, or should be, needless to point to the role of accumulated capital, whether in the form of stored food, extra arrowheads and implements, a hut instead of a cave, and so on down to our modern forms, in enabling the vast mass of mankind to improve their condition and to create a high instead of a low standard of living for at least the great majority.

The stream of history flows on but forms of government change. Thrift, however, would seem to have a very special role to play in our modern self-governing democracies. Democracy depends for success on the character of its citizens, and character depends, in part, on hard work and the self-respect which a reasonable security self-earned brings to all, human nature being what it is. There have been times when work could not be had by many and when those lacking it were carried as far as possible by those who had accumulations. This was far from an ideal system, as human life is always far from perfect, but under it the belief in the value of thrift persisted.

There have also been brief periods of speculative mania when the belief in thrift, though not that of accumulating personal resources, was temporarily lost. But after such periods the belief in thrift has returned. The years leading to the crash of 1929–32 formed such a speculative period, but in the latter year Roosevelt was overwhelmingly elected President on promises of governmental and personal thrift which might have been heartily approved by Benjamin Franklin. The people again were ready to try saving instead of gambling.

GOVERNMENT GOES IN FOR BORROWING, TOO

Before that, for some years, the lure of quick and easy profits in the market, high-pressure salesmanship, the psychological pressure of advertising, and the easy terms offered by installment buying had upset the steady balance of even the most conservative—rich and poor. Since then, however, government itself has largely discouraged thrift. Disregarding the fact that widespread ruin was largely due, not simply to hard times but to the enormous debt accumulated by stock margins, too heavy mortgages, and excessive installment sales, government has tried to teach us that even government can be bought on the same installment plan. Highly critical of business which had brought American living to the highest standard the world had ever known, the administration took over from business as its only lesson the worst blunder business had made, namely, that debt could be incurred recklessly.

Accepting the theory of the English economist Keynes, which the English were too clear-headed to accept themselves, our Government started on a debauch beyond the wildest dreams of the more reckless business leaders. It decided that the way to cure a nation overburdened with debt was not to save but to create more debt. It has operated by colossal annual deficits ever since it came to power. It tried to create jobs in business by attacking and destroying business, and tried to create plenty by a policy of artificially caused scarcity.

But it did more. It set to work to eliminate from men the fundamental idea of saving and thrift.

The attack has come from many quarters, and the confusion is growing. Two incentives to save are reasonable security and a reasonable return. We need not here rehearse the story of the attacks on private enterprise—the failure to do anything for the railroads except to pile higher debts on them and to increase their costs and taxes; the unfair Government competition with the public utilities; and now the threat to divert the most conservative investments of the insurance companies into common-stock portfolios, thus injecting uncertainty into perhaps the three greatest investment fields for the public for the past two decades. Even that last asset to which rich and poor cling, a life-insurance policy, has now become a speculation due to what the Government may or may not do. Marketability is a factor in investment, but owing, in part, to the drastic regulation of markets, that is fast disappearing. I noticed the other day that one of the soundest preferred stocks, which always used to have a spread of an eighth between bid and asked, was quoted with nine points between them. The difficulty of marketing holdings in any quantity is notorious.

But there is more than such things as these. The low interest rates forced by the Government have so reduced return from investment as not only to make insurance and annuities more costly and all forms of saving, such as high-grade bonds, savings-bank accounts, and others less remuneratively attractive, but also to encourage squandering by individuals and all governmental bodies. Worse than all, underlying all these measures has been a philosophy, believed and preached, that America had oversaved and overbuilt; that it had reached the point of a static economy in which saving would be a curse and not a means of further advance nationally and of attaining self-respect and sufficiency individually.

ALARMING IMPLICATIONS FOR SOCIETY

According to the apparent New Deal theory, thrift must be destroyed. The incentive should be taken away from the well-to-do by such taxation as will make saving sterile, and from the poor by assuring them that they will get what they want or need without self-denial and foresight on their own part. We all admit that in a modern industrial society the State must provide more means of social security than in a primitive agricultural one in which each person owns the means of procuring a livelihood under almost any economic conditions. But this new theory of abolishing if possible all effort by individuals to gain security and a better life for themselves by their own efforts has most alarming implications for society as a whole. It is a negation by theorists of all we know about the rise of society in the past and of human nature.

Let us consider the impact of the war on this theory. It has been claimed that America was overbuilt, but now that we suddenly need goods the Government is moving heaven and earth to increase our plant. The capital—goods and money—to do so must come from somewhere. The money, it is said, is to be raised from either taxation or borrowing or both. It is obvious that there can be no property tax if people have not saved in the past to buy property—cars, houses, land, securities, or whatnot.

Suppose nobody had saved anything for the past 500 years and was living only on the largesse of the Government, would the Government tax its own property and would it get any further than by trying to raise itself by its own bootstraps? Take the income tax. If everybody had been living up to his income, where, according to the new theory, would any tax come from, except in part, possibly, by a tremendous fall in the scale of living even for the poorest. Instead of the one-third now poorly housed, clothed, and fed, the full 100 percent of the population would be so under the oversimplified situation shown above.

It is said that the Treasury intends to pay for the war by tapping savings held by insurance companies, other institutions and individuals to pay for bonds, and get the rest of the cost from taxes. But if savings and living well within an income are uneconomic and perhaps some day illegal, or so discouraged by Government as to become impossible, then what?

The impact of war, or of the preparation for it in our belated defense program, leads to another question. We have been through some 10 years of depression, greatly accentuated, I believe, by the false economic theories of the Government. There have been millions of unemployed. Even the Government does not know how many, though it has poured out billions to help them. Millions of these recently jobless are now to be at work at high wages. In my section, Connecticut, factories are working 24 hours a

day, 7 days a week, and young men recently with no means of support except the Government (which means taxpayers like myself and not a Santa Claus on his own), are now getting $60 to $75 a week. In some cases, so strong is the best part of human nature and the desire to feel independent, they are saving, but in all too many they are buying cars and riding high, wide, and handsome. The Government does not give the example of trying to save a cent. The capital of the rich and middle class is levied on. Men are drafted into the armed forces, but labor is highly paid, and striking for more.

When the boom is over and the inevitable post-war break comes, the cry will go up again, for those who have not saved, that "we cannot let Americans starve." The Government realizes that, but its only suggestion is to prepare for a bigger and better Work Projects Administration and to take still more from those who have saved or may still be earning fair incomes Why should young men save, except by native instinct, when the great Government tells them saving is bad national economics and that they will be taken care of anyway when they lose their jobs, get sick or old?

DIPPING INTO A ROYALTY PAYMENT

But for how many generations can we go on living on the accumulated savings of the former ones who believed in and practiced thrift? How long will those of us, who do not think in terms of a 40-hour week to get ahead and save, go on trying to do it if the whole weight of the Government is used to break us of the habit, and where will the surplus come from then? For a personal illustration, I have just had a small royalty payment from England. Britain taxed it 48 percent. Here the Federal Government takes 38 percent of what's left. If I invest it in a bond, Connecticut takes from 10 percent up or more, and when I die and leave it to my widow, heaven knows what the State and Federal Government will take. How long will one continue to work, to make a taxable income, to build up property which can also be taxed, with those facts in mind, and when being taught by the Government that one is doing the Nation an economic disservice by trying to save?

And when we stop creating income and building up estates, however small, what will there be left for the Government to do but to take over the crumbs from the table of private enterprise and turn itself into a socialistic or communistic state, whatever the difference may be between them ultimately? From one side of its mouth the Government calls for thrift so we can lend money to it; with the other it tells us that thrift is an exploded idea, and its tax collectors demonstrate it to us.

After the Middle Ages much was heard of the "dead hand" of the church, but the dead hand of a modern government with its unlimited power of confiscation, taxation, and killing of private initiative and ambition may well prove as paralyzing and devastating. Is it yet too late for one government to turn back and to build up, as far as it can, a thrifty and self-respecting citizenry, who may receive at times such governmental aid as the conditions of the new industrial world may demand, but who will still be taught that in democracy happiness and independence come, as Thomas Jefferson was taught by his father, from not asking someone else to do for him what he can perfectly well do for himself?

And, even against the great pressure of government and its heterogeneous crew of volunteer spokesmen, might it not be well for that great portion of the people who are hard-working and saving, and on whom the burden of taxation will fall later, to try to instill the meaning and effect of thrift into those who are now getting high wages and know little about direct taxation?

SOCIALISM THE ALTERNATIVE

Lincoln said that this country could not long endure half slave and half free. Neither can it do so half ambitious, energetic and thrifty, and half willing to be supported by their hard-working and thrifty fellows. If the Government abolishes saving and thrift, then there can ensue in time—a result which may not be wholly unwelcome to some of the New Deal's more noisy camp-followers—only a socialism or communism which will be the total negation of all we have dreamed of America, and leave most of the 130 millions of us at the mercy of the inevitable tiny group at the top who may still, like Hitler, Goering, and the rest, maintain regal state at the expense of an exploited people. Poverty, prison, and the concentration camp will replace the insurance policy and the savings bank, the millions of comfortable homes and the Bill of Rights.

Judging not from a theory of the future but from all the lessons of history, I do not think this prophecy is overdrawn. If we have a choice, we have not overlong to make it, and if we still have the energetic initiative of a living democracy, the task is one to be undertaken by all, employers and employees or solitary workers like myself, and not alone by the irresponsible theorists of the left-wing of a Government which rests ultimately only on the lives and toil of the mass of the rich and poor who make up the Nation.

William Jennings Bryan

EXTENSION OF REMARKS

OF

HON. HARRY B. COFFEE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

ADDRESS OF WILLIAM RITCHIE, OF OMAHA, NEBR.

Mr. COFFEE of Nebraska. Mr. Speaker, under permission granted by the House I am inserting an address by William Ritchie, of Omaha, Nebr., in commemoration of Nebraska's illustrious statesman, William Jennings Bryan. The address was delivered at 1941 Bryan birthday banquet, Cornhusker Hotel, Lincoln, Nebr., March 19, 1941. The address follows:

At the Bryan memorial breakfast, held last July in Chicago, during the 1940 Democratic National Convention, I was asked to speak a few words on behalf of Nebraska, and I opened my remarks with the following statement:

"Nebraska glories in the fact that from her broad plains and fertile fields, from the travail and hardships of her pioneers, the gay spirit of a young man, just come from Illinois, soared to the heavens with the song of a lark. Nebraska is proud of the fact that she gave William Jennings Bryan to the Nation, to humanity, to the ages."

William Jennings Bryan was a Democrat in the true sense of that word. Many a nation has boasted that it is a democracy when, in fact, the only democracy that it possesses is a democracy for the aristocrats or for the plutocrats. The conception of democracy which many Americans have today is a democracy for the plutocrats or for the intellectuals or for the bureaucrats; not a democracy in which the common man shares equally in opportunities and advantages with all other citizens. Bryan believed that democracy should grant to every individual, rich or poor, high or low, well educated or otherwise, an equality of opportunity and an equality of justice, and equal consideration in the framing of the economic and social policies of the Nation. William Jennings Bryan was the kind of Democrat who knew that there is no true democracy where there is an autocracy of either the classes or the masses; and he told the American people time and again that a centralization of power in the Federal Government and a destruction of local self-government spelled the doom of democracy, no matter what the immediate objective might be.

In the 1927 Encyclopedia Americana, the article on the Democratic Party was written by William Jennings Bryan. In the concluding paragraph of that article, Mr. Bryan summed up his theory of democracy and of the purposes of the Democratic Party. He said:

"There is today and will continue to be an imperative need for a party thoroughly committed to the defense of the inalienable rights of the individual and to local self-government, and jealous of the encroachments of Federal power. Even when such a party is not in power, it exercises a potent influence in molding public opinion and in restraining excesses, because it is very quick to champion the cause of an individual whose rights have been trespassed upon, or the cause of a community whose rights have been ignored. In proportion as the organization is true to the principles promulgated by Jefferson and defended by Jackson, it may hope to appeal to the confidence of those who seek neither favoritism nor privilege, but are content to enjoy the blessings of a government in which the individual is protected in the enjoyment of life and liberty and in the pursuit of happiness."

This article was written 16 years ago, shortly before the death of the Great Commoner, and is a clear-cut statement of the ideals which motivated and controlled Bryan's life career.

In the party platform of 1896, which was framed by Mr. Bryan and his friends, we find the following:

"During all these years the Democratic Party has resisted the tendency of selfish interests to the centralization of governmental power, and steadfastly maintained the integrity of the dual scheme of government established by the founders of this Republic. Under its guidings and teachings the great principle of local self-government has found its best expression in the maintenance of the rights of the States and in its assertion of the necessity of confining the general government to the exercise of the powers granted by the Constitution of the United States. * * * We demand a return to that simplicity and economy which befits a democratic government and a reduction in the number of useless offices the salaries of which drain the substance of the people.

"We denounce arbitrary interference by Federal authorities in local affairs as a violation of the Constitution of the United States and a crime against free institutions."

In the platform of 1900, which Mr. Bryan practically drafted, appears the following:

"We denounce the doctrine that an Executive or Congress, deriving their existence and their powers from the Constitution, can exercise lawful authority beyond it or in violation of it."

And in the platform of 1908, which was drafted by Mr. Bryan, appears a demand for economy in administration and a reduction in the number of officeholders.

Mr. Bryan always put those principles to which he was devoted above self-advancement. He was never an opportunist. Although young Bryan lost the Presidential

election in 1896, his campaign made the people of the country aware of the true principles of democracy, and caused them to realize and understand that this country can never claim to be a true democracy until it devotes itself to the principle of denying favoritism and special privilege and granting to each individual a fair share in the Government and a fair consideration in the formulation of the economic and legislative policies of the country.

Mrs. Henry Cabot Lodge, wife of the United States Senator from Massachusetts, who was long a Republican Party leader, had the insight to realize that, although Bryan had lost for himself, he had won for his principles. Following the 1896 election, Mrs. Lodge, writing to Cecil Spring-Rice, long-time British Ambassador to the United States, said:

"The great fight is won. It was a fight conducted by trained and experienced and organized forces, with both hands full of money, with the full powers of the press—and of prestige—on the one side; on the other, a disorganized mob at first, out of which burst into sight, hearing, and force one man—but such a man. Alone, penniless, without backing, without money, with scarce a paper, without speakers, that man fought such a fight that even those in the East can call him a crusader, an inspired fanatic, a prophet. It has been marvelous. * * * His speeches spoke to the intelligence and hearts of the people. He almost won."

The opening and the closing words of the great oration which Mr. Bryan delivered at the 1896 Chicago convention show clearly the forces which controlled his life and made him one of the great leaders of the democratic forces of the world. When he appeared upon the rostrum the convention was in a bedlam. Renowned Democratic leaders who were famous orators had been unable to throw their voices into the convention hall so that they could be heard. Mr. Bryan, then only 36 years old, stepped before that vast assemblage and his first words were: "I think if you will be quiet I can make myself heard." And did he make himself heard! Those who remember that great voice, with its marvelous tone and tremendous carrying power, know full well that he told that convention the truth when he said they could hear him, and the convention found this out to its astonishment and pleasure. But it was not only that powerful voice which caused the people of America to listen to Mr. Bryan's message. That voice alone would have been as tinkling cymbals and sounding brass if there had not been behind it the spirit of an evangel—the burning passion to make the people see and understand, first, what were their inalienable rights, and, second, how they might obtain them; and this spirit—this purpose—was summed up by Mr. Bryan in the final words of this great oration when he said:

"You shall not press down upon the brow of labor this crown of thorns; you shall not crucify mankind upon a cross of gold."

Here was a great poet, a great crusader, an inspired leader. And from then on, Bryan's powerful voice and his great message commanded the attention and ultimately the respect of the American people.

In the hindsight of a half century of history, it is now clear as crystal that William Jennings Bryan was the John the Baptist of the outstanding political and social advancements made in America by the present generation. Followers of few world statesmen can boast so proud a record.

Let us review this record, briefly. In 1896 the people of the country were plagued with discriminatory and unjust freight rates, with a railroad political machine which was corrupting public officials and legislative bodies. Many small commercial and manufacturing enterprises were forced out of business by rate discriminations in favor of companies in which railroad officials were personally interested. Railroad securities were juggled, great issues of watered stock were sold, to the profit of the financial buccaneers, to the loss of the public, and with a resulting increase of railroad rates which placed such a burden upon the farmers that agriculture was prostrate. Mr. Bryan challenged this great power. In the 1896 platform appeared this statement:

"We demand the enlargement of the powers of the Interstate Commerce Commission and such restriction and guaranties in the control of railroads as will protect the people from robbery and oppression."

In the platform of 1900, Mr. Bryan wrote:

"Any attempt by railroad corporations to interfere with public affairs of the people or to control the sovereignty which creates them should be forbidden under such penalties as will make such attempts impossible. * * * We favor such an enlargement of the scope of the interstate commerce law as will enable the Commission to protect individuals and communities from discriminations, and the public from unjust and unfair transportation rates."

As a means for securing fair transportation charges for agricultural products, one plank in the Democratic platform of 1896 (and Governor Weaver will be particularly interested in this) reads:

"The Federal Government should care for and improve the Mississippi River and other great waterways of the Republic, so as to secure for the interior States easy and cheap transportation of tidewater. When any waterway of the Republic is of sufficient importance to demand aid of the Government, such aid should be extended upon a definite plan of continuous work until permanent improvement is secured."

This same plank was reiterated in subsequent Democratic platforms which Mr. Bryan helped to frame. When these principles were enunciated by Mr. Bryan as a young man, they were looked upon with horror, as revolutionary, and socialistic. Today the principle of equal freight rates and no special privileges to any shipper or community are an integral part of the policy of the Federal and State Governments. Today the powers of the Interstate Commerce Commission have been extended so as to prevent the jugglings of the railroad securities and unfair and burdensome freight rates. Today the great river systems of the interior have been improved with the resulting decrease in freight rates for agricultural products.

In the 1896 platform appeared the following statement:

"Gold monometallism is a British policy, and its adoption has brought other nations into financial servitude to London.

"We declare that the act of 1873 demonetizing silver without the knowledge or approval of the American people has resulted in the appreciation of gold and a corresponding fall in the prices of commodities produced by the people; a heavy increase in the burden of taxation and of all debts, public and private; the enrichment of the money-lending class at home and abroad; the prostration of industry and impoverishment of the people."

The world has finally come to Mr. Bryan's monetary theory. And no one calls those who insist upon the enforcement of that policy, radicals or socialists, as such people were called in 1896.

In the platform of 1900, which Mr. Bryan drafted, appears the following:

"Private monopolies are indefensible and intolerable. They destroy competition, control the price of all material and of the finished product, thus robbing both producer and consumer. They lessen the employment of labor, and arbitrarily fix the terms and conditions thereof, and deprive individual energy and small capital of their opportunity for betterment. They are the most efficient means yet devised for appropriating the fruits of industry to the benefit of the few at the expense of the many, and unless their insatiate greed is checked all wealth will be aggregated in a few hands and the republic destroyed.

"We pledge the Democratic Party to an unceasing warfare in Nation, State, and city against private monopoly in every form. Existing laws against trusts must be enforced, and more stringent ones must be enacted providing for publicity as to the affairs of corporations engaged in interstate commerce, requiring all corporations to show, before doing business outside the State of their origin, that they have no water in their stock."

In the platform of 1908 Mr. Bryan demanded that corporations engaged in interstate commerce should be required to take out licenses and be prevented from issuing watered stock, and that there should be a law compelling such licensed corporations to sell to all purchasers in all parts of the country on the same terms, after making due allowance for cost of transportation.

By bitter experience the public has finally come to appreciate Mr. Bryan's wisdom and foresight, and securities laws have been enacted by State and Federal Governments to prevent evil acts which in the nineties were matters of common practice. The Federal Trade Commission was established and given powers against unfair trade practices, and laws have been enacted by the Federal Government, and in many States, which require chain stores to sell at the same price in every store, making due allowance only for cost of transportation. And yet, when Mr. Bryan proposed these measures he was called a dangerous man.

In the various democratic platforms which Mr. Bryan drafted appear appeals for closer friendship with the Central and South American countries. When Mr. Bryan was Secretary of State he did more than any man before him to build up a spirit of friendliness and cooperation between all the nations of the Americas. During one of the pan-American conferences attended by Mr. Bryan, the Minister from Ecuador asked Mr. Bryan for his autographed picture. In complying with this request, Mr. Bryan wrote on the photograph, "The Lord has made us neighbors, let justice make us friends." This sentiment so touched the hearts of the people of Latin America that the picture with this autographed sentiment was sent from chancellery to chancellery in all of the South and Central American republics, and finally was returned to the State Department at Washington, where it now hangs. This sentiment is the keynote of today's pan-American good-neighbor policy, and it was the first pronouncement of this kind by an American statesman.

At the time Mr. Bryan was first nominated for the Presidency wages were low, working conditions intolerable, long, and unreasonable hours were the rule. In his 1896 platform Mr. Bryan said:

"We believe that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market."

A quarter of a century later this became a fixed policy of the Government. Again Mr. Bryan said:

"As labor creates the wealth of the country, we demand the passage of such laws as may be necessary to protect it in all its rights."

Note in this that Mr. Bryan did not advocate that labor be given more than its share or more than its right, but only that it should be protected in all its rights, and he concluded his program for labor by saying:

"We are in favor of the arbitration of differences between employers engaged in interstate commerce and their employees, and recommend such legislation as is necessary to carry out this principle."

The present administration is now learning from sad experience what Mr. Bryan realized 45 years ago was necessary to protect labor, industry, and the public. And steps are being taken today to meet the demands which Mr. Bryan made nearly half a century ago.

Mr. Bryan foresaw the needs of the present day in the Pacific. In the Democratic platform of 1900 he wrote:

"We favor an immediate declaration of the Nation's purpose to give the Filipinos, first, a stable form of government; second, independence; and, third, protection from outside interference, such as has been given for nearly a century to the republics of Central and South America."

The present Philippine independence bill embodies the first two of these principles but neglects the third; and we are now learning that, in the interest of America and in the interest of democracy, we must adopt the third principle enunciated by Mr. Bryan 41 years ago.

In the 1900 and 1908 platforms Mr. Bryan denounced huge political contributions from corporations and from individuals and demanded that no corporation should be permitted to contribute to a campaign fund, and that contributions from an individual should be limited to a reasonable amount. Laws attempting to curb these evils have been passed in every State of the Union and by the Federal Government.

The 1908 platform demanded a Federal income tax, which has since been enacted; demanded legislation to promote the development of an American merchant marine, and such legislation is now on our books; demanded the organization of a National Health Bureau, and such a bureau is now functioning efficiently for the benefit of the people. Mr. Bryan also demanded the popular election of Senators, and that is now written into our Federal Constitution.

In his later life Mr. Bryan turned his attention to the corruption of public morals caused by an arrogant and uncontrolled liquor traffic. Throughout the length and breadth of the land Mr. Bryan preached temperance and prohibition. He realized that the degradation of the people was due in no small measure to what then was a Nation-wide scandal, and he attacked political power and greed which was built upon this human wretchedness. Mr. Bryan's remedy was national prohibition. Some who believed in the purpose of his attack upon the liquor interests did not agree with his method of attacking the evil, but none who admired high principle and good morals questioned his integrity and good intentions. Largely due to his preachments throughout the country, national prohibition became a part of our Federal Constitution. While subsequent events indicated that this was not the right solution for this problem and national prohibition was ultimately repealed, the so-called noble experiment taught those engaged in the liquor business the need of applying sound morals to their traffic and destroyed this corrupting influence upon the political life of the Nation, and the people of America learned to frown upon intemperance, and the morals of the people of America and the political life of the Nation were definitely raised.

This story would not be complete without mention of the Scopes trial. Here again Mr. Bryan braved public ridicule for the sake of principles which he held dear. Here again history is teaching that he was not far wrong. In this famous trial Mr. Bryan protested against those cynics who scoffed at the Bible teaching, that God made man after his own image. Bryan knew that if this concept were once destroyed, and if the theory, that man was descended from the ape and from the gorilla, took its place, the strongest spiritual influence to hold man to a higher course and keep him from degradation would be destroyed. At the time of the Scopes trial, under the guise of teaching evolution, some textbooks stated that man is descended from the ape, and some scientists were then looking for the missing link. Mr. Bryan knew better and protested against this, as he protested against any form of human degradation. Subsequent events have proved that Mr. Bryan was right. The greatest scientists of today now say that man was not descended from the ape and that there is no such thing as a missing link. And I, for one, prefer Mr. Bryan's position, for it gives me a sense of dignity and a belief in the future of the human race.

By a technical ruling Mr. Bryan was not permitted to give his side of this controversy, and he died 2 days after the trial as the result of the strenuous efforts which he made; so, unfortunately, the cynic and the prankster was left with full command of the field, and Mr. Bryan's position in this matter was never fairly and honestly presented to the American people.

Time will not permit a recitation of all the things which Mr. Bryan advocated in his fight for Democratic principles and of the final success of that fight. Some of the things which he advocated, however, have not yet been fully appreciated by the American people. In the 1900 and 1908 platforms, which Mr. Bryan wrote, he pronounced against the misuse of patronage on the part of the President, in favor of economy in administration, and for a reduction in the number of officeholders. Mr. Bryan always held that there is an imperative need in America for a party thoroughly committed to the defense of the inalienable rights of the individual and to local self-government and jealous of the encroachments of Federal power. These matters, Mr. Bryan knew, would be a cause for constant struggle and would require unremitting vigilance on the part of those who love true democracy.

There are many people here today who knew Mr. Bryan intimately at the beginning of his career. I did not have that privilege. I was a boy of 10 when Mr. Bryan was first nominated for the Presidency. I remember that nomination very well. I remember the pictures in the Chicago papers of Bryan the young man, his right hand uplifted, standing before a great gathering, uttering the immortal words:

"You shall not press down upon the brow of labor this crown of thorns; you shall not crucify mankind upon a cross of gold."

That statement thrilled me to the core and made me always a supporter of Mr. Bryan. In 1900 I was a freshman in high school. When Mr. Bryan was nominated for the Presidency the second time, we lived in a strong Republican suburb of Chicago. There were 3,900 Republican votes to 300 Democratic, and most of the Democrats were so-called gold bugs. I was so enthused with Mr. Bryan's appeal for equality and justice and for honesty in government and business that I bought a pin with his picture fully 3 inches in diameter, stuck it upon the lapel of my coat, and went to school, with the result that I was ridden on a broomstick around the schoolhouse and jeered while the Republican teachers looked on with approval.

In 1908 I was county superintendent of schools in Cheyenne County, Nebr., and accepted a position as secretary of the Democratic County Committee and of the Bryan Volunteers of that county. During the campaign, one of the Republican leaders in Sidney, well and affectionately known as Paddy Miles, became infuriated at my enthusiasm for the Bryan cause and sent out a letter denouncing me for using the office of county superintendent to promote political propaganda. He ended his letter by saying, "We believe the boy ought to be spanked." Well, the voters of the county did not spank either Mr. Bryan or "the boy."

My first meeting with Mr. Bryan was in the fall of 1909, when I was in debating class with William, Jr., at the State University and was occasionally invited to the Bryan household for dinner. I never will forget my first impression of Mr. Bryan's voice. One afternoon he was on the second floor of his house and William, Jr., and I were in the basement, when suddenly we heard booming throughout the house, "William, William." The house was filled with the resonance of the call, and Mr. Bryan had hardly raised his voice at all. He simply used the volume which was there.

In the fall of 1911, I was selling school textbooks down in the Ozarks of southwestern Missouri. I visited with one of the members of a county school board which was going to adopt textbooks. I found that he was a strong friend of William Jennings Bryan, and, of course, I boasted of the fact that I had been a guest in the Bryan home at a number of meals; in fact, I was relying upon this as my strongest argument for having my books adopted in that county. Upon my return to the county seat before the day of adoption, my friend Mr. Lamar advised me that we would have a chance to see Mr. Bryan, because he was going to speak on the Chautauqua platform that afternoon, and Mr. Lamar had bought a ticket for me. I had serious qualms, as I feared Mr. Bryan might not recognize me way down in southwestern Missouri. I had only been in his home when he was present a half dozen times, and what attention or notice he had given to me, I did not know. Of course, Mr. Lamar wished a special introduction to his hero, whom he had always worshipped from afar. So after the Chautauqua was over, we went up to the platform in a long line of people who were shaking hands with Mr. Bryan, and I perspired and trembled for fear I had lost my county textbook adoption. To my surprise and great pleasure, as I came up to him, Mr. Bryan reached out his hand and said, "Why, Ritchie, what are you doing down here?" This was the proudest moment of my life, and one of the happiest. I introduced Mr. Bryan to my friend and, needless to say, sold every book I had to offer to that county school board.

My next distinct recollection of Mr. Bryan is at the Baltimore convention where I heard him use his marvelous voice to still the crowd and bring about the nomination of Woodrow Wilson. Many people at that time questioned Mr. Bryan's sincerity and insisted that he was not trying to nominate Mr. Wilson but was endeavoring to defeat Champ Clark so that he might obtain the nomination for himself. I know that such accusations were false. I was an alternate delegate at that convention from the first district of Nebraska. After the nomination, returning to the Hotel Belvedere, I found myself in an elevator alone with Mr. and Mrs. Bryan. I said to Mr. Bryan, "Well, sir, how do you feel now?" Mrs. Bryan beamed and spontaneously replied, "This is the happiest moment of our lives." Mr. Bryan joyously acquiesced. No one who saw and heard Mr. and Mrs. Bryan then could doubt but that they spoke from the bottoms of their hearts.

Looking back at that convention, I remember the bushel baskets full of telegrams that poured in upon the delegates after the Thomas Fortune Ryan speech was made. And I marvel now when I realize that Bryan's great voice and magnetic personality were confined to the walls of that auditorium. Yet his spiritual appeal, his stand for principles, was so great that cold print aroused the country to a magnificent response. How history would now be changed, if radio had been discovered and developed in Bryan's day.

My next recollection of Mr. Bryan is the day he left Lincoln to become Secretary of State. I was out at his home with William, Jr. As I left, Mr. Bryan stood in his shirt sleeves, having helped move out some of the furniture, and said good-bye to me. As I shook his hand, I said, "Mr. Bryan, how happy you must be." His reply was, "I don't

know. I am approaching this position with a realization of tremendous responsibilities." Two years later, shortly before Mr. Bryan's resignation from the Cabinet as a protest against the administration's policy of insisting upon the right to send our ships into war zones, I met Mr. Bryan, then Secretary of State, in his office in the State Department. Mr. Bryan looked tired and worn and indicated then to me that he was about to resign. He said that no one could have been more gracious and considerate of him than Mr. Wilson, but that his views and Mr. Wilson's views were so far apart on the question of sending our ships into war zones that he felt it was necessary for him to resign in the interest of peace. He said then that he feared that the course which Mr. Wilson was following would lead inevitably to war. Mr. Bryan's prophecy came true, and his policy of exercising self-restraint and withholding our ships from war zones has now been adopted by the American people as a proper principle in the interest of maintaining the peace and security of the Nation.

Mr. Bryan was always an advocate of peace. His treaties with 30 nations whereby for the first time the principle that there must be a time for negotiation before a war could be started is a principle that some day you and I know will be demanded by the peoples of the world, and some day will head off such wars as are not the product of evil-minded would-be world conquerors.

At this time it is well for us to remember the famous answer which Mr. Bryan gave, when he was Secretary of State, to the Japanese Ambassador. The Legislature of California had passed a most vindictive piece of anti-Japanese legislation. The situation was acute. The Japanese Ambassador to the United States called on Mr. Bryan and asked, "Is this final?" Mr. Bryan answered, "There is nothing final between friends." Mr. Bryan immediately took the train to California and pleaded with Governor Hiram Johnson to veto the measure, which the Governor did. Bryan's answer, "There is nothing final between friends," should be the answer of the American people to the people of Japan. It may not be appreciated, however, by the Japanese militarists, but if the Japanese people can understand that the American people take the same position as Mr. Bryan takes, it may be that the problems in the Far East will be settled by peaceful means.

Fellow Democrats, I for one still follow the Bryan flag. I, as a Democrat, still believe that the centralization of Federal power will ultimately lead to the destruction of democracy. I for one agree with that plank of Mr. Bryan's 1896 platform which announced that a third term for the President might result in the establishment of a precedent which would lead to the destruction of our free institutions. The people of this country have passed upon that question for the moment; but history demands that sooner or later that question be settled right. In the stress of emergency, in the demand for relief from pressing evils, we may have forgotten the precepts of some of Mr. Bryan's teachings. We may have failed to recognize that Federal power must be kept within constitutional bounds, and should be extended only where necessary to protect the principles of true democracy. I for one believe that all legislation which has been passed in the past few years which countervenes these principles, will ultimately be considered to have been but emergency legislation, and that the principles advocated by William Jennings Bryan will ultimately triumph.

I say this with due respect for President Roosevelt and many of his reforms which have marked great advances in the development of truly democratic government, but also with an appreciation of the fact that it is human to err and that all great men being human make some mistakes and it is not fair to the principles of democracy if we do not oppose legislative measures and administrative acts which we believe will lead to a destruction of our free institutions.

Fellow Democrats, I love to think of Bryan's great spirit, wiser now that it is freed from the burdens of the flesh, hovering over us today, his eighty-first birthday anniversary. I gain inspiration from his memory to take heart and courage to do my duty here as it hath vouchsafed God to show me the Way and the Light, not as an opportunist, but as a follower of democratic principles; and I am sure that with the inspiration of our great departed national leaders, Washington, Jefferson, Jackson, Lincoln, Wilson, and Bryan, we will ever stand firm for the principles of liberty, justice, and democracy, announced by them, and for the safety, security, and perpetuation of our great Republic.

Eighth Anniversary of the Civilian Conservation Corps

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

ADDRESS OF HON. BUTLER B. HARE OF SOUTH CAROLINA

Mr. HARE. Mr. Speaker, it was my privilege to address the enrollees and many of their friends at a meeting celebrating the eighth anniversary of the Civilian Conservation Corps at Table Rock State Park, Pickens, S. C., on April 10, and by unanimous consent of the House to extend my remarks I am including a synopsis of this address. It is as follows:

Mr. Chairman, misfortunes do not often befall an individual or a nation unless someone, somewhere, at some time is able to find some virtue or compensation arising therefrom. Ten years ago we were in the midst of what proved to be a world-wide economic depression. It was of such magnitude that millions of people were without employment and the income from those employed was growing less year by year. There was more or less suffering throughout the world. The problem was one that commanded the most serious reflections of all the people in practically every nation. Industry was at a standstill. Agriculture was a downhill business, both from standpoint of production and prices. Of course, the problem of production was not a new one. It had been observed for many years that productive lands were decreasing in area, forest lands were approaching the exhaustion point and no solution of the problem had been reached although the necessity for it was known by all.

The depression and unemployment had their compensation in that they furnished an opportunity for a solution of the growing agricultural and forestry problem. It afforded the opportunity for our Government to try and kill two birds with one stone. The Civilian Conservation Corps was provided. The law providing for it was one of the first acts passed under the present Democratic administration. It was not sponsored by any of the many pressure groups. I understand it was the President's own plan in an effort to solve a great problem. It was to serve two purposes—one to afford employment to many people and the other to afford a type of work designed largely to assist in the solution of the one great farm and forest problem. The selection of young men as enrollees in the Civilian Conservation Corps was not a mere accident. From the standpoint of relief, it may have been just as well to have selected older men, but it was decided to select young men where the family was without employment and in need. However, they were not selected solely for this reason. There was another thought involved. It was known that the problem would not be solved within a year or decade, or even a generation. It was thought that a large percentage of the young men would be drawn from rural or farm life, and the further thought was that they would be engaged in a line of work that would serve as object lessons to farmers in preventing farm erosion and preserving their forests. Then the added thought was that these young men, having obtained training and experience in this work, would in the course of time find their way back to the farm, where they would become leaders in adopting plans for better conserving their lands and forests, their farms in turn to become object lessons to their less-fortunate neighbors and furnish concrete information which would enable them to conserve or restore the forests and the productive area of soil.

It will not be my purpose at this time to discuss farming or agriculture, but in order to give some sort of a background upon which this project was predicated, we are told by our soil experts that at the beginning of our civilization in the United States there was on an average of about 9 inches of what we now refer to as topsoil and contained what we know as plant food. In other words, our crops, regardless of what they may be, obtain their plant food for supporting the plant, fruit, or grain thereon from this topsoil. Following the removal of our original forests we all know that rains have descended and floods have been coming for two or three hundred years, and much of this topsoil has been washed from the fields and our soil experts now tell us that the average topsoil in the United States does not exceed 5 inches, or just about half of what it was when we began two or three hundred years ago. This has been observed for several years, and close observers say that if this continues for another century, many of our farms will be so depleted of topsoil the growing of crops will be practically impossible. This has already occurred in many localities and sections of our country. Prosperous farm lands of fifty or a hundred years ago are now practically worthless for crop-production purposes. Men are failing today to eke out a subsistence on lands where their grandparents grew rich. It is easy to see, therefore, that with a decreasing production and an increasing population the time must come when the production on a farm will be too small or too limited to support a family, unless a planned policy or program is inaugurated that will not only prevent further erosion but conserve all of the plant food now available and endeavor to increase the supply. Soil conservation, therefore, is probably our greatest national problem.

I am not certain but what it is greater than the extension or marketing services previously created, especially when we take into consideration the time it will take in a permanent and successful solution. Its necessity is emphasized when we consider that agriculture has always been and will ever be the basis of our national wealth and security of our civilization. It was probably designed this way by the Creator in the beginning, for we do not find any other industry or occupation of man upon which the seal of God's approval was more definitely fixed than that of agriculture. Our first

parents, Adam and Eve, at the very beginning were placed in the Garden of Eden and commanded to dress and keep it. Abraham, a man who talked and walked with God, was rich in cattle. Jacob, another patriarch, was well versed in the practical science of stock raising. Pharaoh, the wicked King of Egypt, dreamed of seven good ears of corn on one stalk. Moses, divinely chosen to lead His chosen people out of bondage, sang of the increase of the field, the butter of kine, the fat of lambs, the kernel of wheat, and the pure blood of grapes. And Ruth, the most lovable character of sacred history, dignified and glorified farm labor when she followed the reapers and gleaned in the fields of Boaz.

The Civilian Conservation Corps or the Soil Conservation Service was inaugurated to preserve this great and indispensable asset to our national life. Lost land is not restored within a year or decade. We are told it takes a hundred years and more to restore an inch of topsoil. Forests are not restored within a year. It takes from 25 to 100 years to grow a good tree. The length of time in either case will depend upon the plans and methods adopted. The creation of the Civilian Conservation Corps, as we have said, was not an accident but the economic depression referred to afforded our Government an opportunity to inaugurate it. The men who are selected to enroll in this great program can be congratulated from a number of standpoints. One is that you are physically and otherwise qualified under proper instructions to assist in the solution of this great national problem. You are further to be congratulated in that it affords you an opportunity to learn early in life the very best way of conserving and improving farm lands and forests which assure you a much better chance of effecting a fair living from the soil and contributing to the education of others who may have not had such an opportunity.

Of course, there are many other privileges that may be recounted. Here you learn the value of cooperative effort. You learn the value of forming regular habits that are conducive to developing strong and sound bodies. You have the opportunity of getting the ideas of others who may be more or less fortunate. You are afforded an opportunity to learn better and more of the functions of government and the obligations of citizens.

And let me stop long enough here to say that good citizenship is the greatest civic virtue in our national life, whether it be social, political, or economic. Unfortunately, if the shadows of today are the forecasts of coming events, our country is threatened by foes more insidious and more dangerous than those ever marshaled upon a battlefield.

Any loyal and patriotic citizen has the legal right to refuse the exercise of his suffrage rights by refusing to vote or take any part in our elections or political affairs but it will be a sad day in this country when people who claim to be patriotic and loyal citizens fail and refuse to exercise this right. Any individual has the legal right to refuse to identify himself with or contribute to support of any religious institution, but it will be a sad day when the church doors of our Nation are closed. A man may have the legal right to quit work or strike, if you wish to call it that, but it is a sad and dangerous situation for people who claim to be patriotic and loyal citizens to exercise such a right when engaged in a program to meet a national emergency. This day seems to have arrived, and I apprehend that more drastic action than that usually found in a democracy will be necessary to correct this situation.

You can by appropriate legislation punish open disloyalty, but you cannot legislate good citizenship. This is a product of training and practice. It is no argument against education to say history shows that a democratic system of government is safer in the hands of a less tutored but patriotic citizenry than in the hands of a more highly trained citizenry that is willing to sacrifice the welfare of a nation in time of pending danger for wholly selfish ends, whether it be employer or employee. This point is well illustrated in your own section of the country at this time where it has been said from time to time that we are a poorly trained people. We do not admit the charge, although it may be true to some extent, but it is an outstanding tribute to our industry and labor that the present national-defense program has not been halted here 1 minute by strikes or lock-outs. This is not an accident either. It is the product of our philosophy of life and government. It is a distinct compliment to the character and patriotism on the part of employer and employees in industry. I would say that employees are primarily entitled to the credit for preventing foreign Communists from coming into our communities and spreading their nefarious and subversive teachings and doctrines among our people, and they deserve the lasting gratitude of the American people; and it is my opinion, if this country is to survive, it will be saved through that type of patriotic philosophy demonstrated in this section of our Nation.

Outside of our homes and schools I know of no better place to secure training in good citizenship than in the Civilian Conservation camps. Every enrollee may congratulate himself for being afforded an opportunity for the development of that type of citizenship which will enable him in civil life to make a valuable contribution to the welfare of his country. The problem of strikes in time of emergency may be met and solved within a very short time, but the removal of the underlying causes, regardless of what they may be, will take a generation or longer, provided they are to be solved by a democracy.

You have here an opportunity for learning a thousand and one things that enter into the life of every individual and will contribute to some extent to his success or failure. You will be able to profit by these lessons. Others will be able to profit by your example in later years if you are successful. We could enlarge upon these thoughts and multiply the many contributions the Civilian Conservation Corps in making for the betterment of American life not only in agriculture and forestry, but in practically every other activity.

It is appropriate, therefore, and highly fitting that this hour has been set apart for the purpose of celebrating the anniversary of this agency, and I congratulate those responsible for this meeting. And permit me to say in conclusion, I appreciate more than I can express the honor and privilege of being one of your guest speakers on this occasion.

Tennessee-Tombigbee and St. Lawrence Inland Waterway

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, the railroad monopoly and the power trust have combined to prevent the development of the Tennessee-Tombigbee inland waterway, the St. Lawrence inland waterway, the Columbia, the Arkansas, the Savannah, the Connecticut, and all other similar river development projects throughout the country.

They seem bent on the economic strangulation of the South and West, and of fastening upon this Nation the exorbitant rate structures under which we are now suffering, and which no country on earth could continue to bear.

This railroad monopoly, which, in my opinion, is operating in flagrant violation of the antitrust law, is bending every effort to prevent the development of the Tennessee-Tombigbee inland waterway, using a few railroad employees in other sections of the country as cats'-paws to pull their chestnuts out of the fire, knowing full well that they do not represent the railroad laborers in the area affected.

The Tennessee Valley is the very heart of what President Roosevelt has called "the citadel of national defense." To this area we must look for the bulk of our aluminum supply for airplanes, as well as for nitrates for explosives, to say nothing of the other materials produced there that are absolutely essential to our national defense.

Unless this Tennessee-Tombigbee cut-off is constructed, this material produced in the Tennessee Valley, traveling by water, will have to go approximately 900 miles out of the way, going around by way of Cairo, Ill., and the Mississippi River to its mouth and then across the Gulf of Mexico to reach the city of Mobile.

It would have to go 650 miles out of the way to reach the Gulf of Mexico at any point. In other words, it is 650 miles farther from any point on the Tennessee River above Pickwick Dam to the mouth of the Mississippi River than it would be down this inland waterway to the Gulf.

All points on the Ohio River up to Pittsburgh, Pa., and all points on the Allegheny and the Monongahela Rivers, as well as all points on the Cumberland, will be more than 200 miles closer to the Gulf when this waterway is constructed.

All that vast area in the Tennessee Valley, the Cumberland Valley, the Ohio Valley, including the Allegheny and the Monongahela, will be tributary to this new route to the sea, which will save every shipper from 200 to 900 miles on every load that goes out or comes in.

In addition to that, it will furnish a slack water route for ascending traffic, that in addition to saving from 200 to 900 miles in distance, will provide an additional savings in transportation costs in that it will furnish a slack water route instead of the present one against the terrific current of the Mississippi River.

The construction of this canal is absolutely necessary from every standpoint of national defense, as well as every consideration of navigation and transportation; and it is just as sure to be constructed sooner or later as the night follows the day. It should be constructed now.

But the representatives of the railroad monopoly now tell us that the war will be over before either the Tennessee-Tombigbee or the St. Lawrence waterway could be finished. Just when they intend to stop the war, I do not know; but the indications are now that this emergency will last for years, and every available inland waterway that would furnish protection from attack by bombing planes released from airplane carriers at sea

will need to be developed and put into operation.

But even if this emergency should end, these projects could be used to absorb the unemployment that would necessarily follow. Then we would have them for transportation purposes in times of peace as well as for future national defense.

If we are going to let the railroads and other selfish interests destroy this Tennessee-Tombigbee inland waterway with their vicious propaganda and keep the Tennessee Valley area bottled up, and also permit the West and Northwest to be bottled up in the same way, then we might as well put a stop to all rivers and harbors development and say to the people of the South and West, "You are doomed to economic strangulation."

Jackson Day Address

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

ADDRESS BY HON. JOSEPH E. CASEY, OF MASSACHUSETTS

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable JOSEPH E. CASEY at the Jackson Day dinner at Boston on Saturday, March 29, 1941:

It is always good to get home. It gives me an opportunity to meet old friends. I am especially glad to attend this Jackson Day dinner. It is an opportunity to renew our loyalty to our party and to awaken our memories to all that America means.

Our life as a nation has been short. A span of 150 years comprises only the infancy of a race. In that century and a half, we have made progress that has amazed the world. From a meager group of people on the edge of a vast and practically unknown continent, we have grown into the most powerful of all the nations.

The party which Jefferson founded has lived through 140 years of turbulent history. It is almost as old as the Republic itself. It has had periods of prosperity and lean years of adversity. The party has made mistakes and at times it has been torn by discord and internal dissension—the usual fate of a political organization. But in the main the Democratic Party has been the bulwark of popular government in this country, and the greatest champion the common man has ever known.

In the days of Andrew Jackson, the party fought for the welfare of the country against the fury and hate of a small oligarchy which tried to secure a strangle hold on the Nation's financial life. It won that struggle. In our day, under the Wilson and Roosevelt administrations, the party has consistently adhered to the principles of liberal and progressive government. Because of this and because the Republican Party has never been liberal, the Democratic Party is in the majority today and it is, in a greater measure than ever before, the true American party. Oh, I know that the Republican Party has a fringe of idealists and liberals who strive constantly to convert the party to progressive principles and to bring it in touch with the needs and aspirations of the average citizen but they have been disappointed in the past and are being disappointed now.

I know that the Republicans say at election time that they approve of the social gains and social objectives of the last 8 years, but I say to you that I have not seen any evidence that they even understand what these social gains and social objectives have been, much less advocate them. They are not leaders in the true sense. They are merely following the drift because they feel it is the only safe political course at this time.

We must all shudder to contemplate the depth to which the failure of the Democratic Party to win the 1932 election would have plunged the country. From 1932 down to the present day, our Nation has been confronted with crisis after crisis. Under Democratic leadership, we have taken each in stride and today we are the envy of all the people of the earth. All we know about food rations and interference with the natural rights of free people is what we read in the reports of conditions abroad.

Today, the Nation, under the leadership of the Democratic Party, faces the greatest crisis in all its 150 years' existence. Across the water in other lands, the very same races of people who live in peace and concord here in America, are at each other's throats. On the one hand are the great dictator states controlled by one man, glorifying the doctrine of blood and iron and seeking to expand. On the other hand is a wealthy and powerful democracy guarding jealously its vast possessions and fearful of losing any of them. This struggle has become so vast and so titanic that it threatens to engulf the world. It is a vision that chills the heart—that moves one to icy terror; this lovely fruitful earth, overflowing with plenty, riven from end to end by hate, aggression, and brutal cruelty, which, if unchecked, must surely crumble civilization to the dust. And less than a quarter of a century ago, 9,000,000 of the world's finest men yielded up their lives to save humanity.

Here in this country the effect of this cataclysm has already been felt. Where formerly we were concerned with the problem of unemployment, making the lot of the old people more secure, flood control, and, in general awakening the social consciousness of America, we now find ourselves mainly concerned with defense preparations. In my own case the change has been equally startling. As a member of the subcommittee on naval appropriations, the duty has devolved upon me to inspect, check, and report on developments in our shipbuilding and airplane-building program. I have visited practically every large shipbuilding yard and practically every bombing plane manufacturing company in the country. I have talked to the men in charge of the shipbuilding program in all of these yards and to the men in charge of building airplanes. There have been inevitable delays in a program so vast—delays in the supply of materials, for instance, caused by bottlenecks. It can best be explained by imagining what would happen if everyone in the city of Boston decided to take the subway at the same time. But tonight I am happy to report that the program is well under way. Designs for ships and planes have been frozen, and both are really in production. It is an answer to the scoffing of Hitler at the unwieldiness and impotency of democracy. Tonight there is one thing that he fears more than anything else, and that is the tremendous production capacity of this virile country. Tonight there is one figure on the world horizon whom he fears more than anyone else. It is the figure of a man chosen by the plain people of this country to lead them during this crisis, a man of indomitable courage, a man of resourcefulness and intellect—who loves freedom—the figure of the great head of the Democratic Party and our Nation, Franklin Delano Roosevelt. He is fighting and we are fighting with him to keep this Nation prosperous and at peace. True, we are sending materials, but we are fighting to keep our people out of foreign wars and to keep foreign wars out of our hemisphere, and, with God's help, we shall be successful.

While the Democratic Party, nationally, is riding high because it has the courage and ability to meet tremendous responsibilities, here in Massachusetts we have fallen on lean days. And why. In Massachusetts, the leaders of the Democratic Party, from their earliest beginnings in public life have given encouragement and support to measures and policies designed to promote the greatest good for the greatest number. And so when I look about for a reason, I can best illustrate it by telling a story.

Last night I had the pleasure of dining with the Irish Minister, Mr. Robert Brennan. One of the stories he told which I think is particularly appropriate, was this one: During the Trouble, he was in a jail in England and with him was a doctor who is now one of the most prominent surgeons in Dublin. Each morning, they and other men were marched out in front of the jail and the big English warden would give them always the same monotonous orders, "Extend your line" and regardless of whether or not the line was straight, or crooked, he would continue, "Back on the left, forward on the right" until one day Mr. Brennan turned to his good friend and said, "Doctor, can you explain to me how a wooden-headed people like the English ever got control of Ireland?" The doctor said, "Why, that's very easy. You take twenty Englishmen, put them in a room and if one of them, by the Grace of God, has an idea and the ability to express it, he becomes the leader. There's no competition. On the other hand take twenty Irishmen, put them in a room and each one of them has his own individual, unyielding idea, and the ability to express it." And what competition.

We Democrats in Massachusets are surfeited with talents. Instead of it being a blessing, it has caused discord. Rugged individuals all and sometimes a little selfish. There is room within the Democratic Party of Massachusetts for all groups and all factions and all leaders. We can have our primary contests with free discussion but when the voters of the party have spoken and chosen as candidates, men who will administer the affairs of our State in harmony with the larger ideals of our national administration, let all of us support those candidates unqualifiedly, enthusiastically, and militantly.

I invite, all of you, to make the fight, without bitterness, but with all the enthusiasm you possess, for a return of the government of Massachusetts to the party whose candidates stand for liberalism and progress.

National Defense

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

Mr. KILDAY. Mr. Speaker, on April 2, 1941, I explained to the House the provisions of H. R. 3962, which has for its

purpose the establishment of a uniform system of promotion for Reserve officers of the Army. I now understand that the War Department will announce in the immediate future the promotion of all Reserve officers who have served the years in their respective grades required by existing regulations and who possess their certificates of capacity for the next higher grade but have not been promoted because of the lack of a vacancy. A total of 1,424 Reserve officers will be promoted en masse under this policy. No doubt this change in the long-established policy of the Department is intended to stop the rapidly rising interest in my bill. However, these promotions constitute nothing more than an admission that the conditions my bill is designed to eliminate do in fact exist. The new policy is no solution of the problems involved, and every reason previously stated still exists for the adoption of H. R. 3962. I propose to press energetically for the adoption of the bill.

Railway Labor Opposes St. Lawrence Seaway

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

Mr. VAN ZANDT. Mr. Speaker, on April 15 at Philadelphia, before a group of representative businessmen of eastern Pennsylvana, New Jersey, Maryland, and Delaware, Mr. J. G. Luhrsen, executive secretary, Railway Labor Executive Association, in speaking for 21 railway brotherhoods, said, in part:

The St. Lawrence waterway constitutes a subsidy, pure and simple; no profits will ever accrue to our Nation, and it only means another burdensome and unnecessary tax on our people.

Continuing the discussion, Mr. Luhrsen made the following significant statement:

I was not merely authorized, but instructed on behalf of the Railway Labor Executives Association, of which I am the executive secretary, to oppose the Great Lakes-St. Lawrence waterway project.

According to statistics compiled as of July 1, 1940, there are 1,146,515 railroad employees in the United States, and with the upward trend in business incident to the national-defense program it is expected as a natural sequence that the above number will be increased in an appreciable number by the recall of many furloughed employees.

The St. Lawrence seaway project is a definite threat to the jobs of the railroad men of America, and, as aptly described by Mr. Luhrsen, is a menace not alone to the railroads and their employees but likewise to the coal industry and their miners, with a resultant adverse effect on large and small industry and a detriment to the American farmer.

Mr. Luhrsen's address is as follows:

I am certain that all of us gathered here today have experienced many, many times the truth of the old adage, "Haste makes waste."

In contrast to this, history tells us that Napoleon of Europe declared, "Delay means disaster," and his haste proved his own downfall.

Personally, I prefer to reason with respect to the former adage by reconciling and combining opposite views, because that will prove the best approach for a solution of correctness. Only through diversified opinion is there a chance of fair play to all sides of the truth.

Fifty-two years ago today a prominent writer was born, only a few squares away from Independence Hall in this great city. A little more than 2 years ago this writer had this to say:

"Sometimes the unfolding paradoxes of human ambition, human aspiration, and human ideals have been crystal clear; sometimes they have been befogged by my own sense of inadequacy. Too often the impetuous hand of the daily pen has done injustice; too often the infallible judgments of immaturity have sketched the news not with the objectivity of reasoned impartiality but in the irritable moods of faction or bias."

Those were the words penned by a Philadelphian, David Lawrence. The title of that article was "The Light That Never Fails." If you have not read his recent article The Return of the Exile in the April 11 issue of the United States News, then I suggest that every one of you read that article, because I think it, too, touches the keynote of what is lacking too much in the world today.

Now with that approach to the subject which I have been asked to talk on today, I trust my sincerity of purpose will not be subject to criticism.

I was not merely authorized, but instructed on behalf of the Railway Labor Executives' Association, of which I am the executive secretary, to oppose the Great Lakes-St. Lawrence waterway project.

It is generally a sound policy to rely on the advice and counsel of those of the past who were criticised when in power, but whose works later are lauded and highly praised and whose guiding influences left with the future posterity unshakable structures for our present-day needs. Lincoln said:

"The true rule whether to reject or embrace anything, is not whether it have any evil in it, but whether it have more of evil than of good."

So let us start with the application of that principle to this waterway project. No matter how hard I have tried to find some good in it for us, the answer is always nil. On the contrary, it is simple, in fact, spontaneous to realize the complete overshadowing of evil for us which accompanies this project.

It is inconceivable how the application of the yard-stick of national emergency measures correctly the real definition of those two grave and important words. To be national it must pertain to the Nation as a whole, living under a single independent government. To constitute an emergency, it must represent an unforeseen combination of circumstances which calls for immediate action.

This project will not and cannot benefit the Nation as a whole by reason of its location and will, as the future shall prove, be discriminatory, and therefore cannot be national. It does not constitute an emergency since no immediate action can be obtained since it cannot possibly be completed for a period of 7 or 8 years.

The pseudonym applied to national emergency falls on the weight of a correct definition.

The most important and immediate question for us to decide is whether the manpower and materials necessary for this project shall be utilized for the ever-increasing crisis at hand now, thereby giving greater fortification to our safety and protection today and the immediate tomorrow, or shall we release both men and materials to a project which will be of no value until 8 years hence?

Is there any doubt in any man's mind as to the correct answer? It requires no superwisdom nor even much intelligence to distinguish between the evil and good on that point. Certainly the answer must be, do the first things first, and our President himself has approved, if not coined, that sound phrase.

Much like the League of Nations idea, a real representative vote as between the two nations directly responsible for this project is very much overbalanced in favor of one as against the other, when we contrast the 130,000,000 people of one nation with that of the other with only about 11,000,000. We assume the larger load of the cost yet have only an equal vote as between the 2 nations. We shall pay the larger proportion of taxation even though, according to statistics, we shall make but little use of the transportation facilities as contrasted with other nations having a preponderant larger merchant marine. You must remember that this is not going to be a 4-track waterway through the smaller water channels; someone is going to have to take the siding, someone is going to be held back. If, therefore, we find 6 or 7 foreign vessels to 1 of our own utilizing this waterway, our speed will be impaired just that much when endeavoring to compete with them. No matter how you look at it, the net results will be that we will be the inferior in rights in both directions on a single-track operation.

Not only the railroad employees will lose the rail haul of coal going into Canada, but thousands of miners in the United States will be found idle, not only because of the water haul by boats other than our own, but because of imports of coal not only to Canada but to the United States as well.

During the last World War coal was hauled 3,000 miles across the ocean to this country and the reason therefor appears obvious. In 1919 our balance of exports over imports was a little over $4,000,000,000 and in 1920 it was $2,950,000,000. These boats could not come back to us with goods other than what would serve principally as ballast considering the vast export balances.

If we, therefore, exercise any prudent forethought whatsoever considering what appears inevitable, will not our export balances for years exceed our imports and we shall be flooded with cheap heavy goods and materials serving as ballast and this very waterway will be the means of transportation inland to the very heart of our Nation.

With a Europe in need to supplant untold destruction, rebuilding of everything that has been dynamited, bombed, and shattered, her demand on us must of necessity create a surplus export of billions of dollars in excess of imports, and the foreign boats will not return, as we in the railroad vernacular call "caboose hops" meaning light, but with such heavy commodities as coal, steel, cement, etc., serving principally as ballast and yet destroy our own markets and employment.

We, as employees on the railroads and railroad managements, when making agreements endeavor to anticipate every possible contingency that may arise under these agreements in the future. If any safeguards have been placed in the agreement with respect to the St. Lawrence waterway which assures protection for America in its fullest sense, they have gone unnoticed by me and not because I did not read the provisions of the agreement which I have so far seen. What will happen to the railroad employees? What will happen to business, industry, and

the peoples of this Nation with such grants, or subsidies or whatever admitted advantages it will give such nations as will utilize this waterway? Certainly this is not the time to forget our senses, our domestic interests, and give away the future.

We are already battling among ourselves as to the survival of the fittest with respect to an overabundance of transportation. This administration has repeatedly and quite boldly declared that there is more transportation today than needed. The Interstate Commerce Commission, the House and Senate, and everyone who has any conception of our transportation facilities has agreed that we have too much now.

You realize what it means to have too much of anything? The market goes down, income diminishes, consumption decreases, stabilization goes by the wayside, and everyone suffers, including the Government, which means the Nation as a whole.

We want decentralization one day and then sponsor a project which will centralize. What will happen particularly to our Western, Southwestern, and Southern States far removed from this project? They will be compelled to pay their share of taxes and constant upkeep, yet they not only do not share in any benefits but will have arbitrarily imposed on them all the detriments which will follow. No one should be forced to accept the responsibilities without sharing some of the privileges, if in any event, there ever be any from this project.

Consider seriously the effect of still another competitor, this waterway project. In 1937, if my memory serves me correctly, our total ton-miles were about 589,000,000,000 for all transportation. Divided among the various competitors, the railroad, 390,000,000,000; the Great Lakes, 93,000,000,000; the pipe lines, 45,000,000,000; the highways, 43,000,000,000; inland waterways, 17,000,000,000; electric lines, 697,000,000; and airways, 2,000,000 ton-miles; all except pipe lines eking out a bare existence. There you see your already overly exercised competitive field of transportation. But not satisfied with this overabundance of transportation, still another quite stupendous transportation facility is to be inaugurated to add to the dilemma already existent.

The railroads are our most valuable and outstanding inland defense, and we must see to it that they shall be able to survive for all time in the future. They are the only instrumentality that can handle both weight and size of larger dimensions better than any other means of transportation. When the real emergency confronts us, think of the speed on the St. Lawrence waterway as contrasted with that of the railroads. We were told only recently that what we needed was speed and more speed. The railroads have greater speed today than ever before, and we should utilize them to the fullest extent in preference to a speedy construction of a project that will only speed the capitulation of the railroads so essentially necessary right now as well as in the future.

Government grants and subsidies in one field of transportation are of necessity unfair to such modes of transportation as do not share in such philanthropy. The St. Lawrence waterway constitutes a subsidy pure and simple; no profits will ever accrue to our Nation, and it only means another burdensome and unnecessary tax on our people.

When you subsidize one form of transportation at the expense of another, you are subsidizing one shipper at the expense of another; you are subsidizing one community or section of the country at the expense of another. You cannot continue such an unjust and uneconomic policy without diverting traffic from the taxpaying and self-supporting railroads—the backbone today, as they have been in the past, of our great national transportation system. If this waterway project actually were cheaper transportation and benefited the Nation at large, there would be little complaint. It exists solely through Government bounty, and that will be the case, but even on a much larger scale, with the construction of the St. Lawrence waterway.

Let me give you a few figures and facts as they will affect your great Keystone State, Pennsylvania. No State has more at stake in the rise and fall of railway employment, the distribution of pay rolls, the payment of taxes, and the purchase of railway materials and supplies. As these earnings fluctuate, the economic balance of the Nation fluctuates also.

Practically every State is a purchaser of Pennsylvania products. The railroads spent $172,001,935 in Pennsylvania in 1940 for fuel, materials, and supplies, and $40,176,550 within the State for new equipment. The vast army of railway employees in Pennsylvania—and their number was far in excess of any other State in the country, 118,718 last year—received in the aggregate $217,530,965 in wages; and as for railway taxes, which last year amounted to $405,000,000 throughout the country, were the most for any year in American history, and Pennsylvania also paid its just share. Certainly the railroads are not the "frozen asset" which we would have on our hands for some 5 months of the year if we permitted the construction of the St. Lawrence seaway, the subject of our conference here today.

The proponents differ in their opinion with the opponents to this waterway as to the number of months it will be closed by the winter season. The proponents argue this seaway can be utilized 7 or 8 months or even more during each year. For sake of argument let us grant it; nevertheless, it still leaves a very discriminatory and unfair situation imposed on the railroads. The latter are expected to so equip themselves with facilities of all kinds so that they must be able to handle everything that is offered during the closed season, regardless of how many months each year this waterway is closed. Who pays for this extraordinary or additional equipment which is naturally compelled to lie idle when the St. Lawrence waterway is functioning? Surely not those nations who will use it most and who have yet to pay both principle and interest of the last war.

We may fairly assume that anything produced in the United States will, if this waterway cannot complete such transportation to final destination, be turned over to the United States railroads for the final haul. Logically, we must apply a similar assumption to all commodities produced elsewhere, and foreign nations using this waterway as far inland as possible will divert final rail haul to all western points to Canadian lines to the Pacific coast along our northern boundary.

Canada imported from the State of Pennsylvania last year approximately 2,643,000 tons of anthracite coal. In case of bituminous, the imports from this country are even greater, approximating some 17,000,000 tons annually for the past several years. Much of this will be diverted by the waterway; and when we add to this the displacement in bituminous tonnage due to the hydroelectric developments in the International Rapids section—and the latter is the alleged defense necessity at this time—you can begin to comprehend and visualize the final consequences.

In conclusion, we may summarize that whatever ill effects this waterway will have upon the railroads, their employees, the coal industry, and their miners, it will not differ with respect to both large and small industries, the farmer, and everyone else. Any possible advantages and benefits which may result from the construction of this seaway will be enjoyed by exclusively by foreign interests instead of American interests, notwithstanding that it will be principally American dollars that will be used to finance it and continued American dollars to maintain the upkeep.

The more recent and most unfavorable developments in Europe only the last few days justifies patriotic America to utilize every dollar, all materials, and manpower, for what is self-evident is an immediate and urgent necessity, and strikingly more important than playing with tops and doll houses for either pleasure or use in the distant future.

Federal Reclamation and Water Conservation and Utilization Programs

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

STATEMENT OF HON. FRANK CARLSON, OF KANSAS, BEFORE THE SUBCOMMITTEE ON APPROPRIATIONS

Mr. CARLSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made in support of Federal reclamation and water conservation and utilization programs before the Subcommittee on Appropriations dealing with these problems, Thursday, April 17, 1941:

Mr. Chairman, the future prosperity of a large part of the State of Kansas, and particularly areas like my district that are subject to drought, is dependent upon water conservation. To my mind, that means the control of floodwaters and water run-off that have wrought so much damage in Kansas in years gone by. It means that we must conserve this water for irrigation and the recharging of the water table in our State for our productive lands that do not receive sufficient rainfall.

Nature came to our rescue, at least temporarily, by a fairly adequate rainfall in 1940, but the deficiency of moisture in the subsoil averaging more than 3 inches annually over the last 10 years is going to be difficult to overcome. Some of our experts have predicted that it will take 50 years of normal rainfall to restore the range in some sections of Kansas and Nebraska.

Thousands of acres of land in the western half of our State should be returned to the original native sod. This is going to require a long time and a well-planned program.

It is not with any degree of pleasure that I call your attention to what the drought has done to the stability of Kansas in the last 10 years. Ninety of our 105 counties had a net loss in population, and the exodus of farm families has not ceased. The number of farms in the State decreased by 10,000, and in 1939 the harvested area was 6,500,000 acres less than in 1929. Crop failures in the State increased from 967,000 in 1929 to 5,370,000 acres 10 years later.

The following comparisons are very interesting and taken from the 1940 census material on Kansas statistics dealing with agriculture:

	1930	*1940*
Number of farms	166,042	156,327
Percent tenant operated	42.4	44.9
Average acreage per farm	282	308
Average value per acre	$48.56	$29.51

Similarly, the number of livestock has undergone some interesting changes. The change from horsepower to machine power reduced the number of horses and mules in 1940 to about one-half the number in 1930. Hog numbers in 1940 also were approximately one-half of the number in 1930. The number of chickens decreased about one-third during the 10-year period. Numbers of cattle decreased slightly. Sheep and lamb numbers, on the other hand, showed a large gain in Kansas from 1930 to 1940. The increase in this class of livestock was more than 50 percent.

On the flood-control side, it is estimated that the raging waters of 1935 caused losses of $11,000,000.

If Kansas alone was affected by the drought situation, we might be expected to work out our own salvation, but the country as a whole has directly and indirectly felt its effects. The Federal Treasury, largely as a result of the drought, expended in 7 years $161,578,000 in Kansas through the Work Projects Administration and its predecessor agencies.

From Kansas there went to California from 1930 to 1939, at least 4,892 families who are accounted for and probably many more would be included if a complete check were made. To the Pacific Northwest, there went perhaps as many families as have been checked in California. Other States to the westward have been called upon to absorb Kansans who have been driven from our farms or from the cities and towns that are dependent on agriculture for their support.

Even with improved climatic conditions, the abandonment of farms has not ceased and the migrations westward are continuing. California is receiving from 25 to 30 families a month from Kansas, most of them practically destitute.

There is only one course to pursue that offers a reasonable chance of stabilizing a considerable part of northwestern Kansas, which I have the honor to represent, and that is through water conservation. The Federal reclamation program, including the water-conservation and utility projects which will rehabilitate existing agricultural areas, is the logical instrument for this purpose, and the waters of the Smoky Hill and Republican Rivers are awaiting control and utilization.

The importance of advancing complete studies of these streams is so urgent that I was disappointed when I saw the Budget Bureau had reduced the estimate for investigations from $625,000 to $500,000. It seems to me the Bureau of Reclamation should have at least a million dollars annually to advance its inventory of water resources if we are to make prompt plans to meet conditions that I have described.

Then, I notice there is only $3,500,000 in reimbursable funds provided for water-conservation and utility projects in the Great Plains and other States. Once the Bureau's investigations are well advanced, any such amount as this will be wholly inadequate to rehabilitate areas subject to drought. This would be true even when it is supplemented by extensive contributions of the Work Projects Administration and Civilian Conservation Corps labor. The idea of using this type of labor for permanent constructive work involved in water-conservation and irrigation projects appeals to everybody as a sound and logical development.

The Sixth Congressional District of Kansas is a part of the drainage area for the Missouri River system. The Republican and Smoky Hill are the main tributaries of the Kansas River. They, together with their tributary streams, cover our entire section. We have a large number of available sites for impounding water for irrigation and for general utilization purposes in this area. This particular section of the State is especially adapted for projects that can be constructed under the provisions of the Case-Wheeler Act. At the present time the Bureau of Reclamation is making extended surveys on these projects, and I sincerely hope they will soon be in a position to recommend the construction of some of them to Congress.

It is not necessary for me to impress on this committee also the importance of providing irrigated land for the settlement of migrant families who have fled westward from the Great Plains. The need for speedy completion of reclamation projects under construction for this purpose must be apparent.

The St. Lawrence Seaway and National Defense

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

ARTICLE FROM MARINE PROGRESS

Mr. BEITER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the April issue of Marine Progress. This organ is a business monthly of the marine industry, one of the oldest trades of our country. If any group in America is conversant with conditions which might warrant the expense of an additional inland waterway to the sea via the St. Lawrence, this is the group. The demand and supply of merchandise for export and import, the demand and supply of ships to carry that merchandise, and the adequacy of present port and terminal facilities is not guesswork with them; they know these facts from the ground up.

Therefore the remarks in this article are important and pertinent to the subject of building the St. Lawrence seaway under the guise of a measure of national defense. Through their experienced eyes this seaway project would be an unnecessary expense as far as shipping is concerned; as a link in our national-defense program, they point out that it would be useless at this time since it will take at least 4 years to complete it, and "a lot can happen in that time." I believe my colleagues will find this article of particular interest.

The article follows:

[From Marine Progress of April 1941]

NATIONAL DEFENSE?

We, the American people, seldom do things by halves. It is axiomatic that when we take up a cause, it is always a case of going all the way.

Today, the overwhelmingly popular theme is national defense. Aside from labor troubles, which we hope will be straightened out pretty soon, nothing is allowed to stand in the way of the defense program. And almost any proposition can get enthusiastic support and endorsement if only the national-defense label can be tagged onto it somewhere.

Please do not misunderstand us. We're for national defense 1,000 percent. We always have been. So far as ships are concerned, we have always advocated a strong, adequate American merchant marine as being as much an instrument for defense as for the transportation of our commerce.

For many years the St. Lawrence seaway proposal has been before the public. First it was advocated as a means of enabling the Midwest farmer to save money in shipping his grain abroad—but it has been shown pretty conclusively that the buyer, and not the grower, of the grain would reap the benefit if, indeed, anyone would profit at all.

Then the proponents of the seaway sought to secure popular approval on the theory that it would be a means of enabling oceangoing ships to penetrate thousands of miles inland, saving the cost of rail or other transportation of goods from the seaboard. But the project still limits the size of ships because of the relatively shallow draft contemplated by the plan, and a seaway that would be closed by ice for 5 months out of every 12 could not help but disrupt other forms of transportation which operate the year around.

And then the St. Lawrence seaway was advanced as a hydroelectric power project, but its value as such has been disputed by able engineers who believe that electricity can be generated just as economically in separate plants more strategically located within our own boundaries.

In 1934, the St. Lawrence Seaway Treaty failed of ratification in the Senate by the necessary two-thirds vote, which was taken in accordance with the procedure required by the Constitution. As a result of that rejection most people thought the proposal was dead, but they have since found out differently.

Now the St. Lawrence seaway plan has again been brought up. On what grounds?

National defense.

Why national defense? Well, if the St. Lawrence River were deep enough and the present locks were wide and long enough, we might build seagoing ships on the Great Lakes. We might even construct battleships—or at any rate, destroyers. Further, the electrical power generated would come in handy in factories making war materials and equipment.

But if work started tomorrow, the immediate project which, by the way, is only the beginning, couldn't be completed in less than 4 years. A lot can happen in that time. If we need electrical power so badly, numerous steam or Diesel plants can be built and placed in operation in less than 1 year.

How much will the St. Lawrence seaway project cost? The immediate project contemplated is in the International Rapids section of the St. Lawrence River. The cost of this is estimated at $255,170,000, but the total eventual estimated cost is placed at more than $500,000,000.

And who is going to pay for it? Canada? Oh, no! The United States!

This time the St. Lawrence seaway proposal doesn't come before the Congress in the form of a treaty, which would, according to the Constitution, require a two-thirds affirmative vote by the Senate. It comes in the form of an agreement negotiated between President Roosevelt and Prime Minister Mackenzie King, of Canada. For some reason, although the agreement closely resembles the previously rejected treaty, it isn't a treaty at all, and can be approved by a majority vote by both Houses of Congress.

Of course, this smacks of subterfuge. It will, if adopted, create a dangerous legislative precedent.

But nothing must be permitted to stand in the way of national defense!

Watch out for a revival of Passamaquoddy and the Florida yacht canal!

Labor and National Defense

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

ARTICLE FROM THE SIGN MAGAZINE

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from The Sign on labor and national defense:

(An article taken from the Sign magazine, vol. 20, No. 9, April 1941, entitled "Strife and the Worker—A Discussion of the Labor Situation That May Shock the Reader Out of Many Preconceived Notions on the Subject," by John F. Cronin, S. S.)

There is no serious labor trouble in the United States today.

In 1940 there was a strike of capital more menacing to defense than all the labor strife since the war began in September 1939.

Relatively speaking, there are fewer strikes today than in any comparable period in our history. In fact, man-days lost through strikes in 1940 were less than one-fourth those lost in 1937, and about one-third of those lost in 1939.

Racketeering and communism are not major issues in the labor union of the present day.

These four statements may seem to most readers to be distortions of the truth. Yet they are probably a more accurate picture of actual events in March 1941 than the story often given through the newspapers and the radio. It is likely that a person well informed concerning the entire picture of American industry would find them substantially correct. But even if they are but half true, it follows that the American public has been misled on a vital problem. It has been stirred up to a state of almost hysterical condemnation of labor activity in general and strikes in particular. Such a situation is serious, when national unity is so badly needed. So much depends upon the good will and cooperation of labor that sheer expediency, apart from justice, demands that workers be not embittered by slander and calumny.

To understand the labor front in America, it is necessary to survey the entire picture. It is a fatal mistake to generalize from isolated instances. Thus, for example, it was stated that the strike of capital has set back defense far more than any strikes of labor. This statement, if true, naturally affords an entirely different perspective on the industrial situation. This assertion is true. During 1940 essential defense industries in large numbers refused to expand plants, sublet contracts, train skilled labor, or even to accept Government orders. They staged a sit-down strike until defense bids were given on their terms.

Their first demand was the permitting of a 5-year period of amortization out of current earnings for all new buildings constructed for defense purposes (with plants still remaining property of the manufacturers after the Government had thus paid their full cost). Their second requirement was repeal of the 8-percent-profit limitation on armaments contracts, with the substitution of a mild excess-profits tax in its place. After long delay the Government capitulated and industry released the patriotism so successfully held in check. Then, after a delay of 6 to 9 months or more, the defense program really commenced. Now the industrialist working on defense contracts may be leasing a Government-owned factory. He may have built his own with the Government guaranteeing repayment of his costs in 5 years. This is the "bankable contract"; after 5 years the Government owns the factory and the operator has the option of purchasing it at "fair value." Finally he may have built at his own risk, amortizing costs within 5 years and retaining ownership. The operator chooses the type of contract most advantageous to him. The net result is that the Treasury takes the risks and industry the profits.

Even today hundreds of millions of dollars worth of plants are in partial or total idleness, not because of industrial strife but simply because big firms are unwilling to sublet contracts. Many companies are so gorged with orders that they will not fill them for years, while others with idle capacity do not have a single defense contract. Here is a cause of delay far more menacing than all the strikes of recent months. Regarding such delays, however, there seems to be a conspiracy of silence.

It may be claimed that the strike of capital was justified. It is asserted, for instance, that industry has no right to risk stockholders' money in new investments which may be useless after 5 years. Such claims may well be partial justifications of the sit-down, although informed persons such as the business editor of the New York Times have expressed skepticism on this point.

It is held, often correctly, that businessmen today are showing a spirit of generous cooperation with government. In the present context, however, arguments for or against the situation are beside the point. What is important is that Americans, who hear incessant reports of minor delays caused by scattered strikes, knew little or nothing of this major delay. Columnists grow indignant over the closing of a single plant, but they remained silent over the blocking of appropriations for a vital dam and the consequent impeding of a necessary aluminum expansion project. (Even the plea of Mr. Stettinius for immediate passage of this bill did not prevent a delay inspired by certain business interests.) When capital obstructs defense, excuses are offered, and heard. But when labor obstructs defense, its repression is demanded.

One further instance of our double standard may be cited. The following statement represents the testimony, under oath and thoroughly corroborated, given recently against one of the largest companies in the United States. There is not the slightest doubt that it represents the organized policy of this firm (the Supreme Court has unanimously upheld a ruling against this corporation, yet practically nothing about it has appeared in the newspapers.

"The company organized a strong-arm squad designed, as F— P—, its leader stated, 'to put the fear of God' not only in any union outsider who might appear in ———, but also in any employee with a sympathetic attitude toward a union of ——— workers. * * * They were supplied with blackjacks which were manufactured in the plant; later, as their work progressed, they acquired whips, lengths of hose, and similar weapons. They were stationed at different vantage points throughout the city; were given free use of company cars; and were afforded free access to the plant at all hours."

The writer has seen certified photographs of one man murdered by mistake by this group (they wanted his brother) and of another who was tarred, feathered, his eye gouged out, and left to die (this was also a mistake; he was a union organizer, but in another type of industry). Our picture magazines, which did not find the cremation of Trotsky too ghoulish, found no place for these illustrations.

The conditions here described are not presented in any attempt to show that labor is always right and its employers are always a group of exploiters. It is admittedly a partial and one-sided portrait. But the silence of our press on these matters does reveal its leanings and its biased and partisan treatment of labor relations. This condemantion is written advisedly and with full deliberation. From the average newspaper today one cannot obtain a correct picture of the labor scene. In general, it portrays the faults of labor and the virtues of capital. It is definitely class conscious, probably not through any overt pressure of advertisers, but rather as a result of the superior power of one group to present its side of the case.

One-sided reporting of necessity foments class struggle and class hatred. It divides a nation at a time when it can least afford division. Capital and labor can get along splendidly once it is acknowledged that an overwhelming majority in each group are decent, God-fearing Americans. But before such a mentality can prevail, the public in general must realize that the story of labor strife which they have been hearing in recent months is certainly not the full truth, and many times not even partially true.

Given an open mind, the labor problem is not insoluble. Unquestionably, labor strikes hold up the defense program, but not half as much as they did in 1917, nor any more than they do in England, which is actually at war. Industrial accidents are at least four times as great an obstacle, and sickness among workers over eight times as great. But, nevertheless, they do impede defense, just as the strike of capital impeded defense. Since in the case of industry, excuses were found to justify its action, it may be that the same may be done for labor. For example, unless we hold that the end justifies the means, we may not maintain that protests, even against injustice and exploitation, are not to be tolerated in defense industries. With this in mind, it may be well to inquire into some of the causes of recent strikes.

Some strikes are caused by disputes between unions, either A. F. of L. versus C. I. O., or jurisdictional strife within one of these organizations. The public has little sympathy for walkouts of this type. Yet, supposing that this position were conceded to be completely right and all such strikes were condemned, then one would indict considerably less than 5 percent of the workers on strike at any given time. If another source of public irritation, the demand for the closed shop, were added to this list, the total of both would be about one-tenth of the workers engaged in industrial disputes. Practically all other disputes concern wages, hours, working conditions, or the formation of unions to correct injustices or inequalities in the factors just mentioned. Nearly 90 percent of labor disputes concern objectives which, everybody concedes, may be legitimate.

What if such strikes hold up defense? The answer is: Remove the conditions which provoked them. When a country is invaded in the modern manner, by undeclared war, it may declare war against the aggressor. Is it to be blamed for the strife which follows? Clearly, the responsibility lies with the invader. Likewise in many modern industrial disputes, the blame really lies at the sources of the trouble, that is, poor wages, insufferable working conditions, or violent campaigns against the God-given right of workers to organize for their own betterment. Costs of living have risen sharply in many areas, while industrial profits have reached staggering totals. (One giant corporation reported net profits of almost two hundred millions; its total wage bill was four hundred millions—several hundred thousand workers

receiving only slightly more for their year's labor than a few thousand stockholders for their ownership.) In other cases, the source of irritation may be of longer duration, but effective action against it is possible only in times of business activity and relative labor shortage. It is axiomatic that labor makes its gains during periods of prosperity. Here is labor's only chance to achieve justice.

It is often said that the same results could be obtained by arbitration or other means similar to those used in a court of justice. But the experience of all Europe, Australia, and New Zealand where some form of this method has been in practice for decades, shows its limitations. In general it has been found successful in disputes over rights, such as difficulties about the interpretation of a contract or the observance of an agreement. But it has not been successful in disputes over interests, such as claims concerning wages, hours, and working conditions (problems of union recognition did not come before labor courts, since during the twentieth century practically all civilized nations, save our own, recognized in theory and in practice labor's right to organize). In these cases mediation has been more successful, but when it failed the economic pressure of the strike was often invoked. Accordingly, even where arbitration machinery existed, it had at times to be discarded in favor of technique similar to those used in the United States today. Revocation of the right to strike would mean industrial peonage. It would be introducing totalitarianism under the guise of saving democracy.

It is not assumed, of course, that all strikes for wages and the like are morally and economically justified. There can be unjust claims in this field and, in spite of public disfavor, there can be justifiable sympathy, jurisdictional, and closed-shop strikes. Each case must be judged on its merits. What is asserted is that labor is not morally to blame for defense delays when it is using its only available means of defense against injustice, discrimination, and other abuses. Where labor has a real claim, and the employer is recalcitrant, there is no other completely effective method of obtaining results. Mediation is highly desirable, but it presupposes good will on both sides. Arbitration calls for equally fine dispositions and is inherently limited in its application. At times results can be had by publishing the facts and letting public opinion force justice.

In the past, labor's side of the case has not always been put before the public. It would be possible to ask labor to bear with injustice for the sake of the general welfare, but such a request should not be made lightly.

The labor situation is more complex and confusing than is commonly assumed. Facts are not always available to the average citizen. But it is better for such a person to be diffident and uncertain about a problem, than to be cocksure and wrong. Truth comes to those who seek it diligently, not to the casual reader of headlines. In serious matters, deeply affecting national security, it is not unreasonable to ask for a modicum of thought and investigation. The thoughtful citizen today might well consider it his duty to read such a valuable book as R. R. Brooks' When Labor Organizes. He might invest a dollar a year in that moderate publication, Labor, or 50 cents in the National Home Library Foundation's Do You Know Labor?, by James Myers. Both are published in Washington, and they are not the least thoughtful utterances on the question emanating from that city. Finally, he can get many solid pamphlets in the social-action series and other pamphlets jointly published by the National Catholic Welfare Conference (Washington) and the Paulist Press (New York).

A final vexing question in relation to unions arises from the problem of racketeering and communism in these organizations. Racketeering is found in large city unions, often connected with A. F. of L. building trades organizations. Some claim that excessively high initiation fees should be called a form of this evil. Communism is more likely to be found in the C. I. O., mainly in four large unions.

These evils exist, although they affect only a small segment of the labor movement. But the fact they are localized in this manner might lead one to suspect that they spring, not from workers' organizations as such, but rather from special conditions in certain forms of business. Racketeering, for example, is found in sick industries, such as the construction industry. Many times it originates from extra-legal attempts by both employers and labor to enforce what they consider standards of self-preservation, on noncooperative employers, "chiselers." Other times it represents invasion of the labor movement by gangsters whose energies were released from bootlegging by the repeal of prohibition. In still other cases, when either capital or labor employs thugs to protect themselves against the hired "goons" of the other side, the "guards" simply take over both parties and exploit them both. In many cases labor is equally with other members of the community a victim of the racketeer.

Communism is likewise tied up with economic issues. Where communism is strong in a union, one almost invariably finds a prehistory of exploitation and abuses which made the soil fertile for the doctrine of the class struggle. Furthermore, one cannot dismiss lightly the stand taken by the heads of both great groups against these abuses. Murray and Hillman, in the C. I. O., are outspoken opponents of communism, and both are in positions today to enforce their viewpoints. Dubinsky, in the A. F. of L., is equally vigorous in fighting racketeering, and his efforts are bearing fruit. When labor is trying to clean its own house, it is neither charity nor common sense to reward the effort with brickbats.

There is more to be said for labor than is being admitted in our press today. This article attempted to bring out a few of these points. As such it is in a sense partisan and incomplete. Some of labor's blunders, particularly those arising from the tragic cleavage in the labor movement, were not mentioned. It is sincerely hoped that impartial publicity, mediation machinery, and the like will be available to achieve justice without recourse to strikes.

The honest claims of labor will not suffer from the National Mediation Board which is being proposed as this article goes to press. On the contrary, such fact-finding attempts will aid the public to separate the wheat from the chaff. They will prevent all labor from suffering because a Communist-led minority ties up the bus service of the great metropolis, or a blindly selfish group refuses to work with other unionists and delays vital airport construction, or another group defies their national officers and holds up the supply of vanadium products. If we show deserved sympathy to the just claims of labor, then we will be in a better position to warn labor against the few leaders whose allegiance is to foreign powers and who may be expected from now on to use every means to sabotage defense. But blind condemnation of all strikes by one side will lead to an equally blind justification by the other. For this reason discrimination and justice in judging labor disputes is one of the highest forms of patriotism today.

The Tide Has Turned

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune of April 4, 1941:

[From the Chicago Daily Tribune of April 4, 1941]

THE TIDE HAS TURNED

The first Tuesday in April saw local elections in St. Louis, a metropolitan city; in Duluth, one of the great ports of the world; in Peoria, the second city of Illinois. All along the line the Republicans won. At the same time they carried the elections in many smaller communities. Quincy, which had been Democratic for 8 years, went Republican. So did Bloomington. Republicans were victors in three judicial elections in Illinois.

The Democrats carried St. Louis last November with 40,000 votes to spare. The Republicans carried the city on Tuesday by as wide a margin.

Duluth had gone Democratic in the last two Presidential elections. Bloomington gave its Republican mayor a majority 15 times as large as he had obtained 4 years ago against the same candidate.

The significance of these Republican victories will not escape any one who is politically astute. They indicate that the people of this country and of the Middle West in particular are aroused. Such overturns do not just happen. Today we have startling proof that the Democrats cannot carry the industrial cities which have been their stronghold in the North for decades and for the last dozen years in particular.

Last November the Democrats promised peace and a majority of the people took the platform and the candidate at their word. Now the people know that the promise was a vote catcher and nothing more. They have seen the country advance closer and closer to the war. They have seen the outbreak of civil disorder. They recognize that the Democratic Party is the party of war abroad and war at home. The people abhor both tendencies. In Tuesday's election the voters seized the first opportunity they have had to express their opinion.

The pendulum is swinging fast. Public opinion at last is recognizing the kinship between the New Deal and communism, between the New Deal and all forms of totalitarianism. The voters are expressing their opinion of an administration whose foreign policy, dictated by Park Avenue pushovers, is colonial groveling and whose domestic policy is industrial anarchy and national bankruptcy.

* * * * * * *

Men and women who have saved something do not want to lose it in an inflation.

The results of these elections have their explanation in the widespread sense that the party now in power in this country has betrayed the Nation with false promises and is leading it swiftly into war, domestic strife, and economic chaos.

We have had our first large referendum since the lease-lend bill was passed. The people have given their answer. They want to save their Republic.

The Other Side

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

LETTER FROM THE SECRETARY OF THE MARITIME FEDERATION OF THE PACIFIC

Mr. GEYER of California. Mr. Speaker, it is always a good thing to look at all sides of our problems. I present here a letter that gives a side of the picture that the press, radio, and public speakers seem reluctant to give us.

Under leave to extend my remarks, I insert a letter from the secretary of the Maritime Federation of the Pacific. According to the letterhead, this organization represents several thousand persons in several organizations. The organizations are: International Longshoremen's Union of the Pacific Coast; Alaska Fishermen's Union; Alaska Cannery Workers; Marine Cooks and Stewards' Association of the Pacific; Pacific Coast Marine Firemen, Oilers, Watertenders' and Wipers' Association; Marine Engineers' Beneficial Association; American Communications Association; International Association of Machinists; International Brotherhood of Boiler Makers, Welders, Helpers and the Inlandboatmen's Union of the Pacific.

The letter follows:

MARITIME FEDERATION OF THE PACIFIC,
San Francisco, Calif., April 3, 1941.

Representative LEE GEYER,
House of Representatives,
Washington, D. C.

DEAR SIR: There are several matters with which we are deeply concerned and which, in our minds, have been magnified particularly since the passing of the lease-lend bill.

We were vigorously opposed to the lease-lend bill because we felt that it was purely and simply a war measure; that it would plunge this country into actual warfare. A majority of the Senators and Congressmen in Washington assured us this fear was groundless, and now we find that the bill is being used for the very purpose we feared when we opposed the bill.

First of all, 2 weeks ago President Roosevelt asked for an appropriation of $7,000,000,000 for national defense, $629,000,000 of which to be used for buying or building ships, vessels, boats, watercraft, supplies, materials, spare parts, and accessories to Britain—$7,000,000,000 more burden upon the backs of American taxpayers; this in spite of the fact that living costs have risen but not wages correspondingly.

We are dubious and reluctant to believe that in order to save democracy we must give "all-out aid to Britain" or that Great Britain vitally needs these ships and vessels in order to carry on her part of the war. Lloyds of London (a world authority on shipping) in their recent report stated that Great Britain at the beginning of the war owned and controlled 8,977 ships with a tonnage of 21,001,925 tons. In addition, when Norway, Denmark, Holland, Belgium, and France were overrun, Great Britain secured from these countries additional tonnage amounting to 12,320,685 tons, which makes a total of 33,320,610 tons. This does not include the millions of tons Great Britain has built herself since the war began, nor does it include the million tons she has received from the United States.

We are fully aware that all of this tonnage is not being used to carry on the war but is being used by Great Britain for regular business and the carrying on of strictly commercial and money-making shipping; it is being used in direct competition with American shipowners and taking the jobs of American seamen. For this, the American people have been asked to pay $7,000,000,000.

We have further been informed that under the $7,000,000,000 gift to Britain, 400 ships will be built in America for the British and that shortly, 50 more merchant-marine vessels will be sent to Britain.

Under this program, we are depleting our merchant fleet to such an extent that we cannot transport raw materials needed in our own commerce and national-defense program, at the same time that British shipowners are extending their control over the world's trade routes. This program means the "bread and butter" of our American seamen.

In view of the recent activities of the Army and Navy Departments, we are also concerned over the obvious plans of the Army and Navy to transport enormous numbers of troops outside of the United States. On March 25, Secretary Stimson appointed Col. Theodore H. Dillon as transportation chief of the Army. The Army Transport Service, which Dillon will direct, includes 30 large troop transports and freighters, besides numerous smaller craft. We note that on the same date that Colonel Dillon was appointed, the Army chartered the 24,000-ton steamship *Washington* and that the steamship *Roosevelt* has recently been acquired by the Army which will carry some 1,500 men. We are further informed that the Navy contemplates chartering other large vessels, including the steamship *Manhattan*. The Associated Press on March 11 reported that the Government is gathering "a vast transport fleet that in a national emergency could move more than 250,000 soldiers at one time to any point in the Western Hemisphere or beyond" and stated that the Government had at that date already acquired passenger ships totaling 270,000 tons, with a capacity for 75,000 men.

Are we still naively to believe that the lease-lend bill is not a war measure; that American soldiers will not be sent outside of the United States to fight in a foreign war and that American ships will not be used as convoys to deliver the huge ship orders to Britain? We find nothing to indicate that this is true. We find quite the contrary.

We are told that we must give "all-out aid to Britain" for the cause of democracy. We see no semblance of democracy in Great Britain nor in the countries which she controls where millions of people live in virtual servitude and we see no semblance of democracy in the moves which have been consummated by our own administration during the past few months. We want to maintain and build our democracy, not become part and parcel of the imperialist camp in Europe.

Since the war emergency arose, labor and industry have been asked to sacrifice alike for the cause of national defense and what do we see today? Statistics show that the profits of United States Steel leaped from a $7,000,000 deficit in 1938 to a $102,000,000 profit in 1940. General Motors jumped from profits of $102,000,000 in 1938 to $195,000,000 in 1940. Profits of Bell Aircraft increased by 3,000 per cent in 1940 over 1939. Bethlehem Steel increased 97 percent; Douglas Aircraft, 275 percent; General Cable, 235 percent; General Steel Casting, 19,560 percent; Lehigh Coal & Navigation, 5,700 percent; Vultee Aircraft, 1,370 percent; and so on down through practically every American industry.

We have not forgotten that in the last World War, the number of known millionaires increased from 7,500 before the war to 25,000 after the war, including quite a few billionaires.

We see Members of Congress repeatedly giving lip service to the needs of the merchant marine as a means of securing higher profits for money-making shipbuilders and operators. As the shipbuilding industry reaches boom heights unparalleled even in World War No. 1, congressional floor leaders plead for still higher returns.

On March 17 the House passed H. R. 3252, a bill to authorize the United States Maritime Commission to enter into negotiated contracts rather than open-bid contracts for the construction of merchant ships. The bill guarantees a direct profit of 10 percent aside from profits that can be made on materials and other factors. The premium granted builders of nonmilitary vessels under H. R. 3252 exceeds even the bonus allowed for construction of naval vessels under present law. This bill is plainly part of the drive to throw the open bid out the window. Government practice has always been to award contracts to the low bidder. Competitive bids are being gradually eliminated in all defense agencies.

In speaking on this bill, from the CONGRESSIONAL RECORD, we notice that Representative DWORSHAK, of Idaho, asked, "Is it not true that all the profits accruing under this bill would redound to the benefit of private individuals and private corporations rather than to the Government, as under provisions involving the Army and Navy construction?" The answer was "Yes."

Along this line we find more and more that the United States Maritime Commission is actively engaged in activities which are a disgrace to the United States Government. In the words of the Temporary National Economic Committee, in speaking of shipping subsidies, "For many years shipping policy has been framed and administered in a way highly lucrative for shipping and shipbuilding interests." This in spite of the fact that several years ago the investigations of Senators NYE and Black strongly urged that a thorough investigation of the United States Maritime Commission's activities be made. This in spite of the fact that for years labor has urged for an investigation.

Are we to unquestioningly accept these huge profits on the part of industry and the close collusion of the United States Maritime Commission with the shipping interests to promote higher profits as sacrifice on the part of industry?

It is ironical when compared to what is and will in the future be expected of labor in the way of "sacrifice." For the past few months labor has continuously been attacked, both in the legislative bodies of Washington, D. C., and in the individual State legislative bodies. Labor has been requested to work longer hours, refrain from striking regardless of what conditions prevail. In many cases even the very fundamentals of labor organization itself have been attacked—the right to collective bargaining and the hiring hall. Various attempts have been made to place the men who sail our merchant marine under the jurisdiction of the shipping commissioners which would virtually wipe our organizations out of existence. Such attempts were made 2 years ago in the Northwest, and we find these same attempts being made today in H. R. 2662, introduced by Congressman

DIRKSEN. In fact, every single effort possible is being made today to put the American seamen and longshoremen back under the conditions which prevailed before the 1934 strike; the shape-up method of hiring which invited discrimination and graft, poor working conditions, dangerous gear, and poor living conditions aboard ships; even the shanghaiing of seagoing men.

The issue is clear cut. Industry's "sacrifice" is a hoax, for who can point to one thing they have actually been asked to sacrifice? Labor, on the other hand, is being asked to "sacrifice" with the very lifeblood of its organizations.

During the past 2 years we have seen the same events which are taking place here happening in Germany and France. We saw labor's rights curtailed, dictator control, civil liberties abandoned, and the living standards of the people lowered from excessive taxes. Such is not democracy—it is the very foundation of fascism and we are opposed to it.

When billions of dollars are appropriated not as a gift to foreign nations but for the welfare of the American people and when the efforts of the administration are directed toward bettering the living conditions and the future of the American people, then we shall have true democracy. We shall have and enjoy true democracy when the democratic rights of the people are upheld by our representatives in Congress. They include—the right to strike, collective bargaining, hiring halls, the right to freedom of the press and speech, and the protection of civil liberties. These are the rights guaranteed to the American people under the Bill of Rights—they are the essence of democracy and we shall fight to preserve them.

Very truly yours,

JAY SAUERS,
Secretary-Treasurer.

Forcing a Labor Crisis

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

EDITORIAL FROM THE MANKATO (MINN.) FREE PRESS

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mankato Free Press:

[From the Mankato (Minn.) Free Press of April 3, 1941]

FORCING A LABOR CRISIS

It should be evident to the most casual observer that a definite decision on the method of controlling industrial disputes in defense industries cannot be postponed much longer. The rush of events in the last few days and the increasing confusion will force a show-down.

Even prejudiced observers must admit that the increase of unnecessary shut-downs and the refusal of the unions to employ the mediation machinery, such as it is, provided by the Government before striking are advancing the day when Congress may take drastic action. What radical labor leaders want, of course, is control of industry by the Government, and it is important to the future of the Nation that this scheme be thwarted. Radical labor leaders believe that with industry in the hands of the politicians, the plunder would be even greater for them.

During the last fortnight no responsible official has repeated the optimistic handouts of a few weeks ago that labor tie-ups are so fractional as to be unimportant. The facts refute such a conclusion.

The new National Mediation Board has been given its first assignments. In four separate cases the regular means of conciliation have failed, and Secretary Perkins has called in the Mediation Board. How effective this agency can be, with power only to recommend, not to order, remains to be seen. In case its suggestions are rejected by either party, it is highly unlikely that its one weapon—publicity—will be sufficiently potent to prevent most lost time.

President Roosevelt is naturally reluctant to declare a national emergency if it can be avoided. But a number of Washington correspondents have dropped hints that the continuance of industrial disputes is pushing him closer and closer to such an expedient. By such action, industry—not the labor leaders who are responsible for the shut-downs—would be the sufferer. But day after day finds production restricted by an epidemic of strikes and the whole defense program dislocated in its most vital joints.

In the meantime Congress does nothing, because its Members, while privately expressing their views of the matter, are afraid of the labor vote.

Should the Mediation Board fail in its efforts, the only alternatives are stern legislative measures or Federal control of industry by Executive edict, under which the guilty would achieve their purpose and the innocent and the Nation be made to surrender.

St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS
OF
HON. JAMES J. HEFFERNAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

LETTER FROM PHILIP A. BENSON, PRESIDENT OF DIME SAVINGS BANK, BROOKLYN, N. Y.

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I wish to include therein a letter addressed to me by the Honorable Philip A. Benson, president of the Dime Savings Bank of Brooklyn, N. Y., a very distinguished and respected member of our community. This letter deals with the proposed St. Lawrence seaway and power project.

The letter follows:

BROOKLYN, N. Y., *March 31, 1941.*

Hon. JAMES J. HEFFERNAN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN HEFFERNAN: I have given considerable thought to the proposed St. Lawrence seaway and power project, and after thorough study am convinced that it is not only unnecessary but economically unsound. Furthermore, I believe it is particularly injurious to the city of New York.

If we need more electric power, the necessary plant for it can be produced in a very much shorter time and at a fraction of the cost. The project can hardly be called a defense measure, inasmuch as it will take 5 years or longer to complete, and we are confident the war will end long before that.

We do not need the Great Lakes for shipyards. There is plenty of room for them on the seaboard. Because of ice and fog conditions, we could use the waterway only a portion of the year, and it would mean a long journey for American vessels through a foreign country. The use of the waterway to any great extent would reduce the need for shipping and transportation facilities in the port of New York, entailing a tremendous loss to American labor.

The argument recently advanced that development of the power projects on the St. Lawrence would bring industrial activity to the northern part of the State is fallacious. In the first place, there is plenty of power there, or it can easily be developed or created there for present and prospective industry, and why should New York favor a visionary idea that is bound to hurt the interests of the people of its greatest city?

I appeal to you as a Representative of this State in Congress to do all you can to oppose the measure and prevent its enactment.

Sincerely yours,

P. A. BENSON.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

RESOLUTION OF THE OPTIMIST CLUB OF HIGHLAND PARK, MICH.

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Optimist Club of Highland Park, Mich.:

Whereas the people of Michigan and States adjacent to the Great Lakes possess the natural right to ship agricultural and industrial products from their ports to the markets of America and the world in the most economical manner; and

Whereas a bottleneck of approximately 48 miles in the St. Lawrence River deprives the people of the United States of a direct outlet to the ocean; and

Whereas the deepening of the channel in the St. Lawrence River will enable us to make our full contribution to the needs of our Nation and to participate in the post-war program of world rehabilitation and stabilization; and

Whereas a deep waterway from the heart of our industrial, mineral, and agricultural region is vital to our Nation and a bulwark of strength of our defense; and

Whereas engineering surveys made by our Government have approved the feasibility of the Great Lakes-St. Lawrence seaway project and forecast a benefit to the entire Nation; and

Whereas President Franklin D. Roosevelt in his message to the seaway conference called the attention of the American people to the importance of completing the St. Lawrence seaway as soon as possible: Therefore be it

Resolved by the Optimist Club of Highland Park, Mich., That we do formally and re-

spectfully request the Congress of the United States of America to enact legislation enabling completion of the Great Lakes-St. Lawrence seaway by removing existing barriers; and be it further

Resolved, That a formally attested copy of this resolution be sent to the President of the United States of America, to the Secretary of State of the United States; to the Senators and Representatives in our National Congress.

Respectfully submitted.

OPTIMIST CLUB OF HIGHLAND PARK, MICH.,
By FLOYD M. BENTON, *President*.
WILLIAM A. DOYLE, Jr., *Secretary*.

Adopted April 10, 1941.

What's Behind the Strikes?

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

EDITORIAL FROM THE NEW ULM (MINN.) JOURNAL

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Ulm Journal:

[From the New Ulm (Minn.) Journal]

WHAT'S BEHIND THE STRIKES?

Usually strikes occur when the cost of living rises faster than wages. Today, we have the strange experience of strikes when there is an urgent need for defense speed-up and when the wages paid are very high and the cost of living has not risen greatly.

What is the reason for all these strikes?

Radical leadership largely. When the Nation began to rearm, these radical labor leaders saw a golden opportunity. They insisted that none but union members be permitted to work as carpenters building Army barracks. Then they collected large initiation fees and heavy dues. Down at Gary they are picketing the steel plants although there are no strikes there. The pickets insist upon checking each worker to see if they are behind in their dues and to be certain that they pay up.

For a number of years these radical leaders have had much encouragement in Washington. They have been able to get their friends in high positions in the Capitol, and they have wielded an influence far out of proportion to the numbers they represent. Then when the C. I. O. was organized, John L. Lewis tied up with scores of Communist Party organizers because they were hard workers and they understood the technique of mass organization and unionization. They did their job of building up the C. I. O. very well, so well that they almost worked Mr. Lewis clear out of the entire C. I. O. organization. He lost his control over them, and the administration seems unable to manage the wild boys of the labor and political movements.

In the present defense movement the Communists find little in common with the administration's program. They are against going to war and they are not even interested in building American defenses. All they do seem concerned about is getting higher wages, shorter hours, greater initiation fees, and higher dues. Naturally this runs counter to the defense program as well as the pro-war movement.

Naturally, anyone interested in the defense of this country deplores these strikes and efforts to slow up and stop our rearmament program. It it wasn't so tragic at this time we might be tempted to point out that it is useless for the present administration to complain about the color of the child's hair, because, after all, it is their baby. They planned it this way back in the days when they flashed the green signal to the radical and Communist labor leaders.

Plattsburg Idea

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

PLATTSBURG IDEA OF TRAINING CAMPS LAUDED BY GENERAL DRUM

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting excerpts from the text of an address by Lt. Gen. Hugh A. Drum, commanding general of the First Army, before the National Emergency Committee of the Military Training Camps Assocition held in New York City Tuesday, March. 25, 1941:

Twenty-six years ago the founders of the Military Training Camps Association rallied the forces of American democracy in defense of justice and liberty for free men. As individuals, who knew that eternal vigilance was the price of liberty—as citizens, who cherished the system of government by consent of the governed—as patriots, who revered the traditions of an independent nation; these men strengthened the spirit of America and aroused the slumbering forces of the Nation in defense against the threats to our security. * * *

Prior to the outbreak of the World War in 1914, it can be clearly stated that for the greater part our American people were concerned principally with local, national, and international policies looking toward peace, and the promotion of the good things of life. No one wanted war. Few anticipated that war was just over the horizon. And fewer still were insistent upon the initiation of a program looking toward the organization and extension of American national defense.

On May 10, 1913, Maj. Gen. Leonard Wood, then Chief of Staff, suggested to university and college presidents throughout the country the idea of having students from recognized educational institutions volunteer to attend military training camps during the summer of that year. * * *

The President of the United States, in an address to Congress in December 1914, said: "We should encourage such training and make it a means of discipline which our young men will learn to value." This opinion, a clear reference to the success of 1913–14 camps, was an opinion which the President afterward expanded to include his approval of an American system of "universal voluntary training." In 1915 four more camps were held. The largest was at Plattsburg, N. Y., with an attendance of 615; one at San Francisco, Calif.; one at American Lake, Wash.; and a fourth at Ludington, Mich. The idea of military training for civilians was rapidly growing to be an accepted principle throughout the country. By this time, the progress of the war in Europe had gone far beyond the limitations of all those Americans who earnestly hoped to remain isolated from the effects of a European conflict.

It was in May 1915 that the *Lusitania* was torpedoed and sunk with a great loss of American lives. No event could have produced so profound and indignant a resentment throughout the country. If anything had been needed to crystallize the desire or will to act, this incident was the spark which aroused the Nation to serious consideration of the dangers which lay ahead. Two days after the great liner had been submarined a group of patriotic men in New York City telegraphed to the President their earnest desire for prompt and adequate measures to secure the Nation against future violations of American rights. I know that there is more than one member present in this room today who remembers the telegram and whose signature was attached to it. Mr. Grenville Clark, your chairman, was one of the group, and also Colonel Wickersham, now on duty with me at the headquarters of the First Army. Out of this group a small committee of three, consisting of Mr. Grenville Clark, Mr. Theodore Roosevelt, Jr., and Mr. Philip A. Carroll, actively engaged in the preparation of a definite plan looking toward improvement in our national defense. They drew up a plan for the first Plattsburg training camp to be held in August 1915 at Plattsburg Barracks, N. Y. Major General Wood gave his hearty cooperation, and within a few weeks several hundred volunteers had enrolled from New York City alone. The complete success of the enterprise was assured. Efforts were made to spread this enthusiasm to other cities. Similar planning committees were formed in Boston, Philadelphia, and Baltimore. The net result of these developments was that when the first Plattsburg camp opened on August 8, 1915, 1,200 volunteers assembled, representing wide geographical distribution throughout the country.

The Plattsburg movement was under way and its success stimulated the growing enthusiasm throughout the country and crystallized the opinion of all patriotic citizens that, as citizens, Americans were prepared to assume their obligations to defend the Nation. The distinguishing feature of this whole movement was the demand on the part of its sponsors for immediate action and personal voluntary service. * * *

At the beginning, there were no provisions for pay, travel, uniforms, or subsistence. The average expense for an individual was at least $100. The men who attended voluntarily, gave up their vacations or cheerfully interrupted their business and professional activities. These circumstances accounted for the high quality and irrepressible enthusiasm of those who did attend the camps. Their example of personal sacrifice confirmed in the minds of all citizens the sincerity and seriousness of their interests. The vitality of the movement flourished and grew on the sound evidence that these men practiced what they preached.

At the close of the first Plattsburg camp, officially known as the Military Training Camp for Business and Professional Men, your present chairman, Mr. Grenville Clark, introduced a resolution which was accepted by the men who had attended. That resolution was "that the members of this camp hereby form an organization for the purpose of encouraging a system of military training camps thrcughout the Nation, and of assisting to provide a reasonable amount of military training for the citizens of the United

States." With great foresight, he later referred to the Plattsburg idea in these words:

"We well know that a system of reasonable military training can be worked out under our (American) institutions without the slightest danger of militarism or its evil results, and we know that far from being undemocratic, such a system may well be the very salvation of our democracy." How vividly that prophesy rings true today. How completely it expressed the spirit of the small group which fostered the idea of military training throughout the country and through their efforts created the great spirit of citizen-obligation which this Nation knew in the years 1915–1916. As Mr. Clark has stated, the first camp was not conceived only as an emergency measure. It was a genuine national impulse. It was a living thing with substance and power of growth. It represented sound judgment, able foresight and a prevision of the emergencies then pending. It was a clarion call which stimulated throughout the country a prudent readiness to face probable events. All the underlying ideas which gave rise to the creation of the Plattsburg movement were systematically promoted by the Military Training Camps Association.

Out of the first training regiment in December 1915 the plan forming the association was drafted and adopted in January 1916. It was a national organization with the declared purpose "to encourage reasonable military training for the citizens of the United States by promoting a national system of training camps and by such other means as may be advisable."

As a result of these continuous efforts in 1915–16, section 54 of the National Defense Act of 1916 established not only the authorization for the continuance of Plattsburg camps in 1916 but also the system of the great officers' training camps of 1917.

During the winter of 1916–17, the Military Training Camps Association continued its promotion of training camps for 1917. Final plans for the 1917 camps were not completed at the time of our declaration of war, the association, in conjunction with other patriotic societies and in consultation with military and congressional leaders, urged upon the Government the prompt adoption of proposals looking toward the expansion of larger numbers of military training camps and, further, serious consideration for universal military service. At the congressional hearings on December 1916, Maj. Gen. Leonard Wood said about the Plattsburg movement, "Plattsburg was the only thing I ever knew that fused the American people. It was a voice to the slumbering people of the country. * * *"

As the Secretary of War said, in 1917, "Accepting the Plattsburg experiment as the basis and using funds appropriated by Congress for enlargement of the Plattsburg system of training, the (War) Department established a series of training camps on May 15, 1917."

It was in these camps that America produced most of the junior line officers for our overseas force during the World War. When we consider today that at the outbreak of the World War our immediate needs for officers numbered some 200,000, a figure equal to the whole number of both officers and enlisted men then in the Army, we see clearly what a profound contribution the Military Training Camps Association made to our national security. * * *

My principal message to you, and through you to those who work with you and who are affected by you is this: Let us recreate in the hearts and minds of all Americans today the vital, overwhelming spirit of civilian obligation which carried us to the top during the war years and is essential to our success in these days of national emergency.

I emphasize with all the force at my command the profound necessity for recreating this deep abiding faith and purpose within our American people. No one knows better than I do how our modern Army needs the machinery of war and all the supplies and material to train for and, if need be, engage in modern combat. I would have you carry to every American in this country my personal conviction that all these material things are useless unless the human factor is prepared and stands ready for service. Back of every gun, standing behind every man in uniform, is the solid reassurance that all Americans are united in spirit and in active support. That has always been the lesson of our American history; that is the lesson which we must learn again today.

Nearly fourscore years ago Abraham Lincoln sought to arouse the spirit of our American people, faced with the realities of war between the States. In December 1862 he said, "Fellow citizens, we cannot escape history. No personal significance, or insignificance, can spare one or another of us. The fiery trial through which we pass shall light us down, in honor or dishonor, to the last generation. We shall nobly save, or meanly lose, the last best hope of earth." He could repeat that sentiment to our American people today without changing a syllable.

Today the unpredictable future which lies ahead is as imminent as tomorrow's headline or the next radio bulletin. Time is telescoped, and the pressure of events limits our choice of action. It takes time to think, yet we must be warned that today events move faster than thought. There is a time to endure, and there is the inevitable time when all must suffer. These are the realities which we face. These are the realities which our American people must strengthen themselves to accept. For to all of them we must carry the message that ours is the cause of the right, and they must know that the better cause must be made the stronger.

The enemies of democracy can prevail, not only by physical violence but by mendacity, by corruption, by sowing the seeds of internal dissension, by dislocating economy, and interrupting the peaceful pursuits on which democracy depends. Democracy is not a static or limited principle, either of government or of a way of life. It is a vital and fluid characteristic. It is never attained in full measure. It must be supported, or it dies.

You and your fellows have again a call to reach out to the hearts and minds of our American people and re-create the spirit of obligation which will renew that support to democracy which democracy must have in the present world crisis.

St. Louis Labor Union Adopts a Sensible Plan To Deal With Labor Disputes

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

RESOLUTION BY THE CENTRAL TRADES AND LABOR UNION OF ST. LOUIS, MO.

Mr. COCHRAN. Mr. Speaker, a great deal has been said on the floor as well as in the press in reference to the serious labor disturbances throughout the United States caused by strikes which have impeded the progress of the national-defense program.

The majority leader, Mr. MCCORMACK, well said:

Labor, as a whole, should not be condemned for the acts of a few.

Of course, I join with all in condemning unnecessary strikes, some of them resulting from unwise action by labor groups and others due to an unreasonable attitude taken by some employers.

The Central Trades and Labor Union of St. Louis and vicinity has taken a lead which I commend to all labor organizations throughout the United States. This outstanding organization which has been in existence over a long period of years affiliated with the American Federation of Labor, believes that the organized-labor movement should stand united for the purpose of trying to prevent strikes in defense industries.

Recently when I was in St. Louis, I talked to Joseph P. Clark, the president of the Central Trades and Labor Union, upon the subject of strikes in defense industries. I am in a position to say that no one regrets some of these unfortunate strikes more than does Mr. Clark and, of course, being president of this union, he had a great deal to do with the passage of a resolution by his organization on April 13.

In this morning's mail I received from W. M. Brandt, the secretary of the Central Trades and Labor Union of St. Louis and vicinity, the resolution which I include as part of my remarks.

The resolution follows:

At the last meeting of this central body, a brief discussion was had on the importance of bringing strikes, especially in defense industries, to an irreducible minimum in this era of great national emergency. It was voted to take up the subject matter at this meeting as a special order.

Your executive board—while meeting to consider a number of other matters referred to it—decided to submit, as a means of facilitating agreement upon a program, the following as a possible basis:

Today this Nation, in which the working people enjoy the highest standard of living in the world, is necessarily engaged in high-speed activity to produce materials with which to fortify our country against the threat of ruthless, inhuman totalitarianism which is rapidly engulfing nations abroad. Continuous, uninterrupted, and maximum production is imperative.

Labor is the largest stockholder in democracy. The record shows that among the first acts of European despots, when they gained power, was to smash the unions, confiscate their funds, and enslave labor. The men and women of toil would be the first and worst sufferers should American democracy fall.

While labor must insist upon its right to strike as a last and final resort, we should exhaust every reasonable process at our command before causing any stoppage of work in an industry related to national defense. Our Central Trades and Labor Union is a voluntary organization and, therefore, cannot command, but merely recommend; the following is recommended:

That any union contemplating a strike in any industry engaged in the production of war materials or indirectly related in a major degree to such production, first confer with the executive board of the Central Trades and Labor Union, for assistance and conciliation in an effort to compose differences between

workers and employer without a strike. Should such intervention and conciliation from the Central Trades and Labor Union executive board fail, said executive board shall promptly apply to the National Defense Mediation Board for conciliation with a view to adjustment of the dispute.

If and when the above extended efforts for peaceful settlement fail, then this central body will aggressively support the aggrieved union in such further steps as are necessary to secure justice. In the absence of unusual circumstances, however, the differences between union and employer should be submitted to arbitration.

Copies of our plan should be submitted to the St. Louis Building Trades Council, Molders Conference Board, Machinists District Council, and all other councils, and also to such other crafts not covered by these councils as are engaged in defense industries, and their cooperation therewith invited.

Unanimously adopted at meeting of Central Trades and Labor Union held April 13, 1941.

National Gallery of Art Dedication Ceremonies

EXTENSION OF REMARKS

OF

HON. LOUIS E. GRAHAM

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

ADDRESSES BY CHIEF JUSTICE CHARLES E. HUGHES AND PAUL MELLON

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two brief addresses; the first by Chief Justice Hughes and the second by Mr. Paul Mellon, on the occasion of the dedication of the National Gallery of Art:

REMARKS OF CHIEF JUSTICE HUGHES, CHAIRMAN OF THE BOARD OF TRUSTEES OF THE NATIONAL GALLERY OF ART

Mr. President, ladies and gentlemen, this treasurehouse, now formally presented to the Nation, is at once a memorial, a symbol, and an opportunity. It is a memorial to an eminent benefactor, whose patriotic ardor and love of art prompted the conception of this plan for public enrichment, now happily brought to fruition. This building, so admirably suited to its purpose in beauty of design and perfection of practical adaptation, does not bear the name of Andrew W. Mellon, as he requested it should not, but it will nonetheless always be a memorial to his public spirit as it is a fitting crown of his public services.

Taking its place as one of the world's great galleries, this palace of art becomes a symbol of the cultural aspirations of the people, increasingly recognized and served at the Nation's Capital. With its facilities for research, its laboratories of experimentation, its collections of masterpieces of art now crowned by this Gallery, Washington attests the high aim of democracy to afford the people the freest scope for all their abilities and thus to encourage them to rise to these realms of endeavor which give to human life its highest dignity.

This building presents a distinct opportunity for those who possess art collections of great importance. Nowhere can they be so admirably housed and exhibited. Mr. Mellon's gift has already prompted other great donations. And we may expect this Gallery to be enriched by many treasures which can here find their best repository, where donors may feel that what they have collected with such loving and absorbing interest will give enjoyment and cultural advantages to millions of their fellow citizens.

This building is a memorial, a symbol, and an invitation.

Mr. Paul Mellon will now make the presentation of the Gallery and Mellon collection on behalf of the trustees of the A. W. Mellon Educational and Charitable Trust.

REMARKS OF PAUL MELLON AT THE NATIONAL GALLERY OF ART DEDICATION CEREMONIES

This building, which we are dedicating tonight, is the realization of a plan formed by my father many years ago, soon after he came to Washington as Secretary of the Treasury.

He felt the need of a national gallery in Washington, with a collection of art which might serve as the nucleus of a great national collection. He saw in his imagination a building adequate to contain that future, great collection.

He hoped that the gallery would become a joint enterprise on the part of the Government, on the one hand, and of magnanimous citizens, on the other. That hope is already being realized.

Mr. Kress, with extraordinary generosity and self-denial, has given his important collection of Italian paintings and sculpture, which you see here tonight. We know of other gifts that are coming in the future, such as the great Widener collection.

Some of the most distinguished American painters of our earlier period are already well represented in the gallery which will in time, of course, acquire the greatest available works of our later painters and sculptors, as they become eligible for the permanent collection. Mr. Chester Dale most kindly has loaned a group of splendid examples of American painting, augmenting the present collection.

Through the generosity of Miss Ellen Bullard and three anonymous donors, the Gallery has been given a collection of prints which forms the nucleus of a very important print collection.

In addition, it is expected that this building will contain eventually a library of books and photographs available for students, in order that it may serve more fully the cause of education in art, and become a center of scholarship in this country. For it was my father's hope, and it is ours, that the National Gallery would become not a static but a living institution, growing in usefulness and importance to artists, scholars, and the general public.

It has been a great privilege for all of us, who have been associated in this work, to have had the opportunity of carrying out my father's plan.

To you, Mr. President, we are particularly grateful, as my father was, for all that you have done to make the task easy, both in establishing the gallery and in securing for it the continued support which it must have, if it is to fulfill its highest function.

May I express also our sincere thanks to the Senators and Members of Congress, whose sympathetic support made possible the necessary legislation;

To the Commission of Fine Arts;

To the National Park and Planning Commission;

To the late John Russell Pope, the distinguished architect, and to his associates, Mr. Otto R. Eggers and Mr. Daniel P. Higgins, who have ably carried on the architectural work;

To Mr. Percy S. Vermilya, president of Vermilya-Brown & Co., and his associates, the general contractors;

And to the thousands of craftsmen who contributed their skill to the erection of this building;

And finally to the staff of the gallery, which has labored with untiring devotion to bring into this building the beauty and harmony of arrangement and decoration which you see all about you.

This building is the product of many minds, intent on giving America their best; and we are happy to turn it over to you, Mr. President, with my father's collection, to be dedicated forever to the use and enjoyment of the people of the United States.

The World Digs Up Its Gold, the United States Buys It and Then Hides It in the Ground Again

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

RADIO ADDRESS BY HAROLD M. FLEMING

Mr. CRAWFORD. Mr. Speaker, with the United States hiding the world's gold in the Kentucky mountains and stationing heavily armed soldiers over the mounds which conceal it, our citizens are beginning to make a good many sensible inquiries about the whys and wherefores of this procedure.

On April 1 of this year Harold M. Fleming, well-known economist, made some observations on this subject in a radio broadcast carried over the Mutual network. His address was entitled "Profit and Loss" and under the unanimous consent granted me, I submit it for the consideration of this body:

One of the most curious things about this topsy-turvy economic world of ours today is the mountain of gold we're piling up in Kentucky. Last week a Government bureau reported that in 1940 we imported something like $5,000,000,000 of gold; that's more than we ever had until 1934. Two months ago the United States Treasury mailed about $5,000,000,000 from the overcrowded New York vaults to Fort Knox for safe keeping; the postage alone was $1,440,000.

The stuff is buried 40 feet in the ground behind 25 inches of steel armor plate and concrete, with a division of mechanized cavalry near at hand, in a desolate spot approachable only by a single-track railroad through mountain passes and over ravines. A couple of years ago the American Institute of Banking held a convention at Louisville, and about a thousand bankers took the day off for an excursion to Fort Knox—but they weren't allowed so much as a squint at the buried metal on which their whole banking structure is supposed to be based. All they saw was the gleam of sawed-off shotguns.

There are more questions stuck to that pile of gold than there are pegs on a hatrack. First, is the question: why the world digs up its gold and then we bury it; and the second is: what would happen if it disappeared and nobody knew it was gone.

Then there's the question of why we say our money and banking structure is based

on this gold. (Try that question on your favorite economist.) When we say that bank deposits are based on money, we mean that you can get money for them; but money can't be based on gold in that sense, because you can't get gold for your money. Our money-and-credit system is a set-up of golden promises of which nobody is allowed to ask golden fulfilment. We're on the gold standard only in a sort of mythological sense. Gold holds up our credit structure only as old Atlas used to hold up the earth.

There are other curious ideas circulating about money. One is that we aren't on gold but on a "managed standard" of money. "Managed standard" is a contradiction of terms, like "rubber yardstick." A standard is something that stays put, so that other things can be measured by it. To manage it means to jiggle it around. And a few years ago some economists actually did think that by jiggling the price of gold up and down, the Government actually cou'd jiggle the cost of living up and down. Wall Street economists laughed when the administration sat down at the financial piano and tried to play a tune on the cost of living by juggling the price of gold—and they were right—it didn't work. But the idea wasn't really so very much different from the old-fashioned notion handed down by generations of bankers and economists that by holding the price of gold steady you could hold the cost of living steady. That never worked either. England and America, financial man and boy, have tried, since the days of William the Conqueror, to use precious metals as a standard of value, by which to hold the cost of living steady; and the periodic wrecks of that hope are strewn down money history every generation from the Hundred Years' War to Shakespeare, and every 15 or 20 years from Shakespeare down to today.

In the first of those periods, when gold and silver were actual currency, the coinage wore out so fast it had to be reminted about every 35 years and with every reminting the weight of the coins had to be cut to avoid a disastrous deflation. In the last of those periods (which means the whole of capitalist history), while there has been a credit-debt system, about every 15 or 20 years people suddenly came to distrust the golden and silver promises in which business was done, asked to see the color of their money, and socked it away in the old sock—and business came to a disastrous standstill until the panic was over.

There is an idea around that the gold standard functioned pretty well until the last 10 years, but history doesn't bear it out. In only two out of the last eight centuries have people been content to leave it alone. Sir Isaac Newton, the man who watched the apple drop and figured out the law of gravitation, fixed the mint price of gold in England around 1700 and people stood for it until 1931; but those are the only two centuries in English history when people have been willing to let the standard alone. It hasn't had even that good a record in this country. One of the reasons for the American Revolution was the effort of English merchants to impose hard money on the Colonies, and one of the reasons for the writing of the Constitution was a rebellion of farmers up in Massachusetts who objected to a hard-money law passed by Boston. One of the side skirmishes that led to the Civil War was the effort of Alabama and Mississippi planters to set up unsound-paper-money banks; for 19 years after the Civil War the country refused to go back to the gold standard, and got along on greenbacks; 10 years later the silver movement broke out; during the World War we had to suspend gold payments, and 15 years after it was over we suspended them again—and they're still suspended. We never had that much trouble with any other standard of weight or measure.

Last year we imported four and three-fourths billion dollars' worth of gold. That was more in dollar value than the total of all our imports and exports of everything else put together. It was 4 or 5 times the value of all the airplanes we hope to export to England this year, and nearly 100 times the value we'll probably export in cotton.

Most of that gold was "flight capital." It wasn't in payment for American exports. It was sent here for safekeeping from the shadow of the European war. The volume has increased steadily in recent years until last year's flood. But now the flood is abating. Practically all the world's gold reserves have been drained to this country. That goes for Britain, Canada, France, Japan, South America—name any country. Our Federal Reserve Board now reports the gold holdings of the Bank of England, guardian of the gold standard for over a century, at $1—a rather nominal sum. So now there's no more gold to come to this country except the newly mined gold.

Now, many economists think that this is just due to the war, and that after the war we can go back to the old gold standard and that somehow perhaps the gold will be distributed round again. But there's been a great change in the last generation in the world's habits and attitudes toward gold. Economists still talk about gold's having "an appeal to fundamental human instincts," but the fact is that people have lost practically all interest in gold except to talk about it. There's not an industrial country in the whole world today, within the fringes of civilization, in which gold still circulates. And that's not because in the last 10 years every government has banned its circulation. People just got tired of it. They found paper money more convenient. Big bankers tried over and over again to pump gold back into circulation, but people wouldn't use it. It wears away. It burdens the pocket. Large sums in gold are cumbersome. Five-dollar gold pieces roll under the bureau and get shoved in the jitney box in place of a nickel. People dropped the habit of using it, lost interest in it, and only wanted it at Christmas. So far as that mythical "fundamental human instinct" goes, we have had prohibition for the last 10 years, as far as gold coin is concerned, and there hasn't been any repeal movement yet.

Also, the habit of relying on gold as a basis for money or credit has died away. One of the most revolutionary steps taken by Great Britain since the war started came in the first month, when the entire gold reserve behind the British currency was turned over to the exchange equalization fund. There's practically no gold today behind any important currency in the world, and nobody but economists cares. During the last World War every nation took drastic steps to keep its gold at home. During this war every nation that had any gold, except the United States, has seized the chance of getting $35 an ounce for it from us.

And this isn't all. A lot of people have got out of the habit of using gold for its original purpose—for decoration, eye appeal, and appeal to pride of ownership. In the 1920's about half the world's annual gold production used to go into the arts—that is, into the making of rings, statehouse domes, plates, cups, dental work, and so on. Now only about one-twentieth goes into such use. For display purposes people now use costume jewelry, new plastics, and metal alloys, and shiny motor cars. You have to go clear round the world to India to find people still using gold for decoration, and even the East Indians in recent years have been exporting out of their hoards and decorations. This all means that another widespread change in people's everyday habits has been made to the disadvantage of gold. All over the world governments have, as we did, raised the price of gold sharply. The result has been the same as happens whenever the price of anything is artificially lifted. Production has increased; use has decreased. The world used to mine 20,000,000 ounces of gold a year and use 10,000,000. Now it mines 40,000,000 and uses 2,000,000.

It's curious to go over the economists' discussions of recent years about what we should do with our golden mountain. Everything has been suggested, and everything rejected. We can lower our buying price, but that would upset foreign exchange and make it so much the harder for the British to pay something on armaments, because they control most of the world's gold mines. We can raise our price, but the present price is already enough of a magnet to drag gold from all over the world, and raising the price would also upset our Treasury's bookkeeping. Some of the bankers want us to try to force some of it into circulation, but people don't want it, and we'd be lucky if half a billion out of the twenty-two billions went into coin use. We can lend it to foreign countries, but that's something like a consistent winner at poker offering to lend indefinitely to the steady losers. We can stop buying, but that, too, would upset foreign exchange and hurt the British, and we can continue to buy—but that's where we came in, to this discussion.

So it looks as though we're stuck with the gold, as the Malay States were stuck with the rubber 15 years ago when they tried to hold up the price, and as Brazil was stuck with her coffee, and began burning it in locomotives. Perhaps at some future time we may be willing, as a Nation and a Government, to take our loss, and perhaps try to encourage the popular use of gold for ornament, by offering it to the jewelers for $10 or $15 an ounce. But it looks as though the problem of how to get our money back on this mountain of noble metal, or noble mountain of metal, is going to turn out, after the war, to be very much like the problem we worried through in the 1920's, of how to collect the war debt. We never did collect it, and we finally had to take the loss.

The real trouble seems to be that gold was never cut out for a good currency except in rough and disorderly times, like the Middle Ages, where its extraordinary hoardability was really a virtue. When capitalism came along, with its credit structure, nobody knew any better than to make the structure of promises a structure of golden promises, and this hoardability of gold became a curse every 15 or 20 years. Few people really wanted to hoard it, but everybody knew that, in a pinch, it couldn't be turned out, like iron or copper, and that society had made a whale of a lot of promises to produce the one thing that couldn't be produced in a pinch. So people figured they better hurry and get their gold before the other fellow asked for his.

And another thing. In the day of doubt they always rushed their gold from the doubtful spots to the safe spots. First it used to go from the weak goldsmiths to the strong; then from the shaky banks to the reliable; then from the uncertain cities to the safe ones; and then from the doubtful countries to the secure. Gold just naturally gravitates, in any times of doubt, from where it's most frantically wanted to where there's already plenty of it.

And the urge to get it out of danger also varies from time to time as well as from place to place. People's interest in it has varied every 15 or 20 years from complete indifference to frantic desire. That's the business cycle. Despite what some economists say, it might have been better if the credit system for the last 300 years had been based on something like iron or copper, more reliable and less hoardable—however bulky—instead of on gold.

And now, so long, folks, and I hope this series of Profit and Loss talks has been profitable to you.

Will We Have Inflation?

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

ARTICLE BY HARRY SCHERMAN

Mr. ANGELL. Mr. Speaker, I ask leave to extend my remarks by including an article written by Mr. Harry Scherman, entitled "Will We Have Inflation?" appearing in the Saturday Evening Post of April 12, 1941. The article follows:

[From the Saturday Evening Post of April 12, 1941]

SHALL WE HAVE INFLATION?

(By Harry Scherman)

The old fable could be altered slightly and provide a good new moral. The little boy was right in the end when he called, "Wolf! Wolf!" Had his elders checked up on him, they might have found he was right all the time, that again and again he did see wolves skirting around in the distance.

The American people are in this position now. "Inflation! Inflation!" has been called many times in the past 8 years. Perhaps the alarmists have been right in seeing packs of wolves venturing ever nearer. The average person has found this hard to check because the alarms have been given in a language few can understand. They have been in economic lingo, one of the most confusing means of communicating ideas used by human beings today.

A good example is at hand. On the last day of 1940 the most responsible monetary officials in the Nation called "wolf" in economic lingo. They were the 6 members of the Board of Governors of the Federal Reserve System, the 12 presidents of the Federal Reserve banks, and 12 members of the Federal Advisory Council. They issued a joint report to Congress—something never before done. The meticulous care with which it was prepared can be imagined. The next day this report appeared, or news of it, in every newspaper in the land. If you read it through—a thousand to one you didn't—were you aware it was saying: "Wolf! Wolf! Inflation is ahead! We must prevent it, and thus-and-so is what should be done". Yet a few days thereafter it was followed by statements of Secretary Morgenthau and Secretary Jones, saying in effect: "Pooh! Pooh! We have heard this before." How can the ordinary man in the street be anything but confused? Yet it is his flocks, his little property, his whole future, which are at stake.

For the ordinary person, it seems to me, this matter of understanding inflation is much like seeing the Gibson Girl in the moon. When you first try, you make out nothing but a blur. Then perhaps you identify the pompadour, the eye, or the uplifted chin; suddenly the whole tilted head is unmistakable. With inflation, too, first you see one thing clearly, then another related to it, and all of a sudden the seemingly impossible happens—you understand, for example, what the Federal Reserve officials were talking about in the statement above referred to.

To begin with, there is at least one easy identification mark in this Gibson Girl head. You know—everybody does—that inflation of the type usually feared involves a highly uncomfortable rise in the prices of practically everything. This rise is erratic and uneven—that is, it does not affect all kinds of goods at the same time—and it takes place over a comparatively short period. As a result, great groups within the population have all the circumstances of their lives thrown askew. Who?

Two immense obvious groups, numbered by the tens of millions, are savings-bank depositors and life-insurance policyholders. The face amount of the debt owed to these two groups—hold your seat!—is in the neighborhood of $144,000,000,000. Assume an inflation that raised the price of everything to an average of double what it now is. Your savings deposits would then buy half of what may be vitally necessary in the emergency you have been fearful of. In the event of your death, the insurance money your widow and children would receive would do just half the job of protection you have figured is advisable.

A third immense group, also now numbered by the tens of millions, are those who have been paying part of their wages and salaries regularly into the Government old-age and unemployment trust funds. No money is held in these funds; as it comes in, every penny is borrowed by the Treasury and spent. The Government merely owes these sums to the millions of old people and wage earners of the Nation. As each one receives his specified share in dollars—as he surely will—should all prices be double what they now are, what he gets in food and living necessities will be just half what it would now be.

In like situation are those—probably again numbering several millions—who are relying for a good part of their income on interest payments from Government and corporation bonds and small mortgages, or on little regular payments from a pension or annuity.

LITTLE PEOPLE ALWAYS PAY

All these are forms of what is called by the economists "long-term debt." The savings-bank deposits, though they can in practice be demanded at any moment, are in actuality long-term debt, because in almost all cases the money lies for a long time undemanded. All long-term creditors are ruinously damaged by the kind of price rise caused by inflation. Thoughtlessly, it is sometimes assumed that it is the rich people who are principally the long-term creditors of the Nation. No fallacy is more socially pernicious. Most of the outstanding long-term debt of the Government is owned by banks, insurance companies, and other fiduciary institutions. Only a minor proportion of the total is owned by individuals. True, those who do own such bonds are likely to be rich. But it is also true that rich people are ordinarily well advised in financial matters. If they want to own debt at all, they shift from long-term to short-term debt when an inflationary rise in prices is seen actually to be imminent. The bonds then gravitate to the only place they can go—largely, the banks and insurance companies. Should we see a great inflationary price rise, it can be said with certainty that the long-term creditors who will be damaged will not be rich people, but principally those who are poor or moderately well off—the creditors of the savings banks, insurance companies, and like institutions.

This, however, is less than half the story of how little people pay through the nose for inflation. If there were a doubled price level, what you could buy with your wage or salary would also, of course, be cut in half, unless your wage or salary itself were doubled. Measure the chance of that happening in your particular situation, whatever it may be. Incomes from wages and salaries always lag—the economic term—in periods of inflation. In some cases it takes long years before the increased wage or salary catches up with the increased cost of living.

It is instructive again to identify the groups that get hurt most in this way. An obvious one is all Government employees. There are now a million of them being paid salaries by the Federal Government alone, and in the States and municipalities several million more—policemen, firemen, teachers, court attendants, clerks, etc. It is most realistic to think of these as millions of little families, not individuals.

Millions of office workers—predominantly young women—are in pretty much the same boat; also the millions of clerks and other employees in our countless retail stores. And the great army of unskilled workers of the Nation straggle along with them way in the rear of the cost of living. Professional people are no better off—doctors, dentists, lawyers, either cannot increase their charges quickly or if they do their business declines. Necessarily their income must lag along with that of the tens of millions of others who, in the main, pay for their services.

The wages of union labor lag also—merely to a lesser degree. While some industries can adjust their selling prices immediately to increased costs, most cannot. As an example, take railroads and public utilities, where rates are fixed by law. How can doubled wages be paid, in the supposed case of a doubled price rise, until the income of such enterprises is adequately increased by a Nation-wide change in the legally fixed rates? That takes time—and fight. Again, take those thousands of enterprises which sell branded goods to consumers at a fixed price. It is not so easy, after accustoming women, particularly, to a fixed price for a branded line of goods, to raise that price substantially. The salaries and wages paid by such enterprises—and they are legion—necessarily lag. Agitation and strikes can speed them up, true, but never so fast as the price rise itself.

What this all spells out in general terms is plain: This speedy and uneven rise in prices caused by inflation necessitates a complete readjustment of all business activities in the Nation to one another. Let's overlook the political and social troubles inevitable with such a quick compulsory readjustment. Looking only at the personal consequences, it will be seen that it is the tens of millions of little people who almost necessarily must be the principal sufferers.

WHAT IS INFLATION?

This comparatively speedy, uneven, ruinous price rise is itself popularly referred to as "the inflation." One will see the Gibson girl in this moon better by identifying it as the mere necessary consequence of inflation. As the word is used by most economists, it means a quite definite condition of affairs—a money supply in the Nation that is being more and more fully used by the people and that is increasing fast—faster than the goods and property that are already on the market to be sold or that are being currently produced. It is in this single sense, stripping it of the many loose popular associations it has acquired, that the word "inflation" is used in this article.

"Money supply" is economic lingo. What is the money supply of a nation? You have, of course, some of it in your pocket or handbag—dollar bills and coins. Add what you own to what is in the momentary possession of all our 130,000,000 citizens, add further what is in the banks and in the cash drawers of all the business firms of the country, and you have just a portion of our total money supply. This part of it is usually called money in circulation. At the moment of this writing it totals close to $9,000,000,000.

Besides the money in your pocket, you say you have money in the bank. That, of course, is nothing but debt owed to you by a bank. When you want to make a substantial payment for goods or for a piece of property, you write out a check—an order to the bank to fulfill its promise to you by paying as you

direct to the person named. But this promise is seldom fulfilled by paying out dollar bills or coins. It usually remains an unfulfilled bank promise, merely a promise of a different bank to a different person. It would be too lengthy a procedure to analyze in detail what happens here—I have done it in previous articles in the Post—but the ultimate situation is this: There was a total of around $50,000,000,000 of these commercial-bank deposits in the Nation, not including the savings-bank deposits, on June 30 last. But there are very few actual dollar bills behind them. For instance, in the 6,339 banks of the Federal Reserve System there were at the end of last year only $789,000,000 cash in their vaults, and no more was needed. More than 90 percent of the buying and selling of the Nation is done by merely transferring bank promises among depositors. This inconceivable total of transferred bank promises is almost 100 percent a bookkeeping affair, ending up, most of it, in the 12 Federal Reserve banks of the Nation.

If one defines money—and it is a good pragmatic definition—as anything that is instantly and commonly accepted in exchange for goods or labor performed, quite plainly our money supply is composed of what is called money in circulation, plus the total of all these bank promises to pay dollars. For this is actually what is used to effectuate the multitudinous transfers of property and labor that go on every day in a society like ours. Sometimes these two items lumped togethed are referred to by the economists as our "circulating media," sometimes as our "currency supply," sometimes as our "money supply." To avoid confusion, it is perhaps necessary to say that throughout this article the last term only is used.

It is highly important—for a reason which will later appear—to understand why savings-bank deposits are not included by the economists as part of this total money supply. Nor, for that matter, are time deposits in the commercial banks ordinarily included. It is because these are in actuality not used in carrying on our daily buying and selling. True, any tiny portion of these savings-bank deposits or time deposits in the commercial banks can very quickly be transformed into a checking deposit if the owner draws out the money, spends it and it then gets deposited in a demand deposit of a commercial bank. For that reason, savings-bank deposits and time deposits in commercial banks are best conceived of as quick potential additions to the total money supply of a nation. But so long as this particular kind of bank promise to pay dollars actually remains unused by the creditors—that is, the depositors—it is ordinarily not included by economists in measuring the size of the money supply at any one time.

HOW MUCH IS MONEY USED?

This matter of the degree to which the money supply of the Nation is used is all-important in understanding inflation. Indeed, if one misses seeing this item in the Gibson girl's head, one can never see the full picture clearly, only tantalizing glimpses of it. Suppose $1,500,000,000 in silver cartwheels were tomorrow added by the Treasury—as they can be—to the Nation's money supply and were all immediately hoarded by foolish people. There should be no more effect upon prices than if there had been no increase at all in the money supply. Yet the figures of money in circulation would show up as being $1,500,000,000 greater than the day before

Put this in a different way. Suppose the Nation had a total money supply—money in circulation plus demand deposits—of $50,000,000,000 and for all the business transactions going on in the country it were used—that is, turned over—40 times a year. Suppose, on the other hand, its total money supply were $100,000,000,000 and this turned over only 20 times a year. The influence of the total money supply on the prices of goods, the economists say, should be about the same in both cases—assuming everything else, particularly the available supply of goods, remained the same.

Thus the "velocity of circulation"—the economic term for this phenomenon—is all-important in understanding inflation. It is particularly important for one reason—governments can do a great deal about the size of the money supply. They can increase or decrease it, in ways we shall see. But in a free society—a free society, mind you!—they are practically powerless to do anything about the degree to which the people as a whole use their money. If a situation arises where governments are obliged to control this element of inflation, they can do it effectually in only two ways—either by taking much more money from the people in taxation, so that they just haven't got it to use, or by forcing the people to lend money to them. This forced-loan system is being used in Germany and Italy to prevent inflation, and it has been proposed in Great Britain by J. Maynard Keynes, but it has not been adopted there.

The velocity with which our money supply is used can be measured reasonably well through our banking system. Endlessly, cash flows into and out of every bank. Also, obviously, banks have a record of every single check drawn, in their so-called "debits to individual accounts." Add these all up, say for a month, divide the enormous sum by the total amount of demand deposits for a month, and you can get the "velocity" with which these checking deposits were used in that month.

With it you get something else, almost the best answer obtainable to the never-ending question, "How's business?" when that question is asked of the Nation as a whole. For, plainly, checks are made out only for goods or property delivered and services performed. The varying speed with which such payments are being made must necessarily be a close reflection of the business activity of all of the people.

PRODUCTION IN WARTIME

Take a look now at the total of goods and property on the market ready to be sold at any moment, and the Gibson Girl's eye, it might be said, begins to gleam. If these purchasable goods keep pace, by increased production, with an increased money supply and an increased use of it as shown by the turnover, nothing untoward may be expected, the economists say, in the realm of prices. Let's not get confused by the highly complicated economic phenomena that may or may not cause such an increase in the production of consumer goods. Let's take something, for purposes of comprehension, that is sure. Such an increased volume of goods purchasable by civilians seldom takes place in times of war or large-scale preparation for war.

At that time, quite obviously, the Government itself is absorbing a steeply increased share of the total of goods being produced. Total production of goods can increase; it usually does. But the share of that total which can be purchased by civilians either remains stationary or may even lessen. But in the meantime, observe, this situation with regard to goods may be faced up against an increased money supply turning over faster. This is almost the classic state of affairs in wartime, and is the reason why wars are invariably asociated with an inflationary rise in prices.

Apply these general principles to our present situation. What has been happening in recent years to our price level, to the size of our money supply and its velocity of circulation, and what's the present situation with regard to consumption goods?

Taking the year 1923 as a base for comparison—using the National Industrial Conference Board index—up to the end of 1940 the price of everything included in the cost of living was still roughly about 15 percent below that year.

WHY HAVE PRICES NOT RISEN?

In the meantime our total money in circulation plus demand deposits has swollen enormously. It is at least $30,000,000,000 greater than in 1923. It is, in fact, 50 percent higher than it ever has been.

Why is it, with this enormously swollen money supply, that there has been no great price rise? The reply of most economists is that it has simply not been used, a fact revealed when you look at the velocity figures. I can give only those having to do with checking deposits, but since 90 percent of our business is done by checks drawn against demand deposits, this will give an excellent picture of the situation.

Using the figures of the Econograph Corporation, which have some advantages over others, in 1923 the checking deposits only—not time deposits—in 101 leading cities of the country turned over 29.6 times a year. In 1940 our then total turned over only 14 times a year, less than half.

The running record is fascinating, for it provides a swiftly moving panorama of the course of business activity of 130,000,000 busy people during these crucial years. Here's the picture:

	Times a year
1923	29.6
1924 down to	29.2
1925 up to	31.5
1926 up to	33.5
1927 up to	36.3
1928 up to	42.9
1929 up to	50.0
1930 down to	35.0
1931 down to	26.0
1932 down to	20.6
1933 incomplete data.	
1934 no uniform basis.	
1935	21.07
1936 down to	21.02
1937 down to	20.5
1938 down to	17.8
1939 down to	16.1
1940 down to	14.3

The record is clear—since 1929, down, down, down to a figure in 1940 which is by far the lowest velocity we have had since the records have been kept.

But suppose now we should have a definite change in this long trend. We saw that this velocity rate is not an independent economic phenomenon. It is a mere reflection of something basic—the total business activity of our 130,000,000 people. Actually, this velocity rate has begun to rise.

Since the latter part of 1940 we have been in a period of greatly increased activity. With the new billions that must be spent for a long period on our armament necessities, the expectation of practically all businessmen and economists is that this will be no short-lived spurt. The Federal Reserve officials, for example, said in their statement: "The volume of physical production is now greater than ever before and * * * is certain to rise to still higher levels."

Put together the various elements of this picture. First, a money supply 50 percent higher than ever before. Second, for the first time since it has been increased, it is turning over faster and faster, with a prolonged improvement in business activity expected. Third, a war condition under which the Government is obliged to absorb a greatly increased proportion of the actual goods produced, with the likelihood that the share available to civilians will either become stationary or at any rate not increase so fast as the other two crucial factors. That is a fair statement of the situation we are now in. It is also, as we saw, a quite exact classic description of a stage fully set for a wartime inflationary rise in prices.

From these keys it is easy to see what was in the minds of the Federal Reserve officials in issuing their momentous report—the dangerous concurrence in full swing of these three factors, coinciding with still another—that the means of still further enormously increasing our money supply are at hand and not easy to control under our present banking and monetary laws.

It cannot be too strongly emphasized, however, that these officials were not alarmists in their warning. They did not say: "Inflation is inevitable," or even likely. On the contrary, they pointed out most specifically what could be done to drive away the wolves they saw in the distance. Panicky buyers and sellers, therefore, who are sure an inflation era will soon be upon us, make two unwarranted assumptions: First, that the supply of purchasable consumption goods will not greatly increase even alongside our war efforts; and second, that measures such as the Federal Reserve officials suggested, and others which they hinted at, will not be taken.

HOW THE MONEY SUPPLY SWELLS

The latter is a possibility, surely, since, unfortunately, the entire management of this matter is sadly mixed with politics. But should the administration and Congress fail to take the necessary precautionary measures, they will be assuming a fearful responsibility for the future; and it is hard to see, in the end, how statesmanlike counsel such as that of the Federal Reserve officials will not prevail, particularly with an informed public opinion aroused to make it prevail.

What precise measures did they suggest, and how would they do the job? That can be satisfactorily understood only by seeing how a nation's money supply gets swollen, as ours has been, to its now unprecedented volume.

There are six pipe lines—they might be called—through which added money and checking deposits can be flooded into the reservoir of our total money supply. Every one is necessary to know about to get the full picture.

The first pipe line is through the introduction of new gold into our monetary system. Gold comes to the United States Treasury through the 12 Federal Reserve banks directly or through commercial banks. For each ounce of pure gold it receives, the Treasury gives a Federal Reserve bank $35 in gold certificates. Out in the banking system, the original owner of the gold—whether a foreigner or an American owner—has received a deposit in some bank. That bank promise to pay dollars—created when the gold was handed to the bank, which was its first step on the way to the Treasury hoard—became a portion of our total money supply. Each new ounce of gold that has been added to the Government's great hoard has added $35 in new checking deposits to those already existing in the Nation. The total amount of usable bank deposits created from this source since 1934 has been about $14,000,000,000.

GOLD AND SILVER PIPE LINES

This pipe line can be stopped up—and the Federal Reserve officials advised that it be done—by an ingenious financial device called "sterilizing gold." As new gold comes into the country, this procedure calls for the Treasury to borrow an equivalent sum to pay for it—let's say $1,000,000. If this has been borrowed from an individual and not a commercial bank—an important "if" that must be explained later—it is not represented somewhere in the banking system by a newly created $1,000,000 checking deposit.

To explain why would mean going into the mechanics, which would only be confusing to the average person, unless done at length. But it is a fact that no new additions to the total money supply are created by the procedure, although it does increase the Federal debt by so much.

A second way our money supply has been increased has been through the purchase of silver since 1934. In these years the Government has bought about 2,500,000,000 ounces of silver. Just how has this increased the money supply any more than the purchase of wheat and cotton and other agricultural products? The Government is always the owner of bank promises to pay dollars, just as you are. Through checks it transferred bank deposits to the former silver owners. This was part of the Nation's money supply and remained a part of it. It was simply now at the disposal of the silver sellers. If the Government had then held the silver unused—just as it holds the millions of bushels of wheat and bales of cotton—there would have been no increase in the existing money supply in the Nation. But it doesn't do this. What it does is to issue silver certificates—dollar bills, of which you will find some in your pocket—against the silver it buys. It has issued some $1,900,000,000 of this paper money since 1934, and is in a position, under our present monetary laws, to issue about $1,500,000,000 more on the silver profit it has gained.

The Federal Reserve officials advised that this second pipe line to a great extent, though not wholly, be choked up in this crisis. They recommended that no more paper money be issued against silver bought from foreigners, and most of the silver bought since 1934 has come from foreign sources, not domestic. Equally important, they recommended that the power of the Treasury to issue silver certificates, paper dollars, against the profit the Government makes on its purchased silver—the co-called seigniorage—be rescinded by Congress.

The President's personal power to devalue the gold dollar nine points further than was done in 1934 is a third big pipe line through which our money supply could be increased—to a degree few people appreciate.

That power allows Mr. Roosevelt to decree that our gold dollar, instead of being 13 71 grains of pure gold, shall be 11.61 grains of gold, roughly. The Government owns $22,000,000,000 worth of gold. If the President utilized this power, overnight that hoard would be said by law to be $26,000,000,000, roughly. There would thus be a so-called profit, of $4,000,000,000. Against this profit, without increasing its holding of gold one ounce, the Treasury could issue $4,000,000,000 of gold certificates to the 12 Federal Reserve banks, establishing that amount of bank deposits there. It could then issue checks against these new deposits, in daily payment for the supplies it is receiving, and soon the total bank deposits of the Nation, used every day by businessmen, would be $4,000,000,000 more than they were before.

The Federal Reserve officials recommended that this power of the President to devalue which expires June 30, 1941, be allowed to lapse; and there are even better reasons for doing this—as we shall see—than to stop the possible enormous increase in our money supply from this source.

WHY NOT PRINT MORE MONEY?

A fourth way to increase our money supply is by outright printing of dollar bills. As the Government needs goods, and the labor of its 1,000,000 employees to carry on its functions, why bother citizens to pay for them? Why take away our precious money and bank deposits through taxation? Why not simply print the needed number of dollars yearly, and pay all bills and all salaries with them? There are at present—and have always been—advocates of this simple-minded procedure in the Congress of the United States. What is more, amazingly there is a law on our statute books, passed in 1933, giving the Treasury the power to issue $3,000,000,000 of such printing-press money.

It is this printing of new money in ever-increasing floods that is popularly associated with a runaway inflation. The canny Lenin used it at the beginning of the Russian revolution, with the object—as he put it—of having "money commit suicide." That is, an all-out deliberate currency inflation was one of Lenin's principal reliances in bringing about revolution in Russia. A great flood of paper money was also, as everybody knows, the distinguishing feature of the great German inflation of the twenties. There is no space here to examine—for those who are not aware of them—the theoretic monetary fallacies at the root of such proposals. For our particular purposes of comprehension here, it is apparent that this is certainly one easy way to increase our money supply. The Federal Reserve officials recommended that the perilous preparatory step already taken in this direction—the authorization to the Treasury to print $3,000,000,000 in greenbacks—be repealed by Congress.

It is most unlikely that we shall see—without carelessness that is hard to imagine—a paper-money inflation on the German or Russian pattern in this country. But one hears often of a bank-credit inflation. If you have ever been confused by the term, a good deal of its mystery is dispelled when you realize that it merely means an increase in the total checking deposits of the Nation brought about by increased lending on the part of the banks.

There are few things more important for the average citizen to know about than this, but if you examine your own personal experience and tie that up with some facts easily learned about banking procedure, the mystery disappears.

Let's say that by some happy chance you come into possession of $10,000 cash. You take your windfall to the bank and deposit it. The bank has the cash, you have its mere promise to pay dollars, which, however, you can transfer to other people for whatever you want to own. Now don't leave the bank, stick around. A half hour later a businessman comes in and asks the bank president to lend him $8,800 on a promissory note. He's a successful and respected citizen; you know him. The banker says, "What a coincidence! I've just got a new deposit of $10,000 from your friend, Mr. Bilkins, over there. As you know, I'm required by law in this particular town to keep 12 percent of that as a reserve, but I am allowed to lend eighty-eight hundred dollars of it to you, and I'm happy to." He then writes "$8,800" in the businessman's passbook, just as half an hour before he had written "$10,000" in yours.

Something hits you! The banker said—you heard him—that he could lend 88 percent of any new deposit. Would that not be true of another bank? Suppose the businessman pays a bill of $8,800 to another businessman in your town. He deposits the check in his bank. That bank then has a new deposit of $8,800 with which it can lend $7,744—88 percent—to a second borrower. This process plainly can go on, from bank to bank, until your original $10,000 bank deposit has been multiplied into, roughly, $66,000 of bank deposits—if the average reserve requirements are 15 percent.

The upshot is this, as you cogitate about it—the lending by one bank increases the deposits of another. And these recurring increases in total bank deposits, by means of lending, can potentially go on through the entire banking system until the average reserve requirements puts an end to the pyramiding.

BANK-CREDIT INFLATION

The average reserve requirement of our 6,339 member banks of the Federal Reserve System is now 15 percent. They have excess reserves—which are best understood as the sums they are free by law to lend or invest—of roughly $7,000,000,000. By the process described above—the lending of one bank increasing the deposits of another—these

excess reserves could be transformed, should lending and investment opportunities arise, into about $47,000,000,000 more checking deposits than we now have.

This would constitute bank-credit inflation—the term you hear so often. This fifth way of magnifying our money supply the Federal Reserve officials also recommended be blocked. They proposed, first, to increase once again the legal reserve requirements—this has already been done several times—and to give the Board power, if this should later prove necessary, to double these then increased requirements. Their idea was to be in a position to wipe out these excess reserves entirely, if in their discretion they decided there was ever any danger of a vastly increased addition to our money supply from this great pipe line.

Finally, there is a sixth—a crucially important—way of increasing the Nation's total money supply—increased borrowing of the Government from the commercial banks. This is similar—but more pernicious, because hidden—to the issuance of printing-press money.

Possibly you had a momentary twinge of alarm a little way back in reading about the $3,000,000,000 in greenbacks which the Treasury has been empowered to issue but has refrained from. The Treasury has, through this more hidden pipe line, gradually pumped at least $11,000,000,000 into our money supply since the beginning of 1931. This is the increase since 1931 in Government debt owned by the Federal Reserve banks and member banks. It is represented by checking deposits used by all of us, not dollar bills, but it is in not the slightest respect different from $11,000,000,000 of new greenbacks being passed around among us. It is merely not seen and doesn't scare the people—and greenbacks, of course, would.

When a Federal Reserve bank or a commercial bank buys a Government bond, precisely the same thing happens as when the banker, whom you watched, extends bank credit to a businessman. New bank deposits are created in the same way, and the Government proceeds to distribute them for use throughout the country by paying its bills with them.

What's more, the bank-credit currency so created remains permanently in existence so long as some commercial bank somewhere owns the Government securities purchased. This, it should be observed, is different in a crucial respect from bank credit extended to business concerns. The new checking deposits created by the latter automatically go out of existence when the original loan by which they were created is paid by the businessman. Not so with credit extended by the Federal Reserve banks or commercial banks to the Government. The new bank deposits thus created represent a permanent addition to our money supply—just like so many greenbacks flooded into it—so long as they remain owned by the Federal Reserve banks or commercial banks. An extremely vital feature of modern society is necessary to be understood at this point. This flooding of our economy with what one Senator has called "greenback deposit currency" does not occur when the Government borrows from individuals and business houses and institutions other than commercial banks.

WILL INFLATION BE AVERTED?

Buy a $1,000 Government bond yourself, examine carefully what happens, and you will see that this doesn't occur. You get a be-scrolled piece of paper and put it away in a safe place. You give your check for it. But this is an already-existing bank promise to pay dollars, merely being transferred by you to the Government for its use. There has been no addition to the total money supply. Yet the Government gets exactly what it does in the other case, and has given exactly the same thing—a piece of paper promising to pay $1,000 with interest in the future.

The Federal Reserve officials, in their statement, recommended that this sixth huge pipe line into our money supply, too, be stopped up. How? By the procedure just indicated—by selling the enormous new supply of Government bonds and notes, necessary for our war finance, to individuals, firms, and institutions other than commercial banks.

Go back now and survey all those recommendations of the Federal Reserve officials. It will be seen that every single one of them has precisely the same purpose—to block any further additions to our existing money supply, already 50 percent greater than it has ever been. This in the main—although not wholly—is how the economic lingo of this momentous Federal Reserve statement can be translated for the average citizen.

If put into effect, would these proposals avert inflation?

No one can responsibly give a flat "Yes" or "No" answer. For this economic field of what causes great changes in the general price level is far too complex for exact prophecy—particularly when the predictions extend well beyond the immediate future. Nevertheless, a reassuring answer can be given. In the opinion of the informed, judging from all past experience, these purely monetary measures should avert any serious general inflationary rise in prices. Particularly if they were accompanied, as they surely would be, by pressure from the great buying agencies of the Government against price rises, unjustified by increased costs, on the part of large producing groups. Such pressure is already being widely and cautiously exerted.

THE WORST KIND OF INFLATION

Yet this assurance—it should be sharply noted—is for only a comparatively short period. One serious criticism has been leveled against these particular Federal Reserve proposals, that they do not go nearly far enough, that they are merely patching up a battered financial Uncle Sam so that he can stay in the ring without collapsing during the next 2 or 3 crucial years. How about afterward? As a matter of fact, although curiously it seems to have been little noticed, the Federal Reserve officials themselves raised this question in one small guarded paragraph.

In asking this question, tough-minded economists who have less political reason to be tactful are worried about something too often regarded as a sacred cow—the eventual collapse of the Government's credit if the administration's fiscal philosophy is not completely changed.

An inflation caused by such a collapse would be far more serious than one of the type considered so far in this article. The latter envisages a price rise caused by a redundancy of money, being turned over faster, against a supply of goods for consumers limited by wartime necessities. It could be bad enough—as we saw in the beginning of this article—but it could be kept within some bounds, and might at least be expected to go down later. But should the Government's credit ever collapse, the kind of price rise we should see would be, at some time, explosive in character and could conceivably go far beyond a 100-percent increase in the general price level. Moreover, the level might be expected never thereafter to go down, gradually or otherwise.

This is really the type of price rise that is in the minds of most people when they use the word "inflation." The fear can, of course, be traced to not very exact popular knowledge of what happened in Germany, Russia, France, Italy, Austria, and other Central European countries as an aftermath of the last war. It is really a justified distrust of the paper money currently being used among a people. Because of what they come to consider its certain and permanent decrease in purchasing power, people prefer to own goods and property rather than money or long-term debt. Thus, the demand for goods of all kinds increases as the demand for money lessens. This, in a vicious spiral, causes the supply of money itself to increase. For the Government, being unable at such times to borrow as much as is necessary, then is forced to begin to use printing-press money increasingly to pay its bills. In other words, the flood of paper money usually comes as the culminating crisis of this type of inflation. It is neither the beginning nor the cause of the price rise, which is the usual popular conception. The beginning of inflation nowadays is the way we have begun—by a government borrowing from its banks, thus increasing the checking deposits its citizens use. We are now actually about $16,000,000,000 along this road.

The long-visioned economists who want to avert this really dread type of inflation have their eyes on one thing: The fact that the Federal debt is continuing to increase by leaps and bounds, with no end in sight.

The appended qualification is all-important. It is not the size of the Federal debt that is the crux of the matter; it is the never-ending increase of debt. This is so, because that increase, as our survey shows, can take place only by actual additions or potential additions to our money supply, to a final point where that money supply may become so huge that a distrust of the dollar would become justifiable. There is only one protection against a runaway inflation in such an event: Complete control by the central government, such as exists in Germany, of all prices, production, and wages. This would be the end of the free-enterprise system. In other words, if we ever see totalitarianism in the United States, it can be pretty safely predicted that it will come rumbling down this road.

What, more precisely, is the picture of the future these Jeremiahs see? Remember that Jeremiah proved to be right. And what do they propose should be done about it?

Since June 1932 our Federal debt, direct and guaranteed, has increased, roughly, $31,000,000,000, an average of more than $3,600,000,000 a year. This has occurred without war. The rise for this fiscal year, it is estimated, will be $6,000,000,000. Next year, it is estimated, it will be $9,000,000,000. That, however, is merely a sure lower limit. It does not include one vast item—the billions of dollars, which few of us grudge, that the Government must borrow to help Great Britain.

THE ROLE OF FEDERAL DEBT

This takes us actually only 15 months away. Is it reasonable to expect that the Federal debt will stop increasing June 30, 1942? What is magic about that date? Certainly it will not stop if the war is still going strong. Even should it end before then, our military expenditures will continue to be enormous. Assume—and it is not an unfair assumption—that the same fiscal philosophy continues to prevail as during the past 8 years. How, one can hear it being asked even now, can we then dare risk deflation by cutting down too much on Government expenditures? All the political pressure, as heretofore, will be to keep up and not reduce the level of Government spending. While this is happening, how about Government receipts from taxation? Perhaps, in this war boom, we shall go on to even a $90,000,000,000 total national income, far above any we have ever had. But can it be expected we shall long stay at this level of national income, with all the annals of business cycles before us, and particularly the record of depression aftermaths that, soon or late, follow every war? Even if total Government expenditures on armament are radically cut whenever the war ends, tax receipts, soon or late, must also

fall from their high levels of the next few years. In such circumstances the debt can go only in one direction—up.

But where are all these new billions, with no end year after year, to come from—above and beyond the money taken from the people in taxes? The reasoning of those who wish to avert an inflation over the long pull must be followed closely here, if one is to decide how much weight to give to it.

We saw six pipe lines, small and huge, through which new money is pumped into the existing money supply. There is a seventh which in several ways is more important than any of the others. This is the one only guardedly hinted at in the Federal Reserve officials' statement, a hint that only the most informed would detect.

THE SAFETY RESERVOIR

There exists at all times, in every modern nation, what can be conceived of as an enormous reservoir of potential money supply alongside of the actual one. It consists in this country of the past savings of the people that have been invested in the Federal Government's debt, plus the time deposits in commercial banks and savings banks. Directly and indirectly, the American people's savings have been invested in direct and guaranteed Federal Government debt up to a total of at least $26,500,000,000. This represents the portion of the total publicly offered Federal debt which is not owned by the Federal Reserve banks and member banks. In addition, there are time and savings deposits totaling around $26,000,000,000. Thus in this great safety reservoir—as it might be considered—there exists a total potential money supply of around $52,500,000,000. This does not include the past savings of the people invested directly and indirectly in other long-term debt, represented by State and local debt, corporation bonds, and mortgages.

Refer back to that great potential money supply that the Federal Reserve officials are principally concerned about—the $47,000,000,000 that could be created by bank lending to businessmen. This can change from a potentiality to an actuality only gradually, only as new borrowers are found. But here is a larger potential money supply, and one already in existence. How much common sense is there in fearing the one and ignoring the other, particularly when, in the second case, the potential money supply can change into actual money supply not gradually but swiftly, explosively, at that moment when confidence in the Government's future intentions with regard to its debt can be justifiably questioned?

There are immediate and close connections—sluices, they might be considered—between this great ignored reservoir of potential money supply and the existing one daily being used. Think back, and you will recall how the continuous flow between them occurs. When a savings-bank depositor demands cash from his bank, spends it, and the recipient deposits the money in a commercial bank, it becomes a commercial-bank deposit—part of the existing money supply being daily swapped by businessmen for goods. The same thing happens, we saw, when an individual takes a Government bond out of his strongbox—indeed, any bond—and sells it to a commercial bank. He receives for the piece of paper a bank deposit—a bank promise to pay dollars—which at his will he can swap for goods and which remains part of the Nation's total money supply as long as any commercial bank owns the bond.

One of the things the Federal Reserve officials recommended was that every attempt be made to divert the new Government debt that must be created by war necessities into this great safety reservoir. At a minimum, this new Government debt will amount to $15,000,000,000 within the next 15 months; and after that, if there is no change in the Government's fiscal philosophy, billions more, year after year.

But here a burning question is raised by the long-visioned economists, whose views I am here presenting. How much potential money supply can the walls of this great safety reservoir stand before finally there comes a calamitous flood into the actual money supply? More specifically, with ever-new additions yearly, how long will all this privately owned Government debt be held?

Suppose the Government's continued financial excesses, year after year, with no end, finally make one fear justifiable—that there will arise an irresistible political pressure to get rid of this great incubus of national debt, to repudiate at least a good porton of it. This could be done swiftly under present circumstances by writing up the value in paper dollars of the Government's great hoard of gold.

POSSIBILITIES OF DEVALUATION

Under such circumstances, who can be the buyers of this old Government debt which would then flood wholesale upon the market? Only the 12 Federal Reserve banks and the thousands of banks below them, and they would be obliged to buy. For if the value of the Government securities they now own is allowed substantially to drop, all their capital and surplus would be wiped out as a result of the loss. Thus the market value of Government bonds must be "supported"—as the term is—by the Federal Reserve System, and it can be supported only by purchases of them.

But in that case there you are, right back to the situation which the Federal Reserve officials are aiming to avoid. For the banks could absorb this sudden flood of old Government debt only by, in effect, extending new credit to the Government. But we saw that this simply would mean enormously increasing the checking deposits which all of us use every day.

In other words, this great present reservoir of potential money supply, represented by privately owned Government debt and time and savings deposits, would have to be transformed suddenly into actual money supply. There is the danger.

It is helpful to distinguish sharply the role of gold in such a situation. In two articles that appeared in the Post last year, entitled "The Real Danger in Our Gold," I showed that there is only one means which modern governments use to wipe out part or all of their debt—by devaluing their paper money in terms of gold. The main point of these articles was that by its monopolization of the greatest hoard of gold in history, now $22,000,000,000 worth, our own Government was in a historically unique position to benefit by such a program. By calling a gold dollar—which it can do by law overnight—4.5 grains of pure gold instead of 13.71 grains, it can pay off roughly $45,000,000,000 of its debt, and not relinquish an ounce of gold.

But what would happen in such circumstances? The Government could issue $45,000,000,000 of gold certificates against the new "profit" it would acquire. It would deposit these in the 12 Federal Reserve banks. It could then issue checks against this to the bond owners. Its debt would thus practically all be wiped out. But the excess reserves of the banks would then be increased literally by billions, and so, too, the checking deposits we all use as part of our money supply. Thus, surely enough, our Government can wipe out its debt by this means overnight. But it can also, by doing so, insure a runaway inflation overnight.

Here then is the long-term, as distinguished from the short-term, view of what can bring about a really serious inflationary rise in prices. The nub of it is this: The threat of inflation over the long term rests in one fact only—that our Federal debt has increased without a stop for 10 years, is continuing to increase faster than ever, and there is no visible end without a complete about-face in fiscal philosophy.

The economists who in general hold this view believe that specific measures like those suggested by the Federal Reserve officials can be helpful in deferring an inflationary rise in prices over the short term, but in the end they must be futile unless something much more drastic is done. That something is to tax, tax, and tax—and on the other side to cut, cut, and cut expenses, all to one final end: that the debt itself stops rising. This can be done—one responsible group has pointed out, the National Economy League—without impeding even such vast war expenditures as we are now engaged in.

The time to stop this rising debt, they aver, is now; not that future Micawber date which for 8 years the administration has set, "When we are able to." The Nation will never be able to meet its expenses in full, they say, until one date—when it decides to. Anyone who is inclined to consider this position the mere habitual plaint of die-hard Budget balancers owes it to himself to read attentively the document analyzed all through this article. Certainly our present Federal Reserve officials cannot be accused of being antiadministration. They say: "There cannot be any question [note the positiveness of this] that whenever the country approaches a condition of full utilization of its economic capacity, with appropriate consideration of both employment and production, the Budget should be balanced." But prior to that they also say: "The volume of physical production is now greater than ever before and * * * is certain to rise to still higher levels." Doesn't that mean—and what newspaper reader needs even these experts to tell him?—that we are right now approaching "a condition of full utilization of our economic capacity"? Add two and two. Were these men, or were they not, warning in as guarded a way as they could, politically, that the long uninterrupted rise in the Federal debt must at last stop?

The Gibson Girl in this inflation moon must be now fairly well delineated to anyone who has followed this survey. The ordinary man asks a simple question about inflation: "Are we going to have one in this country?" He can himself give the answer with these keys. But he must be careful to give it both for a short period—of, say, 2 or 3 years—and for a longer period—of, say, 10 or 12 years.

For the short period, the most judicious answer is: "It depends." It depends almost wholly on Congress and the administration. If the purely monetary precautions suggested by the Federal Reserve officials are taken, the answer is probably no inflationary rise in prices. If they are not taken, the answer must be yes, even for the short period, unless the production of goods purchasable by consumers rises greatly, in spite of the increased share of the total production the Government is obliged to take for war needs. No one is in a position to predict whether this latter happy event can or will happen, and certainly, from all past experience, prudence would dictate that we dare not count on its happening. It would almost be pure luck.

THE CRUCIAL ROLE OF GOLD

For the long period, also, the judicious answer must be: "It depends." Here it depends upon whether the rise in the Federal debt is soon seen to be permanently ended. This certainly will avert the more serious type of inflation because it will be clear at that moment, and never before, that eventual repudiation of part or all of the debt—by writing up the value of our gold hoard—will never be resorted to by the Federal Government. If this eventuality need never be feared, our Government's securities—as they always should and always have been in the

past—would remain over the long run the saftest investment for anybody to own. The walls of that great safety reservoir of potential money supply—privately owned Government debt, and time and savings deposits—will never crumble suddenly like those of Jericho.

To avert this dreadest form of inflation it is just as imperative that the Government end its monopolization of gold as that it put an end to the uninterrupted increase of the debt. The two are inseparable as part of the same purpose—that the credit of the Government for all time be put above questioning.

The common notion that Government ownership of gold is necessary to help our farmers and manufacturers meet lower prices in foreign markets is wholly without validity. The Government's monopolized hoard of $22,000,000,000 of gold actually now serves no purpose save one—it enables the Government, by another develuation, to use the resulting "profit" to wipe out part or all of its debt.

This puts the Government in a strange position. It asks us all—and who will refuse?—to lend it money in this true crisis of our history. Yet it retains the means, in a quick crisis and with little notice, to make the Government debt we all own, directly and indirectly, far less valuable and, should it so decide, even worthless.

It must be apparent to any thoughtful citizen that the men responsible for running the Government cannot possibly have in mind any such ultimate purpose of taking advantage of tens of millions of citizens in this way—all the little savings-bank depositors, the life-insurance policyholders, the future beneficiaries of its old-age and unemployment trust funds, the owners of United States savings bonds, and all the wage earners of the Nation.

But since it can have no such purpose of calling $22,000,000,000 of gold $44,000,000,000 or $66,000,000,000, or points between or beyond, and since its monopolization of gold serves no single purpose other than that, why should the administration not demonstrate to the people by action that it does not intend, now or ever, to use its hoarded gold for this purpose? The final bedrock of credit is deeds, not words. Such a valuable demonstration can be given by the administration and Congress in an extremely simple way—by restoring gold to circulation.

This procedure does not merely mean the rather unimportant matter of coining gold and letting anybody own gold coins who wants to. It means something infinitely more vital. It means ending the Government monopoly ownership of gold. It means canceling most of the gold certificates, returning the gold—as the certificates promise—to the 12 Federal Reserve banks and to the cash drawers of the thousands of banks, whenever they want to ask for it. If the Government isn't the owner of the $22,000,000,000 of gold, obviously it can't profit overnight by arbitrarily writing up its value in paper dollars. In short, without owning the gold, it cannot repudiate its debt by means of another devaluation; and that's really the only effectual way it can repudiate its debt.

THE RETURN TO NORMAL

It may be asked, would not gold then be hoarded by some citizens in the hope that later on they will benefit? The answer is that, if the Government never devalues, it is just as senseless for an individual to hoard gold dollars as silver cartwheels or the Federal Reserve notes we all use. No one, foreigner or citizen, can "unjustly enrich" himself at the expense of the American people by hoarding gold dollars, unless the United States Government itself by a further devaluation enriches him. And that is precisely what the Government, in ending its monopoly ownership, will then be demonstrating it will not do.

There would be nothing abnormal about the monetary situation then existing. On the contrary, it would be a return to a historic normal. Never before in our history, before 1933, was all the gold in the Nation owned by the Federal Government. For 144 years prior to that time—through every one of our wars and all our numerous depressions—practically all of the gold in the Nation had been owned by the banks and by the citizens of the Nation, not by the Government.

But would it not be possible at any time for Congress to reenact this law, requiring all gold again to be turned over to the Federal Government? If so, how would a present end to Government monopolization of gold establish that necessary permanent confidence in the long-future intentions of the Government?

The answer is, "Of course, this can happen." But it is by no means the full answer. An entirely different situation would then exist, as compared with 1933, when in a time of panic this historically unique law was passed and when the gold in this country amounted to only $4,000,000,000. The mere proposal of it would be notice to literally tens of millions of little Government creditors, direct and indirect, of what was afoot. It is they who would have to pay the piper. Never before in our history have there been so many millions of them. Never before, also, are they so widely aware—it can be ventured—of the great personal stake they have in keeping the Federal Government from an eventual bankruptcy procedure, which this action would really represent.

It can easily be imagined that later on there may be political pressure to have the Government once again monopolize the ownership of gold preparatory to devaluing the dollar radically. But with the ownership of so much gold, this would actually be a proposal that we should seriously consider a Federal bankruptcy procedure, and politically, except under panic, would not be easy to carry through, and certainly it should not be. There is a good alternative always to be offered for national discussion—that we tax ourselves still more, up to a third or even two-fifths of our national income, if necessary. European governments at war are doing even more, and we have far more leeway than they. In other words, if ever it should be seriously proposed to reenact this law after it had been repealed, this could and should take place only after the kind of Nation-wide, thorough discussion that such a measure as dollar devaluation, involving a national-bankruptcy procedure, should have. In that discussion, the best interests of all groups in the population would be properly considered.

What can an ordinary citizen do about inflation? His normal reaction, in my own opinion, is about as unwise as it can possibly be. He thinks only of protecting his own personal future. His instinct is, as he puts it, to try to "beat inflation." He buys this, he sells that, he hoards the other, intensifying the general price rise by every action he takes, and merely piling up more trouble in the future for himself and everybody else.

For, in that type of inflation caused by distrust of a nation's money, all the historical records show that it is only the nimblest and shrewdest speculators, hopping from the ownership of one thing to another as circumstances change almost daily, who can in the end hope to save themselves from great loss. Both the political and economic changes are so incalculable that, in fact, practically everybody loses. And this is inevitable. For, in the larger sense, an inflation of this type really means that the people as a whole are finally taking their losses as a result of previous fiscal excesses. A great readjustment of the ownership of property is occurring, the final result of which is to determine who are to stand the losses which inexorably must be assumed. And, as we saw, in the end it is always the tens of millions of little people of the Nation who have to stand the greater part of the loss, both as long-term creditors and as wage earners.

Yet there does exist one simple way for the individual to "beat inflation" of this dread type—namely, to help avert it.

If everybody concentrated upon that public objective, instead of worrying about his own little sensitive skin, he would be acting with real intelligence. It is actually the only effectual thing the individual can do to beat inflation caused by distrust of a nation's money. Personal efforts at protection are in almost every case futile in the long run.

What, specifically, can every one of us do?

First, to the limit of our ability, we can each one of us lend all he can to the Federal Government. That will keep our present huge money supply from dangerously rising.

Second, we can every one of us hold on to that debt, relinquishing it only to meet the direst personal emergencies.

Third, as a corollary to this patriotic action we can insist upon a demonstration, on the part of the Federal Government, that it will never repudiate this Government debt we hold by again writing up the value of gold. This demonstration must be by action, not words. It must consist of the restoration of gold to circulation by repeal of the law, passed in 1933, setting up for the first time in our long history the monopolized ownership of gold by the Government.

Fourth, we can demand of our congressional representatives—in order to avoid an inflationary price rise over the short term—that all the carefully considered proposals of the Federal Reserve officials be enacted into law.

Fifth, we can insist upon, and every one of us be ready to bear, greater and greater Federal taxes. This would tend to stop the dangerous continuous increase in the Federal debt, which, as we saw, was the real key to inflation over the long term.

Sixth, as a matter of justice, if we are all willingly paying far more to the Government in taxes, we can insist that every possible cut in nonmilitary expenditures be put into effect at once, and that no political obstacles be allowed henceforth to prevent this.

Seventh, as members of pressure groups—and there are millions of us who are—we must change the direction of our pressure. We must exert it not upon Congress but upon our own misled leaders, demanding that they cease herding the Government blindly along the road to a bankruptcy procedure. Every little portion of pork we get from the Federal Government as a member of a pressure group we shall surely pay back later with usurious interest in the loss we shall sutain in an ultimate inflation. Members of pressure groups are direct and indirect long-term creditors, like almost everybody else, and predominantly belong to the classes who are most hurt by inflation.

IT'S TIME TO BE ADULTS

What this all spells out, quite plainly, is sacrifice on the part of everybody without exception. But it is merely being adult to recognize that for the individual war means nothing but sacrifice. We are in a world era of war and have to stand the gaff, whatever our opinions may be, whether we like it or not, and whether we get into the actual conflict or not.

We can either meet and stand these necessary personal sacrifices with open eyes, paying for them no matter how it hurts, or, misled by politicians who think we cannot be treated as adults, the sacrifices can be ostensibly deferred. Ostensibly! For we, not our children, will pay the great bill for this war era just the same. In that case we will pay it, probably within a decade, by an inflation—with all the ominous disorder that will entail.

There is no out for this, if we do not make up our minds as a really intelligent democracy to pay, to know we are paying, and to be willing to suffer all the inconveniences of paying, as we go along.

Reclamation Possibilities

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

STATEMENT BY HON. CARL T. CURTIS, OF NEBRASKA

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I include a statement made by me today before the Appropriations Committee:

STATEMENT OF REPRESENTATIVE CARL T. CURTIS, OF NEBRASKA, BEFORE THE APPROPRIATIONS COMMITTEE OF THE HOUSE OF REPRESENTATIVES ON APRIL 17, 1941

Gentlemen, I wish to speak to you briefly concerning the appropriations for the Bureau of Reclamation. I am interested in the Case-Wheeler program and the regular reclamation work and investigation activities of the Bureau.

First, in my statement to you last year, I remarked on the value of the North Platte Federal reclamation project to the people of that area, as contrasted to those areas without irrigation which suffered severely from the drought. It will interest you to know that while 77 of the 93 counties in Nebraska showed a decrease in population from 1930 to 1940, Scottsbluff County, which depends on the North Platte project, had a gain of 18.3 percent. Practically every irrigated county, whether in the Great Plains or to the westward, showed an increase in population. In the Great Plains, more than 500 counties out of 650 showed losses in population while to the westward where irrigation and water conservation prevail, only 32 counties out of 309 showed a loss.

Second, it was estimated by competent observers that 350,000 families in the Great Plains were uprooted during the 10-year period, largely due to the drought. About half of these moved westward seeking new opportunities for a livelihood and disrupted the economy of the States to which they fled.

Third, testimony at several hearings, confirmed by subsequent information, indicates that the dislodgment of farm families in the Great Plains is continuing. Farms in Nebraska and Kansas, and perhaps in other States, are being advertised for sale and these uprooted families are generally moving westward.

My attention has just been called to the report of the California border patrol. This report shows that in December 1940 the number of Nebraskans entered California in need of manual employment was twice the total for December of 1939.

Weather Bureau reports, while showing improvement in climatic conditions in some sections of the Great Plains, indicate that the drought has not been broken in some sections of Nebraska and other States.

The uprooting of Great Plains families and their migration westward is peculiarly the problem of the States directly affected, but the unfortunate effects are national in scope. I would call your attention to the relief expenditures by the Federal Government in 7 years of two and one-half billion dollars in the 17 States of the arid and semi-arid region. These expenditures were like putting a barrel under a leak in the roof. So far, other than the limited appropriations that have been given the Bureau of Reclamation and a few other agencies, no constructive steps have been taken toward a permanent solution of the problem. Few of these areas affected by the drought, or to which migrant farm families have fled, offer opportunities for employment in national-defense industries. In fact, those few who will get work in these industries are mostly unskilled, except as farmers, and, when the emergency is over, they will again be a part of the relief problem.

Another phase of national significance is the loss of the buying power that comes from self-sustaining farm families. Well-posted economists advised our committee that for each irrigated farm at least two families were stabilized in nearby towns and cities through the distribution of the farm income. Midwestern, eastern, and southern manufacturers, who are interested in maintaining a home market for their products should take heed.

This committee is aware of the work of the Tolan Committee for the Investigation of the Migration of Destitute Persons. That committee has found that a great portion of the homeless families on our highways today come from the area of the Great Plains States. I wish to refer to some of the findings and recommendations of that committee.

Specifically, the committee which conducted exhaustive hearings in eight cities of the country, recommends anchoring families in their present locations through continuance and extension of the water conservation and utilization program in the Great Plains and elsewhere, and of the supplemental water developments of the Bureau of Reclamation. It also urges return to the land of agricultural migrants now in the West through settlement on reclamation projects now being brought in.

Recognition is accorded the fact that at the present rate of appropriations, the reclamation program can provide for only a small part of the migrant families. The program is, however, singled out as one of the very few constructive methods now being offered for combating conditions that contribute to migrations and to the continuance of the hopeless wanderings of several hundred thousand families in the West.

The report filed on April 4 urges steps—

(1) "To care for potential migrants in agriculture" by the continuance and extension at as rapid a rate as feasible of water conservation and pump irrigation under the Wheeler-Case program, the water facilities program, and the provision of public aid in construction of reclamation projects.

(2) "To care for migrant families—now in the West—who are trying to get a new start, and for whom a return to their point of origin is not a feasible solution" by providing an opportunity to return to independent farming, to the limit of the facilities now available, on reclamation projects now opening up, and through the Farm Security and other aid.

In support of the recommendations, the committee headed by Representative JOHN H. TOLAN of California, quotes copiously from the testimony of Commissioner John C. Page, of the Bureau of Reclamation, at a hearing in Lincoln, Nebr. On the first recommendation, Mr. Page reported that in 10 years, if appropriations are maintained at the current rate, Bureau of Reclamation projects will be able to accomplish these results:

Eighty-five thousand farm families now facing water shortages will be made secure in their present locations, while cities and towns with three times the rural population will be stabilized.

Twenty to twenty-five thousand families remaining in the Great Plains and similar areas, who otherwise would be forced to migrate, will be rehabilitated.

The committee observes that this work of anchoring farm families in their present locations is additional to the reclamation projects' offer of new settlement opportunities. It urges construction of these latter projects "to provide for as many agricultural migrants as possible an opportunity to return to independent farming."

Commissioner Page is again quoted as testifying that if appropriations are continued at present rates for 10 years, the Bureau of Reclamation may be expected to provide 40,000 to 50,000 new farm homes on irrigated lands where settlers will be self-sustaining. From 75,000 to 100,000 additional families will be supported in cities, towns, and villages that will rise or expand in the wake of irrigation developments.

With these few observations, as a Member of Congress from a State that has suffered heavily from drought and lack of water conservation, I urge this committee to go the limit of its judgment with respect to financing the Federal reclamation program. In particular, I address myself to two specific items:

First, the need for adequate funds to permit the Bureau of Reclamation to advance its surveys and investigations. Before we ask that money should be spent, we must know about the engineering and economic feasibility of proposed reclamation developments. There should be a million and a half dollars for investigations.

Second, I urge this committee to give serious consideration to increasing the recommended appropriations of $3,500,000 annually for water conservation and utilization projects in the Great Plains and other established agricultural areas. This amount is too small to advance projects in the Great Plains, let alone those in other States to the westward which are now sharing in its program. I urge six million for the Case-Wheeler program.

I feel that you are well aware of the importance of speedy completion of projects under construction. There are ample reasons for advancing this work. Irrigated land is necessary to settle families now in the West, and supplemental water supplies which may be provided in Colorado, California, and other States are vital to the maintenance of established agricultural communities.

I Am the Cherry

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

POEM BY GUY BOGART, BEAUMONT, CALIF.

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following poem by Guy Bogart, of Beaumont, Calif.:

I AM THE CHERRY

I am the Cherry.

My red wealth wings from white petals beneath blue skies—
I am the Spirit of America.

Mine the redeeming red:
Red lips of mother-kiss and red roses of home garden;
Red rim of rainbow arch of promise;
Red mammalial blood linking continents and eons;
Red stripes of Old Glory;
And my rich red greeting—

I am the Cherry.

I am sunlight incarnate,
Wedded to earth elements;
My blood crystal-dropt from heaven's bowl,
Through soil and sap to nectar'd miracle—

I am the Cherry.

For ascetic and epicure
My lure.
I was companion of America's pioneers.
George Washington knew me as a child.
F. D. R. ate of my fruit in youth.
I have come through the ages—across seas and centuries.

I am the Cherry.

I am home in the East;
I rejoice in mid-empire by lakes and rivers titanic;
I am known in the mountains;
I am Queen in the West.

I am the Cherry.

Eat me for contentment;
Eat me for health.
From the heart of the orchard,
From the heat of the oven,
My vitamins greet you.

I am the Cherry.

American am I.
Red is my maturity;
White is my Easter Dawn;
Blue are the skies above me.

I am symbol of freedom—
I am the Cherry.

—*Guy Bogart.*

Importation of Livestock and Agricultural Products

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

RESOLUTION BY THE KANSAS LEGISLATURE AND TABLE BY THE TARIFF COMMISSION

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks I am including House Concurrent Resolution No. 10 approved by the Kansas Legislature on March 14, 1941, in opposition to the purchase or admission to this country of any livestock or agricultural commodities in competition with our own. I am also including a table furnished me by the United States Tariff Commission giving the value of the agricultural imports for 1938, 1939, and 1940.

House Concurrent Resolution 10

Concurrent resolution relating to the importation of livestock and agricultural products from foreign countries into this country

Whereas livestock is the most important branch of our agricultural industry and a decisive factor in national defense, both with respect to adequate sustenance of our people and as a source of income to defray increasing Federal expenditures, and it is highly important that the country's livestock business enjoy whatever degree of prosperity may come from preserving the American market for American producers, a protection to which it is fairly and justly entitled; and

Whereas recent press dispatches from Washington inform that the United States Government proposes to purchase greatly increased supplies of livestock products from countries other than our own; and

Whereas American producers are abundantly able to meet American requirements: Now, therefore, be it

Resolved by the House of Representatives of the State of Kansas (the Senate concurring therein), That we are unalterably opposed to the purchase or admission to this country of any livestock or agricultural commodities from other lands that compete with the crops and livestock produced in the United States, until and unless it is clearly apparent that the American producer is incapable of supplying home needs; be it further

Resolved, That the secretary of state be instructed to send copies of this resolution to the President of the United States, the presiding officers of the United States Senate and House of Representatives, and to the Members of the Kansas congressional delegation in Congress.

Summary of values of United States imports of agricultural products, 1938–40

[Value in thousands of dollars]

Commodity imported	Calendar year		
	1938	1939	1940
Supplementary [1] agricultural products:			
Sugar	130,421	124,649	113,253
Wool, excluding free for carpets	10,046	23,945	53,481
Hides and skins	29,398	46,631	49,532
Dairy products	12,095	14,143	9,082
Oils, seeds, and vegetable oils expressed	93,228	84,123	89,216
Grains, grain products and feeds	11,841	23,923	27,506
Tobacco leaf	34,622	34,595	35,198
Other supplementary	154,994	174,083	165,545
Total supplementary	476,645	526,092	542,811
Total complementary [1]	478,875	591,701	742,535
Grand total imports of all agricultural products	955,520	1,117,793	1,285,346

[1] In the classification of agricultural imports into supplementary and complementary groups, all those similar to agricultural commodities commercially produced in the United States and all others that are interchangeable in use to any significant extent with agricultural commodities commercially produced in the United States are considered supplementary. The remaining agricul tural imports are considered complementary. They consist largely (about 95 percent) of the 8 following commodities: Rubber, coffee, raw silk, cacao beans, bananas, wool for carpets, tea, and spices.

Source: Foreign Crops and Markets Supplements, U. S. Department of Agriculture: 1938 data, pp. 567–579 of supplement dated Apr. 30, 1940; 1939–40 data p. 190 of supplement dated Feb. 12, 1941.

Railmen in War on Poll Tax

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

Mr. GEYER of California. Mr. Speaker, I am inserting in the RECORD today a news story from Labor recording the fact that the Railway Labor Executives' Association has endorsed the Geyer-Pepper anti-poll-tax bill and has urged the Members of Congress to sign discharge petition No. 1 to bring the bill to the floor.

The association is the spokesman for 22 railway labor organizations with nearly 3,000,000 members. They are the Brotherhood of Locomotive Firemen and Enginemen, Brotherhood of Locomotive Engineers, Brotherhood of Railroad Trainmen, Order of Railway Conductors, Order of Railroad Telegraphers, National Organization of Masters, Mates, and Pilots of America; International Longshoremen's Association, National Marine Engineers' Beneficial Association, American Train Dispatchers' Association, International Brotherhood of Blacksmiths, Drop Forgers, and Helpers, International Brotherhood of Electrical Workers, Brotherhood of Stationary Firemen and Oilers, Brotherhood of Maintenance of Way Employees, Brotherhood of Railway Carmen of America, International Association of Machinists, Sheet Metal Workers International Association, International Brotherhood of Boilermakers, Iron Shipbuilders, and Helpers of America; Order of Sleeping Car Conductors; Brotherhoo dof Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; Brotherhood of Railroad Signalmen of America; Switchmen's Union of America; and the Railway Employees' Department, American Federation of Labor.

Below is the article:

RAILMEN IN WAR ON POLL TAX—CHIEF EXECUTIVES URGE ENACTMENT OF GEYER-PEPPER BILL FREEING FRANCHISE

The Railway Labor Executives' Association, representing all the standard railroad labor organizations, has renewed its endorsement of legislation now pending in Congress wiping out the requirement that voters must pay their poll tax before they can vote for President, Vice President, or Members of the House and Senate.

The legislation is sponsored in the House by Congressman LEE E. GEYER, of California, and in the Senate by Senator CLAUDE PEPPER, of Florida.

WILL FREE FRANCHISE

It would not interfere with a State's right to insist on the payment of a poll tax as a requisite for voting for State or local candidate's, but it would make it illegal for election officials to use the poll tax as a means of depriving voters of the privilege of participating in Federal elections.

In an effort to get his bill before the House, Congressman GEYER has prepared a petition discharging the committee from consideration

of the measure. Two hundred and eighteen signatures are required.

In addition to endorsing the Geyer bill, the railroad unions are urging Members of the House to support the petition.

Timetable of Europe's Wars

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

Mr. STEFAN. Mr. Speaker, while we are confused today as to whether we are going to convoy or not going to convoy, it would be wise to pause before we reach that slippery path toward complete war.

There are many of us here who are still old-fashioned enough to hark to the admonitions of our founding fathers. We feel that George Washington uttered the deeper truths of history which should guide us in these confusing and grave moments. His words should be carved in the minds and hearts of every Member in this Congress. I quote briefly from that historic address:

> Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, or caprice?

We have been guided by that policy from 1789 to 1917. I am sure the people whom I have the honor to represent in this Congress do not wish to deviate from that American policy.

That the RECORD may be kept straight, I here include a timetable of Europe's wars:

1801 The old German Empire breaks up, and all territory on the left bank of the Rhine is ceded to France.
1802 French aggressions in Holland, Italy, and Switzerland.
1805 England declares war on Spain. France fights Austria.
1806 Napoleon enters Berlin.
1807 Napoleon defeats Russia.
1808 Napoleon invades Spain.
1810 France annexes Holland. Turks driven out of Balkans.
1812 War starts between United States and England.
1812 Napoleon declares war on Russia.
1814 France invaded from all sides. Napoleon to Elba. British seize and burn Washington.
1815 Napoleon leaves Elba, is defeated by British and Germans at Waterloo, then sent to St. Helena for life.
1816 Holland annexes Belgium.
1817 British wars in India.
1822 Greeks and Turks at war. Civil war in Spain.
1823 French Army enters Spain.
1824 British battle for Burma.
1825 Russia wars on Turkey.
1826 Russia invades Persia.
1827 Turks driven from Greece.
1828 Russia overruns Rumania.
1829 England and Austria intervene against Russia.
1830 Revolution in Poland and France. Belgium revolts from Holland.
1831 Prussia and Austria aid Russia against Poland.
1832 Egypt revolts against Turkey.
1838 French bombard Mexican ports. Debt collection, old style.
1839 Britain wars on China.
1846 War between United States and Mexico.
1848 Schleswig-Holstein fights Danish annexation.
1849 Danish-Russian war.
1850 Britain blockades Greece. Prussia and Austria war.
1854 France and England war against Russia.
1856 British war on China and Persia.
1861 Civil War in United States. British blockade runners supply South.
•1864 Germans defeat Danes.
1866 War between several German states. Austria wars on Italy.
1868 Britain invades Abyssinia. Spanish revolution.
•1870 Franco-German War.
1871 Alsace-Lorraine goes to Germany. Back to France in 1918 and back to Germany in 1940.
1874 Spanish civil war.
1876 Balkan wars.
1877 Civil war in Japan. Russia wars on Turks.
1879 British war on Zulus.
1880 Boers and British battle.
1881 France wars on Tunis.
1882 Britain wars on Egypt.
1884 Japan wars on Korea.
1885 Russia wars on Afghanistan.
1887 Balkan wars. Italy wars on Abyssinia.
1894 Japan wars on China.
1895 Belgium seizes Congo State.
1898 Spanish-American War.
1899 Britain wars on Boers.
1900 Boxer war in China. United States returns Boxer indemnities.
1904 Russo-Japanese War.
1910 Japan takes Korea.
1912 Balkan wars.
•1914–18 Russia, France, Britain, Italy, United States, Japan, Rumania, Serbia, Belgium, Greece, Portugal, and Montenegro, 12 nations, battle Germany, Austria-Hungary, Turkey, and Bulgaria.
1917–18 The United States of America participated in the World War.
1920–30 A breathing spell and period of disarmament conferences, which obviously disarmed no nation except the United States. European and Asiatic powers destroy League of Nations ideal.
1931 Japan seizes Manchukuo.
1932–33 Europe repudiates all World War debts to United States ($12,000,000,000).
1934 Italy takes Abyssinia.
1937 Japan develops an "incident" in China.
1938–39 Germany takes Austria, Czechoslovakia, and Poland. Russia invades Poland. France and England declare war on Germany.
•1940 Russia takes part of Finland. Germany seizes Denmark and defeats Norway, Holland, Belgium, and France. Italy joins war against England.
1941–?? Germany and England at war. Russia, Italy, Rumania, and Japan, against Germany in 1914, like the figures of the year, have reversed their positions and are with her in 1941. Bulgaria, Turkey, Greece, and Yugoslavia involved in conflagration. Starvation general throughout all Europe.

Labor Resolution

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

RESOLUTION BY THE CENTRAL TRADES AND LABOR UNION OF ST. LOUIS AND VICINITY

Mr. PLOESER. Mr. Speaker, I have today received from the Central Trades and Labor Union of St. Louis and vicinity—A. F. of L.—the following report of their efforts to prevent strikes in defense industries. I believe their resolution commendable and express the hope and confidence that they will vigorously prosecute these efforts:

ST LOUIS, MO., *April 13, 1941.*

At the last meeting of this central body a brief discussion was had on the importance of bringing strikes, especially in defense industries, to an irreducible minimum in this era of great national emergency. It was voted to take up the subject matter at this meeting as a special order.

Your executive board—while meeting to consider a number of other matters referred to it—decided to submit, as a means of facilitating agreement upon a program, the following as a possible basis—

Today, this Nation, in which the working people enjoy the highest standard of living in the world, is necessarily engaged in high-speed activity to produce materials with which to fortify our country against the threat of ruthless, inhuman totalitarianism which is rapidly engulfing nations abroad. Continuous, uninterrupted, and maximum production is imperative.

Labor is the largest stockholder in democracy. The record shows that among the first acts of European despots, when they gained power, was to smash the unions, confiscate their funds, and enslave labor. The men and women of toil would be the first and worst sufferers should American democracy fail.

While labor must insist upon its right to strike as a last and final resort, we should exhaust every reasonable process at our command before causing any stoppage of work in an industry related to national defense. Our Central Trades and Labor Union is a voluntary organization and, therefore, cannot command, but merely recommend; the following is recommended:

That any union contemplating a strike in any industry engaged in the production of war materials or indirectly related in a major degree to such production first confer with the executive board of the central trades and labor union for assistance and conciliation in an effort to compose differences between workers and employer without a strike. Should such intervention and conciliation from the central trades and labor union executive board fail, said executive board shall promptly apply to the National Defense Mediation Board for conciliation with a view to adjustment of the dispute.

If and when the above extended efforts for peaceful settlement fail, then this central body will aggressively support the aggrieved

union in such further steps as are necessary to secure justice. In the absence of unusual circumstances, however, the differences between union and employer should be submitted to arbitration.

Copies of our plan should be submitted to the St. Louis Building Trades Council, Molders' Conference Board, Machinists' District Council, and all other councils, and also to such other crafts not covered by these councils as are engaged in defense industries, and their cooperation therewith invited.

Unanimously adopted at meeting of central trades and labor union held April 13, 1941.

Filipino People Stand With America In Present Emergency

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

Mr. STEFAN. Mr. Speaker, the Philippines are under our flag. They are a part of the territory which we will have to defend in the event of war. Their population is 16,000,000. The Filipinos could be an asset or a liability. There has been much talk that they, especially the political class, are not really grateful for what our country has been trying to do for them in the last 41 years. This talk is belied once and for all by the expressions of their government leaders in these days of crisis and emergency. The following such expressions are by President Manuel Quezon, Vice President Sergio Osmena, Speaker Jose Yulo, Finance Secretary Manuel Roxas, and Resident Commissioner Joaquin M. Elizalde. No less impressive and very welcome are the statements of two distinguished Filipinos in private life. They are Generalissimo Emilio Aguinaldo, of historic fame, speaking for the Filipinos who actively fought our armed forces in the Filipino-American War, and Mr. Vicente Villamin, lawyer and economist, expressing the thoughts of Filipinos outside of the government, particularly the 120,000 who are in America, and those who have received their education in American schools and universities.

Hon. Manuel L. Quezon, President of the Philippines:

It behooves us, therefore, to assure the Government of the United States of our loyalty and devotion which have grown deeper and stronger in the perspective of the many years of unselfish American endeavor to serve the best interests of the Filipino people.

In this critical moment I wish again to pledge to America in behalf of our people our unstinted loyalty and our fullest cooperation in the promotion of the ideals of justice and liberty and in the safeguarding of the legitimate rights and interests of both the United States and the Philippines.

We want the Government and people of the United States to feel that we are bound to them not merely by the presence of the American flag in our country but by the nobler and stronger ties of gratitude and affection—bonds of sentiment that are born of the human heart and which transcend the obligation of allegiance implied in the presence of that flag.

More recently, addressing the National Assembly, President Quezon said:

The Philippine Commonwealth is fortunate in that it is still free from the armed conflicts now raging in several parts of the world. Let us hope that we may be spared the destructive effects of such conflicts. But our fate in this respect is linked with that of the United States. We are placed in that position not only by the very nature of our political relationship with that great Nation, but by our common faith in democracy and by every noble impulse that animates our people.

In these times of stress, our national security is naturally the greatest concern of our Government, and we are doing all we can in this respect. But it must be admitted that with our own resources alone we are not now in a position to defend ourselves.

The Government of the United States has embarked upon a program of national defense which, we earnestly hope, includes the Philippines; for the defense of our country remains primarily the responsibility of the United States. This is as it should be, because as long as we are under the American flag it rests exclusively with the United States, and not with us, to determine whether we shall be at peace or at war. The Filipino people, desirous of cooperating with the United States in the execution of this defense program, are ready to bear their full share of that responsibility. To this end, I have assured the Government of the United States in behalf of the Commonwealth, that the entire Philippines—its manpower and material resources—are at the disposal of the United States in the present emergency.

Hon. Sergio Osmena, Vice President of the Philippines, has expressed himself repeatedly along the same lines as President Quezon's utterances, but none of his statements is available in Washington for reprinting in the present symposium. His pro-American sentiments have grown from year to year and today, expressing himself eloquently in English, he is one of the strongest expounders of American ideas and ideals. The Quezon-Osmena ticket for reelection has been announced recently and it is expected that it will sweep the field in an overwhelming fashion.

Hon. Jose Yulo, Speaker of the Philippine National Assembly:

It is our common hope, of course, that the United States may not be forced actually to go to war, that she may continue, and our country with her, to live in peace. But the future does not flatter the brightest hopes of peace that we hold, and it would be dangerous to ignore any contrary possibilities. We must face the possibilities realistically, and be prepared to stand side by side with the American people when the day of reckoning shall come. We shall then not only be true to our inheritance and loyal to our obligations; we shall be true and loyal to the enduring principle which alone gives meaning to such things as popular government, self-rule, and constitutions.

Hon. Manuel Roxas, secretary of finance:

The world is going through a painful crisis, and the Philippines, although not directly involved in the armed conflict, is, nevertheless, suffering from its harmful consequences. * * * True, the Philippines is still the one bright spot in this part of the world. We are completely surrounded by warring nations, and yet we live in peace, practice democracy, and maintain individual liberty under the American flag.

The international situation, however, is filling us with misgivings as to the future. We see danger signals ahead, and we are impotent to face possible emergencies were they to eventuate in the near future. We are anxious to cooperate. We are determined * * * to place our men and material resources at the disposal of America when the bugle call of defense is sounded. We would be glad to fight for every inch of our land against invasion if we are given the opportunity and the means to meet that ordeal.

We do not expect American soldiers to shed their blood in the Philippines. We claim that duty as our own. We have now approximately 150,000 trained men for the defense of our territory. We have an adequate framework. We have intelligent leadership. We have patriotism and determination. What we need are more arms and ammunition, more airplanes and other equipment essential to modern warfare. These, I believe, the United States can supply us while, at the same time, safeguarding our communication with continental America with her powerful fleet. It cannot be the plan to leave the Philippines to its fate and permit it ruthlessly to be overrun by an invader.

That would be inhuman. It would be repugnant to American honor and traditions. It would destroy 40 years of American altruistic efforts in this country. * * * We Filipinos do not believe that American pride and prestige would allow such a thing to come to pass. We believe that the conscience of America would revolt against it. We believe the American people will fight to prevent the desecration here of the American flag and to stop the invasion of this American territory.

It is the considered judgment of qualified observers that if the United States should today make herself strong in the Philippines that alone would tend to forestall her involvement in a war in this section of the globe. Our present insecurity is a source of great danger to the peace of America. I make this assertion because of my loyalty to America, because of my fervent wish that she may continue to live in peace, and because of my deep concern for the safety of my country. (Note: President Quezon approved this speech of Secretary Roxas which was broadcast from Manila to the United States.)

Hon. JOAQUIN M. ELIZALDE, Philippine Resident Commissioner: He has expressed himself from time to time in favor of cooperation with the United States in national defense as well as in other matters of mutual interest and advantage. Recently in a statement in a magazine he said:

It is our belief that the Philippine Commonwealth, its affairs and problems, are of great and vital interest today, and have a peculiar significance in the cataclysm which is going on about us. In the Far East today Filipinos and Americans together man the treacherous ramparts, and keep joint watch on the Pacific frontiers. * * * We Filipinos feel that the welfare of America, as well as the welfare of the Philippines, can be promoted by a better realization and closer acquaintance with recent developments in that sector of the world; it is our hope to foster a more conscious relationship between our two peoples and countries. * * * The United States, we expect, will always remain our closest friend and confidant.

Generalissimo Emilio Aguinaldo, addressing the convention of Filipino veterans:

It appears that because of unsettled conditions throughout the world as a result of the wars in Europe and Asia, dark clouds are gathering on the far horizon and are threatening to cast their shadows over the freedom of our country. There is no gainsaying the fact that the longer these wars are fought the more serious our problem becomes and the greater will be the sufferings of all peoples on earth.

Personally, I shudder whenever I think of the dangers that may disrupt American-Japanese relations and precipitate both countries into war. Of course, there is no reason why we should feel panicky, for as you all know, our defense is in the good hands of the United States. I may state that in view of its tremendous power and strength, it would seem that any outside help would be unnecessary.

However, it becomes our bounden duty to stand by America in these critical days and show the courage of our people in defending our rights and interests. There is no doubt that in the event of a conflict with Japan, victory will be America's, especially as the Land of the Rising Sun has been greatly weakened on account of the war being waged against China.

Mr. Vicente Villamin, lawyer and economist, expressing the views of Filipinos in private life and addressing himself particularly to the 120,000 of his compatriots in the United States and Hawaii:

We Filipinos are with America loyally and proudly in the present emergency. Her flag we honor, we love. We are eager and ready to defend it with all our might.

Two primal instincts steel us to this determination: First, our soulful gratitude to the American Nation for their goodness and helpfulness to our country during the last 41 years; second, our sense of national self-preservation in the face of probable aggression from a country which has willfully proved that she is a neighbor to be feared and distrusted.

The American flag flies serenely over our country. Under it we have civil liberty and individual freedom; we have self-respect and self-government; we have democracy and equal opportunity; we have security and tranquillity; we have progress and prosperity. We should be willing to perish in combat before we permit the Japanese banner to take the place of the Stars and Stripes in our beloved native land. We must remember, too, that China has been fighting for all the peoples of the Far East to tame the wolf of east Asia, and heroic China commands our sympathy and gratitude.

We are giving our heart and hand to America cheerfully and voluntarily. The beauty of it all is that America does not ask us by law, not even by moral appeal or by indirection, to serve under her flag. She respects our local autonomy and self-government even to the partial impairment of her international defense policies. And withal she will defend our country with all her resources from foreign aggression. What could be our response but total collaboration with this noble nation—now, anytime, anywhere, and in any and all circumstances?

Around the American flag, therefore, we will rally. The 16,000,000 Filipinos could be of some help in carrying that flag to victory when war comes; and that victory would be a victory over oppression, over brute force, over greed, and over unreason. It is the sanctifying victory that the human soul covets in these weary and restless years.

Commodity Prices Under Two Governments—a Comparison

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

Mr. DONDERO. Mr. Speaker, it is interesting to note the difference in the cost of the necessities and commodities of life between two governments, one under the control of communism and dictatorship and the other under the control of the people themselves:

After 20 years of communism

Commodity	Unit	Price	
		Moscow	United States
White bread	Pound	$0.15	$0.09
Coffee	Pound	4.37	.26
Tea	Pound	10.21	.72
Sugar	Pound	.34	.05½
Macaroni	Pound	.46	.13
Rice	Pound	.59	.08½
Beef roast, rib	Pound	.87	.35
Veal cutlets	Pound	.96	.43
Pork chops	Pound	.96	.42
Chicken, first quality	Pound	1.00	.34
Ham, smoked whole	Pound	1.63	.32
Bacon	Pound	1.45	.38
Corn, canned	Pound	.18	.13
Tomatoes, canned	Pound	.32	.09
Potatoes	Pound	.04	.02½
Cabbage	Pound	.15	.03
Onions	Pound	.15	.04
Milk, fresh	Quart	.30	.12
Cream, fresh	½ pint	.29	.15
Butter, first quality	Pound	1.81	.38
Eggs	Dozen	1.32	.35
Smoking tobacco	¼ pound	.57	.12
Cigarettes	20	.36	.14
Suits, men's		50.00	21.05
Overcoat		66.90	20.10
Underwear, cotton knit		6.40	1.20
Socks, rayon and cotton (rayon only in Moscow)		1.23	.25
Socks, cotton		.45	.21
Hosiery, women's rayon		3.20	.30
Shoes, men's work		34.85	2.83
Shirt, cotton		7.74	.96
Sheet		3.00	1.53
Tablecloth, linen		8.00	3.45
Hats, men's felt		8.00	2.74
Cap, wool		9.20	.91
Gloves, men's leather		3.74	1.19

National Defense

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

Mr. JENSEN. Mr. Speaker—

It seems to me that the administration has reached the point where it must do one of two things. It must either recognize that our aid to Britain will go no further, except as to quantity of materials, or else it must directly call for the risk of some loss of life. I think we have got down to the bedrock question.

The above paragraph was written by Raymond Clapper in his April 5 column. Step by step like a death march to the execution chamber we have been led, blindfolded, to the very rim of the abyss. We have been told, by administration leaders, that we can play this game of war without becoming involved in anything worse than dirty name calling across the ocean by radio. We have been bombarded by the intelligentsia of our own country until only those who have schooled themselves in the art of independent thinking have not fallen completely under their spell, and those that could not be persuaded by guile have been singled out for a special treatment of ridicule, carried even to the point where their patriotism has been questioned.

Sane, clear-thinking men and women have not been blinded to the extent that they could not see the eventual destination of nations who insist on playing the game of international poker, where the chips are human lives and the jackpot is the destiny of nations. Now that the blindfold has been ripped from the eyes of the masses, now that the stark naked, red, raw specter of war beckons to us with its bloody hands, now that we are invited to participate in the bombing of homes and open cities, in the killing and maiming of small children, of women and old men, of hospitals and schools and churches, of the sick and helpless, of women giving birth to babies, of people paralyzed with fear and as helpless to protect themselves as dumb animals, and not to forget, to have this same thing happen to our own homes and dear ones, are we ready to embark on this course?

Is it not time for cool heads to look around and count the cost before it is everlastingly too late? Is it not time to balance the cost against the profit and let common sense, instead of passion, seek a solution?

It is admitted that the economic cost of a war cannot even be approximated at this time. Total war sweeps away all past standards. The winners cannot win without complete sacrifice of every vestige of that which we in America hold most dear, and have spent the past 165 years building up. The losers will be reduced to the status of beggars who are dependent upon the mercy of others for continued existence.

All parties will sacrifice thousands and perhaps millions of their young manhood. Mothers will die from broken hearts, wives and sweethearts will turn drawn, tear-stained faces away and try to be brave. Children will grow like young animals without the benefit of home life. Old men and women, and men and women not so old, will see the accumulations of a lifetime swept away and be reduced to abject poverty in the sunset years of their lives.

This, men and women of America, is what you are looking at now, this minute. You have been led to believe that this ordeal will pass you by. Let no one tell you that our present course leads you any other place than into the inferno that is raging across the sea. Let no one tell you that you can win anything now, or in the future, by going to war. Win, lose, or draw, the jack pot will contain only the stinking, rotting flesh and bones of the human chips which we have to feed into its maw. The grinning skulls of the dead, and the hollow, lusterless eyes of the maimed and the broken, will haunt and curse us forever if we falter in our efforts to keep our land at peace.

To ask the blessing of God on our efforts of destruction is to mock and deny the Prince of Peace and the sacrifice he made on the Cross of Calvary. To fail to go all out in our efforts to preserve peace in our country is to fail in our service to God and man.

A Distinguished American

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

EDITORIAL FROM THE HOOSIER FARMER

Mr. CANNON of Missouri. Mr. Speaker, under leave granted, I desire to include a notable editorial from the April issue of the Hoosier Farmer paying a deserved tribute to one of the most useful men in the Nation today.

The editorial follows:

Each halt in the march of human progress has brought forth leaders in whom men placed confidence and followed. It has ever been true that rising from the ranks, armored with their own oppression and that of their fellow men, these leaders have pressed into definite action. From the gentle hills of Virginia came a man to lay the foundation of the world's greatest nation. He loved the good earth. Torn to shreds years later, the tattered fragments of democracy were gathered and rewoven into a fabric everlasting by another man whose feet never left the clay. Now, midst the tottering ruins of economic stability, there rises another, whose stature of mind and understanding casts a protecting shadow over the homes of American farm families—Edward A. O'Neal.

The Southland gives this true American, a farmer, whose grace and determination charm all who know him, to lead in these days of distress. Casting aside the choice of careers less hazardous, he stands today in the wake of criticism from the multitude of those who would grind agriculture into the dust of submission. The memory of great leaders grows in the light of their enemies. American farmers, through the knowledge and perseverance of Mr. O'Neal, have the password to the council chambers of the Nation. Though bitterly denounced by his enemies, he commands a respect seldom attained during life's span. His words carry weight because never has he shaken the dust of his cotton fields from his feet.

Future historians will write of the great period of economic adjustment, with which the present generation is so well acquainted. Shafts of stone and marble will reach to the sky, commemorating the deeds of great men, and tradition will march our posterity past these markers. This is as it should be. Not one, but millions of monuments will rise to agriculture's present great leader. In the gleam of brightly lighted homes, rich in the experience of equality, where contented people daily go about their tasks facing a world with hope and courage, will grow in the fertile and educated minds of American farm folk the monument everlasting to the efforts of the man who today enjoys a fight for the love of his people—Ed A. O'Neal.

The future of agriculture is not dark, dreary, and without promise. Quite to the contrary, never before has the light of organized agriculture shone so brightly and with such telling effect. With the knowledge to understand, and the power to act, no barricade remains to block the forward march of agriculture, save the stubbornness within. As guardian and preserver of man's most essential vocation, let every man lay his hand to the building of great cooperatives and educational organizations as citadels, where the passing parade of future generations may place a wreath of praise, commemorating the faith of those who make possible their daily repast. Our support gages accurately the successful efforts of our leaders.

National Defense

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

LETTER BY BUFORD C. TYNES

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a letter written by my friend, Mr. Buford C. Tynes, to the Huntington Advertiser, of Huntington, W. Va.:

[From the Huntington (W. Va.) Advertiser of March 18, 1941]

EDITOR, THE ADVERTISER:

Alighting from the FFV this morning, after several days' absence in the East, I hied me home to read and enjoy the current issue of the Herald-Advertiser, sans, as I hoped and expected, the fulminations that it had been carrying during the last 8 or 9 months against first, candidate Roosevelt's, then candidate Willkie's, and now the recently become (by the overwhelming nonpartisan vote of the Congress and with the well-nigh universal approval of our people) studied and irrevocably fixed policy of our Government as respects the world conflagration and its implications. But, no.

Far be it from me to deny to others the same latitude in voicing their personal views on public questions that I demand for myself. In this connection, permit me to say that The Reader Speaks letters and accompanying editorials on freedom of the press, which recent issues of the Herald-Advertiser have been carrying, have in principle, certainly, met with my entire approbation. Nor is it my purpose to draw a distinction between the dissemination of the private views of reader-correspondents and the presentation, through the quasi public medium with which you have entrusted and endowed and the public has tolerated him, of the personal views on public questions of one of your editors. In passing, one cannot but indulge the reflection that our much-vaunted and highly prized but as yet, thanks be, un-Hitlerized freedom of the press, has more to fear from the abuses of liberty upon the part of some of our editors and publishers than from undue restraint at the hands of a provoked governmental authority.

When, Mr. Publisher, one finds on the front page of section 1 of his not last year's, not last month's, not last week's, but today's Sunday newspaper, in a boxed italicized editorial captioned This Means War, phrases borrowed from the text of the address (found reproduced at page 7 of section 4) delivered last night by the President of the United States before the White House Correspondents' Association and edited in such a way as to give them a meaning wholly different from that obviously (to one who takes time to read both) intended and inescapably accorded them by the context from which lifted, one fears not so much for the freedom as for the integrity of the press.

To cite, by way of illustration, but two of the numerous distortions and misstatements found in that editorial:

Says the editorial, at the end of the first subdivision, in using a directly quoted phrase from the President's address:

"Never before has the American public been warned that 'no divisions of party' would be tolerated in an existing or approaching crisis."

This to support the innuendo, reserved for the closing paragraph of the editorial, that the President will out-Hitler Hitler in ways despotic and barbarous.

What the President actually said in this connection was:

"There will be no divisions of party or section or race or nationality or religion. There is no one among us who does not have a stake in the outcome of the effort in which we are now engaged."

At the close of the second subdivision of the editorial, where the writer again employs a phrase directly quoted from the President's address, we read:

"He (the President) said that all critics of his policies were either powerful enemies abroad or * * * small selfish groups or individuals at home, and we don't believe that statement is honest or fair."

Honest or fair indeed! What the President actually said was this:

"Upon the national will to sacrifice and to work depends the output of our industry and our agriculture. * * *

"Upon that will depends our ability to aid other nations which may determine to offer resistance.

"Upon that will depend practical assistance to people now living in nations which have been overrun, should they find the opportunity to strike back in an effort to regain their liberties.

"This will of the American people will not be frustrated, either by threats from powerful enemies abroad or by small, selfish groups or individuals at home."

"Never before," if we may be permitted to paraphrase and correctly apply the vitriolic language of the impassioned editor, "has language so violent and so inflammatory come from the pen of a responsible editor," be the object of his unbelievable attack President or policeman.

When, upon turning to the further editorial found on the editorial page proper, captioned "Make no mistake, we are in the

war," one reads such levity—such words, words, words as—

"At long last";

"So, brother, take it from a principal advocate of leasing and lending";

"The great bulk of American citizens (our Congressmen and Senators included?) * * * never took the trouble to read" the lease-lend bill;

"That Mr. Roosevelt would be able—by some sort of mumbo-jumbo incantation—to keep us within the limits of theoretical neutrality";

"Drag us into World War II through the back door";

"Looking at the conflict through rose-colored glasses";

"Have their cake and eat it, too";

"Mr. Roosevelt has asked for a cool seven billions to plunk (sic) down as first payment on the obligation we have just undertaken to help the British beat Hitler." (So, that is where the shoe pinches?)

"You ain't seen nothin' yet";

"Conscription of capital and labor are coming," without saying whether under unexpected contingencies, he approves or disapproves such a national policy;

"So is illegalization of strikes," again without saying whether, under the same contingencies, he would approve or disapprove such;

"So is compulsory (sic) purchase of war bonds," without saying whether he will or will not voluntarily purchase such;

"So is new and unprecedently severe tax legislation," without saying whether he approves or disapproves even a partial pay-as-you-go policy; and, finally—

"Unless Britain shows a strength and versatility beyond anything she has produced to date, she can't 'beat Hitler' without our active participation"—thus demonstrating the correctness of his wishful premise, that the passage of the lease-lend bill will inevitably lead to such participation upon our part and that its defeat would have just as inevitably led to our nonparticipation and to our continued peace and freedom, one wonders whether our Sunday newspaper is going to be an asset or a liability in promoting that unity of purpose—that universality of sacrifice—so needed in carrying out our fully debated and duly enacted national policy.

In a still further editorial, appearing on the editorial page proper of today's issue, under the caption, If you don't ask, you don't get, apropos the building of a new city auditorium coincidentally with the building of an adequate Western Hemisphere defense, we find this capstone of levity and inconsistency:

"If Uncle Sam can send seven billions to England (ad, the rub again) he might be induced to divert a few thousands down this way."

Verily, as the President said last night:

"Loyalty * * * springs from the mind that is given, and that is receptive to, the facts, that retains ancient ideals and proceeds without coercion to give support to its own government."

And again:

"Loyalty cannot be bought."

And, finally:

"This will of the American people—not to impose our own democratic ideology upon other nations, but to prevent the self-constituted dictators of other nations from imposing economic, political, and social slavery upon us—will not be frustrated, either by threats from powerful enemies abroad or by small * * * individuals at home."

Please, Mr. Publisher, give us a virile, patriotic Republican or patriotic Democratic Sunday editorial page. We shall be in sore need of such in the trying days, yes years, mayhap, ahead.

Yours respectfully,

BUFORD C. TYNES.

MARCH 16, 1941.

Sugar Quotas

EXTENSION OF REMARKS

OF

HON. JAMES M. FITZPATRICK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

LETTER FROM MAYOR OF NEW YORK

Mr. FITZPATRICK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter from the mayor of the city of New York:

CITY OF NEW YORK,
OFFICE OF THE MAYOR,
April 9, 1941.

Hon. JAMES M. FITZPATRICK,
Member of Congress, Washington, D. C.

MY DEAR COLLEAGUE: It has been brought to my attention that because of the expiration this year of the present sugar quotas, legislation will be necessary to renew or change existing quotas affecting the volume of sugar refining in the port of New York.

Although the protection at present granted the domestic producers is costing the consumers of New York City about $15,000,000 a year, I realize it would be too much to expect legislation increasing the volume of sugar refining in the port of New York.

I would be highly gratified, however, if I could secure your cooperation in opposing any legislation which would change the existing quotas to reduce that volume, because such reduction would add substantially to the already tremendous load upon the consumer in New York City, resulting from protection of the domestic beet-sugar refineries.

I should like further to point out that, at a time like this, when we all are interested in promoting pan-American relations, legislation which would have the effect of expanding the western beet-sugar refineries and other domestic sugar refineries, while contracting the Cuban and Puerto Rican "off-shore" refineries in New York City and elsewhere on the east coast, should be discouraged.

I should like to quote to you the recommendation on the matter made by the Mayor's Business Advisory Committee, pointing out the detrimental effect to the citizenry of New York in the event of passage of legislation reducing the volume of sugar refining in the port of New York and again urge your cooperation in this matter. The extract from the committee's report follows:

"We recommend, therefore, that you place the city on record as opposed to any rearrangements of quotas that will tend to increase prices to industrial or household consumers. As a practical matter, this will mean placing the city in opposition to the further expansion of the beet-sugar quotas at the expense of offshore as well as continental producers and refiners, for it is the protection granted to the beet producers that is mainly responsible for the high price of sugar in New York City and elsewhere in the United States, compared with the world price."

Sincerely yours,

F. LAGUARDIA,
Mayor.

Jewish National Workers' Alliance

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, April 18, 1941

ADDRESS BY HON. HAROLD L. ICKES

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Hitler's Unconscious Tools," delivered by Hon. Harold L. Ickes, Secretary of the Interior, at a dinner sponsored by the Jewish National Workers' Alliance of America for the benefit of the Jewish National Fund, at the Masonic Temple, Chicago, Ill., on April 13, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In these days of world-wide wars, when civilization stands uncertainly and precariously at the edge of the abyss, it is heartening that some people have the courage and the vision to look to the future; to carry on in their efforts to make this world a better one in which to live.

That the Jewish people have the courage and the vision to continue in their efforts for the reclamation of a well-nigh wasted land, a land wherein the oppressed might find refuge, indicates the strength of your faith in the ultimate triumph of democracy, in the final return of sanity and justice in international affairs. A man of little faith, a pessimist, a defeatist, does not plan for the future when the present is dark and lowering. Today we identify as appeasers men who lack faith in themselves, as they lack faith in the institutions of which they are a part. These are puny men who would meekly stretch out their necks for the collar of their master because they lack either the vision to see or the will to resist.

You, who support the Jewish National Fund, have demonstrated your faith that right and justice, within the compass of the principles of democracy, will triumph. Lacking that faith, you would not now be planning for the future of that ancient land which you have reestablished as a sanctuary for your people. For you must know that no dictator will permit you to realize that dream if he can prevent it; its fruition depends upon the victory of democracy. Your presence tonight demonstrates your faith in that triumph.

Faith was a quality of your forefathers.

By faith they passed through the Red Sea by dry land.

By faith the walls of Jericho fell down.

Descendants of an ancient race in which the aspiration of justice and freedom has never failed, you will persevere in your determination to rebuild the homeland of your fathers in Palestine. You are continuing your notable work in trying circumstances, against grave handicaps, despite great dangers. For the tyranny that has burst the bounds of Germany and is threatening to drown the world has its threat for Palestine, the land of your ancestors, just as it has for the United States, the land of you choice. If you will need to expend your love and courage for Palestine, you will need to expend them, perhaps in even greater degree, for our own land.

Because America, too, is in peril. Our institutions, based upon Magna Carta, the Declaration of Independence, and the Bill of Rights, are in such danger as they have not been since we became an independent Nation. The hordes of Hitler, singing their hymn of hate, are on the march. Brave England, gallant Greece, and valiant Yugoslavia, are fighting in the front-line trenches, fighting not only for their own liberties but for yours and mine, for the liberties of all of those men and women everywhere who prefer death to the chains of slavery.

Worse even, and more dangerous than Hitler's cruel hordes, is the deadly poison of Goebbels' lies that make the air that we breathe as fatal as carbon monoxide gas. Since the English people became immune to noxious propaganda, their main concern has been to defend their shores from actual invasion. In our own land we are still in the first phase of the deadly conflict. Thus far the enemy cannot even be sighted from our shores, although we know that he is looking in our direction with malignant eyes. But his poisonous propaganda, his thinly veiled lies, make our air fetid.

We are being assailed from within. If our danger is not a visible one, it is all the more to be guarded against because it is insidious. The fall of France and Belgium and Holland and Norway, due not so much to the "blitzkrieg" of Hitler as to the corrupting words of Goebbels, is a warning to us to be on guard against the enemy within our gates. Hitler has made no secret of his designs upon us. He has declared his intention to prepare the ground before his armies come by destroying our morale and setting the hand of neighbor against neighbor so that we may fall as easy a prey as did once mighty France. Listen to what Hitler said to Rauschning in discussing the United States of America:

"There will be endless confusion, but for a long time I will have had contact with those men who will direct the new government—a government that suits my purpose. We can always find such men. We can find them in every country. We do not even have to buy them. They will come to us of their own accord. Pride, confused thinking, political animosity, and egotism are their chief motives."

Who can doubt that Hitler may boast that, with reason, he has in America today men and women eager to help him? Not only has he willing aides, he has unconscious tools as well, who serve him to better purpose than those in his actual pay. Such constitute our real danger. Tonight I shall talk to you about Hitler's unconscious tools—Nazi fellow travelers—Fascist stooges—stupid cat's-paws.

It may be confidently predicted that the career of Hitler will be similar to that of other ruthless men who have preceded him. All of the tyrants of history—the Pharaohs, the Ivans the Terrible, the Genghis Kahns, the Attilas—have been unable to stamp out of the human heart the love of freedom that God gave it. One by one dictators, pursuing a seemingly irresistible course, have fallen because, just as today, enough men have had faith and have been willing to die for that faith. We, too, can be certain of ultimate victory because we love freedom so much that we are willing to die for it, and in President Roosevelt we have a great leader. Our confidence in him is all the greater because he is the object of the savagely bitter attacks both of Nazi fellow travelers and of Hitler's unconscious tools.

Every great American President has had to contend with appeasers, whatever their current name may have been. Every major crisis in our history has been aggravated by men of little faith and even less courage, by evil men and by stupid men. Let me quote to you what Tom Paine, in his Common Sense, had to say on American appeasers during the Revolutionary War. Paine's words are still as descriptive as they were when he wrote them 165 years ago:

"I am inclined to believe that all those who espouse the doctrine of reconciliation may be included within the following descriptions:

"Interested men who are not to be trusted, weak men who cannot see, prejudiced men who will not see, and a certain set of moderate men who think better of the European [Axis] world than it deserves; and this last class, by an ill-judged deliberation, will be the cause of more calamities to this continent than all the other three."

Into Paine's categories our contemporary appeasers fit perfectly.

Abraham Lincoln was likewise plagued by a bad lot of appeasers, even in the North. There was a powerful secret society that was determined to promote slavery and to destroy the Union. This group was known as the Knights of the Golden Circle, and consisted of appeasing Democrats and Copperheads who discovered a perfect consanguinity in their bitter opposition to President Lincoln. In 1863 there were as many as 40,000 of them in Indiana alone. In that year they attempted an uprising in that State. After they were disbanded by a long-suffering and patient democratic Government they reorganized as the Order of American Knights, and finally as the Sons of Liberty. Like our own present-day appeasers, these Sons of Liberty were no lovers of liberty. They hated liberty, and collected hand grenades and arms to destroy both freedom and the Republic. In the end, President Lincoln's government ferreted out the leaders and suppressed the Copperheads before they could strike at the life of American democracy.

I do not say that our appeasers and Nazi fellow travelers are precisely following the pattern developed by those in Lincoln's day, but it is true that they are acting from motives and for purposes that Hitler well understands. Perhaps some of our native-born appeasers with an eye to the future are already organizing "The Society of Hitler's Unconscious Tools," which, after our American habit, we may initialize into the H-U-T's and colloquialize as the "HUTS."

The American "HUTS" are following Hitler, who has nothing to offer to the world but evil.

He has his fifth columnists.

But they are nothing new. The activities of fifth columnists in George Washington's day were responsible for the order "Let none but Americans be placed on guard tonight."

He has his concentration camps. Every tyrant in history has had them.

He has his Gestapo. But the methods it employs were already old in the days of the Spanish Inquisition.

He has his slave labor and his conquered nations. So had Attila, the Hun, and Genghis Khan.

Fifth columnists, Trojan horses, concentration camps, Gestapos, slave labor, and conquered nations—old, all old, old as the human race.

If Washington and the Revolutionary patriots had yielded to the appeasers, this country would never have become an independent democracy. Washington and his fellow patriots insisted upon establishing liberties which the descendants of both patriots and appeasers have enjoyed ever since. If Lincoln had listened to the appeasers when secession was attempted, he would, as he was urged to do, have "let the erring sisters depart in peace." But Lincoln and the men and women of his generation to whom the solemn covenant that we call the Constitution of the United States meant something more than "a scrap of paper," insisted on preserving our liberties for both their own descendants and those of the current appeasers.

President Roosevelt and patriotic Americans who gladly and proudly follow his leadership, will carry on the tradition of Washington and Lincoln. They will preserve our American institutions and for so doing future descendants of present-day appeasers will call them blessed, just as present-day descendants of Tories and Copperheads now call Washington and Lincoln blessed.

No, Hitler has developed nothing new. But in adapting old techniques to his evil purposes, he has made Dante's Inferno read, in comparison, like winter-resort literature.

Let us consider the amazingly clever Nazi method of getting other people to do a large part of Hitler's dirty work—people even in countries that Hitler has boasted that he has marked for destruction.

You will remember that up to the Hitler-Stalin pact there were in this country, as well as in Europe, liberals, pacifists, and people of good will generally who joined organizations which had, ostensibly, peace, justice to labor, international good will, or similar lofty objectives as their goal. Frequently people belonged to them without knowing that they were run by Communists for their own ends. The non-Communist members of such camouflaged Communist groups came to be known as Communist fellow travelers. The Nazis have been quick to seize upon this Communist technique, particularly in the United States. So now we have Nazi fellow travelers. And they are much more numerous and dangerous than were their Communist prototypes.

We have the phenomenon of Americans, some of them men of distinguished position and of good will, who, sometimes innocently and sometimes deliberately, have adopted the Nazi viewpoint. These Nazi fellow travelers and members of the society of Hitler's unconscious tools, have been propagandizing and propagating the Nazi ideology throughout the United States.

An outstanding example is Charles Lindbergh. Only the future will demonstrate whether he is a Nazi fellow traveler, as he appears to be, or one of Hitler's unconscious tools. Another, apparently a fellow traveler, is Gen. Robert E. Wood.

They are a queer assortment, these Nazi fellow travelers. For instance, in this group you find good old liberals, such as Oswald Garrison Villard; decent Socialists, such as Norman Thomas; well-meaning laborites, such as A. J. Muste. In the same group you also find pathological Nazis, such as Joe (McNazi) McWilliams; the notorious Robert Edward Edmondson; and anti-Semites, such as Edward James Smythe. Naturally, the Communists are also there. A strange and weird assortment, indeed.

Recently the America First Committee, which has been described as a Nazi transmission belt, and which should more aptly call itself the America "Next" Committee, held a meeting in New York at Mecca Temple. And what happened at this meeting at Mecca Temple? Joe (McNazi) McWilliams packed the hall with his own Nazi-Fascist-Coughlinite followers, and they began to shout, "Jew! Jew! Jew! Jew!" In the audience there were Nazis, Communists, Fascists, and "Huts."

The Bundists, the Ku Kluxers, and the Communists have taken up the ideas and the publications of the America Next Committee, and have distributed them among their own followers. We find that the Lindberghs and their pro-Nazi ideas are frequently praised by the most notorious reactionary Nazis, Fascists, and anti-Semites in this country.

The Nazi fellow travelers are organized and well subsidized, but they do not like to tell from where their money comes. Their immediate and most-pressing aim is the same as that of Hitler—to defeat Britain and Greece and Yugoslavia by hindering American aid. They also carry on insidious pro-German and anti-British propaganda. Of course, they try to hide their propaganda

behind blinds of pacifism and alleged patriotism. I know of no better way to describe them to you than by recalling Aesop's fable of the wolf who covered himself with a sheepskin when he engaged in "fifth column" activities. Like Hitler, the members of the society of Hitler's unconscious tools say that they are anxious to keep America out of war. What they will in fact do if they succeed in their purposes will be, not to keep us out of war, but out of Hitler's way until he stamps out one country after another. Then America really will be next.

You remember Verne Marshall, the editor of a middle western newspaper. He organized a so-called No Foreign War Committee, which was a pro-Nazi organization with anti-Semitic undertones. This Don Quixote of the Iowa cornfields rolled up his sleeves and challenged everybody to a fight who was ready to fight Hitler. His antics finally lost him the backing of the more responsible pro-Nazis. The last heard of him was when he said, on February 18, before the Inland Press Association that within 2 weeks the administration would declare a censorship of the radio with the man who is speaking to you tonight as the censor, and that at the end of another fortnight the same censor would be telling the newspapers what to print and what not to print. My comment then was the same as it is now, Marshall doesn't need a censor; he needs a nurse.

Take another appeaser, Maj. Al Williams. This gentleman is hysterical about the American way of life being threatened if we should dare to aid Britain. You will appreciate Major Williams' notion of the American way of life when you understand that he is a great admirer of that other great lover of democracy, General Franco, of Spain.

Still another Nazi fellow traveler and one who at least has the courage of his convictions, is Merwin K. Hart, of New York. To that gentleman, the Fascist destroyers of Spanish liberties were heroes whom he publicly defended in this country. Merwin K. Hart is now devoting himself to the task which he considers of paramount importance to the country. I quote: "It is time to brush aside this word 'democracy' with its connotations." Hart says that democracy is a "Communist invention."

In no place other than a democracy would a man like Hart have the right to talk in the manner that he does. What would happen to him if he lived in Germany and undertook to oppose nazi-ism as he does democracy in America? If he were a German citizen and expressed opposition to the "Wave of the Future" he would find himself carried to a concentration camp on that same wave.

But at least some of these Nazi fellow travelers are intelligent and support Hitler with open eyes because they prefer his nazi-ism to our democracy. In this category I place Lawrence Dennis, the philosopher of American fascism. Dennis appears to believe that fascism has a future while democracy is on the way out.

What Mr. Dennis overlooks is the fact that democracy is but the present-day expression of the age-old yearning of mankind for freedom. The passion for freedom has never died. It will never die. Democracy is not on the way out. On the contrary, democracy will come through this trial by fire cleaner, purer, and revitalized to perfect what perhaps we have been taking too much for granted. You can no more kill democracy than you can destroy the spirit of a people like the Jews who have survived persecution and attempts at extermination for almost 2,000 years.

The No. 1 United States Nazi fellow traveler is Colonel Lindbergh, not because of his experience in affairs of state or his knowledge of history or political science; not because of any native ability aside from that of a clever and daring aviator—an ability which we admire—but simply because he was the first American to raise aloft his standard of pro-Nazi-ism. He is the proud possessor of a Nazi decoration, which, it must be sadly admitted, has already been well earned.

The Nazis have taken Lindbergh up and are distributing his speeches more widely even than those of Hitler. You may recall that last autumn the Nazis nominated him for the Presidency of the United States in their rump convention at Los Angeles. Colonel Lindbergh's speech of May 19, 1940, was given to all of the customers of the Nazi Germania Bookshop in New York. The Brooklyn unit of the Christian Front issued a special bulletin, headed "To All Americans Who Think: Colonel Lindbergh Is a Patriot."

Well, maybe he is a patriot; maybe he is sincere. But maybe he is merely a misguided, mistaken, and gullible young man who has got himself into bad company. He is a "Wrong-way Corrigan" when it comes to reading the compass of public affairs.

The Nazi publication, the Deutscher Weckruf und Beobachter, organ of the German-American Bund, greeted Lindbergh's speech with a 7-column banner. Father Coughlin's publication, Social Justice, backed Colonel Lindbergh for the Vice Presidency of the United States, and the German-American National Alliance, which is a pro-Nazi organization, over Station WHIP announced:

"I bring pressing summons to all members and to all listeners to the United Front radio hour to do their duty by attending the great mass meeting in Soldiers Field."

At that mass meeting Lindbergh was the chief speaker. At a political rally in New York, Joseph (McNazi) McWilliams said that in 1944 "I and Lindbergh" would run the country. McWilliams, with his "I and Lindbergh" line, strikes an old but familiar note. Maybe he's mixed up, too. Maybe he thinks that he's the old Kaiser of "Me und Gott" fame; or an American Hitler. "Me, I, myself, the state." It is heady wine that these Nazi fellow travelers are drinking.

Lindbergh said before a congressional committee that he saw absolutely no difference between Britain and Germany. He pretended that he was indifferent whether England or Germany won this war, but every act of his and every word, including even this transparent statement, proves that he wants Germany to win. It would seem that he prefers fascism to democracy; that he is indifferent to liberty, agrees with Hitler that Christian civilization is decaying, and condones, if he does not actually applaud, the brutalities of which the Nazi ideology has already been guilty. Apparently he perceives no difference between international ku kluxism and respect for the rights of others. I wonder if anyone has ever heard Lindbergh deplore the wretched fate of Czechoslovakia or Holland or Belgium or the Netherlands or Norway—peaceful democracies all—where Lindberghian "statesmen" assured the people, as he assures us, that no war would come to them if they remained neutral and unarmed. I haven't.

Lindbergh's wife has written a book, which, as you know, has now become practically the Bible of every American Nazi, Fascist, bundist, and appeaser. I would like to quote to you a few selections from Wave of the Future. In one place Mrs. Lindbergh writes: "I cannot see this war, then, simply and purely as a struggle between the forces of good and the forces of evil. If I could simplify it into a phrase at all, it would seem truer to say that the 'forces of the past' are fighting against the 'forces of the future.'"

I quote again:

"There is no fighting the wave of the future, any more than, as a child, you could fight against the gigantic roller that loomed up ahead of you suddenly."

Thus the wife of the No. 1 Nazi fellow traveler and appeaser regards the butchers and killers and torturers and terrorists of the Third Reich as representing the "forces of the future" that she seems to look forward to with happy anticipations. To this pair of fellow travelers and appeasers, English democracy, American democracy, Scandinavian democracy, are nothing but half-decayed forces of the past inspiring only contempt and deserving to be destroyed by those great Lindberghian heroes, Hitler and Mussolini. It is no wonder that the notorious Hitlerite, Robert Edward Edmondson, said:

"Col. Charles Augustus Lindbergh is a true patriot."

We may thank God that the average American does not measure patriotism by the same standards as does Robert Edward Edmondson.

Let us look into this Nazi "wave of the future" for which our American fascists and appeasers are ready and eager to sacrifice that American democracy for which our forefathers fought, not reckoning that free soil could possibly breed those who would betray what they would not have had the courage or the strength to take.

The Nazis claim that they are building a new order. This new order, which, according to its devotees, is floating—I might say, parenthetically, like scum—floating on the "wave of the future," consists of six major objectives. First, the complete elimination of the British Empire and of British institutions from the world. Second, the organization of a new Europe under the Germanic "master race." Third, the abolition of Christianity. Fourth, the physical destruction of the Jews in all parts of the world. Fifth, the liquidation of the small nations of Europe. And sixth, the destruction of democracy everywhere.

And to forward such a program, our Lindberghs, and our Woods, and other Nazi fellow travelers would place in jeopardy the liberties that we have won under Magna Carta, the Declaration of Independence, and the Bill of Rights.

They may believe that the Nazi new order and the doctrines of Hitler are superior to democracy, but you don't think so and I don't, and the people of England don't, and the people of Greece and Yugoslavia don't. Nor does any sane citizen of the United States think so, save only our appeasers and members of the "Society of Hitler's Unconscious Tools."

And what do you suppose the people of conquered Norway, of Poland, of Holland, and other Nazi-dominated countries think? Can there be any doubt that, except for the Quislings and the Lavals and other appeasers and Nazi fellow travelers, all of the people of such countries who have experienced at first hand the vaunted glories of the Nazi new order prefer democracy?

In place of democracy and national independence there would be, under the Nazi new order the German master race. A handful of Germans would sit in the saddle, and everybody else, Jew and Gentile, Czech and Pole, Frenchman and Norwegian, Dane and Bulgar, Englishman and American, and even freedom-loving Germans themselves would be slaves working for the Nazi overlord. Such is the avowed objective of Hitler's new order; such is the wave of the future proclaimed by the Lindberghs.

Hitler's new order, which our Nazi fellow travelers are supporting, whether they know it or not, is the repository of other notions and purposes. Let me quote from Dr. Robert Ley, the head of the German labor front:

"The German race * * * has higher rights than all others. The German laborer is worth more than an English lord. He has the divine right to rule and we shall assure ourselves of that right."

Here is arrogance for you, but note particularly the words "divine right." Don't they have a familiar ring? Kings and emperors, in other days, proclaimed that they

possessed a divine right—a right granted by God—to rule other men.

In the past democracy—the right of men to rule themselves—challenged, and challenged successfully, the doctrine that kings ruled by divine right. In America we are dedicated to the proposition that the right to govern is derived from the consent of the governed. We believe that "the voice of the people is the voice of God." In the past we vigorously rejected the theory that kings ruled by divine right. Today we reject just as emphatically the spurious philosophy that Nazi gangsterdom possesses a divine right to rule.

What blasphemy! A Nazi claiming anything as a divine right. As well might the wolf that leads the pack proclaim a leadership based upon divine right.

Here is some more Wave of the Future idealism. I quote from Dr. Ley:

"War is not in contrast to peace, but simply another form of expression of the uninterrupted battle of nations and men. It is an expression of the highest and best in manhood. In this war lies the rebirth of our Nation. Every war demands a blood sacrifice from the men of the nation. They should give their blood gladly, for thus they equalize that which every mother gives at the birth of a child. In nations living in eternal peace manhood dries up and all the virtues that make man lovable to woman degenerate. One cannot demand of mothers that they uninterruptedly give the nation children without man bringing his blood sacrifice. Therefore war is not the wrath of God but a blessing of God."

When the Nazis admit God they endow him with hideous and satanic aspects.

What kind of a man is it that can speak in such a manner? War, hideous, cruel, terrible—war a blessing of God? Only a man who worships the false god of nazi-ism could speak in this manner.

Listen to another Nazi, Dr. Hans Frank, a member of Hitler's Cabinet and the Governor General of tortured and famine-stricken Poland:

"The maxim, 'right is whatever profits a nation, wrong is whatever harms it,' marks the beginning of our legal work. * * * Pale phantoms of objective justice do not exist for us any more."

This, then, is the Lindberghian Wave of the Future.

In a recent speech, Hitler declared that this is a world conflict between two universes—democracy an nazi-ism. He is determined that democracy shall be destroyed, and he is certain that it will be.

We accept the challenge. We say Hitler and nazi-ism, and all that they stand for, must be destroyed if civilization is to survive.

Let those who believe that nazi-ism and democracy can exist in the same world read again Lincoln's House Divided speech:

"A house divided against itself cannot stand. I believe that this Government cannot endure, permanently, half slave and half free. * * * It will become all one thing or all the other."

It can be said with even greater truth today: "A world divided against itself cannot stand. I believe that this civilization cannot endure, permanently, half Nazi and half democratic. It will become all one thing or all the other."

Hitler knows this even if his abject followers, our Nazi fellow travelers, do not.

Hitler said: "I believe that one of the two worlds must break in pieces."

We Democrats say to him: "It will be the monstrous Fascist world that will 'break in pieces'."

One of the songs of the Hitler Youth reads, in part:

"Today we own Germany,
And tomorrow the whole world."

Is it necessary to repeat that "the whole world," which the Nazis propose to conquer, includes the United States? Hitler and his men make no secret of their ultimate aim to disrupt and to crush the Western Hemisphere, in order that the German "master race" may carve out for itself a new feudal system of world proportions—a feudal system based upon and supported by slavery. Last May, Richard Walther Darre, Hitler's Minister of Agriculture, delivered what was intended to be a secret speech to a select group of big Nazi officials. Neither the North American Newspaper Alliance nor Life magazine, which published the speech, has divulged how it came into possession of Minister Darre's amazing address, but its authenticity has never been successfully denied.

After saying that the Germans were the superior nation "predestined to rule the whole world," Darre proceeded to explain their plans of conquest and rule. Briefly, the idea is that the "master race" will turn all of the conquered nations into chattel slaves, as has already been done in Poland and elsewhere.

What is of particular interest to us is Minister Darre's views of and plans for the United States. Listen to what this Hitler henchman had to say about us:

"I have been asked about my opinion of America, especially the United States, and the danger of this pseudo-democratic Republic's possible attempts to hinder us in our historical development. There is no fear that this demoralized country will mix in this German war. In the first place, as in France and other countries, also in the United States we have many of our compatriots and even more friends among the citizens of the United States who are favorably disposed toward us. Many of the latter hold the most important positions in political and economic life and will not permit public opinion to allow something as senseless and insane as war against Germany. * * *"

Could Herr Darre have been thinking of Lindbergh or General Wood or, perchance, others as the ones in "most important positions" here who, knowingly, or unknowingly, are favorably disposed toward Hitler and his cause?

Isn't it about time that some of these fellows should wake up to the fact that they are playing Hitler's game; that they are either Hitler's conscious tools or dupes; that they are lending aid and comfort to the enemies of democracy—to those who would enslave them and theirs?

After insisting that our Nazi fellow travelers and appeasers will not permit America to do any harm to their friend Hitler, Minister Darre proceeded to explain the fate that threatens the United States after Hitler has conquered them. I wish that the more honest and intelligent appeasers in this country would engrave the following words upon their memories. Listen to Herr Darre:

"We Germans have accounts which must be settled with this country (the United States). In this war, not to mention the last war, the United States holds all the gold of Europe, which indisputably is our property. * * * The gold alone is practically of no value to us, but the insulting fact that something which God intended for us, which we were robbed of and which is intentionally withheld from us must not remain unpunished."

Again the "Me and Gott" motif. At least we cannot complain that the Nazi brigands have not warned us.

But listen further:

"The United States also will be forced by Germany to complete and final capitulation. Our superior industrial products will be sold at very low prices to the whole world, which will cause the United States to have not 7,000,000 but 30,000,000 to 40,000,000 unemployed. Mr. Rosefeld [sic] will then beg the Fuehrer on his knees to purchase from the United States, not manufactured products, but raw materials at prices which we will dictate. The United States is at present so demoralized and so corrupted that, like France and England, it need not be taken into consideration as a military adversary."

Even though the Nazis may pretend to have a low opinion of the fighting qualities of our men, or the flying range of our planes, or the firing power of our ships, or the deadliness of our bombs, they are taking no chances. They are working hard to weaken our will to resist by cultivating doubt and fear among our people. This is where the appeasers and fellow travelers come in.

Here are Darre's concluding words:

"We have in the United States a police organization operating with the same exactitude as in Berlin or Prague, and we have no fear of any activities on the part of the United States. * * * The only purpose of our offensive against the United States is forever to get rid of another bulwark of plutocracy, to regain what belongs to us, to establish order, to distribute property proportionately, and to teach America to respect Germany."

I wonder how many of the members of the Society of Hitler's Unconscious Tools have read this speech of Darre.

Our Nazi fellow travelers have well learned the Goebbels technique of spreading confusion, fomenting misunderstandings, and appealing to race and religious prejudices. They not only take positions that are helpful to the Nazis, especially in international politics, they express views that are identical with those of the Nazis.

Moreover, they have their own organizations, probably the most important of which is the America "Next" Committee. Its aims and activities are such that, if they should succeed, America would be without a single friend in the world and consequently would have to fight the hungry Nazi wolves alone. In other words, America next.

Among the active supporters of the America "Next" Committee are such men as Hugh S. Johnson, Hanford MacNider, Ernest Weir, and Gen. Robert E. Wood. I suppose that it would be difficult to find a collection of worse reactionaries than these. The America "Next" Committee attracts anti-Democrats, appeasers, labor baiters, and anti-Semites. Whatever you or I may think of this America "Next" Committee, Hitler is enthusiastic about it. Recently this Attila redivivus has cited Gen. Robert E. Wood by name and noted with approval his activities as acting chairman of the America "Next" Committee. This is a conclusive reason why Americans should be suspicious of this Nazi transmission belt. And Hitler's complimentary references to General Wood should be sufficient to make that gentleman get down on his knees and search his soul. I agree with the charge made by the Reverend Dr. Birkhead, of the Friends of Democracy, that the America "Next" Committee is a device for feeding the American people the vicious propaganda of Adolf Hitler. How anyone who claims to be an American can stomach such nauseating stuff as is dished up by the America "Next" Committee is beyond my comprehension.

The tie-up between the America "Next" Committee and professional Fascists and anti-Semites is clear and scandalous. Edward James Smythe is a case in point. Smythe is a columnist for the anti-Semitic, Nazi newspaper Fublicity. He is a professional anti-Semite. According to Smythe's own boast, it was he who arranged the joint meeting of the Ku Klux Klan and the German-American Bund at Camp Nordland in New Jersey several months ago. What a hell's broth must have been brewed on the occasion of this fellowship.

Recently, on December 16, 1940, this admirer of Hitler spoke before the National Legion of Mothers and Women of America in Philadelphia under the auspices of the America "Next" Committee.

Little wonder that Hitler approves of General Wood and his America "Next" Committee.

The current issue of another official Nazi publication praised General Wood when the latter made the truly remarkable statement that "there is as yet no reliable evidence or proof" that Hitler plans world conquest.

There is none so blind as he who will not see. General Wood undoubtedly is convinced that France is still a land of liberty and fraternity; that Poland is free and happy; that Belgium is not being ground under the iron heel; that Yugoslavia and Greece are cheerfully going about their customary peaceful pursuits, and that Norway is not starving. General Wood is probably convinced that Hitler is merely joking when he talks about organizing the world for a "new order" in which the humane and gentle Nazis will ride herd on all the rest of us. No wonder Hitler likes General Wood and approves his beneficent activities.

But why does the General like Hitler?

Giving them the strained benefit of every doubt, it is probably true that there are members of the "America Next" Committee who are sincere and patriotic Americans. However, it must be said that their credulity is more to be marveled at than their intelligence. It may be that they are being taken advantage of, just as the Communists used to take advantage of liberal and pacifist fellow travelers in their midst. The sooner decent and patriotic Americans repudiate the "America Next" Committee, the healthier the atmosphere will be all around.

An American publication that expresses the views of the "America Next" Committee is Scribner's Commentator. This journal follows the Nazi Party line, especially in foreign affairs. Its contributors in the December 1940 issue also included Colonel Lindbergh and General Wood. Among later contributors have been Hugh S. Johnson and other appeasers. As might have been expected of a Nazi Party journal, Scribner's Commentator denounced Dorothy Thompson, H. V. Kaltenborn, Robert E. Sherwood, President Conant of Harvard, Walter Lippmann, William Allen White, Archibald MacLeish, and, in general, all men and women of sincere democratic faith who are fighting Hitler and all his works.

I have spoken of General Wood as a prominent Chicagoan who is, wittingly or unwittingly, stooging for Hitler. But I must not overlook the worst of the lot—the mourning colonel who publishes the most malignant newspaper in America. I am referring, of course, to Robert R. McCormick, of the notorious Chicago Tribune.

I do not propose at this time to go into the black record of the Tribune—its contempt for the truth, its perversion of the news for its own base purposes, its looting of the school fund of Chicago by means of an unconscionable lease, or its base hatred of everything that is fine and decent in American life. I wish to confine myself to the bushwacking of the Tribune against the President's foreign policy and its bitter campaign against aid to Britain.

It will not surprise you to hear that the Chicago Tribune is hailed with joy both in Berlin and in Rome, and with good reason. One of its recent editorials discussing aid to Britain and the fighting democracies sounded exactly as if it had been written by Goebbels. It contained every ingredient that goes into a Nazi editorial compound—mendacities, viciousness, chauvinism, and unscrupulous anti-Semitism. Listen to parts of it and judge for yourself:

"The list of names on the Committee to Defend America by Aiding the Allies is so long as to make adequate identification of the suggested influences a difficult research problem. Glancing through the list, we come upon the names of four J. P. Morgan partners. * * *

"When we look further into the list we see such names as James Warburg and Frank Altschul. Mr. Altschul is a member of the firm of Lazard Frères, investment bankers. * * * Mr. Warburg (was) born in Hamburg, Germany. * * *

"These two gentlemen are representative of great banking families in Hamburg and Paris which were influential in the finance and politics of Europe for a hundred years. The European properties of the families have been confiscated and their relatives and coreligionists have been subjected to an oppression greater than that under which the Irish suffered in their island. If these families could look at the world situation with an eye single to America's interest they would be lacking in natural affection. * * *"

In other words, the Tribune is saying exactly what the Nazis are saying—that wicked Jewish bankers are fighting Hitler, that poor little beggar on horseback. The Tribune also hinted broadly that these Jews cannot be loyal to America.

This amazing editorial was hailed in Berlin and hailed in Rome. Hitler's Volkischer Beobachter quoted from it and Mussolini's Popolo di Roma paraphrased it. Popolo di Roma said that the Chicago Tribune's diagnosis coincides perfectly with the official views of the Fascists. General Wood may have one accolade from Hitler, but Colonel McCormick has one from Hitler and another from Mussolini. It appears that we are dealing not with an Axis but with a triangle.

The Nazi fellow travelers are an assorted package. By and large, there are very few friends of democracy among them. The one characteristic that they have in common is their dread of the prospect of a Hitler defeat. Pretend as they may, jointly or severally, they wish to see Hitler successful and victorious. This is why they oppose our aid to Britain. This is why they bitterly object to our giving any help to the democracies that are fighting Nazi-Fascist brutality and aggression.

Do you know why they do not wish to see nazi-ism defeated? Because they fear that a defeat of nazi-ism would mean a resurgence of true democracy throughout Europe and the world. And a true democracy means a society based upon social reform, economic security, decent labor conditions, justice, equality, and equal opportunity. None of our appeasers, none of our fifth columnists, none of our labor baiters, none of our Nazi fellow travelers likes the prospect of such a democracy. They would rather be a Fritz Thyssen in a German concentration camp, as many of them will be if their hero should win, than share the blessings of American liberty on a basis equal to that of their fellow Americans. Therefore, they will do everything within their power to prevent the defeat of Hitler by Britain. Apparently they have forgotten, if they ever knew, that the Fritz Thyssen of today's brutal concentration camp is the same Fritz Thyssen who so admired Hitler when the latter began his struggle for political power in Germany that he dipped his hands deep into his wealth to help Hitler.

Doubtless other Nazi fellow travelers with a lust for power are toying with the hope that they may become "the man on horseback" for the United States. Doubtless even there are men among us who would be the Quisling of America. There is no nation that does not harbor potential traitors ready to sell out their country at the first opportunity. A British defeat would mean a tremendous victory for appeasers, Fascist racketeers, and Nazi fellow travelers. A British defeat woud jeopardize American unity with all of the dreams and hopes and promises of American democracy. Such a situation as might develop in this country, if Britain were prostrate and Nazi pressure were directed against us, might indeed offer the right opportunity that some ambitious "man on horseback" is looking for.

Some say that this is not our war; that it is an imperialistic war. This is the most insidious propaganda ever spread among the American people. But it is propaganda that the intelligent rank and file of the American people understand and reject. The people know that, in very truth, this war is our war. They recognized it as such by the enactment of the lend-lease bill. They underscore their awareness that this is our war every time that they approve the passage of a bill voting huge sums of money for aid to the brave peoples fighting Hitler and for our own defense. They know that this is a war to defend our oceans, a war to protect our shores, a war for our security. The American people know that if the British Fleet should be destroyed or captured by Hitler, we would be, as he has threatened, his next objective. Not only would we not be safe from the outside, we would continue to be exposed to domestic Nazi propagandists—both foreign and native born—who would deliberately preach disunity and spread hate and prejudice against religious and racial minorities, until the very fabric of our democracy would be rent and torn.

And what of the economic consequences of a Hitler victory?

Mr. Wendell Willkie has stated this as clearly as anyone. He said:

"Thus, if Germany wins, the United States and Canada will find themselves almost surrounded by governments hostile to our form of government and to our methods of trading with other people. And in that situation we shall have two choices, both equally fatal.

"We may choose to trade with those hostile governments. However, we must remember that our system is based upon competition between individuals. The totalitarian system is based on competition between States. Individuals cannot compete against States. Hence, if we choose to trade with totalitarians, we ourselves will have to adopt totalitarian methods. * * * Instead of that, we might choose not to trade with any nation. We might try to live within ourselves. But this, too, would be fatal. * * * We would lose our freedom in the very processes of trying to save it. And finally, if we were thus virtually surrounded by powers whose principles were hostile to ours, we would have to keep on almost indefinitely building colossal armaments. * * * And under that burden our democratic system would surely collapse."

For this patriotic and truly American stand, the Chicago Tribune has had the effrontery to attempt to read Wendell Willkie out of the Republican Party. Undoubtedly this has greatly added to the prestige of Mr. Willkie in the area in which the Chicago Tribune circulates.

But let's have done with these Nazi fellow travelers for tonight. We know who they are—at least some of them—and what they seek to accomplish. We shall continue to watch those whom we know and expose others whom we discover lurking in the dark places. We shall continue to throw the white light of publicity upon them and their activities. We must continue to do this for our own security. We must expose the facts to the clear view of the American people, in full confidence that if they know the truth they will not be misled by the Nazi fellow travelers, lulled into a feeling of false security by the appeasers, nor confused by the lies that roll off of Hitler's transmission belt in this country.

There is another important phase of the present situation about which I wish to talk briefly. It has to do with the peace which will follow this dreadful war, wantonly inflicted upon the world by Hitler.

We know that a negotiated peace is impossible now. We know that a peace imposed on the democracies by Hitler would be horrible to contemplate. The only peace that can be real and lasting will be one established by the democracies. To give the world real peace, the democracies must lean backwards in order to recognize justly the rights even of those who would have destroyed the democracies and Christian civilization with them.

So it is necessary that we begin to think about the terms of the peace that will be forced by the cooperation of the democracies. Without being distracted, even slightly, from our first and most important duty, that of all-out aid for Britain and the other gallant peoples who are fighting in the first line for their liberties and ours, we should give thought to the basic principles that should control the peace conference.

We, of my generation, have witnessed two world convulsions. We should be in a position to know the mistakes that were made after the first great World War, and knowing them, we should be determined that they will not be repeated. Further, we must guard carefully against new mistakes.

It is often said that we learn from history that man learns nothing from history. Let us now determine to learn from history. Let us now determine that the peace that will follow the triumph of the democracies will be a just peace—just not the least to those who today are so unjustly riding amuck in the world, threatening those very rights which they insist they must have for themselves. Let us neither create nor endure conditions that will permit the rise of another Hitler in the aftermath of the current war. We should now determine that the next treaty of peace will be a fertile seed out of which will grow the brotherhood of man. We have had enough of peace treaties that, even before the ink is dry upon them, become the spawning grounds for more wars, more men on horseback, more poverty and misery for humankind.

A lasting peace cannot be based on hate—nor on revenge—nor on inequality—nor on intolerance.

Peace, if it is to be lasting, if it is to be permanent, must be grounded on a recognition of the inalienable rights of all mankind.

A peace that includes a dismemberment of nations, or one that does violence to just geographic, economic, and ethnologic considerations is no peace at all.

The peace that the democracies shall advocate and strive for must embody guarantees of those four essential freedoms that President Roosevelt outlined in his address to the Congress on January 6. These are: freedom of speech and expression, freedom of worship, freedom from want, and freedom from fear.

Men of reason and good will must work out a peace along the lines that have been indicated, if the dreadful experience through which we are passing is not to be repeated again and yet again. But before we can have this sort of peace, or any kind of peace at all for that matter, the principles of democracy must win on the field of battle. It is our prayerful hope that that victory will be won without actual involvement on our part. It can thus be won if we have the will and the ability to supply arms and planes and ships at such times and in such quantities as they may be needed by those who are fighting the good fight for us as well as for themselves—by the British, by the Greeks, and by the Yugoslavians.

The situation in which we are involved today is something that is much more portentous and fateful even than the most gigantic war in all history. The fact is that we are involved in a world revolution. It is all right for the appeasers to tell us, as they told Austria and Czechoslovakia and France and Belgium and so on down the list, that it takes two to make war; that neutrality on our part will merit and receive respect from Hitler. The trouble with those hapless countries was that they did not realize that a revolution was about to engulf the world. There was no anchor that would hold the ship safe in the tossing waves of a revolution. One cannot calmly sit and watch a revolution rage by. Not even with the best will in the world can we do this even if we continue to be successful in keeping free of the actual clash of arms.

But if America cannot keep out of a world revolution, it can at least take steps to mitigate its effects upon our own country. We must put and keep our house in such order that none who dwells therein would prefer another roof. To do this we must continue to conduct our affairs in accordance with democratic principles, but with ever greater consideration and understanding and justice. We must not only keep the social gains that we have won, we must consolidate and increase them. This is the only true, as it is the only safe, course for America in a time of world revolution. We should unite not only in fact, but in spirit, if we would make a safe harbor.

Here lies the path of genuine statesmanship.

Editorial Tribute to the Late Senator Sheppard

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, April 18, 1941

EDITORIAL FROM THE FORT WORTH STAR-TELEGRAM

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an editorial written for the Fort Worth Star-Telegram and published on Thursday, April 10, in honor of the late Senator MORRIS SHEPPARD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Worth Star-Telegram of April 10, 1941]

A NATIONAL LOSS

The untimely death of Senator MORRIS SHEPPARD, who for 39 years had represented Texas in Congress, constitutes a well-nigh irreparable loss to the Nation, a loss which is shared by his home State, the administration, and the Democratic Party. The deficit created by the removal of the wisdom of experience from national councils is not made up by election of a man to the place of the dead leader.

The initial blow falls upon the vitally important Senate Military Affairs Committee, of which Senator SHEPPARD was chairman, and which has been vitally employed in recent months in defense planning and enactment. Senator SHEPPARD's dominant position in the Senate has been a large factor in the distribution of Army camps and defense plants according to a system of decentralization which promises greatly increased efficiency of defense. The Texas Senator held other important congressional posts, among them being membership of Senate committees dealing with commerce, irrigation and reclamation, manufactures, and various economic activities. He long had been an active proponent of rivers and harbors improvement, and was a strong supporter of the Trinity watershed development program.

Senator SHEPPARD's 39 years in Congress brought to him the title of "Dean of the Senate." To that valuable element of seniority were added the maturity of judgment and settled wisdom that come best with years. He was a prodigious worker, who stayed at his task from early morning till past nightfall. Among his preemergency accomplishments were his sponsorship of the suffrage amendment, of national prohibition, and maternity aid. Senator SHEPPARD had the ear and respect of all classes, from national leaders to the humblest worker. To legitimate appeals of all classes, he gave equal attention.

As one of the few trustworthy leaders remaining of the previous war Congress, Senator SHEPPARD's experience fitted him peculiarly for service in the present defense emergency. He was both a wise counselor and useful aid of the President and the military department of the Government. In him were summed up the virtues of the good citizen, the patriot, the statesman, the national leader, and the efficient public servant.

Senator SHEPPARD's unwavering loyalty stood out in the current period of national conflict. He was faithful to his country, its Government, his State, his party, his friends, and his family. In the intimate grief of the last, the Nation extends its sympathetic affection.

The Nation has lost a stanch servant who, at the same time, was endowed with the highest qualities of leadership. To the multitude of Senator SHEPPARD's friends and admirers, his death brings a feeling of personal loss as well as realization that a blow has fallen upon the country as a whole.

Tribute to the Late Frederic William Wile

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, April 18, 1941

TRIBUTE BY HON. RAYMOND E. WILLIS, OF INDIANA

Mr. WILLIS. Mr. President, I ask unanimous consent of the Senate to have inserted in the Appendix of the CONGRESSIONAL RECORD a brief tribute to the life and work of the late Frederic William Wile, a fellow citizen of the State of Indiana, who, for many years, served with distinction in the Press Gallery of the United States Senate.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

Mr. President, already, in my limited experience in the United States Senate, I have been impressed with the dependence that Members of the Congress place upon newspapers and upon the men engaged in the newspaper profession for information upon

current affairs, both in the Nation and in the world.

The Members of the Congress probably never will reach that frame of mind in which they will use the oft-quoted expression of the late Will Rogers, "All I know is what I read in the papers." There is made manifest, however, day by day, the amount of information which they gather from the newspapers and upon which they rely heavily to chart their positions on public questions.

Within the past decade the journalistic profession has added to the mere recording of events a discussion of the portents of these events with relation to national and world affairs. It is highly essential, therefore, that the men charged with the responsibility of reviewing these events be able, conscientious, and, above all, patriotic.

It is heartening to know that so many who are engaged in collecting the news and in writing the review of the news have a full sense of this responsibility. Such men are rendering a valuable service to our country.

One of these men—my native neighbor in up-State Indiana—a columnist, news commentator, foreign correspondent, and pioneer in radio news broadcasting, went back home for the last time last Wednesday, April 9.

Frederic William Wile, truly a gentleman and a great reporter, must have looked forward often to returning to the placid Hoosier farm lands after the nerve-racking experience of covering both the Boer War and the World War. But his body was taken for burial into a different La Porte, Ind., than that which he remembered—a La Porte whose thousands of acres of farm land are now being transformed into a huge Government shell-loading plant. It has become an ironical resting place for one who served so long on the war fronts of Europe and Africa, bringing news of war to his American readers. He was 67 years old when he died.

Frederic William Wile was faithful to his profession from his early boyhood, when he edited the Wile Evening Journal, until his last days when he wrote his autobiography, News Is Where You Find It, and continued his newspaper articles.

Other books which Mr. Wile found time to write are: Men Around the Kaiser, 1913; The Assault, 1915; The German-American Plot, 1915; Explaining the Britishers, 1918; The Life of Emile Berliner, 1936; and A Century of Industrial Progress, 1928.

The last correspondent with British affiliations—he was then working for the London Daily Mail—to leave Berlin before the declaration of war in 1914, he was always loathe to admit that his job was done. As the Washington Star said on April 8, "Mr. Wile was not content merely with getting the news and writing it well. His job, as he saw it, was not done until the story was in the paper, and the painstaking effort that he would put into last-minute revisions to keep his story, an editorial, or his column, as the case might be, abreast of the latest developments was the true mark of the master craftsman."

It was only a short time after he obtained his first full-time newspaper job on the Chicago Record in 1898 that he became a foreign correspondent for the Chicago Tribune, Chicago Daily News, and the New York Times. He served as lieutenant colonel in the military intelligence after the entry of the United States into the war. He was later to collect $6,000 from the German Government as reparation for false arrest as a spy.

His writing continued voluminously here in Washington after the war. During that time, he worked hard to attain the voting privilege for residents of the District of Columbia. He called the lack of District suffrage "scandalous." Paradoxically, 1936 was the only year in which he ever cast a Presidential vote of his own.

The Nation and the world, and Indiana in particular, mourn the passing of this capable member of the great band of Hoosier writers.

Use of American Vessels for Convoys

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, April 18, 1941

RADIO ADDRESS BY HON. RUSH D. HOLT

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address recently delivered over the radio by a former member of this body, Hon. Rush D. Holt, on the use of American vessels for convoys.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is with pleasure that I accept the invitation of the No Foreign War Committee to talk to you tonight on the subject of convoys. Twenty-four years ago tomorrow the United States declared war. Remember the war? I am sure the parents and friends of the boys who lie buried in France remember it. That was called a war to make the world safe for democracy, but it wasn't. Boys died for that fine ideal, but those who made the slogans lived on. Today others are making slogans for your boy or your friend to die in another war for democracy. The slogan makers and the planners will tell the soldiers why they should die while they stay 3,000 miles from the battlefield. Yes; that was called a war to end all wars, but it wasn't. Again led by the President and others, we are given a 1941 version of that slogan that there will be no peace until there is total victory. But those who are taking this country in war won't die in the deserts of Africa, or drown in the beautiful Pacific, or be torn to pieces by shrapnel trying to land in Europe. Your son will do that. These men will live on to make new slogans for another generation.

Now, after 24 years, the administration is heading straight into the war. We are being tricked into going in. We are going into an undeclared war. At least in 1917 the President of the United States had the courage to ask for a declaration of war. Today the move is to take our great country into the conflict through the back door, by forcing an incident so that they can hypocritically say we have been attacked and therefore our national honor is at stake. That is why the convoy issue is being brought to the front now. They have tried time and time again to force the Axis Powers to declare war on us. They have committed what they admit to be "acts of war" against countries with which we are supposedly at peace. These countries have not seen fit to declare war. Now they want to take our ships, our sailors, into the war zones and force the issue, force it in such a way that the decision will not rest with the dictators but with those in Washington who have been sold on war as a means of covering up their failures to solve our own domestic problems. They do not want peace, because peace would mean that the facts would come out into the open and the most despicable diplomacy in American history would be shown in its horrid nakedness of our part in starting and our part in continuing the war now raging in Europe.

Step by step we have gone closer and closer to war. Not once since war broke out on the first day of September has the President done one thing for peace. Every step, every action, every speech, has been to get us farther into the conflict until today we are in the war in every way except from a military standpoint. All that remains is to send your boys into another one of Europe's many wars. They say we do not intend to go to war unless we are attacked. But how do they want to force that attack? It is easy. Just have our battleships escort our merchant ships into the war zones. Everyone with any common sense knows that Germany will sink every ship she can under such circumstances. Then our battleships are to protect and the shooting begins, but before that shooting ends, your sons will be killed by the thousands, yes, by the tens of thousands. That will be the attack and then in all hypocrisy, they will say they went to war because we had been attacked. Everything is being done to force the issue so as to have the excuse to get in. By subterfuge and dishonesty, the American people have been taken to the very precipice of war. Officials in Washington have not told the truth. They have been preaching peace while preparing for war. They talk about defense as they get ready to create another American expeditionary force.

Now, the implement of propaganda is at work to sell the American people the necessity of convoys. The Committee to Defend America by Aiding the Allies has already started the propaganda drive going for convoys but that is to be expected. By the way, if you want a copy of my exposé of this outfit, just write me, Rush D. Holt, Washington, D. C., and a copy will be sent. You will see why they want convoys.

From the beginning you haven't been told the truth about our foreign policy. You have been given untruths and half-truths to sell you war under the label of peace.

Why did they say they wanted the Neutrality Act passed? You remember—to keep our ships out of the war zones. Let me quote the words of SAM RAYBURN, now Speaker of the House, on November 2, 1939, during that debate:

"What would be the reaction in a great conservative country like yours and mine, in which, as I stated, 99 percent of the people are praying that they may stay out of this war, if an American ship were sunk and 100, 200, or 500 innocent boys were sent to the bottom of the ocean. I tremble to contemplate what might be the reaction of this country to the sinking of ships and destruction of American lives * * *" and then Speaker RAYBURN continued in these ominous words: "I saw this country, and I was a Representative in the Congress of the United States at that time, when there occurred the loss of lives and the violation of rights we then claimed—I saw this country converted from a peace to a war mind in 60 days."

Yes, Speaker RAYBURN, you did see that change. That is why the war crowd wants convoys. They want some incident created by which this country can be plunged into that terrible mass slaughter of Europe. You know, Speaker RAYBURN, although you will favor convoys if the President tells you to do so, that the sentiment may change in this country in 60 days when American boys are sent to their watery graves.

I want to recall to you the speech of the majority leader of the Senate, Senator BARKLEY, when he cited ship after ship sunk in 1915–17 as the reason for our entering the war. Shall we duplicate that period? We will if we start convoys.

Also note these words of Senator WAGNER, strong administration supporter on October 7, 1939:

"There is only one realistic course for America to follow if it wants to avoid the causes of war and at the same time maintain its dignity and self-respect. This course is for the American Congress absolutely to prohibit American ships from carrying American passengers or American goods of any

kind to any belligerent nation, or to proceed through any combat areas."

What did SOL BLOOM, chairman of the House Foreign Affairs Committee, say of the danger? I quote from a speech of October 31, 1939, when he said:

"Where a part of the world has gone mad, where laws and rights are trampled upon, it is folly for the United States to expect its ships and citizens to be safe in exercising their rights. They will not be safe. They will be slaughtered. The United States would go to war as a consequence and in that war thousands of other lives would be sacrificed."

Much has been written about Senator JAMES BYRNES, one of the Presidential advisers. What did he say about the danger? Let me quote from a speech of October 1939:

"Under the administration proposal (the cash-and-carry proposal) we sacrifice our right to sail the seas. By the cash requirement we sacrifice the right even to send American property on the ships of other nations into the zone of war. By this sacrifice we remove the cause of our entering the World War and the cause most likely to result in our entering another war."

President Roosevelt gave us the solemn assurance, and I quote, "This Government clearly and definitely will insist that American citizens and American ships keep away from the immediate perils of the actual zones of conflict."

How can we convoy without entering the war zone?

But let us not try to fool ourselves. Convoying means war. War means the death of American boys.

Why is it that every single individual in this country who wants us to actually declare war advocates convoying? Because they know it is the absolute, sure way of getting this great country into war. They have thought that this step and that step, advocated in the past, would force the Axis Powers to declare war on the United States. They have not seen fit to do so although we have committed acts of war against them. Now, they can hardly wait to get into the battle, not loaning money, not leasing ships, tanks, guns, and implements of war, but actually in the shooting, killing part of war. They want to send American ships into the war zones, knowing full well that they will be sunk, that American boys will die, that the American flag will sink, and that would provide the excuse for our declaring war against the Axis. We would be attacked, and then the President would say that we would have to defend our honor, our citizens, our rights, and, therefore, war would be the only remaining course; not the kind of war we are now conducting, but the kind that kills our boys on the battlefields, sinks them into the ocean. That is the kind of war convoying means.

What do convoys mean? Let me tell you what three spokesmen for the administration's foreign policy say convoys mean.

First, let me call upon the words of that distinguished and able chairman of the Foreign Relations Committee, Senator WALTER GEORGE. Here are his words:

"As plainly as I can, I have always stood against convoying vessels by the American Fleet and will stand against convoying vessels by any unit of the American Fleet until and unless the point shall come when I shall be willing to vote for war, because, in my judgment, convoying would lead us into actual war."

Of course, it would lead into the shooting, killing part of the war. But let me proceed with the words of Frank Knox, Secretary of the Navy, in reply to two questions on convoying. He was asked: "You stand much opposed to the idea of convoying merchantmen across the Atlantic?" He answered, "Yes." Then he was asked, "You do look upon it as an act of war?" Again he was direct in his answer with the plain word, "Yes."

However, the last authority is the most important because if convoying is done, he and he alone will be the responsible man for it. He has the power to do so. What did President Roosevelt say convoys meant, and I quote:

"Convoying means shooting, and shooting means war."

Well, Mr. President, do you want convoys which mean shooting, which in turn means war? You have taken action after action toward this war. Shall you take the one that will cause the shooting to start? I fear because of your record of the past 2 years, not a record of peace.

What can you do? I'll tell you. Write tonight to your Congressman and to your Senators against convoys. You may think that is useless, but do not be deceived by the war crowd's propaganda to discourage letters to Congressmen. Had not millions of you written letters against steps taken toward war, we would have been in actual total war today. Your letters and your protests have kept this country out of the shooting. They can keep it out if you are interested enough in our country to spend a few moments advising your Congressman and Senators that you do not want convoys, that you are against another A. E. F., that you want peace.

Opening Dinner, 1941 Campaign, Greater New York Fund

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, April 18, 1941

ADDRESS BY HON. JAMES A. FARLEY

Mr. O'MAHONEY. Mr. President, on Monday, April 14, 1941, Hon. James A. Farley, former Postmaster General, delivered an address at the opening dinner of the 1941 campaign to raise a fund for the welfare and health services operating in Greater New York. I ask unanimous consent that this address by a distinguished citizen and former official be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. FARLEY. This is a thrilling occasion. In this room are men and women whose energy and vision and organizing ability have helped to make this city the business center of the world. Here, too, are men and women whose skill and strength and steadfastness are the foundation on which the city's business has risen to greatness. Some of us are white of skin, some dark; some pledge allegiance to one creed, some to another; but all of us—employer and employee, capital and labor, Catholic, Protestant, and Jew—are united tonight by concern for one common cause, the Greater New York Fund, whose fourth annual campaign opens today.

We have fallen into the way of saying that the Greater New York Fund is an appeal to business firms and employee groups on behalf of some 400 great welfare and health services. I say to you that this is an appeal for something far more fundamental than support for these 400 organizations. It is an appeal for the American way of life. It is an appeal for the future of 2,000,000 of our fellow New Yorkers. It is an appeal that could only be made in a city like this, and a country like this, where we are free—free to express our good will for each other, free to live and speak and worship as we will, free to help each other as we will, without a question asked as to politics or race or faith.

That's an appeal worth answering, in these troubled times. While we sit here in friendship, men and women are fightng and suffering and dying in other parts of the world. Bitter prejudice and discrimination and intolerance have bred a war that is crushing peaceful towns and green valleys and once-prosperous cities. Many of us have known these cities and towns and quiet valleys in happier days. We have friends and relatives there. From those countries whose names are in all the headlines have come men and women who have enriched the life of this Nation in countless ways.

Our hearts are heavy as we think of the destruction that is going on, and we should not be Americans if we were not quick and generous in our efforts to relieve the widespread suffering abroad.

But there is suffering in our own city of New York; here, too, are men and women broken in body and spirit; here, too, are children hungry and helpless.

These are our people. You have seen their faces in the fund motion picture. You know—after seeing the picture—that these New York neighbors of ours are no different from ourselves. There are no visible scars to mark them as casualties in the battle for health and well-being. We should not recognize them if we passed them on the street outside of this hotel, or sat next to them in the subway train going home. We might truly say, "There, but for the grace of God, go I."

Suppose that came true next week, next month, next year.

If that happened, I'd want to know there'd be another chance for me and mine. You'd want that chance, too—for yourself—for your wife or child—for the man who runs the little shop where you have your shoes repaired.

Well—it's up to you and me.

The Greater New York Fund is our chance to give a chance, to our own people, here at home. It's home defense; and if there were time I could cite instance after instance from the records of draft boards all over the country to prove to you how vital to our national defense it is that these welfare and health services be—not maintained—but strengthened. We're paying a price right now because in years past we have given too little attention to the day-in, day-out struggle against undernourishment and sickness and discontent.

For 3 years now the Greater New York Fund has called on us for this vital defense.

For 3 years you and I, who work and do business in this city, have not made good.

The need which the fund gave us a chance to meet year by year during the last 3 years totals $30,000,000. The business firms, corporations, and employee groups of the greatest and richest city in the world raised $11,000,000. Business has not raised as much as $4,000,000 in any one of these years to give a helping hand to the people who need a break in a city where business prospers as it does nowhere else in the world.

When I say that the need is $10,000,000 a year, that is not a guess. A committee composed of businessmen and women, social workers, public-spirited and philanthropic citizens, worked for several years in the middle thirties analyzing the city's health and welfare services and how the demands on them had increased, and estimating from their financial statements their immediate and future needs.

In 1938 the Greater New York Fund was formed. Its purpose was twofold: First, to raise new and additional money to eke out the rapidly dwindling total of philanthropic contributions; second, to obtain this needed additional support from the source that had thus far given least—the business concerns and employee groups of New York City.

The fund offered business a simple method making one contribution once a year to help social welfare and health agencies meet their budgets. Thus business not only was relieved of sifting hundreds of appeals each year from individual agencies but obtained a channel by which it could merge into one donation all its giving to the important welfare and health services that participate in the fund. The fund plan offered assurance that business enterprises which contributed would receive no further appeals from fund agencies. It guaranteed the distribution of the money raised without waste, and with something more—the certainty that for the first time in New York's history the distribution would be scientific, well organized, aimed to help forgotten groups and neglected areas.

How did business respond to this?

Let us look at the record.

In 1938 the amount raised fell short of the need by $8,600,000. In 1939 the shortage was $5,800,000. In 1940, again there was a deficit of $6,800,000.

That is water over the dam now. This year—today—we are faced with the fourth campaign of the Greater New York Fund.

What is New York business going to do about it?

I am counting on raising not less than $5,000,000.

We can do this. We can do much more than this—if we go about it in the right way.

First, we must believe in the Greater New York Fund. We can't sell anything that we don't believe in.

Second, we must show our prospects—the businessmen into whose offices we go—that by this one gift to the fund they cover their contributions to 400 agencies.

Third, we must break down the all-too-frequent opposition by firms to permitting their employees to be solicited as groups. Employees have just as much right as their employers to a chance to do their duty to community welfare.

Fourth, our campaign must be short and vigorous. A long campaign means wasting money.

Fifth, we must see our prospects in person. It isn't enough to write. It isn't enough to telephone. We'll have to wear out shoe leather on this job. Nothing takes the place of a personal interview.

Sixth, we must follow through on solicitation of employee groups. We must stimulate interest among employees, not only in our own companies but wherever we have business connections. In small firms where there are no company chairmen, this is especially important.

That is our strategy—conviction, speed, face-to-face appeal—and the greatest of these is conviction.

Over a million employees now are organized into contributing groups. Many of these groups have never been so organized before. Pledges are already coming in and the increases are striking—for instance, the trucking section, which raised $3,500 last year, is working on a goal of $20,000 from the drivers to be matched by a similar gift from the trucking employers.

Labor is backing the fund. Over the air and in union meetings the appeal has already been presented to scores of groups of organized workers.

The business women of the city are behind us, the churches, public-spirited civic organizations. Ten thousand volunteers have been working day and night at fund headquarters, in the boroughs, in factories, and stores and offices, forgetting their personal profit, their convenience, and their comfort. Tonight I pay tribute to them all. Their hard work is one of the two important factors in the success which I am confident I shall be able to report to you 6 weeks from this time.

The second factor in our success is the quality of the service for the support of which we appeal. Listen to this letter, written to one of our fund organizations:

"Do you suppose any of your contributors have ever stood outside the door of a social agency, licked in body and soul * * *. I was in that position a year ago. * * *

"I had been led to expect that social workers took a fiendish glee in prying into one's past, ruthlessly tearing down every defense, until you felt as naked as the day you came into the world, but since you were asking for charity you'd have to take it.

"But to my surprise this social worker I talked to did no such thing. She didn't ask one embarrassing question. * * * And unexpectedly I found myself pouring out the whole pitiful story, the succession of nervous shocks, the severe illness that had necessitated a year in bed under the most trying conditions, and that had drained me of every scrap of physical strength and emotional stability, the shortness of funds that wouldn't even cover my meager food needs during convalescence, and the difficult struggle back to health and normalcy which just didn't seem worth the effort. * * *

"I left her an hour later with funds enough to meet my most pressing needs and with the firm conviction that here was one person who was interested in me and who really cared what happened to me. In all the months since that time I haven't changed my mind. * * *

"There has been plenty of financial help, what with two more operations and another long convalescence. But somehow, it just hasn't felt like charity; certainly not when she came to the hospital both times and sat with me through the last difficult hour before going to the operating room."

I haven't time to read the rest of that letter, but let me ask you this question.

Are you willing that such help should end? That it should even be curtailed?

I am not, but the record tells me that in these last 3 years the shortage of money has forced some organizations to cut entire services and others to help fewer people or do less for those they have helped. Sometimes emergency service only has been given, where long-time preventive work was needed.

Don't count the cost of such reduced services in money only. Dollars alone can't measure the loss when a summer camp, fully equipped to care for 200 children a season, has to be closed for 4 years; when a hospital has to deny free care to 400 sick people who need it; when there is less medical and dental service in a neighborhood center; when unmarried mothers can no longer be helped to keep their babies with them and are thus deprived of their greatest incentive for rebuilding their lives.

Let me say one thing more.

I believe in the Greater New York Fund.

Wherever I go in this city that I am proud to call my home, I see evidences of the fine work that the fund is helping to support. I have seen one organization where men and women who were being shut away from life by the loss of hearing were being helped to break down the silence that was walling them in. I have seen another organization where children—eager, talented, courteous—were busy and useful and happy in a clubhouse set like an oasis in the midst of a drab neighborhood once notorious as the breeding place of criminals.

And when I was there I noticed that the dingy walls of the houses adjoining the playground were hidden by a tremendous painting illustrating a fairy tale we all know—Jack and the Beanstalk. There was the famous beanstalk—four stories high, growing out of the concrete-covered soil of New York—and there was a small boy, climbing determinedly to the top. I looked at that painting, and I looked at the boys and girls crowding around me to welcome me to their club, and I thought that the Greater New York Fund was something like that pictured beanstalk—giving boys and girls, men and women, too, for that matter, not something to cling to, but something to climb by—to climb to health, to usefulness, to happiness and independence.

An organization that does that is worth working for.

A city that supports such an organization is a good city in which to live or make a living.

And so tonight, as our campaign opens, I give you this challenge:

Let's stand together.

Let's work hard.

Let's give the Greater New York Fund's 1941 campaign support that is on a par with the vast trade and activity of our city.

On the wall of this room is the magnificent poster which is Miss Neysa McMein's contribution to the fund. That little girl might be your child or mine. She is, literally, one in a million—a million young people in this city against whom the doors of fund welfare and health organizations must not close.

Ladies and gentlemen, I call on you to do more than work—go out and fight to make this campaign succeed. We must win. The stake is that look of faith and hope on the face of a child.

Four Million Irishmen Against Forty Million Englishmen and Forty Million Englishmen Against Eighty Million Germans

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of April 19, 1941:

[From the Saturday Evening Post]

In a letter to the London Daily Herald, George Bernard Shaw writes: "England has held her hand very hard. No other country in the world would have accepted the situation. Mr. de Valera is asking Mr. Churchill to imperil his 40,000,000 people for the sake of the mere paper neutrality of 4,000,000 hostile Irishmen. Mr. de Valera wants to make Ireland another Switzerland, but it can't be done. He says those ports belong to Eire, but the day is gone when any race of people can call land its own. These ports belong to Europe, to civilization. * * *"

If 4,000,000 Irishmen have no rights that 40,000,000 Englishmen are bound to respect, what rights have 40,000,000 Englishmen that 80,000,000 Germans are bound to respect? If

the day is gone when people may call their land their own, what is England defending and what is the war about? Thirdly, if this is liberal ethic and liberal thinking, then liberalism of this cult, as we have suspected before, is morally and intellectually bankrupt.

Debunking "An Odorous Comparison" Concerning the Los Angeles Light and Power System

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, newspapers throughout the country are being flooded with canned editorials prepared by utility propagandists for the purpose of discrediting public ownership and operation of light and power facilities.

A few days ago a copy of one came to my desk, which reads as follows:

AN ODOROUS COMPARISON

In Los Angeles a municipally owned electric-utility system serves the densely populated urban area, the cream of the market, and a private corporation, the Southern California Edison Co., operates in the outlying territory. Here is how their operations stack up:

Southern California Edison Co., calendar year 1939—

Operating revenue	$45,785,983
Taxes paid	$7,936,956
Ratio taxes to revenue (percent)	17.33

Municipal light bureau, fiscal year ending June 30, 1940:

Operating revenue	$30,173,456
Taxes paid	$112,086
Ratio taxes to revenue (percent)	0.37

Although the private company was taxed 47 times as much on each dollar of revenue as the favored municipal plant, its average rate was 1.54 cents per kilowatt-hour compared with 1.95 cents for the city-owned utility. Federal corporation taxes were increased from 18 to 24 percent, effective in 1940, which would have made the disparity even greater if the Edison Co.'s year had coincided with the city light bureau's fiscal year.

I was somewhat familiar with the facts, and was shocked to think that such false and misleading propaganda would be sent throughout the country and published by unsuspecting editors.

I therefore addressed a letter to Hon. E. F. Scattergood, advisory engineer in charge of the Bureau of Power and Light of the City of Los Angeles, with which I enclosed this article. Under permission granted me to extend my remarks in the RECORD, I am inserting his reply:

[Department of Water and Power, City of Los Angeles, Bureau of Power and Light]

WASHINGTON, D. C., *April 10, 1941.*

Hon. JOHN E. RANKIN,
Member of Congress,
Room 358, Old House Office Building, Washington, D. C.

DEAR CONGRESSMAN RANKIN: Responsive to your request of March 15, 1941, there is enclosed for your consideration and use, as you may see fit, comparisons between the financial operations of the Bureau of Power and Light and those of the Southern California-Edison Co., and also those of the average of the half-dozen larger cities east of the Mississippi River.

From these you may pick out the basis of comparison which will loan itself best to your purposes. All these comparisons are on a fair and meaningful basis, and not deliberately deceptive, as in the case of An Odorous Comparison, copy of which you sent me and which is being returned to you along with a copy of your letter to me.

The Southern California-Edison Co. sells approximately one-half of its total energy at wholesale rates, at transmission voltages, to the electric railways of the Los Angeles metropolitan area, both the Los Angeles city railways and the interurban railways of the Pacific Electric Co. A comparison, therefore, with the average rate per kilowatt-hour is utterly meaningless and, undoubtedly, deliberately deceptive. The Bureau of Power and Light has no such wholesale power deliveries to railways or anything corresponding to it. Even excluding the electric railways deliveries of the Edison company, the company has a far greater percentage of large industrial consumers.

The only true basis of comparison of sales rates per kilowatt-hour can be made by assuming one utility's gross earnings on the assumption that its sales were made by use of the rate schedules of other utilities. The set-up shown shows clearly that if the power bureau had used the Edison company rate schedules it would have collected, during the year in question, $37,241,034 in operating revenue instead of only $30,152,242, showing the Edison rates to average approximately 23 percent greater for the classes of consumers connected to the Power Bureau line.

It is evident that with the increase of more than $7,000,000 in revenue through the use of the Edison rates, the Power Bureau could have paid full corporation taxes in excess of what it would transfer to the city in lieu of taxes, and still be approximately $3,000,000 to the good, over and above the actual net earnings which it would make.

I hope this will serve your purposes and that you will be able to use it, as I know you desire to do, in a manner that will be greatly to the public interest.

Sincerely yours,

L. F. SCATTERGOOD.

LOS ANGELES MUNICIPAL BUREAU OF POWER AND LIGHT

TAXES PAID IN CONTRAST WITH PRIVATE UTILITY TAX BURDENS

In considering the taxes paid by municipal utilities and reflecting on the smallness of the item, the matter of cash contributions to local government and for civic benefit, as well as the equivalent thereof through free or partially paid for services rendered, is generally ignored, or lightly passed over. These items, as revealed through the surveys made by the Federal Power Commission, are not inconsiderable, at least in many instances. This is true, particularly, if the burden of bond amortization on the municipal utility is taken into account.

This matter of cash contributions, amortization of bonds, and rate savings to the municipal customers is often dismissed by the skeptic with the idea that the municipal utility would fail if it were to pay taxes on a basis equivalent to that under which private utilities operate. That this is not the case is revealed by a comparison at hand, which shows the earnings and profit that the Los Angeles municipal enterprise would make on a private-utility basis of operation, and measuring such earnings and profit in the same manner that a private utility would. For purpose of comparison, we will consider the results of the operation of the Southern California Edison Co. for the year 1939:

Gross revenue	$46,246,573
Operating revenue	45,785,994
Taxes paid (local, State, Federal, social-security, etc.)	7,936,956
Gross earnings (total after all expense but before interest)	19,468,704
Net income (available for dividends)	12,701,917

The results of the operation of the municipal Bureau of Power and Light of Los Angeles for the fiscal year ending June 30, 1940, were as follows:

Gross revenue	$30,173,457
Operating revenue	30,152,242
Taxes paid	112,086
Net earnings (total after all expense but before interest)	11,247,655
Net income	6,783,994

It should be noted that although it would appear that the tax burden on the bureau was only $112,086, that it transferred $1,018,000 to the city treasury out of its net income, and, similarly, in the previous year it transferred $1,124,300. For the current fiscal year it is contemplated that the transfer will be substantially greater. However, we have not yet answered the question as to what would happen if the bureau paid taxes on a basis equivalent to private-utility operation.

If the municipal enterprise of Los Angeles would pay all taxes—local, State, and Federal, inclusive of employee social-security taxes, etc.—the results would be as follows:

Gross revenue	$30,173,457
Operating revenue	30,152,242
Tax requirement	4,530,582
Gross earnings (total after all expense but before interest)	6,829,159
Net income	2,265,498

Note that this net income is on the basis that the bond interest requirement would be increased over that of municipal operation and practice, because of the nonamortization of bonds, similar to private-utility practice, and that therefore the net income would be less than if the interest requirement were not so increased.

Since the municipal rates in Los Angeles are substantially lower than the rates applied by the Southern California Edison Co., and even more so with respect to rates of eastern cities, the following two presentations are on the basis of such prevailing rates and the taxes that would relate to such increased revenue:

Municipal Los Angeles operation at Southern California Edison Co. rates

Gross revenue	$37,262,249
Operating revenue	37,241,034
Tax requirement	5,876,015
Gross earnings	12,572,518
Net income	8,008,857

Municipal Los Angeles operation at rates averaged for 6 private utilities in the East

Gross revenue	$44,257,569
Operating revenue	44,236,354
Tax requirement	7,305,540
Gross earnings	18,138,313
Net income	13,574,652

Now that we have the earnings-and-profits picture before us, it is appropriate to measure these factors on the same basis that a private utility would. "Gross earnings" is usally measured by private utilities and regulatory bodies in terms of a rate of return on rate base, and for comparative purposes such earnings are compared here on the basis of average capital (investment in plant and equipment, without deduction for depreciation), as follows:

Gross earnings as a return on average capital

	Amounts	Rate of return on capital
Southern California Edison Co. (1939):		
Average capital (undepreciated)	$354, 103, 537	Percent
Gross earnings	19, 468, 704	5. 50
Los Angeles B.P.&L. Municipal Plant (1939–40):		
Average capital (undepreciated)	203, 305, 637	
Gross earnings—actual	11, 247, 655	5. 53
Gross earnings under private utility tax burden:		
At B.P.&L. rates	6, 829, 159	3. 36
At Southern California Edison rates	12, 572, 518	6. 18
At 6 eastern cities average rates	18, 138, 313	8. 92

"Net income" is profit available for dividends, according to private utility practice, on the capital-stock ownership. For a municipal system, the factor equivalent to stock ownership is the citizens' equity in the enterprise, whether it be by investment of the citizens, through taxes, or whether, as in the case of the Los Angeles enterprise, the equity does not represent investment by taxation but represents investment through accumulated profits, obtained, largely, as a result of the policy followed as to amortization of outstanding bonds. "Net income" is usually measured in terms of the return on the stock-ownership investment, and comparison is made as follows:

Net income available for dividends on capital stock

	Amounts	Rate of return on stock
Southern California Edison Co. (1939):		
Capital stock ownership	[1] $166, 989, 917	Percent
Net income available for dividends	12, 701, 917	7. 61
(Dividends actually paid)	(11, 133, 881)	(6. 7)
Los Angeles B. P. & L. Municipal plant (1939–40):		
Citizens' Equity in Enterprise	[1] 74, 788, 850	
Net income, actual	6, 783, 994	10. 47
Net income under private utility tax burden:		
At B. P. & L. rates	2, 265, 498	3. 50
At Southern California Edison rates	8, 008, 857	12. 36
At 6 eastern cities average rates	13, 574, 652	20. 95

[1] At beginning of year.

Summary of income, expense, and earnings comparison under municipal and private utility tax and rate conditions

[Based on detailed analysis of tax items under various revenue bases]

	Southern California Edison Co.: Actual for calendar year 1939	Bureau of Power and Light, city of Los Angeles			
		Actual operations for fiscal year 1939–40	On private utility tax bases—various rate conditions		
			At actual rates of Bureau of Power and Light	At rates of Southern California Edison Co.	At eastern United States rates (average for 6 utilities)
Approximate rate base (average capital undepreciated)	$354, 103, 537	[1] $203, 305, 637	[1] $203, 305, 637	[1] $203, 305, 637	[1] $203, 305, 637
Equity investment (capital stock or citizens' equity) (beginning of year)	166, 989, 917	64, 788, 850	64, 788, 850	64, 788, 850	64, 788, 850
Gross revenue (operating plus net nonoperative)	46, 246, 573	30, 173, 457	30, 173, 457	37, 262, 249	44, 257, 569
Expenses (before interest):					
Taxes (local, State, and Federal, including social security)	7, 936, 956	112, 086	4, 530, 582	5, 876, 015	7, 305, 540
Other expenses (including depreciation and employee benefits)	18, 840, 913	18, 813, 716	18, 813, 716	18, 813, 716	18, 813, 716
Total expenses (before interest)	26, 777, 869	18, 925, 802	23, 344, 298	24, 689, 731	26, 119, 256
Gross earnings before interest	$19, 468, 704	$11, 247, 655	$6, 829, 159	$12, 572, 518	$18, 138, 313
Rate of return on capital in operation (rate base)—percent	5. 50	5. 53	3. 36	6. 18	8. 92
Net interest (including amortization bond premium and expenses)	$6, 766, 787	$4, 463, 661	[2] $4, 563, 661	[2] $4, 563, 661	[2] $4, 563, 661
Net income after interest (available for dividends)	[3] $12, 701, 917	$6, 783, 994	$2, 265, 498	$8, 008, 857	$13, 574, 652
Rate of return on equity investment—percent	[3] 7. 61	10. 47	3. 50	12. 36	20. 95

[1] Inclusive of property acquired from Southern California Edison Co. as of beginning of year, in order to show proper comparisons with earnings.
[2] Interest item for Bureau of Power and Light increased $100,000 under basis of private utility operation, in consideration of fact that Bonds would not be amortized in such case.
[3] Of net income for 1939 there was appropriated, for dividends, the amount of $11,133,881 (amounting to 6.7 percent on capital-stock investment).

I repeat what I have said before, Mr. Speaker, that the Bureau of Power and Light of the City of Los Angeles is worth untold millions annually to the light and power consumers in the Western States, and especially in the State of California.

If it were not for the example set by Los Angeles in providing electricity to the people of that great metropolitan area at reasonable rates, I dare say the overcharges for electricity to the people of California alone would run far above $100,000,000 a year.

Yet, instead of giving Los Angeles credit for its great accomplishments in this respect, or maintaining a decent silence, these hired propagandists continue to flood the public with such false and misleading statements.

It is time for the American people to wake up, follow the lead of Los Angeles, follow the lead of the T. V. A., follow the lead of Tacoma, Wash., follow the lead of other public-power agencies and see that the consumers are supplied electricity at rates based upon the cost of generation, transmission, and distribution in every corner of every State in the Union.

That would reduce their light and power bills on the present load by more than $1,000,000,000 a year.

Railway Employees Face Death Struggle

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

RESOLUTION ADOPTED BY THE INTERNATIONAL RAILWAY ASSOCIATION

Mr. VAN ZANDT. Mr. Speaker, advocates of the St. Lawrence seaway are loud in their denunciation of the railroads of America as monopolists in a feverish attempt to follow the administration in saddling American taxpayers with such an impractical and economically unsound political brain child.

In attempting to draw a red herring across the trail by pointing an accusing finger at the American railroads, the protests of railway employees continue to be heard as a mighty chorus in opposition to the proposed St. Lawrence seaway.

Realizing that their jobs are in jeopardy and that the St. Lawrence Seaway is destined to drive thousands to the relief rolls, the plaintive appeal of men, women, and children faced with destitute conditions is fast exposing the St. Lawrence seaway as a glittering hoax and a fraud on the American people.

The following resolution adopted by retired railway employees is another voice in the clarion call of railway labor that the St. Lawrence seaway be recognized in its true light as a menace to the future welfare of every railroad employee and coal miner in the United States.

The resolution referred to is as follows:

To the Honorable Members of the Senate and the House of Representatives of the Seventy-seventh Congress of the United States:

The International Railway Association, of St. Petersburg, Fla., organized in 1923, and with a present membership of 736, representing 53 railroads in the United States, at their regular meeting in St. Petersburg, Fla., on Monday, April 7, 1941, unanimously adopted the following resolution:

The prosperity of the railroads means more employment on the railroads; more employment in the thousands of industrial plants, large and small, that supply the railroads

with their many items of supplies; more prosperity for the local businessman in the hamlets, towns, and cities, and more taxes paid into the treasuries of the local towns and States.

The agreement which has been entered into, between the Governments of the United States and Canada, providing for the cooperative development of the St. Lawrence project, and now before your honorable body for consideration, and, as we understand, for prompt favorable action, is of such vital concern to the future prosperity of so large a group of outstanding industries, including the railroad industry, that we urge and respectfully plead that your honorable body take such action as may be necessary to defeat the project.

The membership of the International Railway Association is composed mostly of retired railroad employees, whose homes are located in the northern section of the country, and we realize fully what can be reasonably expected, if the St. Lawrence project becomes a reality, and foreign-owned tramp steamers begin to make the Great Lakes section the dumping ground for cheap products of foreign countries, including cheap foreign coal and foreign iron ores, seriously affecting railroad labor, American seamen, and thousands of high-type American workingmen, whose opportunity for profitable employment will be practically lost for all time.

We have faith in our Representatives in both the Senate and in the House of Representatives, that they will safeguard the essential interests of our Nation, and pray that final action on the St. Lawrence project agreement will insure its defeat.

F. H. ANDREWS,
President.
J. A. NESBITT,
Secretary.

Nazi Methods of Finance

EXTENSION OF REMARKS
OF
HON. JOSEPH H. BALL
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, April 18, 1941

ADDRESS BY BERNARD H. RIDDER

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a partial text of an address delivered by Bernard H. Ridder, publisher of the St. Paul Dispatch and Pioneer Press, St. Paul, Minn., before the member banks of the Ninth Federal Reserve District at Minneapolis on March 8, 1941.

In this speech Mr. Ridder analyzes the methods by which the Nazis have financed their military efforts.

There being no objection, the partial text of the address was ordered to be printed in the RECORD, as follows:

The outline of the world revolution that has been going on for the past 7 years is beginning to take shape. The war is only one phase of this revolutionary movement, the purpose of which is to destroy the heritage of a great civilization. This revolution has been given different names—in Germany it is called national socialism, in Italy it is fascism, in Spain it is falangism, and in Japan it is nameless but not without meaning.

Revolutions are no longer fought out behind barricades in crowded cities, for the technique of revolutions has changed. The leadership in revolutions comes now from above and not from the masses below, for governments direct revolutions. As Trotsky said, "Insurrection is an engine which technical experts are required to start, and even they cannot stop it."

The Nazis believe that humanity has to be kept constantly stirred up by a never-ending revolution so that men will become pliable clay in their hands to shape anew the destiny of a harried world. Hitler once said, "The revolution cannot be ended. It can never be ended. We are motion itself. We are eternal revolution." Or again "externally, I am the revolution, but internally it goes on just as we store up our hate and think of the day on which we will cast off the mask and stand revealed as those we are and eternally shall remain."

This revolution took Europe by surprise, which, to me, seems so very surprising. What has been called the English ruling class remained completely blind to the real nature of nazi-ism. Months after the war came there was still, and probably still is, an utter failure of comprehension of the true nature of the revolution that is sweeping the world. Recently I read Sir Neville Henderson's Failure of a Mission. These were the memoirs of the British Ambassador to Berlin during the dangerous years when he succeeded Sir Eric Phipps. "Though he knew all the main characters in the play, he knew absolutely nothing of the social forces operating behind the scene. The fact that Hitler has been able to conceal the universal revolutionary aims of his movement and sell it as an insurance of profits for vested interests in every country is probably the major achievement of his fantastically successful career." These were the words of the Czech writer Mach in assessing Henderson's work in Berlin.

It is an idle but interesting question if the British could have stopped this revolutionary movement in its beginning. Had the statesmen of Britain and France the courage to make small sacrifices while there was still time to make them, by giving up a little in order to save all, they might not have been forced to give up all to save even a little.

It is fitting before this audience of bankers to call attention to the German financial program of the last 7 years, a program which is both revolutionary as it has been successful. When Hitler launched his vast public-works and armament program in 1934 and 1935, economists generally believed that he would bankrupt Germany by this mad program. The truth is otherwise. As Dal Hitchcoke in the February Harper's says, "The facts stand incontrovertible that instead of being bankrupt, Germany has actually created vast public improvements, expanded her industry, and built her unparalleled war machine in the course of 6 years, the greatest enocomic triumph of the times. All this has been done in a nation that, at the start, was debt-ridden, impoverished, and deep in depression." All this has been possible in Germany because for the first time a planned economy was attempted and operated in a nation that had both its complete mechanical equipment as well as the human mechanics to create sufficient production to prevent the operation of the laws of inflation, and furthermore because the government had ample power to control both wages and prices and, in addition, was able to manage the technical machinery which makes the financial system go.

At the start Hitler did what all governments have been doing during the last 20 years, namely, he issued short-term obligations to pay governmental expenses. The German banking system absorbed these obligations, discounted them, and gradually they became a form of liquid investment by individuals and corporations. The Government and the Nazi Party saw to it that these Government obligations did not drop below a fixed price but neither the arrogance nor brutality of the methods employed was solely responsible for the success of their price-fixing method.

With the proceeds of the Government's securities the Nazis had ample funds with which to begin their program. Up to this point there is nothing new in this financial method. In fact, our own Government is operating under a similiar system today. Hitler and the Nazis have been preaching for 10 years that labor is the only wealth of the country and that modern capitalism and the plutocratic democracies were unable to use either all the labor available or, if available, unable to give it an adequate return. Hitler has achieved and sustained full employment.

The checks and controls which the Nazis established, with which you are probably more familiar than I, are nevertheless interesting to discuss. The first danger to such a governmental financial system is undue expansion of bank deposits, a process now under way in the United States. These bank deposits are a source of great danger if left to remain in the hands of banks or the individuals and corporations to which they flow. The Nazis have discovered a new method of getting these bank deposits out of the banks after they have performed their initial service. After the Government has spent the money the individual corporations and individuals themselves throughout the country come under the watchful eye of Nazi inspectors who determine how much cash balances each company is permitted to retain, and suggestions are made that their excess cash balances be used to buy governmental securities. These suggestions are necessarily heeded, and so they reverse the order and wash the slate clean for the renewed flow of Government moneys. All these transactions come within the structure of capitalistic financial procedures, retaining the profit motive as the stimulus for private enterprise, and, as Dal Hitchcock says, "It is an astonishing demonstration of the vitality of that beleaguered institution called capitalism. This method brings the volume of banking deposits in Germany under the absolute control of the Nazi machine. Furthermore, it allows the profit motive and individual enterprise to function in German economic activity."

Finding that the control of bank deposits could be accomplished so easily they next set out to control the volume of currency. Fortunately for them there was no demand for German currency in the outside world. During the period from 1933 to 1939 the British leaders, men of property and successful capitalists, were by their very background and experience the most liable to miscalculate the effects of the Nazi financial innovations. They felt instinctively that the Nazi method would have failed in England. What wouldn't work in Britain, however, worked marvelously well in Germany because of the willingness of the German people to accept an economy of coercion in a time of peace. While the British during this period were attempting an economy of prosperity and of social reform, the Germans were ready to sacrifice everything of today for the national promise of tomorrow; just as in the Middle Ages the church promised in exchange a happy future life for the mortal life of misery and the masses of the people of Europe accepted that promise of the hereafter and willingly suffered the social inequalities of the time, so Hitler held before German eyes a future world order of prosperity in return for his economy of slavery, and once again future profits appeared more attractive than present misery.

The control of currency and bank deposits solved another problem for the Germans which is a disturbing factor in our present economy. Each month in the United States we find the pool of capital securities grow-

ing less and opportunities for the investment of capital growing smaller, because we have found no means of completing the circle which begins and ends with Government securities issued and paid. The Germans learned how to make government securities and bank deposits circulate.

The theory that savings are bad and that spending is good is one of the craziest assumptions that has been prevalent in this country during the past 8 years and is precisely the opposite of the German financial system. The Nazis believe that saving is good but they control these savings and use them either by liquidating them or converting them into governmental securities. They control and prevent the accumulation of bank balances. They prevent the hoarding of currency and they prevent the formation of idle capitalistic pools which normally stop production. The German economy has therefore avoided the major mistakes that we have made because the German Government was in a position of deciding where the current of saving would flow and was able to direct its economy to keep the full flood of productivity at work.

There is a fundamental difference between the National Socialistic viewpoint of economy for the welfare of the state instead of our conception of an economy for the welfare of the individual. Hitler works on the principle that what eventually will help the state may raise the standard of living of those who live in the state, but he does not consider it very important to raise the standard of living as an end in itself but only as an accident in his economy of force. We are all wondering today whether democracy and the philosophy of force can live together happily in one small world. The differences are so fundamental that it is difficult for a believer in democracy to understand the Hitler system. Whereas we have always believed that the highest end is to be achieved through the development of the individual, the Nazi idea holds that the individual is only a tiny fraction of a race or state. Mussolini once said, "Fascism, the more it considers and observes the future and the development of humanity quite apart from political consideration at the moment, believes neither in the possibility nor the utility of perpetual peace. War alone brings to its highest tension all human energy and puts the stamp of responsibility upon the peoples who have the courage to meet it." I wonder to what heights of responsibility the Italian Army has risen in its war test of the last 6 months. Perhaps this philosophy does not work in Italy.

The Nazis are fond of quoting from Nietsche, especially where he says: "For the present we know of no other means whereby the rough energy of the camp, the deep, impersonal hatred, the cold-bloodedness of murder with a good conscience, the general ardor of the destruction of the enemy, the hollow earthquakelike convolution of the soul, can be as forcibly and certainly communicated to enervated nations as is done by every great war. You shall love peace as a means to new wars, and the short peace more than the long. You I advise not to work but to fight. You I advise not to peace but to victory. Let your work be a fight; let your peace be a victory." For years Hitler kept a copy of Machiavelli's Prince at his bedside, and often quoted the following: "It is much safer to be feared than loved, because men are generally ungrateful, fickle fools and cowards."

If the philosophy of force should triumph, then the belief in a society of free and equal men and women will perish. Our civilization has believed in an international order based on a common conception of international law, while the other system has no international order and can be only power and dictation by the strongest. Under Hitler's conception, the people should serve the government, also in the sphere of economics, and therefore there can be no free people nor a free economy. It is folly to expect that men can have even a remnant of economic freedom under a totalitarian dictatorship.

The British leaders knew that in England's free economy the national debt is of tremendous importance, but in Germany's economy of force it was of relatively small importance because human values did not matter and welfare was no aim. The Nazi leadership exacted a claim on the hearts and minds and bodies, the possessions and faith of every man, woman, and child in Germany, and the result was and is political slavery. Imagine the billions of man-hours of labor represented in this German production without any real increase in the people's acquisition of personal possessions, for the comforts and the conveniences of life. Therein lies the answer to how Germany could have completed her immense rearmament program without bankrupting Germany. The labor ingredient was a contribution of the German people for which they were not paid and may never be paid. Under this economy there can be no such thing as real ownership of property or control over one's work, one's thought, one's speech, or one's religion. Confiscation is inherent in the system itself, but the German economy is not likely to fail.

Is it any wonder that the British miscalculated the effects of this kind of a slave system in our modern twentieth century civilized world. They overestimated the German people's interest in their own individual lives and own freedom. They did not realize that Nazi inspectors could check successfully upon personal bank accounts and corporation balances, upon savings accounts, and confiscate them either through taxation or through enforced exchange of governmental securities. That is the irony and the tragedy of the British miscalculation. While an individual corporation cannot constantly capitalize its losses, a national economy as a whole can capitalize losses at one point to facilitate economic activity at other points. The important question we must ask ourselves is, Can these financial methods be utilized so that a governing people determined to preserve individual freedom and anxious to make full use of individual initiative could make private enterprise and private capitalism better serve the purposes of democracy? We must find the answer to that question in the coming years.

* * * * *

I am indebted to the New York Journal of Commerce, one of my family newspapers, and to its editor, Dr. Bogen, to articles of Dal Hitchcock and Stewart Nelson, and to some German magazines for the material in this address. As it was made extemporaneously, I have forgotten exactly where credit is due, and I am adding a paragraph which is the most recent information that I have received from Germany on the present condition of the German financial system:

* * * * *

On February 9 Fritz Reinhardt, the Assistant Minister of Finance in Germany, stated that the German national debt has more than doubled since the outbreak of the war in September 1939. The excess borrowings of Germany amounted to 3,000,000,000 marks a month. The servicing of the present debt of Germany requires 4,000,000,000 marks a year, while the Government income through taxation and other regular avenues amounts to 30,000,000,000 marks per year. Dr. Schmidt, of the Deutsche Bank, pointed out recently that the key to Germany's economic policy is not financial, as bankers formerly understood it, but rather the direct management of the national economy. Through restricting consumption by a far-reaching system of rationing and price controls, the mass of the population is left with a large surplus of cash which it cannot spend as it wishes to. All this cash is then absorbed by the government either through taxes or government loans. The Nazis therefore determine what proportion of the national productive capacity shall be allotted for consumer needs so that all personal incomes are reabsorbed by the government.

The essential framework of this economic system closely resembles that of Soviet Russia, although the Russians have never been able to make their control plan function with even a remote resemblance of the smoothness and efficiency that characterizes the German controlled economy. It must be perfectly plain that only through force and continued force can an economic system such as the Nazis survive.

Address by Pearl S. Buck Before Writers' Committee Dinner of United China Relief

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, April 18, 1941

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Pearl S. Buck, well-known author and authority on oriental affairs, delivered at the Writers' Committee dinner of United China Relief at the Waldorf-Astoria, New York, March 26, 1941.

While I have the floor, permit me to state that I endorse the United China Relief Committee's program and hope the American people will respond to the call for assistance for the distressed Chinese. I know that every dollar subscribed for this fund will be well and carefully and helpfully expended, and that it will save many lives and alleviate much suffering. I realize that the call upon Americans for aid to other nations is heavy these days; but surely in the plight of the Chinese people, good friends of America at heart, they are worthy of such assistance as individual Americans feel they can contribute.

I send the address to the desk for publication in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The hour is late for relief to China. The war has been going on for 3½ years and now soon it will be 4. Three million Chinese have already lost their lives. A third of China's territory lies under the nominal control, at least, of the Japanese. For all this there can now be no relief.

Relief must be for the future. China is not going to lose this war. With some help she can perhaps end the war this year, if not victorious, at least with the balance of victory in her favor. Unready as she was for modern warfare, unwilling as she always has been for any war, believing as she always has that war is the occupation of fools, she has, in spite of all her losses, steadily gained in strength during these terrible years, not only in military strength but in other ways. In these few years the Chinese people have been compelled to know and to realize the

world in which we are all living together. They lived, actually, before this war began, in a sort of splendid isolation, wrapped around by the glory of their own history. Even though revolutions were taking place and changes being made it was at their own pace, in their own way. They felt no need to imitate any other nation or to hurry their modern development. Modernization in China was not designed as any catastrophe of change. It was to be an evolution founded upon and flowering from their own civilization.

But this war has taught them that in our world no nation can live in isolation, however splendid, and that civilization, however lofty, protects none from the attacks of the ruthlessly uncivilized. China's civilization has held and it will hold, but it will change. China at this very moment is at a crossroads. She is ready to make alliances.

Which way will she take? China knows that in the future world, perhaps the very near future, it will no longer be possible for any nation to live alone. Nations will be compelled, for mutual protection and to guarantee the world they want, to live in groups with others of like mind and wish. With whom will China choose to live? Naturally, with her friends.

But who are China's friends today? That is what she is trying to discover. Be sure that there are those who are telling her that the United States is not her friend, we who with such incredible blindness not only to humanity but even to our own interests, have been furnishing Japan with the instruments of war year after year. Actually we have helped Japan more than Germany has, and in so doing have wounded China, not only in the millions dead and the territory lost, but in the very heart of that great people we have put deep distrust of America. Can Americans be our friends, Chinese are asking, when they have, for profit, gone on selling to our enemies those things without which this war could not have gone on?

Be sure that Germany is keeping this distrust constantly alive in Chinese minds. Germany knows that in the Far East of the future it is China that is important, not Japan. Japan has nothing that Germany wants—a handful of fiery ambitious people living upon a handful of volcanic islands. If Germany wins the European war, Japan will sink to a third-rate power. Today Germany is directing her real friendship to China. China is more important to her than England. She will not try to conquer China. She will try to win China's friendship. The Germans appreciate the Chinese.

But the Chinese have always liked the Americans. And now, in spite of the wounds we have dealt them, in spite of our callousness and indifference, in spite of our preoccupation with England and our unwillingness to realize that China has fought and suffered far more and far longer even than England has in this same war, the Chinese wish for our friendship if it can be had. If it cannot be had, if we continue callous and indifferent and preoccupied with Europe, they are a realistic people, and they will accept what friendship they can get, knowing that in the world of tomorrow, and of a tomorrow nearer than we think, they must have friends.

But in that world all must have friends, and we, too, must have them. It will not be enough in that world for us to have England alone as our friend. We need another, upon our Pacific coast. England is weak in the Pacific. She holds only by force a rebellious, discontented India. England and the United States must have China with them, if democracy is to prevail in the world. We cannot do without China. I believe that China is at this very moment a pivot nation. Who has her friendship will rule the future; who loses it, will be lost.

And yet I am not willing to put upon the basis of self-interest alone our friendship for China. It is to our interest, to our supreme interest, to cement our friendship with China. We ought, for self-interest alone, too, to send her our aid as swiftly and strongly as we are sending aid to England. To help China defeat Japan would be to defeat Hitler in the East, and 50 years from now it will be far more important to have defeated Hitler in the East than in Europe.

But I will not speak of self-interest alone. I will speak rather of our genuine liking for the Chinese. We do like them and they like us. We admire their old civilization and their courage in this modern day. The Chinese are a great people, worthy of all we can give them, and worthy of our loyal friendship. With them we can make the sort of world we want. There are peoples in the world whose ideas and desires are so different from ours that we cannot with them make the world we want. But the Chinese people are our kind of people, democratic, individualistic, liberty-loving, humorous, and brave. We need them for the future and they need us now, they need relief from us and swift help of every kind. Let us make and keep them our friends.

Mr. CAPPER. Mr. President, China's magnificent resistance to armed aggression is now in its fourth exhausting year. Every American who reads the newspapers knows of the brave struggle against overwhelming odds, the long retreat, the final determined stand, the mounting toll of famine and exposure, the urgent need of medical supplies. Every American knows of the spunk the Chinese people have shown during a period when in Europe one country after another has fallen under the heel of the Axis; and every American who has thought the situation through, whose imagination has been stirred by Chinese ability to "take it and go on," who has come to realize our tremendous stake in successful Chinese resistance, wants to help China to see it through. The only question is how to do it best. Heretofore, the seven agencies that do the bulk of Chinese relief and rehabilitation have been conducting separate appeals. Now these agencies are combined in a united, Nation-wide campaign for $5,000,000—United China Relief.

I know that few of us can boast any expert knowledge with regard to China. Most of us have never been to China. Yet we know that China is struggling to be free, and I believe that in the perspective of history this struggle will go down as one of the decisive battles in mankind's long fight for freedom and for a better life.

Under their leader, Gen. Chiang Kai-shek, the Chinese, about a decade ago, embarked upon a program of industrial, political, and educational development to raise the standard of living of their people and to integrate themselves as a nation. Scores of new factories were founded. New and beautiful buildings were erected. New railways, new highways, new air lines were established. Hundreds of technical advisers and experts were imported from the western world.

But the new China was too young, and too little integrated, to withstand aggression. Before the most brutal and inhuman invasion of modern history she was forced to abandon her coastal cities and to retire over the mountains and rivers into the interior.

In that trek to the interior millions of men and women transported, mostly on human backs, the equipment of 353 factories, including a hundred and fifty thousand tons of machinery.

These men and women have withstood bombings the like of which not even the people of Britain have had to endure. Their economic system has been paralyzed by the capture of large areas of Chinese territory. Yet they have borne it all with a courage and a cheerfulness that has won the admiration and respect of brave men everywhere.

United China Relief presents an appeal that leaves no doubt as to the most effective means of translating American sympathy and admiration for China into concrete measures of assistance. A National Advisory Committee of United China Relief has been formed with Mrs. Franklin D. Roosevelt as honorary chairman. I have the honor of being a member of the national committee, and am intensely interested in a successful climax to the campaign to raise $5,000,000 for relief and reconstruction of war-torn China. Therefore, I desire to insert in the CONGRESSIONAL RECORD statements regarding the purposes and program of United China Relief.

The agencies which have united in the $5,000,000 appeal include:

American Bureau for Medical Aid to China, which is helping to remedy the frightful lack of anesthetics and to furnish medical supplies urgently requested by the Chinese Red Cross, and which supports emergency aid stations in Chungking, epidemic-control programs, and training centers for physicians;

China Emergency Relief Committee, organized last year to raise funds for this and similar work;

China Aid Council, also active in meeting special medical needs, and, through its affiliated agency,

American Committee for Chinese War Orphans, active in rescuing, maintaining, and training thousands of orphaned children.

Church Committees for China Relief, serving as the official agency of the United Protestant Churches of America for providing direct relief in bombed and famine areas, food and shelter and medical relief for the destitute, and work projects for men and women—all this largely through missionaries and Christian Chinese associates without regard to religious belief;

American Committee for Chinese Industrial Cooperatives, operating 3,000 "vest-pocket industries" supporting some 500,000 refugees in a vast, expanding, self-owned, self-help project to rehabilitate themselves and replace the destroyed productivity of Chinese industry;

Associated Boards for Christian Colleges in China, representing 13 colleges with an enrollment of nearly 8,000 students, 11 of which institutions have been forced by the war to transfer their teaching and research activities as far as 1,500 miles inland.

Thus, the campaign is not an additional appeal, but rather a coordination of the seven existing appeals to make possible relief and rehabilitation in China on a greatly broadened scale.

The executive board of United China Relief is comprised of James G. Blaine, president of the Marine Midland Trust Co., of New York, chairman; Eugene E. Barnett, general secretary of the National Council of the Y. M. C. A., vice chairman; and Artemus L. Gates, president of the New York Trust Co., treasurer.

Directors include Pearl S. Buck, former Ambassador William C. Bullitt, Paul G. Hoffman, Thomas W. Lamont, Henry R. Luce, John D. Rockefeller 3d, Col. Theodore Roosevelt, Jr., David O. Selznick, Robert G. Sproul, president of the University of California, and Wendell L. Willkie.

Four points to be remembered about the United China Relief campaign are:

First. The Chinese deserve and have earned help; they have helped themselves.

Second. Their need is appallingly great; one-ninth of China's population of 450,000,000 men, women, and children are refugees today.

Third. Facilities for relieving the need exist right now in the agencies for which United China Relief is raising money.

Fourth. Money goes farther in China than anywhere else in the world. As a "bargain" in relief it is unique.

Here is an opportunity for Americans to aid decisively in laying the foundations for the modern, democratic new China which can and must come out of the war. Let us face that fact and give generously both in work and in dollars now—while we are still in time.

Planned Treason

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of April 19, 1941.

[From the Saturday Evening Post of April 19, 1941]

THE FETISH OF INDEPENDENCE

"Good times would come back. Taxes would be reduced. Armaments could be cut tremendously, and the Union would still be stronger than any possible combination of enemies. The Union's stable, reliable money would start new enterprises rolling, ending depression and unemployment. * * * The greatest political and economic opportunity in history * * * lower automobile prices * * * revival in shipbuilding and railroads * * * benefits to agriculture * * * an end to world war. * * * Dictatorship of every kind and the many forms of intolerance that thrive on depression would cease."

This is from the printed propaganda of Federal Union.

It leaves us but one thing more to wish for this side of the true millennium. We wish it might then be possible for those who sweat with the conviction of a noble idea to present it entirely for what it is and trust it to sell itself, instead of to stultify it with salesmanship as if it were a piece of merchandise.

In a much less heedless assault upon susceptible American emotions, the League to Enforce Peace was making that same mistake 25 years ago. There was immense enthusiasm for that idea—for a war that was to end war, and for a world peace that was to come after, enforced by the just and peace-loving nations forever. Those who opposed it were worse than infidels; they were sinners against the light. At the head of 50 eminent Americans who promoted this evangel was William Howard Taft, the former President, who said: "I am supporting the League to Enforce Peace; and if the Republican Party ever abandons that idea, I shall resign from that party, giving my resignation all the publicity and scandal possible."

Yet when President Wilson returned from Versailles with the beautiful idea on parchment, all signed and sealed, requiring only the consent of the United States Senate to make it the new law of the world, the American people rejected it. They not only declined to embrace the League of Nations; they went on to make a separate peace with Germany.

Were they fickle? Had they changed their minds? No. The explanation is that the evangelists had presented to them only that shining surface of the idea in which their fervent, innocent desires were reflected. When it was reduced to hard writing they realized for the first time what it meant. In the field of foreign relations they would have to surrender American independence, and that they were passionately unwilling to do. Much confusion and political bitterness might have been avoided if that choice had been made clear to them in the beginning.

Reading further in the printed propaganda of Federal Union we come to this: "No new powers would be given to the Union Government. A few powers (the ones that are now being used inefficiently or at cross-purposes) would simply be moved away from the present national governments and put in a new and more advantageous place. In other ways, the present governments would be left just as they are. There are five powers which could be transferred to a Union Government with great benefits to the individual citizen's safety, prosperity, and freedom. They are: union citizenship, union defense force, union money, union free-trade area, union postal and communications system."

We cannot imagine that a more disingenuous statement could be composed out of the common materials of language. What is concealed is the truth that national sovereignty consists in these "few powers" proposed to be transferred, not this time to a League of Nations, but to a world government, with a constitution of its own, a parliament of its own, a paramount military power, and sovereignty above that of any individual nation in the economic sphere.

Imagine putting it that way to the American people: "For all these blessings of Federal Union that we enumerate, are you willing to surrender American independence?"

To all Federal Unionists in this country—taking their emotional sincerity for granted—we recommend the intellectual integrity and freedom from self-deception of the British mind as it acts upon the same idea. These rare qualities appear in the proceedings of a round-table conference on Federal Union held in London last year.

To bring such a thing to pass—call it Federal Union, World Union, or United States of Man—it will be necessary first to overcome the human prejudice in favor of national sovereignty and treat independence as a fetish. The British enthusiasts have the moral courage to face that violent fact.

Sir Norman Angell said, "If we are ever going to put over either a covenant or a Federal Union, this very issue of independence has to be fought out. * * * But independence is an antisocial claim. * * * See what this emotional demand for independence is doing in Scandinavia at this moment—how bitter is becoming the relationship between those states—how the moral confusion gives encouragement to aggression, and how it adds weight to the argument of the Germans, who will be able to say, 'This idea of a united Europe is perfectly hopeless and unattainable save by the domination of one great power.' If we cannot reply to that by proving a capacity for cooperation, we are lost, and we cannot have that capacity for cooperation unless we banish from our vocabulary such words as 'independence.'"

Harold J. Laski, the extreme advocate, was not present at this round table, but he has written a book, saying: "There can be no peace without international organization which abrogates the sovereignty of individual states."

We challenge the Federal Unionists here to set that honest, forthright statement at the top of the propaganda with which they are flooding the country.

Many Americans who are reacting emotionally to their unreal description of the near-perfect world do not know what the question is or what the price will be. Are they willing to surrender the national sovereignty? That is the question.

To those who do see it and have resolved it for themselves in favor of world citizenship above American citizenship, we have nothing to say. With what is not in them it would be folly to argue. They have that right. They may say, as some of them do, that the War of Independence was a civil war and a mistake, and we ought to forget it.

But the obsequies are still a problem. Have they thought as far as that? The Congress of the United States of the World might appoint a day of self-celebration, and we might contribute the Liberty Bell to sound the joyous knell of American history. But should we build a crypt in place of a shrine for a piece of paper called the Declaration of Independence? And what should we do with such a thing as the Bunker Hill Monument? We cannot imagine the ceremonies. There is no precedent. Never has it happened that a mighty people recanted their own history.

Some Things to Watch

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

Mr. VOORHIS of California. Mr. Speaker, sometime ago, on January 13 to be exact, there was inserted in the CONGRESSIONAL RECORD an article entitled, "The United States Is Not a Democracy But a Republic," written by Catherine Curtis, national director of Women Investors of America. It is so significant

that it seems to me that it requires comment, for I am convinced that it represents the point of view of a certain reactionary group in the United States, which frankly admits that it does not believe in democracy and holds substantially to the idea, once expressed by conservatives in the period of the American Revolution, that government should be by "the rich, well-born, and the able." The main charge made in the article by Catherine Curtis is that wherever a nation has achieved democracy in the sense of majority rule, terrible consequences have followed and eventually a dictatorship of some sort has been set up. I challenge this thesis and believe it in fact to be one of the most dangerous ideas that can be advanced, for in it is certainly contained the fundamental basis upon which a Fascist form of government can readily be built to replace government of the people, by the people, and for the people. It is important to recognize this.

The article by Miss Curtis does not quite say so, but it certainly points to the inevitable conclusion that the writer and others who agree with her are of the opinion that certain definite limitations should be placed upon democracy and that, indeed, we have too much of it in the United States today. She cites examples from Russia, Hungary, Germany, Mexico, Italy, Austria, Spain, and France in an attempt to show that wherever what she calls democracy was established it was followed by a break-down of constitutional government and then by dictatorship. Without going into too much detail, it certainly can be pointed out that not one of those nations except France ever has had a truly democratic government and that in every one of them the fundamental facts have been: First, that the economic problems of the people were for one reason or another left unsolved; second, that, as a consequence of this, powerful group, seeking the establishment of dictatorship, either Communist or Fascist, arose; and third, that except in the case of Mexico, one or another of these movements was successful. At this point, however, it is necessary for Americans to determine very definitely what course they are going to follow. Are they going to hold that we should turn to some modified form of fascism ourselves, thus making possible a limitation on the efforts of the people to achieve economic security and a solution of such problems as unemployment? Or are we going to continue to hold the faith that has always been America's fundamental faith and believe that the cure for the ills of democracy is not less democracy but an extension of it in such manner that greater equality of opportunity will be open to all our people? Upon our decisions in this matter will depend the whole future of our country. I think it most important for those of us who do really believe in constitutional democracy to recognize the fact that there are those in our Nation who are frankly saying that they believe constitutional democracy is wrong and that they prefer a system which will better guarantee the perpetuation of monopolistic privilege.

It is, of course, true that it is important for us to accomplish our progress as much as possible without the extension of governmental controls and regulation over the lives and activities of our people. But this has nothing to do with the basic value of political democracy or with the importance of securing as broad a participation in such political democracy by all the American people as it is possible to obtain. The danger for us is not that we have too much democracy but rather that our faith in it may be undermined. Should this happen, it will not be because of any fault in constitutional democracy as a form of government but rather because reactionary forces succeed in blocking economic and social progress and thus bringing on a situation where the economic problems which destroyed democracy in these other nations can become the cause of its destruction here.

Evidence that definite plans have been developed by the Congress and the administration for assuring full employment and preventing depression at the close of this period of crisis would do more than anything else I know of to build the morale of our Nation and its people. Measures to give us a sound, scientific monetary system—one which would make inflation and especially deflation impossible, should be the first and central ones to be undertaken. The time is now.

The one thing upon which Fascists and Communists will always agree is that the thing they desire most is social conflict and what they call a revolutionary situation. And one method they have always employed is the method of ridiculing constitutional democracy, distorting the facts about it, and attempting to keep it from solving its problems in united fashion. Against such defeatist ideas, too, we must be on guard.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

Mr. LAMBERTSON. Mr. Speaker, the sun never sets on the United States Treasury.

The steel strike settled down on the taxpayer.

When we opened the Red Sea last week we spread the blues.

It is not because Easter has just passed that we are interested around the Holy Land.

The queen of the cherry blossoms was convoyed across the Tidal Basin. The name Japanese has been dropped.

After feeling 12 summer days now and having felt the drop to zero in Kansas, November 11, we know the world is out of joint.

The Chief, while avoiding the German measles at Warm Springs, developed a little African fever down Pennsylvania Avenue way.

It was a radio voice from far away America that pleaded with the Yugoslavs to fight. Now thousands of them lie dead and their homes devastated.

Lifting the embargo on planes to dear old Russia prevented no new pacts between the "Bear" and the Axis. While we play the Soviet we should pay Finland back.

Is it worth sending 35 marines to protect Winant in London? Halifax does all the business. However, the 35 may prove the entering wedge for 3,000,000 and that may be the purpose.

If we can sink a good anchor in Greenland and another in the Admiral Byrd land near the South Pole and string an electrified barbed wire on buoys between the two we will be sitting pretty.

Seniority is as much recognized here as the law of the Medes and Persians, and if the powers that be can prevent Senator REYNOLDS from succeeding to the military chairmanship recently made vacant by death, it is the last proof of dictatorship.

Is National Unity Desirable?

EDITORIAL FROM THE CINCINNATI TIMES-STAR

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Times-Star for April 15, 1941:

[From the Cincinnati Times-Star of April 15, 1941]

IS NATIONAL UNITY DESIRABLE?

When a people are in as great danger as we are of involvement in one of the most deadly wars of history, it is obvious that national unity is a thing that should be desired, prayerfully, by all patriotic men and women.

Administration orators have referred occasionally to their desire for national unity. But other administration spokesmen do not help the cause when they say, as Secretary Ickes said in Chicago Monday, that men like General Wood and Colonel Lindbergh are "Nazi fellow travelers." A smear campaign like that might work if Wood and Lindbergh stood alone. As a matter of fact, they have far too much company to make the use of such epithets any more promising than it is decent.

A far greater cause of dissension among Americans is the idea held by millions of our people that the administration plans to send American expeditionary forces to many parts of the world. This impression is based upon many things—talk about an Army expanded far beyond the size contemplated when the draft bill was originally under discussion; Mr. Roosevelt's oratory about an all-out war, joined up with the proposal to establish his

four freedoms, apparently by force, "everywhere in the world"; the ultra warlike attitude of Washington in the face of an obvious increase in the opposition to war in other parts of the country.

The greatest thing Mr. Roosevelt could do to bring national unity to the United States in the obviously dangerous and critical situation which confronts us would be to give the American people definite assurance that he is not going to endeavor to police the world, that he does not mean to try to crush Hitler on the Continent, that the American Army, definitely and positively, is not to be used in service abroad.

If such assurances were given, we believe that a very large proportion of Americans who are now opposed to war would be willing to go along in a program of common action, based on sea and air power, for the defense of the English-speaking peoples.

That is a program that makes sense. It is a program which can be carried out within the limits and the spirit of our democratic institutions. The plain fact is that the English-speaking peoples have not amounted to much in organization for land fighting on the continental scale for a good many centuries. On the sea they have been supreme and should be able to more than hold their own there against all competition.

The American people have an inevitable interest in standing against the conquest of the English-speaking world by Hitler. By the English-speaking world we mean our own country, Canada, the British Isles, Australia, New Zealand, and, if her people want to go along, South Africa. With these countries free at the end of the war, the world would still be a decent place for Americans to live in. With them conquered, the prospect would be desolate indeed.

Talk to ordinary men and women on both sides of the war issue, and see how many of them will agree with you on a program limited to common action for the defense of the English-speaking peoples back of sea power. If Mr. Roosevelt is as anxious for national unity as he should be in times like these, why wouldn't the outlining of such a program offer America greater safety and his own administration a larger chance for final success than either possesses in these days when Washington talks only of all-out war and the establishment of our ideas and form of government "everywhere in the world?"

Strikes in Defense Industries

EXTENSION OF REMARKS

OF

HON. VANCE PLAUCHÉ

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

RESOLUTIONS BY LOUISIANA ORGANIZATIONS

Mr. PLAUCHÉ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

[Resolution unanimously adopted by the police jury of Beauregard Parish, April 10, 1941]

Whereas it is common knowledge that labor unions with leaders of questionable authority and jurisdiction are fomenting trouble and causing delay on the construction of Camp Polk, as well as Army camps and other defense projects throughout the Nation; and

Whereas exorbitant union dues are being charged workers on many defense projects, and in numerous instances dues are collected, but the worker given no guaranty of a job. In many cases no job is given. In many other cases the worker is permitted to work until the full union dues are collected and is then discharged, ostensibly to make way for a new "member"; and

Whereas this police jury does not question the right of workers to organize for the purpose of legitimately and peacefully promoting their common interests but does condemn the anarchistic uprising that is apparently taking over the Nation's industries at a time when all should cooperate in our Nation's defense even to the extent of personal sacrifices: Therefore be it

Resolved, That the Government be, and it is hereby, petitioned to immediately take such action as is necessary to protect the rights of both labor and industry as guaranteed by the Constitution, thereby furthering the cause of national defense, in which we are so intensely interested.

Certified a true copy:

LEE NICHOLS,
Secretary-Treasurer,
Beauregard Parish Police Jury.

Whereas President Roosevelt has proclaimed that our country has become the arsenal for all the democracies;

Whereas contracts for national defense aggregating billions of dollars have been let, and work thereon is being delayed because of strikes and labor troubles and shutting down of the plants, causing a serious menace to the safety of all the democracies; and

Whereas irrespective of the merits of the strikes, we declare that national safety demands that drastic steps be taken immediately by the Government to put an end to this destructive condition: Now, therefore, be it

Resolved by the Jennings Business Club, That we condemn the delay in national defense caused by shut-downs of the plants with contracts for the Air, Army, and Navy, we deplore the delay in carrying out these contracts, and we demand that our National Government order these plants to start work at once upon these contracts, and that it fix the responsibility for these strikes and shutdowns, and deal most severely with those responsible therefor: Be it further

Resolved, That copies of these resolutions be sent to President Roosevelt, our two Senators and our Congressman, and to the press.

Unanimously adopted Monday night, April 7, 1941.

W. H. ADAMS, *President.*
J. W. LANDRY, *Secretary.*

A true copy:

J. W. LANDRY, *Secretary.*

Whereas the Legionnaires of the American Legion, Robert Turner Post, No. 129, at Eunice, La., cheerfully rendered their services to the cause of democracy in World War No. 1; and

Whereas they are ready, able, and willing to again sacrifice their personal interests in response to the call of the President of the United States in the interest of national defense; and

Whereas in compliance with the request of the Honorable Sam H. Jones, Governor of the State of Louisiana, they have offered to form the Home Guard, in the absence of the National Guard of the State of Louisiana; and

Whereas members of the American Legion are now neglecting their own personal businesses to serve on the local selective service boards without any remuneration whatsoever, but solely and only in order to comply with their duty to their country; and

Whereas the Selective Service Act has drafted the most able men of the Nation from every walk of life to serve in the armed forces of the United States as well as in many civilian activities necessary to the proper administration of the said act; and

Whereas these men who have been so drafted do not utter any complaints relative to salary, hours, etc., but have gladly answered the call of their President and, if necessary, these men would lay down their very lives for the cause of democracy; and

Whereas time is of the essence in that a new type of warfare known as blitzkrieg has been inaugurated by the inventive genius of the military leaders of Nazi Germany; and

Whereas the attitude of organized labor is vicious in nature, detrimental to the cause, and uncalled for in this period of national emergency in that organized labor has demonstrated its unwillingness to play its role in national defense, as evidenced by the various strikes throughout the Nation; and

Whereas southern labor has been preyed upon by organized labor in the various cantonments of the Army in the following manner, viz:

Employees are employed at the Army cantonment, and as a prerequisite to employment they are compelled to join the union and as a result thereof pay an exorbitant fee. One or two weeks thereafter the same employees are discharged and new employees are employed and discharged in the same manner, to the end that organized labor is now practicing a system of profiteering upon southern labor;

Whereas during the first week of April 1941 an unauthorized strike was called by organized labor at Camp Polk, Leesville, La., curtailing the erection of housing and shelter for selectees and other members of the armed forces of the United States; and

Whereas in the interest of our national security the strikes existing throughout the Nation should be condemned and abolished and future strikes prevented by appropriate congressional legislation, and the unjust and unfair labor practices of organized labor in the South should be entirely eradicated: Be it, therefore,

Resolved, That the Honorables JOHN H. OVERTON and ALLEN J. ELLENDER, United States Senators from Louisiana, and the Honorable VANCE PLAUCHÉ, Member of Congress from the Seventh Congressional District, be and they are hereby urged to introduce or sponsor legislation in Congress condemning, abolishing, and prohibiting strikes throughout the Nation, and, further, that they immediately take the necessary steps to eradicate the unjust and unfair practices of organized labor in the South; be it further

Resolved, That the Honorable SAM H. JONES, Governor of the State of Louisiana, be furnished with a copy of this resolution and that he be requested to communicate with our entire representation in the Halls of Congress urging the said Representatives to do all in their power to obtain an immediate solution of these problems; be it further

Resolved, That copies of this resolution be forwarded to State headquarters and to every post of the American Legion; to the mayor and town council of the city of Eunice, and to the local organizations of the city of Eunice urging them to adopt like or similar resolutions, and that a copy also be furnished to the press.

LOCAL COMMITTEE ON NATIONAL DEFENSE.
F. QUIRK, *Chairman.*
A. E. TYSON, *Member.*
C. J. DIRBES, *Member.*

[Resolution adopted at a regular meeting April 7, 1941, of the board of directors of the St. Landry National Farm Loan Association, having a membership of 347 farmer borrowers and loans of about $1,000,000]

Whereas the United States is making a serious effort to put itself in a position for

total defense and to help other countries resisting aggression; and

Whereas many labor leaders and unions appear to be obstructing our defense efforts unnecessarily and unreasonably, and, in many cases, we believe, treasonably, by striking, although from reports it appears that all union men are already getting very high wages and working very few hours; and

Whereas many thousand young men have already been called to the colors and perhaps another million will be called next year and they receive $21 per month and are subject to no minimum-hour limit: Be it hereby

Resolved, That this board go on record as condemning the present strike tactics of various labor unions; and be it further

Resolved, That the Congress be urged to take necessary steps to end such practices; and be it further

Resolved, That copies of this resolution be sent to the following: Hon. Franklin D. Roosevelt, President of the United States; Hon. Henry Wallace, Vice President of the United States; Hon. Sam Rayburn, Speaker of the House; Hon. Allen J. Ellender, Senator; Hon. John H. Overton, Senator; Hon. Vance Plauché, Representative; Hon. Sam Jones, Governor of Louisiana; Dr. R. L. Thompson, president of the Federal Land Bank of New Orleans.

P. P. HIDALGO,

Urge Enactment of Legislation To Provide Funds for Educational Facilities for Communities Adjacent to Defense Establishments

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

RESOLUTION PASSED BY MICHIGAN STATE LEGISLATURE

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks I include a resolution passed by the Michigan State Legislature urging the passage of legislation to provide funds for additional educational facilities in communities adjacent to Army establishments and defense industries.

The resolution follows:

House Concurrent Resolution 31

(By Mr. Fisher)

Concurrent resolution memorializing the Congress of the United States to provide funds for educational facilities in the communities where Federal funds are to be expended for housing of defense workers

Whereas the Congress of the United States has appropriated the sum of $150,000,000 to be expended through the Office of Production Management on housing of defense workers, which in Michigan would result in an acute lack in educational facilities in such communities, and the inability of the taxpayers in those communities to provide sufficient revenue to build the needed school buildings, supply the needed equipment, and furnish the required number of teachers to take care of the additional school enrollment; and

Whereas, in keeping with the defense program, the education of the youth of today, the citizens of tomorrow, in the true principles of democracy is imperative; Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the Michigan Legislature respectfully requests the Congress of the United States to appropriate funds for educational facilities in the communities where Federal funds are to be expended for housing of defense workers; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the President of the Senate and Speaker of the House of Representatives of Congress, and the Michigan Members in the Senate and House of Congress.

Adopted by the house of representatives March 13, 1941.

Adopted by the senate April 3, 1941.

MYLES F. GRAY,
Clerk of the House of Representatives.

Secretary of the Senate.

Treatment of Selective-Service Men

EXTENSION OF REMARKS
OF
HON. JAMES J. HEFFERNAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

STATEMENT AND ARTICLES BY JOHN A. HEFFERNAN, OF THE BROOKLYN EAGLE

Mr. HEFFERNAN. Mr. Speaker, I ask permission to extend my remarks in the RECORD and to include therein a statement of Mr. John A. Heffernan, well-known columnist for the Brooklyn Eagle, regarding suggestions for adjusting numerous complaints of the treatment accorded selectees; also contents of three newspaper articles by Mr. Heffernan on this subject:

I present these remarks because of the numerous complaints of the treatment accorded the selective-service men in their introduction to military life. The process of selection brings into the Army of this country the very cream of our young manhood. They are selected for their excellent qualities—mental and physical. No one expects that the treatment they receive shall not be rigorous; soldiers are not made by pampering. But Americans, free men as they are, conscripted under the Selective Service Act should not, in the very vestibule of an honorable service to their country find themselves the victims of petty and contemptible graft and corruption, the prey of cheap profiteering inside and outside the service.

I believe a committee should be established which will be able now to stop these despicable practices, make it a criminal offense for civilians or organizations to discriminate against soldiers off duty and outside camps, and oust from such camps all persons and groups of persons who are not prepared, voluntarily and without recompense to furnish aid and entertainment to the soldiers. Also, I hope that all laundry work, sanitary service, clothing, and toilet articles will be furnished free to them.

I feel that when we constrain these fellow citizens to sacrifice their normal lives, interests of free Americans—and it may be their blood or their lives for us—we should see to it that those of whom we ask so much should be given full and free service within the Army.

Following are the texts of various articles by me, which have been published in the Brooklyn Eagle, dealing with this vital subject:

[From the Brooklyn Eagle of March 19, 1941]

HEFFERNAN SAYS: IN '17 THEY SMILED BUT BOYS ARE SERIOUS TODAY

This Republic registered 17,000,000 potential soldiers in a day. It has run through the mill and inducted into service more than a million of the registrants.

This process has taken many months. Consequently I must assume that the long column of men I saw detrained at Camp Upton on Friday last were the pick of the crop, the very flower of American manhood, and I want to say right here and now that what I saw on Friday afternoon makes me wonder if our Government at Washington has gone completely haywire.

You see, I listened attentively to the arguments in favor of the enactment of the selective training law. I heard Colonel Hershey—I think that was his name—tell on behalf of the Army General Staff how well the trainees would be treated; what provision would be made for their health and wholesome entertainment; what precautions would be taken for their protection against the harpies and camp followers that seek their illicit and unclean profits on such occasions. And the most conspicuous sign that greeted my eyes in a ride through Camp Upton was this:

Boxing tonight; admission, 25 cents.

And the thought in my mind was this:

Cannot a government that is spending 39 billions for national defense and all-out aid to Britain provide a free boxing show for the men who may have to do the fighting and the dying?

ROOM FOR IMPROVEMENT

I know that the conversion of a free people into an army is rough business. And I know that it is easier for me to sit in my comfortable home and criticize than it is for staff officers to improvise in a short time proper accommodations for these new soldiers of the Republic. And still I think better provision could be made and should be made. For this is what I saw on Friday afternoon:

On both sides of the main road were wooden barracks, post headquarters, hospital wards, and also the old, weather-blackened remnants of the camp of 21 years ago. Muddy side roads. Men in khaki, in squads, and in loose groups. And columns of men in civies, carrying suitcases and bundles and marching over the muddy roads, with a uniformed corporal in front and uniformed men on the flanks of each group.

PROCESSING

At the northern end of the camp the tents of the Delaware One Hundred and Ninety-eighth Artillery were neatly arranged. I chatted with a soldier of that command, who stood at the intersection of the main road with the road leading from the railroad station.

"Four trainloads are being detrained now," he said, pointing to the long columns of uniformed marching men, marching down the road. "They are being processed—given some idea of infantry work and their uniforms. It'll take 4 or 5 days before they fall into

their stride. Our command is to move on to Massachusetts."

SMILES MISSING TODAY

Twenty-odd years ago I saw the draftees move into that camp, for the most part laughing and light-hearted, the "We're in the Army now" spirit beginning to take hold. But on Friday I didn't see a single smile. Not only the new arrivals but the men already on the job looked sober and glum.

Presumably this will pass. And I hope the many small impositions and cheats that robbed the boys of '17 of their small pay will not be repeated; that they will get their smokes and wholesome entertainment free, and that Upton—and other camps of its kind—will soon look less like a Prussian concentration camp for prisoners than it did last Friday afternoon.

It is, of course, a clearing station but for the young men entering it it is the vestibule to military service under the flag of the United States, and it should not be made repulsive.

[From the Brooklyn Eagle of March 30, 1941]

HEFFERNAN SAYS: "LET US ALL PITCH IN TO HELP OUR OWN ARMY"

There is a singular thing about our war effort that I never noticed during the World War. Letters come to me from aid-to-Britain societies asking for subscriptions. An old friend, a lady, who visited us not long ago, was knitting some worsted affair. She said it was for the British soldiers, and she asked me for the British royal colors so that she might get appropriately colored worsteds. Another lady holds a bridge party, the proceeds to go to a society aiding the British soldiers.

I can understand that. In England they are already under fire. And Britain's suffering, Britain's heroism, Britain's danger are stressed in the most powerful propaganda of the hour.

What startles me is the fact that there is so little of all this with respect to the members of the rapidly forming American Army. And I think that if we are really going the whole way in our effort to save the British Empire, this is a pretty serious defect. For if we want real enthusiasm in the Army which may in the final analysis be called on to determine the issue of the conflict, it might be well to pay a little attention to the young men who are putting on Uncle Sam's uniform.

My article on conditions at Camp Upton has brought response from readers. From Mrs. Harriet E. Quackinbos of Southampton, who spent the World War period in Europe, comes this comment, "Your article in the Brooklyn Eagle March 19 was read with much interest, especially the description at Camp Upton and more especially the line 'Boxing Tonight! Admission 25 cents.' To charge these boys 25 cents for a boxing match, or entertainment of any kind, is little short of disgraceful, and the other conditions you speak of are worse. Here we are, pouring our billions to help England and are asked to make sacrifices and even go on rations. Lavishly we are giving and haven't even decent accommodations for our own. Is this fair to our splendid sons and the American people? Billions are being given and given and our boys haven't a decent cot to lie on and are taken from clean homes and given a place to live not fit for a pig. I saw by the papers they had 400 cases of flu in 1 camp. What they need is a thoroughly reliable businesswoman at the head of these camps. One who will see the boys have clean beds and bedding and other arrangements for eating and comfort if they are to survive. There is no excuse for anything else."

H. A. Hay, of 855 President Street, says:

"Concerning the serious faces of 'the very flower of American manhood,' you noted as they detrained at Camp Upton recently, compared to our men of 21 years ago, it is quite one thing to enlist in the service of one's country under a great ideal and—as President Roosevelt will find—another to be dragooned into giving of services under lost ideals."

Val Bauer of Jamaica writes:

"It indeed was a pleasure to read an article with some sense to it. Yes; you hit the nail on the head. Most writers are sidetracking the truth. They write with rose-colored glasses, but the real truth is known by 75 percent of the people—so they can still write their bedtime stories and get paid for it

"Yes; I was one of those 24 years ago. We had an objective; we had plenty of morale; we won or helped win the war. I was doing ambulance work in the A. E. F."

Mr. Bauer is particularly indignant about the insurance charge which he says cuts into the meager wage of the soldiers.

I wrote of what I saw. I've heard much more. Of this I can only ask if it is true that the draftees find their dunnage bags short of shirts, socks, towels, etc., and complaints to the commissary department are answered with the statement that the soldier must pay for the missing articles?

In 1917 the draftees were light-hearted because they were to fight for an ideal. Don't let the present generation have forced on them the notion that they are fighting for a racket.

[From the Brooklyn Eagle of March 31, 1941]

HEFFERNAN SAY: WITH A FEW CHANGES ROOKIES COULD GET AN HONEST BREAK

In the year 1917 a fine American officer was in command at Camp Upton. He had seen hard service as an Indian fighter and in the Spanish war, and hoped to go overseas with the men in training amid the scrub oaks at Yaphank. They looked like good material, healthy faces and sturdy figures, a laughing million crowd of fellows who were being gluttons for work.

One day the general observed a young fellow standing on the road. The lad's face was sober. The general returned his salute and then placed a friendly hand on his shoulder. "What's the trouble, son?"

A GENERAL TALKS TO A RECRUIT

I knew the soldier, he lived home in Flatbush, and he told me about it later.

He said to the general that he didn't approve of fighting abroad; that he was perfectly willing to die for his country, but considered our policy one of intervention and had no heart for it. "Son," said the old general, "for many years I have been, as you are now, an American soldier. Day by day I've stood at attention when that flag up there was broken out in the morning and when it came down at night. I've come to regard any place where that flag flies as my country. I feel as badly today as you do. Do you know why? Today I had a medical test and am informed that I may not have the privilege you do not want of following the flag in service overseas. Soldier, shake hands with me, and good luck to you, boy."

So spoke Maj. Gen. J. Franklin Bell to a new recruit.

SPIRIT OF A. E. F.

In that spirit the A. E. F. was organized. If that spirit is not in our new Army now, something is wrong somewhere. When I was at Camp Upton a few weeks ago, I did not notice that spirit. Now, I have a letter from Fort Bragg, N. C. It is from a private, and I'm going to publish his kick and keep his name in confidence. He hasn't asked that, but—well, here is his story:

A TRAINEE WRITES

"I'm taking this opportunity," he says, "to write you a few things about the Army. After seeing your swell column the other day we know at least one person sitting back home knows the real low-down. We are a bunch of boys from New York, and, as you said, we don't do as much smiling as did our predecessors. Mr. Heffernan, we wouldn't mind this life at all if it were done a little bit different. None of us here, I assure you, would mind it a bit if we were here purely for defense purposes, but every officer we come in contact with has the same line. 'Come on, you fellows, put something in it because in a few months you'll wish you had when you're up against those Heinies!' They automatically discourage us; instead of building morale, they actually break it. We have to pay for every petty thing that happens."

HIS COMPLAINTS

His items of complaint are:

1. Canteen prices—25 cents for tooth powder, shaving cream, and other necessities that can be bought at the local stores for 10 cents.
2. Two dollars a month for laundry, whether sent in or not. Many of the boys would prefer to do their own washing. (Note: That may be a sanitary measure, but the fee is unconscionably high.)
3. Bus round-trip fare to nearby Fayetteville 40 cents, when 10 would be reasonable.

SOMEBODY'S GOT OUR RADIO

"In our company," continues this soldier, "we saved a few hundred dollars in a company fund by cutting expenses in the mess hall, chipping in and stuff like that, for a recreation room. Well, they bought a beautiful radio for it, but we don't use it because it's in the orderlies' room with the top kicks' and captain's desk. We have a few old tables and desks and some old magazines lying around. We built one old ping-pong table for 200 men and they want to charge us 5 cents a game if they put in a pool table, and here on the R. R. we are treated like bums or cattle. We pay full fare but they stick us in unventilated cattle cars.

"Well, Mr. Heffernan, we will survive, but with a few changes it could be swell."

AWAY WITH PETTY GRAFT

No one expects the Army life to be a bed of roses or a cantonment to be a hotel de luxe. But these men, the selectees, the cream of the crop of American manhood, shouldn't be subjected to the petty grafts. They're "in the Army now," but don't open their military career with the idea that it isn't a cause but a racket for which they've been drafted.

"With a few changes it could be swell."

These Things Are Ours

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

ADDRESS OF MATTHEW F. McGUIRE, ASSISTANT TO THE ATTORNEY GENERAL

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Matthew F. McGuire, the Assistant to the Attorney General, at the annual banquet of the Boston University Law School Association, Wednesday,

April 16, 1941, Parker House, Boston, Mass.:

There is a view in the city of Washington, which to Americans should be one of the most inspiring in all the world. It runs, straight as the crow flies, for a distance of over 2 miles, beginning at the Capitol, down across a beautiful landscaped Mall, past the Washington Monument and the famous reflecting poo., to the Lincoln Memorial, thence across the Potomac to the storied heights of Arlington, with Lee's mansion overlooking the river, to the rolling hills of Virginia beyond.

At the Capitol end, with the books of the law cradled in his arms and his juridical robes about him, stands Marshall, the soldier who fought with the men of Virginia in the great struggle that culminated in the achievement of our independence—Marshall, the jurist, who as a great Chief Justice welded the Colonies into the Federal Union.

At the other end, looking toward Marshall, sitting alone and in simple yet majestic state, is the solitary and melancholy figure of Lincoln, looking out not now upon the work of Marshall tumbled into ruin, or upon the smoke of battle rising out of the Shenandoah and over the hills of Arlington, nor upon States broken and dissevered about him, but upon a country united as never before, exceeding even his fondest dream, and risen to the heights of the heritage that is ours.

We as lawyers should be proud of that heritage, for while laymen contributed in an immeasurable degree to the achievement of our independence, it was lawyers who led the way, and the great names of the period read like a roster of the American Bar.

Public life, then as now, seemed to be the lawyers' natural forum.

They took the democratic idea and convinced the American people of its inherent wisdom, translated it into objective reality, laying the foundation for the Declaration of Independence and the Constitution of the United States and of our American commonwealth which was builded upon them.

They were the inheritors of those fundamental liberties which antedate the common law, which are written in the heart of every man by the Almighty Hand of the Great Law Giver.

They were the inheritors, too, of a common intellectual tradition and of a norm of private and public morality which, despite the religious upheaval of the sixteenth century, came down to them practically intact, so that when they said—as they did say—in our Declaration of Independence: "All men are created free and equal and endowed by their Creator with certain inalienable rights," they gave practical and concrete evidence of their belief in the overlordship of God and the spiritual kinship of man.

There were very few debunkers in those days. Men still clung to the fundamentals and the eternal verities, and although we may smile at the manners and customs of the period there was a substance to it and a fiber in it that somehow today we sadly lack.

Out of these fundamental concepts have sprung those things which are ours: Freedom of assembly, freedom of speech, freedom of the press, and freedom of conscience—the right of every man to worship God according to the dictates of his own heart—those fundamental freedoms which we take for granted.

If the democratic idea is to survive, and the constitutional government in America which has been predicated upon it is to be maintained, then our devotion to it must be something more than mere lip service or casual allusion.

For, despite anything that we may have done or failed to do, we find it threatened today by forces more sinister in their objective than any in human history since the day when Charles Martel overcame the hosts of Mohammed upon the field of Chalons.

A peaceful country, we suddenly find ourselves compelled to create a large standing army and to train it with all the ability and all the power we possess, to double and even triple the size of our fleet, to turn great numbers of our people to the production of instruments of violence because there are those who threaten not only our peace but our very way of life, who openly proclaim there is no God but Caesar, that the altar of the omnipotent state is the only shrine before which every head must bow and every knee must bend.

This philosophy of force is the new Alpha and Omega and must be the first and last concern of men who too long have labored under the delusion that human liberty and the God-given rights that spring from it is the foundation stone of civil society.

This conflict is not a mere struggle of armaments. It is not the revolution of a free people to determine a change in their government. It is the spawn of that atheistic culture and philosophy that stems from Nietzsche, Marx, and Engel, the matriarch of all those other "isms" that have sprung from generations of irreligion, the repudiation of fundamentals, false liberalism and the pursuit of the cult of pleasure, that reduce men to automata, that explains history by economics, and wages this war, not against armies only but against our very concept of society, against women and children, destroys homes, separates mothers from fathers and children from both, and holds over all the stark terror of the concentration camp and a slavery more terrifying from the Siberia of the czars and the galleys and the salt mines of ancient Rome. Such—this so-called total war.

How can we then be indifferent to this thing which is happening in Europe. It isn't a question of liking the British Empire, or disliking it. It is a question of meeting a menace that defies all pattern. It has leaped all barriers and like a tidal wave sweeps all before it.

Not so many years ago Europe seemed so far away. Within our lifetime the genius of the human mind has brought to us the knowledge of events as quickly as they have occurred, making them as near as though they happened at the doors. Giant clippers leave New York and in a few hours bring their shining hulls down upon the bay at Lisbon—distance no longer lends enchantment.

We cannot be indifferent any more than the people of this city and this commonwealth could be indifferent to what happened at Lexington and Bunker Hill, or any more than the people of this country could be indifferent to what happened at Waterloo, although the knowledge of the event was not brought home to them until long after it occurred.

This America of ours—under the providence of God, for it cannot be explained in any other way—has been designed to be the one shining oasis in a desert of darkness; it has been the haven of those pilgrims of human liberty who came here from many lands and in many Mayflowers to achieve it.

Go to the graves at Plymouth—see the terrible harvest of that first winter here in the old bay colony, and you will get a slight picture of what the achievement of liberty meant in America.

Go over to Charlestown and see the shaft that marks the battlefield of Bunker Hill and you will get some small idea of what the achievement of that liberty was to mean in blood—that you and I might enjoy it.

Go to Gettysburg and see what sacrifices were demanded of the generation that preserved it, and look about you on every side of this great country of ours, at its marvelous cities, its peaceful towns and villages, its rolling hills and fertile valleys, vibrating with the pulse and stuff of life, and you can see that it was not only blood but sweat that made America.

Nor do I need to remind you, whether your forebears came here in the first *Mayflower* or in the thousands of other *Mayflowers* which followed it, in the creaking barks and clippers of the forties, with their dark and reeking holds, or in the steerage of those ships of the latter era, of what we owe them for their contribution in sweat and tears to the wonder that is America. These things are ours. We have known their cost; so we should be neither Jew nor Gentile, Irish or English, French, German, or Italian, or any other composite or amalgam, but Americans, and resolve that the hates and prejudices of the older world cannot abide in the new under the bright light of a new day and the flaming splendor of a new sun. What we need to do is to never forget that fact.

You can depend upon it, to paraphrase the words of the great Edmund Burke, that the lovers of freedom will be free. Have no doubt about that.

What we need, however, is to recapture some of the idealism, some of the practicality and some of the spirit and the devotion of the founding fathers. What we need is to purge out the old leaven and to reaffirm our belief in the Fatherhood of God and in the fact that men exist, not for their stomachs or their purses, nor as the pawns of others, but for a destiny that is eternal, and that governments exist not as the instrument for the privilege of the few but for the greatest good of the many.

"Sursum Corda"—"Lift up your hearts," should be our battle cry, while presenting the phalanx of a united democracy against those who hate the name and would root out and erase, if possible, the very word from the hearts and minds of men.

It will mean sacrifices, sacrifices upon the part of labor and upon the part of capital; upon the part of those in high places and low; it will mean longer working hours and heavier taxes, all a small part which we are asked to pay to preserve the liberty that we now enjoy and the philosophy and the way of living it has engendered.

To us as lawyers, it is the call to a high emprise. To us as Americans, the call to a new crusade.

It means that this liberty of ours shall not be enshrined, as has been said, like the Roman gods of old, in cold and impersonal marble in some lone temple, on some lone hill, but a living, vital, vibrant thing—sprung from the Hand of the Author of all Good—and enshrined forever in our hearts and those of our children.

The Responsibility for the Just Treatment of the American Indians Is Now Up to the Democratic Congress

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

Mr. BURDICK. Mr. Speaker, I desire to present to the membership of this House the situation with respect to Indian claims. For 6 years I have sat here in Congress and closely observed how Indian matters are handled, and I am

forced to state that no class of our citizens is as unjustly treated as are the Indians. We hold up our hands in horror when we see a powerful nation in Europe overrun the territory of a weaker nation and impose the will of the stronger on the weaker. The principle involved in such action is abhorrent to our sense of justice. This Congress has already passed legislation which will require us to appropriate $40,000,000,000 to assist democracies in their fight for existence.

Mr. Speaker, are we as a great democratic nation free from guilt—have we as a powerful nation over-ridden a weaker one—have we by sheer force imposed our will on a weaker nation? Have we taken territory by force and driven the native inhabitants off the land? It seems to me that St. Matthew 7: 3 ought to start us taking an invoice of our own actions. This reads:

> And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?

Robert Burns put this in another way when he saw a louse running up the hair on an exacting lady's head. Here are the lines:

> O wad some pow'r the giftie gie us
> To see oursels as others see us!

This continent was inhabited when our first settlers arrived. For thousands of years the natives had roamed the valleys and the hills and brought home the game and fruit that a bountiful nature had provided. There was no want or suffering among the red men. There was plenty for all. No Indian claimed more land than he could use. There were no land offices and no homestead laws, but for the Indians' use the title extended back for generations. If one will turn to the early maps of North America, those published before this Government was established, it will indicate just where each tribe was located and time immemorial sets the date of their first settlement.

Then came the white men. They landed on the shores of a new continent and each explorer claimed the land for his king who never had any claim whatever to the land except the mere landing on ground that belonged to others. Spain, France, and England each laid claim to those portions of the continent which their subjects happened to visit, and, as they said "discovered."

It never occurred to the white visitors that it was necessary to make any arrangements with the natives for the use of the land. When the Indians objected to the visitors remaining, trading began, and the Indians, being children of the forests, were attracted by the brilliance of the white man's articles of merchandise, and for little or no consideration, the Indians were induced to give up their land. In many instances the title was obtained by the trading of intoxicating liquors—anything to cheat and defraud the Indian. When trading failed, the Indian was hunted down and killed. Whenever the Indian was provoked into fighting and went on the warpath and killed the whites, it was called an Indian massacre.

Not all of the colonists treated the Indians in this fashion, Pennsylvania and Rhode Island being noted exceptions, but as a rule the Indian was literally driven off his land.

Later on treaties were entered into between the Indian tribes and the United States, but in the greater number of cases the treaties were either broken by the Government or so interpreted that the Indian was the loser in 95 percent of all cases arising under treaty agreement.

To add insult to injury the Indians were taken out of the homeland and herded into Indian Territory or cooped up on smaller reservations. The sorrow of Longfellow's Acadia was enacted in every State in the Nation where Indians lived. They were forced to leave the land of their fathers and move into a country with new and strange surroundings.

The Government, then, upon its own motion, placed itself as guardian over the lives and property of the Indians. The Government said, in effect, that the Indian could not take care of himself and that a great altruistic Government would give him protection. In this position the Indian became helpless. Then opened up a great orgy of treaties entered into when the Indian was incapacitated and while the Government pretended to be his protector.

The Indian signed what the Government put in front of him. He had no suspicion that the Government which had placed itself over him as guardian would ever enter into an agreement that was misunderstood, or would be couched in slippery language, or would not be kept. But in this the Indian was doomed to disappointment. These treaties, for the most part, were not explained, or, if explained, were fraudulently explained, or contained language that eventually robbed the Indian of his rights under the agreement. If this did not happen, the agreement was simply ignored.

I have not time here to give the many, many examples of bad faith. I will cite one glaring example. In the treaty of 1868 at Fort Rice, Dakota, the Sioux gave up all title to their lands on the east side of the Missouri River, except established reservations, and in return the whites were to recognize the Sioux title to the lands west of the Missouri River. Within this territory was the Black Hills. As soon as gold was discovered in the hills, the whites rushed in, mined the gold, and took the land, and to this day the Sioux have never received payment for either the gold or the land, which the treaty established in definite terms as theirs. The case is still pending, and under our present policy will probably pend "as long as the grass shall grow."

In this case all the Sioux have ever asked is a chance to take their claim before the courts and prove their case. That is all any tribe or band of Indians asks—to go before the courts and prove its claims.

Here is where Congress gets busy. Congress will not permit them to go before the courts—Congress denies them the right—Congress is afraid they will prove their claim. Congress cannot bear to see any money paid on these claims because Congress wants to save the taxpayers the terrible burden of paying these claims. Congress is careful with public funds.

The Court of Claims was established 86 years ago and up to the present time claims amounting to a little over $2,000,000,000 have been filed, but the recovery had by the Indians on all of these claims has amounted to less than $40,000,000, or about one-half the cost of one battleship.

Under the House rules Indian bills come up usually under the consent rule, if they come up at all. That means that one Member can rise in his seat and object and that ends the Indian legislation. Congress always has a few Members who seem to just hang around waiting for Indian day. In fact these Members are actually proud of what they are doing, because such repeated objections confer on them the false title of "watchdogs of the Treasury." These same "watchdogs" would vote $40,000,000,000 to involve us in a war that is none of our concern.

Realizing that nothing could be done in Congress for the Indian unless public opinion was first created in his favor, I caused to be presented to both the Democratic and Republican conventions in 1940 an Indian plank that would cure this situation. The Indians had many friends in both conventions and both conventions placed an Indian plank in its platform.

The Democratic Convention took the matter seriously and passed a plank that, if enacted into law, will cure the situation. The Republican Convention put in just enough to catch a few Indian votes, but not enough to do the Indian any good.

The Democrats said:

> We favor and pledge the enactment of legislation creating an Indian Claims Commission for the special purpose of entertaining and investigating claims presented by Indian groups, bands, and tribes, in order that our Indian citizens may have their claims against the Government considered, adjusted, and finally settled at the earliest possible date.

The Republicans said:

> We pledge an immediate and final settlement of all Indian claims between the Government and the Indian citizenship of the Nation.

Examining now the Democratic pledge, it means something, and, since the Republicans were defeated, it does not make much difference what they said. The Democrats are in power, and it is up to the administration now to make good on this promise and pledge.

To carry out this promise in good faith, Senator THOMAS of Oklahoma has introduced a bill in the Senate, S. 1111, and Congressman O'CONNOR, of Montana, has introduced the same bill in the House, known as H. R. 4339.

I am reliably informed that the Attorney General's Office is against this bill, and I presume the Bureau of the Budget will be against it—this Bureau is usually against anything that is right—but that should make no difference. This bill should be passed, and, as one Republican, I will do more than my full part in passing it.

All of the Democratic "watchdogs of the Treasury" will be against the bill, and since the bill is a Democratic promise and pledge, we may rest assured that many Republicans will be against it; all of the Republican "watchdogs" will be against it, but that should make no difference. The bill should be passed. This is now the responsibility of the Democrats, and I am just wondering how they are contriving to side-step the issue. How will the Democrats avoid their promise? What can the Democrats say if they do not redeem their pledge?

There is only one way out for them and that is to say, as Wendell Willkie said, "Oh, that was just campaign talk." That explanation was to be expected from a phony candidate placed before the people by the House of Morgan, but it will hardly do for honest men to try it.

Importance of Speedy Appropriations for Federal Reclamation Purposes

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

STATEMENT BY HON. CLINTON P. ANDERSON, OF NEW MEXICO, BEFORE THE COMMITTEE ON APPROPRIATIONS

Mr. ANDERSON of New Mexico. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me April 17, 1941, before the Committee on Appropriations:

STATEMENT BY HON. CLINTON P. ANDERSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW MEXICO

In discussing the Federal reclamation program and the need for expediting completion of projects it includes, it should be noted that New Mexico, from 1930 to 1940, showed a growth in population of 24.9 percent. The rate of gain was second to only one State—Florida—and the pressure of population makes it more necessary than ever that our limited water resources be conserved and put to productive use through irrigation for the support of the more than half a million people within our borders.

Although less than a third of the State's harvested acreage is under irrigation, the irrigated land produces more than half of the crop values. You will, therefore, see the importance of irrigation in the life of New Mexico, especially in those areas which border on the drought region and have suffered from deficiencies in rainfall.

The one project in the reclamation section of the Department of the Interior appropriation bill to which attention is directed is the estimate of $450,000 for the Tucumcari development, which will bring under irrigation some 45,000 acres in Quay County in my State. This project will develop the only intensively farmed area on the railroad between Kansas City and the Rio Grande Valley. Water, as you know, will be secured from Conchas Dam constructed for flood control on the South Canadian River. It will be carried through a 75-mile canal to fertile lands that need only an assured supply of water to make them productive.

The Tucumcari project will make available for settlement over 300 farmsteads. It will produce hay and grain for the support of the livestock industry that needs stabilization of forage supplies, and other products will be consumed by the increasing population in the State. Many large holdings, now running as high as 1,700 acres, will be subdivided into family-size farms for the settlement of newcomers in eastern New Mexico.

But if this project is to be of service in providing settlement opportunities there must be more speed in advancing its completion, and speed calls for larger appropriations. With $3,946,000 required to complete the undertaking after the fiscal year 1942, it will require nearly 10 years to bring water to all of this land if appropriations are continued at the rate proposed in this bill—$450,000. Since the Federal Government has already invested $4,000,000 in the project, it would seem to be good judgment to make this money produce results as soon as possible by completing the necessary facilities without delay.

New Mexico knows of the beneficial results that have come from the construction of the Carlsbad project and the Elephant Butte district facilities of the Rio Grande project. Tucumcari will contribute as much proportionately to stabilization of an agricultural area and in creating a market for manufactured products of the Midwest and East as the Carlsbad and Rio Grande projects have done.

There is another phase of the reclamation program in which New Mexico is interested along with all the arid and semiarid States. And that is in advancing surveys and investigations looking to the utilization to the fullest of the available water supplies in this area. Reports indicate there are about 430,000 acres in New Mexico which can be brought under irrigation if water is conserved.

Of greatest personal interest to me are studies and investigations which the Bureau of Reclamation has under way on the Middle Rio Grande Conservancy District, where flood control and supplemental water supplies are of the greatest concern to an area that has long been irrigated as a private undertaking.

The Middle Rio Grande Conservancy District is located in the valley that has been continuously irrigated for 300 years. We have every sort of a problem in that valley. It needs the care and attention of the Reclamation Service. It needs to have the Reclamation Service devote a lot of time to a study of how far it can go in the solution of present problems.

These problems include the control of floods, the control of silt and the responsibility which the Government owes to Indian population along the river.

I do not want to take the time of the committee to do more than outline some of these things. I just want the committee to remember that millions of dollars of Federal money are invested in the Elephant Butte Dam and Reservoir and that the Middle Rio Grande Conservancy District embraces in its territory the mouth of the Rio Puerco River. This Rio Puerco stream probably dumps more silt into the Elephant Butte Reservoir than all the rest of the Rio Grande system. If the Reclamation Service and the various other agencies now involved can stop this deposit of silt in the Elephant Butte Reservoir they will thereby protect huge investments which this Government has already made.

Secondly, the conditions in the valley constitute a recurring flood menace. The bed of the Rio Grande through central New Mexico is rapidly building up. It is, for example, several feet above the city of Albuquerque, although it borders that city. It is not a situation which should be allowed to continue without Government attention.

All through the area are the homes of the Pueblo Indians. They are wards of the Government. Their lands include many thousands of irrigated acres. It will be cheaper to take care of their interests now than to wait until the problem becomes aggravated.

I recognize that the possibility of the transfer of this project to the Reclamation Service is not before your committee. I am greatly interested in it, and I only mention it at this time to urge this committee to make available to the Reclamation Service ample funds for the pressing problems which require immediate investigation and study and which prudence demands shall not be allowed to drift.

People are moving in search of the sun. Florida and New Mexico and California—these are the three fastest-growing States in the Union, and in every one of them the lure has been outdoor, sunny living. If the population of New Mexico continues to increase—yes; if we are to feed and support decently the present numbers within its borders—more irrigated land is needed, and quickly. No good end will be accomplished by sending these people on to other States or returning them to the drought and other areas from which they have fled. The Bureau of Reclamation should have more than $500,000 annually for this purpose.

The investigations will doubtless uncover areas in New Mexico which can qualify under the water-conservation and utilization program for the irrigation of small projects or the rehabilitation of existing water supplies. For that reason, the State is concerned about the adequacy of the $3,500,000 appropriation of reimbursable funds. Spread over the Great Plains and States to the westward, this amount will not go far enough to provide speedy rehabilitation for areas threatened with retrogression by drought or shortage of water supplies.

No Adequate Defense Against Air Offensive Warfare Yet Discovered—Vulnerability of the Panama Lock Canal

REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

Mr. MANSFIELD. Mr. Speaker, the news about the war in Europe is illuminating with respect to offensive and defensive warfare in the air. We read that German bombers attacked London from dark until dawn and that four or five German planes were brought down. In Greece they say that waves of German bombers precede the German infantry and tank attacks to perform the same functions that were formerly performed by artillery. Now, instead of infantry attacks being preceded by an artillery barrage, they are preceded by barrages from the air. If the Allies in Greece have been able to shoot down any appreciable number of attacking bombers, the newspapers do not tell anything about it.

Apparently any defense against air attacks at night directed against a large

target, fixed in location, is woefully inadequate. In the daytime air attacks may be beaten off by defending fighter planes, but even then some bombers appear to slip through any defense. Obviously, bombers high enough in the air can fly over a fixed target either in the daytime or at night; and if the target is large enough, hits are likely to be scored. As yet we have heard of no defense that can prevent this.

The lock canal across the Isthmus of Panama includes one double set of triple flight locks on the Atlantic side and two double sets of locks on the Pacific side. There are also two or three dams holding the lock pool 80 feet above sea level. If a dam or one set of lock gates should be breached, the pool would drain out. If the pool should be drained, the canal would go out of operation for a long time, perhaps for several years.

The existing situation makes me extremely apprehensive for the safety of the Panama Canal. It should be converted into a sea-level canal as soon as practicable.

Stabilization With Pensions

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

ARTICLE BY WILLIS OVERHOLSER

Mr. VOORHIS of California. Mr. Speaker, the following article by Mr. Willis Overholser is, in my opinion, well worth the careful reading and consideration of Members of the House. I have therefore asked permission to have it printed herewith in the CONGRESSIONAL RECORD:

STABILIZATION WITH PENSIONS—FINANCING BY A COMBINATION OF TAXATION AND NEW CURRENCY

(By Willis A. Overholser)

I have heretofore reviewed the two leading pension bills pending in Congress. These bills both provide for financing pensions solely by means of increased taxation. As I stated in effect in a previous issue, I believe that it is a mistake to confine the financing of pensions solely to increased taxation. The chief economic need for an old-age-pension system is to increase the actual circulation of buying power and aid in the correction of a deflationary condition. Of course, there are other good reasons for an old-age-pension system, such as the social need of restoring millions of old people to some state of economic decency, who have been impoverished by social causes—for example, by the great economic collapse of 1929.

However, returning to the economic need of increasing buying power in actual circulation, it should be apparent that financing the payment of pensions solely by means of increased taxation may fail miserably to aid in fulfilling this economic need. Thus, if money is taxed from some and turned over to others to spend, those who pay the taxes will have as much less money to spend as those on the receiving end will have more to spend.

VELOCITY OF MONEY

Some contention is made that this will increase the velocity of money—that is, increase the turn-over of our existing money supply—and thereby increase business activity and production. To the extent that the money is taxed out of the hands of people who are already spending, or investing back into circulation, all of their respective incomes as fast as they receive them—and this includes a very sizeable proportion of our population—this contention is obviously erroneous. In such cases the velocity of money actually will be retarded to some extent. On the other hand, to the extent that money is taxed out of the hands of people who are not spending or investing back into actual circulation all of their incomes as fast as same are received, this contention may be correct. However, even this would not necessarily, under all circumstances, be true, since increased taxation of such persons often causes them to cut down in the rate of their spending and investing. Furthermore, during extreme deflationary periods, the incomes of most wealthy persons are greatly reduced along with the incomes of the rest of the population.

Thus, in general, increased taxation is deflationary in character and retards instead of increases the velocity of money. I am quite sure that most leading economists will agree with this statement. It, therefore, seems to me, that the ideal pension system should provide for financing pensions partly through an increased supply of Government money and partly through taxation, on some balanced basis, and in the remainder of this installment I shall call attention to the general provisions of a plan which I believe would provide such a balanced basis.

INCREASED GROWTH REQUIRES MORE MONEY

In this connection it should be noted that with an increase in population and with a normal and healthy increase in industrial growth, there is a constant need for a proportionate increase in our money supply. Some people will talk about making up for some of this needed increase by an increase in the velocity of money. However, the velocity of money is not something that can be regulated like volume. Furthermore, there is a limit to the velocity of money, just like there is a limit to the velocity at which an automobile can travel. When velocity of money does not increase, it is necessary to increase the volume of money to take care of increased needs.

Most of the increases in volume of money during recent history have been increases in bank-credit money. Increases in that type of money, however, are based on increases of interest-bearing debt. As a result the country has gotten badly mired in debt. It is terribly unsound to try to depend upon debt-based money to meet our needs for increases in the volume of money. The general need for such increases, being social in character, should be met by increases in constitutional debt-free money issued by the Government, and an old-age pension system would provide an excellent channel for getting such needed increase into actual circulation.

ADEQUATE SAFEGUARDS AGAINST INFLATION

Such increases, of course, can and should be supplied in a manner which will provide adequate safeguards against harmful inflation. Both inflation and deflation are reflected in changes of the general commodity price level. In fact, while the rise or fall in the prices of individual commodities (except in the case of monopolistically controlled prices) is governed by the supply and demand for those commodities, respectively; nevertheless, the general rise or fall of prices in general is largely governed by the supply and velocity of money as compared to the demand for money.

Thus, a general lowering of prices is indicative of an insufficient volume and velocity of money, and reveals a need for increasing the volume of money in actual circulation. On the other hand a general rise in prices—except in cases of general scarcity, such as is produced by war—is indicative of too large a volume of money, and reveals a need for a withdrawal of a part of the volume of money from actual circulation. We have at Washington in the Department of Labor a Bureau known as the Bureau of Labor Statistics which collects and records the changes in prices of over 800 different commodities. By weighting the various commodities according to their importance in trade, the Bureau arrives at an index number for ascertaining the relative level at any time of general prices. In this manner the relative position or changes in the general commodity price level is traced from week to week, month to month, and year to year. This, of course, reveals what the purchasing power of the dollar may be at any time, and records from time to time the changes therein.

GENERAL PRICE LEVEL GAGE

In financing pensions on some balanced basis, partly with taxation and partly with increases in the money supply, the general commodity price level should be used as a scientific indicator. In this manner both harmful inflation and deflation can be avoided, and the purchasing power of money can be stabilized. It would be necessary for Congress to determine at what level money should be stabilized. I make no proposal in this respect, but will say that the most common suggestion made is the 1926 level, which would involve a slight rise in the present price level.

Also, I offer no exact proposal as to the amount of the monthly pension that should be paid to those of retirement age. The Gallup Poll indicates that there is wide support for a $30 to $60 per month pension. Whatever pension is paid should be fixed, instead of fluctuating, in amount in order to provide greater stability. Neither is it necessary for the purpose of revealing the important distinguishing features of this plan to suggest the exact type of taxation that should be used. Other proposals have embraced a transaction tax, a gross-income tax or an excess-profits tax. The important thing is that the tax when levied should be levied and collected on a monthly basis.

SALIENT PROVISIONS

Under the plan herein suggested new United States legal tender currency would be issued and used in paying the first month's pensions. This should be repeated during subsequent months until the general commodity price level reaches whatever level is adopted as the standard level, assuming that a level, higher than the existing level, is adopted as the standard for stabilization purposes.

If the price level goes above the standard during any month, then a 1 percent tax (of whatever type is determined upon) automatically should go into effect and be collected throughout the country during the ensuing month. The revenue derived from the tax should then be applied toward the payment of the next month's pension, and if the proceeds of the tax prove insufficient for the full payment of that month's pension, then the deficiency should be provided for by the issuance of new currency. If the price level does not return to the standard level during the next month, then the tax should be increased to 2 percent, and so on until the full amount to be paid in pensions is raised by taxation. In this manner adjustments should be made between the tax and new currency so as to maintain a stable dollar. If other checks on inflation are desired, provision can be made for prohibiting

banks from using the new currency as fractional reserves for credit expansion purposes, or provisions can be included for increasing bank reserve requirements generally. These latter provisions, along with the general provisions of the plan above proposed, would provide a greater bulwark against harmful inflation than has ever yet been established in this country. I realize that all these matters involve many questions in regard to money and banking. In future issues I intend to embark upon a series of articles on our money system, including matters involving certain banking laws and practices.

Humanity Is Threatened With Universal Bondage

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

ARTICLE BY HON. PRENTISS M. BROWN, OF MICHIGAN

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Senator PRENTISS M. BROWN, of Michigan, which was published in the Detroit Jewish Chronicle of April 11, 1941.

[From the Detroit Jewish Chronicle of April 11, 1941]

HUMANITY IS THREATENED WITH UNIVERSAL BONDAGE—SENATOR BROWN POINTS TO PASSOVER LESSON AS SUPREME EXPRESSION OF MORAL CODE IN THE PRESENT FIGHT FOR LIBERTY

(By the Honorable Prentiss M. Brown, United States Senator from Michigan)

A distinctive feature of our times is our forced return to first essentials. Principles that once aroused inspiration and enthusiasm, for which men and women once fought and died and that in more recent days had become trite, slightly commonplace formulas thoughtlessly repeated by a somewhat bored humanity, have once more come into their own. "Equality of the citizens before the law," "All men are born free and equal," "Inalienable rights of mankind," were long subject to indifferent observance and trivial breaches alike. Now that a gigantic effort has been made to divorce humanity from these principles, to abrogate the Ten Commandments after 4,000 years, we are shocked into a rediscovery of the fundamentals.

After an age-old matter-of-fact acceptance of these eternal truths as self-evident, the world suddenly finds itself face to face with a brazen attempt to overthrow them. Faced by this danger, the world rises in their defense. As of old, as in the days when the ideas of equality, of tolerance, of physical and spiritual freedom were first proclaimed amid a glorious fight against primeval shackles of primitive humanity, these ideas proved once more that they are capable of arousing devotion and sacrifice. We discover that our traditions of democratic government are the technique by means of which these eternal truths are translated into political and social terms. Viewed from this angle, the Declaration of Independence, the Bill of Rights, the fourteenth amendment, are a restatement of the moral code of democracy and of religion at once.

This awakening is proceeding apace the world over, albeit in many countries under the heavy hand of oppression. But nowhere has the shock of awakening come with an impetus stronger than that experienced in this country. Indeed, more than any other country of the modern world does the American Nation owe its existence to the prevalence of the moral code of democracy.

Discovered by refugees from the Inquisition of Spain, settled in turn by puritanical refugees from England, by Catholic refugees from Ireland, by liberal refugees from Germany after 1848, and again in our days, by millions of poverty-ridden Slavs and Jews, Italians and Greeks, Scandinavians and Orientals, America, as we know it, is a monument to the equality of races, to the freedom of the individual, and to the essential unity of mankind despite political and religious differences. A long succession of placid days has permitted us to forget our true character and task.

The stormy days we live through now compel us to take stock of essentials and to rededicate ourselves to their service.

All this is peculiarly apt to be recalled by my Jewish cocitizens on their ancient festival of Passover, the holiday of liberation from slavery. It was the darkest hour of Israel's history, the hour of Egyptian bondage, that led to the supreme expression of the great moral code which has been laid down on Sinai and has remained the cornerstone of civilization ever since.

At present it is not one race alone that is faced with the revival of slavery. It is humanity as a whole that finds itself threatened with universal bondage. Together we shall face the danger, together we shall overcome it, and together we shall vow allegiance to our old American dream—the dream of a free society of free and equal and mutually tolerant men.

Movie Producers, Think of American Interests First Before You Disseminate Dastardly War Propaganda

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

ARTICLE FROM THE MILWAUKEE SENTINEL

Mr. THILL. Mr. Speaker, the motion-picture producers of today are seemingly reenacting the war propaganda role played by the movies prior to the last war. Why is it that these men who through cinema art mold so much American public opinion, cannot or will not follow the pleas of those who were tools or dupes in the same field before the last war? It is my hope that the movie producers of America will see the wisdom and have the courage to act in the interests of American blood and treasure. Members of Congress and the country might gain a new insight into movie war propaganda by reading the following newspaper article. It details the part regretfully played by Lillian Gish in propaganda films before the last war. Members of Congress have had their sleep disturbed and have been filled with remorse because they followed the crowd, were fooled, and voted for war in April 1917. Let us pray to God that this may never happen again.

[From the Milwaukee Sentinel of Wednesday, April 2, 1941]

LILLIAN GISH DEPLORES HER ROLE IN PULLING NATION INTO WORLD WAR THROUGH PROPAGANDA PICTURES—AMERICA FIRST PARLEY URGED TO OPPOSE INVOLVEMENT—BRITISH, FRENCH BACKED FILMS INTENDED TO SWAY UNITED STATES

CHICAGO, April 1.—How do you go about it to put to sleep a nation's natural aspiration for peace and to create in its place a million-voiced scream of hate and a clamor for war?

A formula for the performance of this trick was told today by one who learned it from an expert—and wishes she hadn't. She is Miss Lillian Gish, star of stage and screen. And she told the secret in the grand ballroom of the Hotel Sherman at a rally sponsored by the Chicago chapter of the America First Committee.

PROPAGANDA FILMS

A quarter of a century ago Miss Gish was making powerful propaganda pictures, directed by David Wark Griffith, for the purpose of luring the United States into a war "to make the world safe for democracy." She was very young, and she believed she was doing right. Today she told how it all happened:

"Mr. Griffith was approached by Lloyd George, Lord Beaverbrook, and the heads of the British and French propaganda departments about making films to interest Americans in fighting for them * * * and I found myself on a boat bound for France.

"We got 86,000 feet of film, with everyone working for us, from the King and Queen of England to the French and British common soldiers, before we sailed for home. From this material we made three pictures."

GIRL LOSES MIND

"You may recall scenes from one called Hearts of the World, the story of an English girl who was about to be married to a French boy when the war broke out. She sees her home and mother and grandfather blown to bits before her eyes, loses her mind, goes roaming along the battlefield, hugging all that is left of her wedding veil, stumbles upon her fiance, wounded and unconscious, and she goes to sleep peacefully at his side.

"In another scene three children, left alone in a dugout with their dead mother, dig her grave and bury her without help.

"These were effective scenes, calculated to stir the emotions of Americans so they would be willing to fight and die for the cause.

"The other pictures we made were The Great Love, a story of English bravery under Zeppelin attack, and The Greatest Thing in Life, the story of an American snob who finds himself in a shell hole, holding in his arms a dying Negro soldier.

"These were good stories, deeply moving. But when we ran them again a few years ago, long after the war was over, the scenes that showed the Huns, as we called them, and the 'Beast of Berlin' as we called the Kaiser, brought only laughter. * * * But now, with propagandized hysteria at its present peak, who knows but that those who laughed might take them seriously again. * * *"

PROPAGANDA REVEALED

"I remember that people asked us if it was true that the Germans cut off the hands and

legs of old people and crucified children. Sir Philip Gibbs afterward admitted, in the twenties, that such stories were sent out for propaganda purposes—propaganda that made our people talk and think like idiots.

"I am not proud of the part I played in spreading hatred. Hate is like a boomerang. It seems to me that this is a time when Americans must decide whether they love some other country better than their own. Those who do should go to that country and offer help. But those who love this country most should do something to keep it out of ruinous war, if only by sending a penny postal card of protest to their Congressmen and Senators."

Another speaker at the rally was Gen. Thomas S. Hammond, former head of the Illinois National Guard, whose chief point was that, even though the lend-lease bill has become the law of the land and must be loyally accepted as such, there is still a task for wise leadership in the problems which arise under that law.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

STATEMENT ENDORSING SEAWAY

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a statement which came to my desk in relation to the Great Lakes-St. Lawrence seaway entitled "A New Frontier for America":

A NEW FRONTIER FOR AMERICA

The St. Lawrence seaway and power project proposes a direct route to the Atlantic through the St. Lawrence Channel, providing a minmum depth of 27 feet as contrasted with the present limit of 14 feet through the existing canals on the St. Lawrence River.

Studies by the Federal Government indicate that this new channel would accommodate more than half of the world's cargo tonnage and would open up a vast new inland empire benefiting 40,000,000 of our people and about 20 States on or near the Great Lakes.

The effect of the seaway would be to create a new frontier in America and open up vast channels of trade not now enjoyed by the great inland empire. Studies by the United States Department of Commerce indicate that it would not only be a tremendous aid to defense but that it would have incalculable benefits from a lasting long-range standpoint.

From the large perspective of national welfare, the seaway project has received the enthusiastic endorsement of every single President since William Howard Taft. A plank in the Republican Presidential platform of 1932 endorsed it. A Republican President negotiated a treaty with Canada in 1932 and a Democratic President supported it in Congress.

Opposition comes principally from powerfully organized local groups such as power interests in New York State, the railroads, certain Great Lakes carriers, and Gulf, Atlantic seaboard, and a few Great Lakes ports now collecting tolls for the transshipment of goods for the export market.

They say the project would be wasteful, impractical, a threat to present communications systems, and that ice and fog would cripple the open ocean route for much of each year.

They imply that the project is new, whereas it is simply a modernization of existing facilities. Traffic has moved through the St. Lawrence canals consistently for over a hundred years in constantly increasing amounts, particularly since the opening of the Welland Canal in 1932. In 1938 more than 8,000,000 short tons of lake freight moved through these canals eastward to tidewater. So the navigation phases of the project are not new. They seek simply to modernize outmoded channels which have reached the limit of their carrying capacity.

Of the more than 2,000 miles of lake route from Duluth to the sea, only 48 miles of rapids and shoals stand in the way of ocean-going commerce. This hindrance blocks the stretch between the outlet of Lake Ontario and Montreal.

As early as 1911 the Aluminum Co. of America, on whose output hinges the speed of aircraft production for defense, recognized that dams for hydroelectric power development in the International Rapids would also aid navigation. Today the Aluminum Co. buys much of its power from Canada. Canadian defense industries may soon require this reserve power. The power phase of the St. Lawrence seaway project can develop 2,000,000 horsepower a day, half of it for American consumption, with the cost self-liquidating. In the national-defense effort, it can obviate a bottleneck; in peacetime, it can bring cheap power to domestic consumers, farmers, and businessmen in New York State.

Other phases of the seaway call for dredging and new lock construction in other sections of the route, principally in boundaries contiguous to Michigan.

Government authorities estimate the total cost to the United States at $256,170,000, including all the channel improvements from Lake Superior to Montreal, of which $90,000,000 would be borne by the State of New York, leaving $166,170,000 as the cost to the Federal Government. This is the approximate equivalent of the cost of two battleships.

In return for this cost, seaway proponents cite figures to show that Great Lakes shipyards, now largely idle while coastal yards are booked solid 2 years ahead, could handle a billion dollars' worth of ship contracts—if the ships could be moved to the sea.

Completion of the seaway will enable all types of fighting ships except battleships and airplane carriers to move through to the Atlantic. If construction of the project started the same day as the keel were laid for a heavy cruiser in a Great Lakes shipyard, the channel would be ready by the time the cruiser was ready to move out to its place in our new two-ocean navy. It would take longer to build a cruiser at tidewater today because, since all shipyards are already busy with defense work, new ways would have to be built, and this in itself would take a year and a half, in addition to the time it takes to build a cruiser.

This defense aspect of the St. Lawrence project moved President Roosevelt to say of it: "It is now a vital necessity * * *. The United States needs this great land-locked sea as a secure haven in which it will always be able to build ships and more ships in order to protect our trade and our shores.

"It (the seaway) means a more secure nation. It means a continent protected and served by the additional shipping built in inland shipyards. It means more industries, both defense and domestic, thriving on the cheapest power in history. It means more comforts in the homes of many cities and rural areas. It means more work for the ordinary citizen in shipyards, factories, and other transportation services connecting the center of this continent with the great highway to and from our national and international market."

After the defense effort is ended the Great Lakes shipyards can help meet the maritime needs of the world. Before the outbreak of the present European war America had less than one-seventh of the world's total ship tonnage. If this country is to aid in world rehabilitation, ships will be needed far beyond the present building capacity of coastal shipyards. It is also agreed by traffic experts that after the war competition among nations for world trade will be intense and low transportation costs will be a vital factor. This will be particularly important in neutral markets such as South America, where strong-arm methods of commercial competition by totalitarian countries has already undermined the market for American products. Cheaper transportation costs will make it possible for this country to compete with cheap labor costs of other countries without reducing the standard of living of American workers.

Opponents of the seaway say that it would bring to the Midwest a flood of cheap European goods in competition with American products. The mere fact that this has not happened on Atlantic coast ports, which are closer to Europe and on which transportation costs of cheap goods would be even cheaper than into the Great Lakes area, is proof enough of the fallacy of this argument.

Rather than cheap foreign merchandise, in-bound cargoes would consist of the much-needed raw materials for the great manufacturing plants of the Midwest. The automobile industry alone now imports 300 different commodities from 56 foreign lands. Raw rubber would come in for the great tire plants of Ohio. Principal in-bound cargo through the limited way of the Welland Canal in 1939 was wood pulp for paper making, of which there is a shortage in America. Lower transportation costs on all these needed raw materials would tend to reduce costs of finished manufactured articles, and greater consumption invariably follows lowered costs and prices. This would be true of the domestic market for cars, tires, newsprint, etc., as well as of the export market. More than 800 industries in Michigan have a stake in foreign trade, and one-seventh of Michigan pay rolls depends on it. The story is the same for western New York and Pennsylvania, for Ohio, Indiana, Illinois, Wisconsin, and Minnesota. Each of these areas would benefit by the cheaper cost of incoming and outgoing cargo.

Opponents say the seaway would offer fog and ice hazards and would be closed 5 months of each year by reason of climatic conditions. A recent Government study discloses that fog conditions from Lake Ontario to Montreal are relatively better than in New York Harbor.

The accident experience on Great Lakes canals is better than on the Panama Canal. Admittedly the St. Lawrence would be closed for a minor part of each year by ice. The same thing is true of the Sault Ste. Marie Canal and locks connecting Lakes Superior and Huron, one of the northernmost points on the entire route. Yet the Sault locks in 1 year carried 100,000,000 tons of shipping, the approximate equivalent of the combined tonnage of the Panama and Suez Canals and the ports of London and Liverpool (before the present war). The seaway in the open months of the season would be one of the busiest ship routes in the world.

Government engineers say that the deeper channel would have a potential of 25,000,000 tons of cargo a year. This will permit 16,000,000 tons of new traffic over the present movement over the 14-foot channel.

As important as the savings in transportation costs is the relation of cheap transportation to the building abroad of American factories with American capital and at the expense of American pay rolls and American

industrial activity. Yet Michigan manufacturers have found it necessary to build extensive foreign plants in order to get costs down to a competitive basis in world markets. Several plants built in Europe by Michigan industry would not have had to be built, and would not have been built on the direct testimony of the operators had the cheap transportation of a deep St. Lawrence seaway been available.

So, not only is lack of a deep sea channel holding the great Midwest back from its full potential development but it has forced emigration overseas of American capital and manhours of labor through lack of completion of only 3 percent of the entire St. Lawrence route.

The pros and cons of the Great Lakes seaway boil down to this: Sectional selfishness as contrasted with national welfare. Opponents have raised specious claims unsupported by facts. Every single valid negative argument has been answered by factual data compiled by surveys carrying the full weight of the authority of the United States Government. Lacking factual arguments, those who would kill this plan for the betterment of the country have fallen upon the familiar devices of trying to scare labor into opposition and of rattling political skeletons.

Every official survey shows that labor would tremendously benefit, including miners, railroad workers, farmers, and many others.

The political bogey is answered by the record. President Roosevelt enthusiastically endorses the project. He was preceded in this attitude by ex-Presidents Hoover, Coolidge, Harding, Wilson, and Taft. Republicans and Democrats alike have put the St. Lawrence seaway above party politics. They have seen it as a great boon to America.

They have seen it in the statesmanlike perspective of true national welfare—the means of opening a great new frontier for the enrichment of all America.

Social Security Program Inadequate for Aged Persons

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

Mr. PITTENGER. Mr. Speaker, from time to time I receive letters which constitute real evidence of the failure of the social-security law to benefit aged persons. Under the present set-up, the amount of funds which one of our pioneers can receive is determined by the State or its municipal subdivisions. They call it old-age assistance. If a State does not carry out its responsibility, then the aged people suffer.

One of the best bits of evidence that I have received, showing the need for a national old-age pension law, is contained in a letter which came to my office today.

I have had many other letters of a similar character. I do not here use the writer's name because I have not had permission to do so, but the facts as set forth in his letter to me are as follows:

A large number of my friends and neighbors, who know my circumstances, have convinced me that I should write to you and explain my problem.

I am an elderly man of 74 and have received old-age pension for the past 4 years. The sum has been $20. This money was supposed to buy my clothes and pay my board, but out of this amount I have tried to take care of my wife.

Others have received clothes and such and then again there are many more who could not get these things through their local relief.

I have no way of getting to town or having my groceries hauled out without paying for it so this takes a small amount of my pension, too.

But it is this that I wish to tell you about. In January of this year my wife became 65 and upon that date made her application for old-age pension. On April 1 this year we received our checks, her first, and instead of her getting a small additional check, my pension was cut in half and we each received a check for $10, no more than I alone received.

We are both eligible to draw a pension because we have no one who has enough to take care of us. One son, however, furnishes us with a small house and gets our fuel. But $20 won't buy our food and clothing. Right in the same community there are other couples living under much better conditions than which my wife and I live in, and they are getting from $15 to $22 each, with extras for medicine and arrangements for purchasing false teeth. Neither my wife nor I have teeth and do not expect to get any. All we ask for is enough to eat and wear.

There are pending in the House of Representatives various national old-age pension bills. I do not here undertake to favor one bill at the expense of another, but I want to point out that all of this talk when the Social Security Act was passed about doing something for the old folks was just talk, and there is still a duty to pass effective legislation which will permit our aged pensioners to have some of the comforts of life in their old age.

This case of a man 74 years of age with a wife 65 years of age and getting the magnificient sum of $20 a month clearly illustrates the failure of the present social-security law. It is an appeal to Congress to do something, and the way to handle this problem, in my opinion, is to pass a national old-age pension law.

The A. A. A.'s Expanded Program

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

EDITORIAL BY BERRY H. AKERS, EDITOR OF THE FARMER, ST. PAUL, MINN

Mr. H. CARL ANDERSEN. Mr. Speaker, the expanded A. A. A. program as recently announced by the Department of Agriculture must be studied very carefully as to its effects upon prices farmers should receive for their commodities, produced to feed our Nation, and needed also by other nations today.

The announced program has for its purpose—and I agree heartily with that purpose—the encouragement of the production of food products for those nations facing starvation as a result of the European war. By its purchase power the Government proposes to hold up the price of hogs at Chicago to $9 per hundredweight; that of butter at 31 cents per pound; and that of eggs at 22 cents per dozen—all Chicago prices.

These assured prices are all below parity. What the farmer is interested in knowing is whether these prices shall prove to be a ceiling or the floor of the farm-price structure.

A very able editorial on this subject appears in this week's issue of The Farmer, published in St. Paul and edited by Mr. Berry H. Akers. This editorial, entitled "The A. A. A.'s Expanded Program," gives much food for thought as does also one entitled, "Would Keep Prices Down," published in a previous issue of The Farmer.

May I request of the Members of the House that you take the necessary few minutes to read both of these editorials, printed herewith under permission accorded me:

THE A. A. A. EXPANDED PROGRAM

The A. A. A. is expanding its ever-normal granary program into a food program which has two objectives: First, to assure us, Great Britain, and her allies an adequate supply of pork, dairy, and poultry products; second, to safeguard the income of the producers of these products.

To accomplish the first objective, farmers are being asked to increase pork production by raising more hogs and feeding them to heavier weights; by milking more cows and feeding cows more grain; by raising more chickens.

To accomplish the second objective, the Government will peg the prices of these products. It agrees during the period ending June 30, 1943, to keep the price of hogs at Chicago at least $9 a hundred; butter, 31 cents a pound; eggs, 22 cents a dozen; and chickens, 15 cents a pound. Prices in other markets will be subject to the usual trade differentials. They are based on existing price relationships. The assumption is they will be raised if the prices of things farmers buy rise.

The net result to date has been an increase in the price of hogs to around the $9 level at Chicago. Butter, chickens, and eggs were selling at Chicago above the Government "peg" prices when the program was announced.

The Government will support the price level by buying in the open market for British needs and for relief distribution. Whenever prices fall below the Government's pegged-price level, the Government will step into the market and buy to bring them up to that level. But if natural demand should cause prices to rise above the pegged-price level, the Government will not interfere unless prices become unduly high. Then the Government will become a seller in order to, quoting Secretary Wickard, "stabilize prices and maintain them at reasonable levels." This is not price fixing, since prices can go above and not below the assured levels.

The vital part of the new plan is its purpose to assure ample quantities of feed. The A. A. A.'s corn program has been revised, al-

lowing producers in commercial areas to increase corn acreage up to their usual acreage (about 40 percent over the 1941 allotments). The proposed corn marketing quota referendum for next fall has been abandoned and there will be no marketing quotas on the 1941 corn crop. Government-owned corn will continue to be available to feeders who wish to buy it at existing prices. There are around 150,000,000 bushels for sale at 65 to 69 cents a bushel. The corn-loan program will be continued for 1941 and 1942 at the existing 61-cent level. There are no promises to increase the loan rate, and the A. A. A. is not supporting in Congress measures designed to increase the rate.

The catch in the revised corn program is this: The grower who exceeds his allotment cannot get a loan on his 1941 corn, and he will forfeit his corn parity and corn diversion payments on his entire crop. He will, however, receive conservation and practice payments if he stays within his total soil-depleting allotment.

Here is an example how the revised corn program will work. We'll assume that you have a corn allotment of 40 acres; that the normal yield is 40 bushels. If you plant within the allotment, you will receive a parity payment of 5 cents a bushel and a diversion payment of 9 cents, a total of $5.60 an acre and a grand total of $224. If you overplant your allotment you will not receive this $224, and in addition will forfeit the right to get a corn loan. You can plant up to 140 percent of the allotment, or 56 acres, and still receive other A. A. A. payments if you stay within the total soil-depleting allotment. If you plant 56 acres, you are betting that the corn produced on the 16 acres above your allotment will be more valuable as hog feed than the $224 in payments you will forfeit, not to mention the loss of the right to borrow on your corn.

This change in the corn program has received a mixed reception from farmers. It is a question whether the net income from growing more hogs to feed the corn produced on extra acres will offset the loss of special benefit payments and the assurance of price stability through the loan program. Each farmer must figure this out as it applies to his particular situation, but our guess is that most corn farmers outside of "cash corn" and drought areas will stay within their allotments. This is the wish of Secretary Wickard, who said in his official announcement that "because of the ample feed supplies on hand, most producers should plant within their corn allotments."

The A. A. A. has already begun a drive to induce farmers to plant within their corn acreage allotments this year. This drive, coupled with the fact that the revised program penalizes the farmer who increases acreage, leads one to wonder whether the A. A. A. actually wants more corn, except in deficient areas. Probably the desire is to first use up supplies on hand.

The food program is a compromise between factions in the administration favoring low prices and those favoring higher prices. The ill-advised statement of Secretary Knox, to which we referred last issue, that cheap food keeps the working man happy, and similar outbursts by other Government officials, brought widespread protests from farm sections. To satisfy those who want low prices, assurance was given the consumer groups that if prices rise unduly the Government will see that they are put back down to fair levels and that farmers will increase production of corn, hogs, milk, chickens, and eggs.

The present parity price for hogs is $9.24 (around $10 at Chicago); 35 cents for butterfat; 14.6 cents for chickens; 21.8 cents for eggs, all at the farm. The assured prices are all below parity. The question now is whether the assured prices will be the ceiling or the floor of the price structure. If they prove to be the ceiling, farmers will protest with all their might. They have not sought inflated prices, but they are entitled to, at least, parity prices.

WOULD KEEP PRICES DOWN

One of the notions which just will not die is that, regardless of how high wages go, how high taxes go and how high other prices go, food should be cheap. Much progress has been made in recent years in correcting this notion, but that it isn't dead is indicated by the desire of many high officials in Washington, especially within the Navy and the Army, to prevent the cost of living from rising.

Frank Knox, Secretary of the Navy, recently told Congress: "I was tremendously gratified, when back in Chicago recently, to find that food prices have gone down, which is the best thing in the world to keep labor satisfied. What I would like is to see wages stabilized and prices kept down; because you cannot keep wages stabilized if the prices of the things the man is buying are going up."

How about keeping the farmer satisfied? He is contributing to defense in low prices, long hours, and efficient and abundant production. If it is essential to provide workers with low-cost food to keep them satisfied, it will be necessary to increase Government subsidies to farmers, not to keep them satisfied but to enable them to hang onto their farms and remain out of bankruptcy. The farmer can't be expected to make all the sacrifices, even in the name of national defense. Until farm prices reach parity, the cost of living should go up enough to reimburse farmers for the increased cost of the things they will need to buy.

Wages paid to labor before defense activities started were the highest in peace-time history. Many increases have been granted since our industry began going on a war-time basis. Strikes involving higher pay, shorter hours, and changed working conditions which increase manufacturing costs, have tied up scores of industrial plants, many of which are producing materials for our defense. Two of the largest farm-equipment plants are involved in strikes. Without judging the merits or demerits of the workers' demands, we all know that strikes are costly and that increased costs mean higher prices. Farmers who buy will have to pay the higher prices.

The cost of farm products which enter into living costs are only a small part of what employed workers spend. The wheat farmer gets only about 1 cent from a loaf of bread that sells for 8 or 9 cents. The tobacco farmer gets only a cent and a half of the price of a package of cigarettes. Parity prices, therefore, would raise only slightly the cost of food, assuming that processing costs were stabilized. Often the worker who cries loudest about the cost of food will pay, without a groan, higher prices for luxuries which increase his joy of living.

Farmers are not expecting boom prices, knowing that in the long run they do more harm than good. But they have the right to expect parity of income with other groups. The Government's promise of parity prices is still a promise, and, instead of expressing gratification over the low cost of living, all Government officials should be striving to make good the promise.

Iowa Leads the Nation in Many Fields of Endeavor

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

ARTICLE FROM THE HAMPTON (IOWA) CHRONICLE

Mr. GWYNNE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article which appeared recently in the Hampton Chronicle, of Hampton, Iowa:

[From the Hampton (Iowa) Chronicle]

DO YOU KNOW IOWA? HERE ARE SOME FACTS—LEADS THE NATION IN MANY FIELDS OF ENDEAVOR

Although Iowa ranks sixteenth in population and twenty-third in area of land, the State ranks:

In value of corn, oats, horses, hogs, and poultry, first.

In value of farm lands and buildings, first.

In combined value of livestock, first.

In total value of farm property, first.

In farm land improved (95.6 percent), first.

In value of farm machinery, first.

Twenty-five percent of all grade 1 farm land of the United States is within the State of Iowa. Seventy-five percent of all grade 1 farm land of the United States is within 250 miles of the center of Iowa.

The farms of five Iowa counties (Sioux, Crawford, Shelby, Kossuth, and Plymouth) exceed in value the farms of either Massachusetts, Vermont, New Hampshire, Wyoming, New Mexico, or Utah.

The farms of 10 Iowa counties (Cedar, Clinton, Crawford, Jasper, Kossuth, Marshall, Polk, Plymouth, Shelby, and Sioux) exceed in value the farms in any one of the States of South Carolina, Maryland, Florida, Idaho, Maine, New Hampshire, Delaware, New Mexico, or Utah.

Iowa has one of the finest road systems in the Nation with over 40,000 miles of surfaced roads. The State is seventh of all States in paving and fourteenth in total surfaced roads.

Iowa's soil produces more wealth each year than all of the gold mines of the United States.

The wealth of Iowa is over $10,000,000,000.

One-tenth of all the food products in the United States come from the State of Iowa.

But she does not only produce food; the factories of Iowa in 1937 had an output worth $709,458,428.

Iowa's grain products for 1939 totaled 698,190,000 bushels. This amount divided by Iowa's number of square miles—55,586— gives an average of 12,560 bushels per square mile. No other State begins to equal these figures.

The per capita wealth for Iowa is $4,322. The per capita wealth for the remainder of the United States is $2,685.

The farms of Iowa are worth more than the combined farms of the 11 States of Maine, New Hampshire, Vermont, Massachusetts,

Rhode Island, Connecticut, New Jersey, Delaware, Maryland, Virginia, and West Virginia.

Iowa has 221,986 farms. The average size of each is about 155 acres, and the value of these farms and the property thereon is over four and a quarter billion dollars.

No point in Iowa is over 12 miles from a railroad, and no one walks to the railroad station, as Iowa has a total of over 670,800 cars.

The value of the farm products produced in Iowa in one year is greater than all the gold that has been produced in Alaska in the 69 years since the United States purchased Alaska.

Norway Continues Brave Struggle for Freedom, Popular Government, and International Decency

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

STATEMENT BY THE MINISTER OF NORWAY, HON. WILHELM MORGENSTIERNE, ON THE ANNIVERSARY OF THE INVASION OF NORWAY, APRIL 9, 1941

Mr. SMITH of Washington. Mr. Speaker, by unanimous consent granted by my colleagues, I desire to insert in the RECORD the statement by the Minister of Norway, Hon. Wilhelm Morgenstierne, on the anniversary of the invasion of Norway, April 9, 1941. The American people will endorse and applaud this courageous expression of the hopes, ideals, aspirations, and heroic struggle of the people of Norway to retain and regain her freedom and independence and the fact that Norway, in the words of Minister Morgenstierne, "fights now for freedom, popular government, and international decency."

The statement referred to is as follows:

A year ago today there was perpetrated an act which will go down as one of the most dastardly crimes of history. In the dark, early hours of April 9, Nazi Germany, without warning, without the least provocation on our part, attacked peaceful Norway.

We could not immediately grasp that such brutality, such deceit, could really happen. We thought the German people were our friends. But there they were, their warships in our harbors, their wings over our heads, their tourists and spies and "fifth columnists," posing as friends, in our midst.

In spite of the suddenness and overwhelming force of the attack, King Haakon and the Government of Norway did not waver or hesitate. They turned down indignantly the humiliating terms submitted to them by the Nazis and made known their determination to fight to the finish for the freedom and independence of our country. The Norwegian people then, as always before, preferred to die on their feet rather than live on their knees.

After a heroic fight of 2 months on Norwegian soil, King Haakon and the legal Norwegian Government took up temporary residence in England from where they continue to direct our war of independence.

The central fact today on this solemn anniversary is that Norway is formally and actually at war with the country which fell upon us. Our soldiers, sailors, and pilots are training in Norwegian camps in Great Britain and Canada. Our warships are fighting side by side with our friends and allies, the British. Our great merchant marine of about 4,000,000 tons and 25,000 sailors is sailing the seven seas under the Norwegian flag and Norwegian management, carrying supplies to our common battle front.

We shall stay in this great fight until victory has been won, until we have accomplished our irreducible war aims; first to clear Norwegian soil of every foreign invader, then to join with our friends and allies in muzzling permanently the ruthless aggressors, which for some time have been running amuck in the world challenging the peace, freedom, and very existence of civilized peoples.

In spite of the tragedy which has befallen our Nation and our beautiful land and which on this day fills us with peculiar bitterness, we feel deeply grateful that our leaders and our people from the first moment chose the path of honor and resistance; that today Norway is definitely and prominently amongst the nations which did not submit, but challenged the aggressor and fought—and fights now—for freedom, popular government, and international decency.

Not only the free Norwegians abroad but our hard-pressed countrymen at home, who are standing up so magnificently against the Nazi terror, realize with deep satisfaction that we are on the right and winning side in this World War of liberty—the most momentous crusade in human history. As sure as day follows night, men of good will in all lands shall repel the onslaught of the powers of barbarism and darkness against all that civilization means and is.

Our heart goes out in this hour to the people of Norway under the iron heel of the oppressors, but whose spirit is unbroken and marches on. It goes out to the British and their inspired leader and all their Allies, who today, with unsurpassed valor, are bearing the brunt of battle. Our gratitude and admiration go out to the President of the United States, who, with extraordinary vision for years, has perceived and understood the deadly threat facing the world today and who, with unequaled clarity and force, has given expression to the thoughts and aspirations of free men and women everywhere.

The Hopkins Appointment

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

EDITORIAL FROM THE BOSTON (MASS.) POST, AN INDEPENDENT DEMOCRATIC NEWSPAPER

Mr. PLUMLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Boston (Mass.) Post:

[From the Boston (Mass.) Post]

THE HOPKINS APPOINTMENT

Harry Hopkins, friend and confidant of the President, has had a career which will make historians gasp many years from now.

The country has probably never seen such a meteoric rise from humble beginnings. Mr. Hopkins, with none of the qualities which we commonly consider as necessary adjuncts to greatness, now occupies one of the most important positions in the Government in one of the most important epochs of our history.

He was yesterday appointed supervisor of the purchases in the greatest spending program of all time. He comes to this job with none of the training commonly required for even a far less important position.

He will regulate vast buying of war materials, yet he never has been either a purchasing agent or a soldier. He will allocate contracts for some of the mightiest war machines ever conceived by man, and he probably has not the faintest idea of their construction, their functions, or their eventual employment.

Mr. Hopkins represents more than a mere political freak, to our way of thinking.

He is a representative of a class of people who have succeeded in becoming, in war and in peace, one of the most influential single factors in modern government. They have literally ridden to power on the shoulders of the poor. They have found, much to their surprise, that they can outshine the gaudiest politicians, the most impressive men of finance, the most astute lawyers, and the sagest generals and admirals.

This class is that of the social-service worker, comparatively new in the professional field, yet one which has changed the face of America and the conception of the relationship of government to the people, in the short time that it has been in authority.

Mr. Hopkins was an obscure social-service worker back in 1928, acting as director of a tuberculosis association.

He came to New York from a little college in Iowa and got his first experience in the world running a camp for underprivileged boys.

He had his ups and downs. His salary was small. Yet he managed to rub elbows with rich and socially prominent people who were interested in uplift. How well he took advantage of this opportunity might well be read by every schoolboy in the country.

Mrs. Roosevelt "discovered" him and she saw to it that he met the right people. One of these was Franklin D. Roosevelt, a social-minded man himself. The rest of the story is well known.

Washington has long considered that his amazing luck in rising to astronomical heights in the country's affairs was due to his ability to be a "useful man" to the most powerful Presidential character that we have seen in modern times.

But it is hardly conceivable that such a brilliant man as the President could entrust Hopkins with, for example, the political maneuverings of the 1940 convention, the liaison with Winston Churchill in England, and the present herculean task of war purchases under the lend-lease plan if he were merely a "useful man."

He certainly wields an influence and the mystery of it has long bewildered the thinking people of the Nation.

Nazi Occupation of Norway

EXTENSION OF REMARKS
OF

HON. JOSEPH H. BALL
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 18, 1941

ADDRESS BY MINISTER OF NORWAY BEFORE MINNESOTA LEGISLATURE

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Wilhelm Morgenstierne, Minister of Norway before the Minnesota Legislature at St. Paul, on April 10, 1941, in which he describes the Nazi occupation of Norway and what has happened subsequently.

There being no objection, the address was ordered to be printed in the RECORD, as follows.

I want to thank you sincerely for inviting me to address this joint session of the Legislature of Minnesota. When I first came to St. Paul in 1911—30 years ago—then a young secretary at the Norwegian Legation in Washington, it never entered my mind that such an honor would come to me.

You see, Minnesota is a name very close to Norwegian hearts. Thousands upon thousands of my countrymen and their descendants have taken a part, yes; a very significant part in making this great State what it is today. They have found a warm welcome and happy homes here and a spirit of freedom and democracy congenial indeed to every Norwegian man and woman.

It did me good to see the statue of my old, fatherly friend Knute Nelson, outside this building. Perhaps, some day, he will be joined by Leif Eriksson.

Yes; I am happy to be with you. I shall tell you the facts and the truth about the Norwegian situation. I am not interested, and I am sure you are not interested in anything else. I do not believe in propaganda—in the sense in which it is sometimes carried on these days. But, I do believe that in a democracy it is a fine thing and a necessary thing that facts from all the world should be presented to the people in order that they may be in a position to make up their own mind on every important issue.

It sometimes used to be said that Norway was a very beautiful, but a poor country. The latter may have been true in earlier times, but only in the sense that we had not fully developed the possibilities of our soil, and forests, mines, waterfalls, shipping, fisheries. We discovered gradually that Norway was potentially a rich country offering possibilities of a secure and even comfortable livelihood for our 3,000,000 people. Particularly since the turn of the century we had made great strides toward the full utilization of our natural resources.

Hand in hand with this development went efforts to secure a fair distribution of the things with which Providence had blessed Norway. We tried to build a democracy which would give the people, all the people, not only political rights and freedom, but also the economic basis necessary for true freedom and a fuller life.

It is not possible for me here to go further into this phase of our national life, describing our social insurance systems, our school system, housing policies, our cooperatives, the building of hospitals, and other institutions for the welfare of the people. Suffice it to say that we had succeeded through a series of economic and social reforms and State activities—made possible by the steady development of our natural resources—to reach a rather high level of national life and general well-being. Though, of course, we had not reached perfection by any means, we felt that we were on our way.

Together with this development in Norway went a devotion to and belief in international cooperation and peace. The Norwegians were among the pioneers in the field of international agreements to secure peace and understanding between nations. The great Swedish industrialist and benefactor, Alfred Nobel, who donated a very large sum of money from which the annual Nobel prizes are being paid, left it to a committee appointed by the Norwegian Parliament to distribute the Nobel Peace Prize.

For 126 years the Norwegian people had not known war; our little war with Sweden in 1814 was hardly more than some frontier skirmishes. We had gradually come to feel that anything as cruel and inhuman and senseless as war—mass murder of fellow beings—could not happen to us who only wished to live in peace and brotherly relations with all other nations. We in Norway were thinking that the well-being and the cultural and spiritual development of the people, all the people, was the thing that really mattered. That schools and hospitals and decent homes for happy human beings were more important than a fortress or a warship. We were rather proud, I hope not too much so, to have given to the world leaders in many fields of human endeavor: Ibsen, Bjornson, Sigrid Undset, Fridtjof Nansen, Roald Amundsen, Grieg, Sinding, only to mention a few. Some people will say now that we erred, that we were too optimistic. Perhaps we were. In spite of everything which has happened, however, I am not convinced that the ultimate verdict will not be that it is better to error on the side of civilization and humanity than on the side of ruthlessness.

When the war between Germany and the Allies broke out in September 1939, it came as a terrible shock to us—as to everyone else. We were determined to remain neutral. We believed that, wanting nothing from anybody, we had a right to demand that our neutrality be respected. We so informed the warring powers. And from then on we scrupulously maintained an absolute neutrality, without fear or favor. We hoped and prayed that in this way the war would pass by our door, and that when the skies cleared we should be allowed to continue our peaceful development toward a happy future for our people.

Then suddenly, on April 9, 1940, in the dead of night, Nazi-Germany attacked us, without warning, without the least provocation on our part. We could not understand it. We thought the German people had friendly feelings for us. But now, suddenly, their war ships were in our harbors, their wings over our heads, their tourists, and spies, and fifth columnists, posing as friends, were in our midst.

Our towns, and villages, and farmhouses were bombed and burned, our men, women, and children were ruthlessly machine-gunned.

Naturally our people were dumbfounded. It took a little time to realize that such brutality, such deceit, could really happen. But soon, very soon, the Norwegians rallied and fiercely defended themselves against the invader.

I shall not here give any detailed account of the war in Norway.

Unfortunately, as you may remember, certain reports immediately following the invasion created a very unfavorable impression. We still meet and have to combat some of the allegations made at that time. It appears now that those who sent such reports were no doubt in good faith, but unfamiliar with Norwegian conditions and with the characteristics of the people. It was said that the population of Oslo was indifferent to what happened, that they stood silently gazing at the German troops marching through the streets of their city. Now, what would you expect? Oslo was an absolutely open city. There were no soldiers to defend it. The people were told over the radio—which was in the hands of the Germans—that the Government had decided that there should be no resistance.

The people could have been no more surprised, if the people of Mars had descended upon them. They did what the unarmed, civilian population of Prague had done before them, what the unarmed, civilian population of Brussels and Paris did after them—they watched in silence and consternation—but certainly not with indifference—the enemy marching into their city. If you look at the photographs taken in the streets of Oslo on April 9, you will see that the faces of old and young express deep resentment and contempt, against those who at night broke into our peaceful city and country.

And as soon as the actual situation became clear to them, thousands upon thousands of men managed to escape from Oslo and joined the Norwegian forces which were being organized north of the capital.

I do not believe that either the extent or the valor of the fighting in Norway during April and May last year have been generally recognized. Do you all realize, for instance, that about one-third of the entire German Navy was destroyed in the Oslofjord, outside Kristiansand, at Narvik, and in other places along the Norwegian coast?

We have no absolutely authentic figures about the number of German soldiers who lost their lives in the Norwegian campaign. Some very high figures have been mentioned. I believe I make a conservative statement, however, when I say that about 20,000 Germans lost their lives in warships and transports on their way to Norway, and that additional 40,000 soldiers were killed in action on Norwegian soil. This I think will show that there was some real fighting going on, and that the Norwegian adventure was not the walk-over for the Nazis which some people mistakenly may have thought.

There was also at the time of the invasion a great deal of talk—based upon erroneous reports from Oslo—about treason among the Norwegians. This, of course, has been shown again and again not to be true. But in case any lingering doubt should remain in this respect, I want to state here definitely and explicitly that apart from one or two conspicuous and well-known exceptions there was no such treason by our own people. It was the invaders, the Nazis who were themselves responsible for all the deceit and trickery which took place.

There has been a tendency to compare the Norwegian war unfavorably with the wars of the Finns and of the Greeks. Now, I do not believe that anyone could admire more than I do the splendid, epic fights of those two nations. They will go down in history among the great fights of small courageous nations to defend their liberty and independence.

But it should be remembered, in all fairness, that the circumstances which the Finns and the Greeks had to face were different in two very important respects from what the Norwegians had to face. In the first place neither the Finns nor the Greeks were attacked by the Germans—but by certain other powers.

In the second place Finland and Greece had had serious divergencies with the respective powers and critical negotiations had been going on for many weeks. When war came it was more or less expected. The Norwegians on the other hand had no reason to foresee any clash with Germany, and the attack found us, as I said before, absolutely unprepared and unmobilized.

In spite of this, the Norwegian people refused to be overwhelmed, to give in. They would rather die on their feet than live on their knees. By their own record the Norwegian people have taken their place definitely among those nations which stood up and fought the aggressors. They belong with the Finns and the Greeks, and those other nations which valiantly resisted. They belong also, I am happy to say, definitely among those nations which may benefit by the provisions of the Lend-Lease Act. And let me emphasize in this connection that the assistance which the President and Congress of the United States have decided to extend to countries resisting aggression, yes, the assistance which goes to our friend and ally, Great Britain, now, is also assistance to Norway and the Norwegian people. Our fate and future and freedom is bound up intimately with a victory for Britain and her allies. Without such victory we, too, are doomed. Your assistance brings nearer the day when your friends, the Norwegian people, shall regain their beautiful country and be masters once more in their own house. Then they shall be able to continue their interrupted forward march toward the realization of those ideals which we share with you and other free democratic nations. Yes; aid to Britain is aid to Norway.

After 2 long months, from April 9 to June 7, last year, during which the Norwegian people fought stubbornly and almost singlehanded against the overwhelming forces of the enemy, we were at last forced to give up temporarily the fight on Norwegian soil.

Subsequent events have proved, and history will record, I am sure, the wisdom and courage of King Haakon and the Nygaardsvold Government in choosing the path of resistance and honor instead of submitting to the slave terms offered by the invaders. Experiences of other countries have shown only too clearly what it means to negotiate with an adversary without the elementary notions of decency and fair dealing. To enter into negotiations with Nazi Germany is to give your little finger to the evil one—to invite penetration, deceit, and ultimate absorption—without even the moral satisfaction of going down fighting.

King Haakon, Crown Prince Olav, and the legal Norwegian Government are today carrying on the fight from England. This is in full accordance with the Norwegian Constitution, as well as with the explicit authorization of the Norwegian Parliament, voted at its last meeting on April 9, 1940.

The free Norwegian Government in London is today fully recognized by every government in the world except the one which attacked us, and its puppets.

Under its direction, about 90 percent of our merchant marine—about 4,000,000 tons and 25,000 sailors—is sailing the seven seas under the Norwegian flag.

The Norwegian foreign service is functioning all over the world, and taking an active part in the preparations for the day when we shall all return to a free Norway. In Washington, for instance, the Norwegian Legation is larger than at any time in its history. Our personnel is four times what it was in April 1940, and we have had continually to enlarge our premises.

Norwegian training camps have been established in Great Britain and in Canada, and Norwegian units will soon be in the thick of the fight at the side of our Allies. Norwegian ships are already actively cooperating with our friends the British.

The Norwegian Government carried to safety our gold, thus preventing it from falling into the hands of those who broke into our country. It is being safeguarded for the Norwegian people until the day when they shall once more be master in their own house.

Norway has never as yet defaulted on any foreign loan, and true to that tradition the Norwegian Government even today is paying every cent due as interest on our dollar loans and other foreign obligations.

Yes, the legal, free Norwegian Government, temporarily residing outside Norwegian territory, is a going concern, a government in being, paying as it goes, carrying on politically, financially, and in a military way.

Around this Government, around our great King Haakon, all Norwegians at home and abroad are rallying, determined to work and fight until we have regained the country of our fathers—and of our children.

In the meantime an unceasing, determined fight is going on in Norway between the foreign invaders and a handful of Norwegian traitors on one side, and a practically unanimous Norwegian people on the other. It is not a fight with arms—because my countrymen do not have any. You cannot fight mechanized barbarism with your naked fists or with flower pots.

But it is a fight with all the weapons of the spirit and of the will and love of country.

It is a fight of immeasurable bitterness, because the Norwegian people are witnessing the enemy pulling down everything that with love and care we have been building through generations.

Many of our Americans friends have visited Norway and have seen with their own eyes how we tried and partly succeeded in building a society, based on democracy, social justice, freedom, security, and equality under the law, economic well-being, and intellectual and spiritual development for all the people.

Today, there is hardly a vestige of these things left in Norway. Popular government has disappeared altogether. Freedom of speech and of the press does not exist. One of the cornerstones of a civilized society: the integrity of the courts, has been brutally destroyed. There is no security, no justice, no protection. The members of the Supreme Court of Norway resigned in a body as a protest against the arbitrariness of our temporary masters. People are arrested, imprisoned, and tortured without cause, without legal proceedings. No one is safe in his own home. Gangs of young boys are being armed, called guards, and allowed to terrorize the population. In vain—as far as immediate and outward results are concerned—the seven bishops of Norway unanimously and indignantly protested against this anti-Christian, brutal terror.

Now, here is something open for all the world to see and contemplate. Here are no pros and cons—only one-sided brutality. We are facing not a theory, not an ideology, but an actual situation and a comparison.

Peaceful, progressive, friendly Norway, as we knew it, as the world knew it a year ago, and Norway today under the iron heel of the Nazis.

This is the new order, not an abstraction, not a blueprint, but the new order in deadly practice. To anybody with ears to hear and eyes to see, it is plainly and blatantly a return to dark, barbaric ages.

With these facts in our minds and hearts every waking hour, it will be appreciated, I am sure, how difficult it is for us Norwegians to understand the contention that there is no difference between the methods and the aims of the nations opposed to each other in this war. The contention that it is immaterial whether the gangster kills his victim—or vice versa. I wish that any person so thinking might see with his own eyes the work of destruction now going on in Norway, the distress of the people, and hear the heartbreaking cries of those innocent men and women who are being tortured by the Gestapo.

Against these things, against the enemy which broke into our country and is now trying with appalling ruthlessness to reduce the Norwegian people to the level of nazidom, we are now fighting with bitter determination on several fronts. There is the military front to which I referred. Then there is the home front—the magnificent, mostly silent, but extremely effective struggle of resistance which a practically united Norwegian people are today waging against the strongly entrenched invader. Every day messages from the other side unfold a story of how national calamity and common hatred of oppression have brought forth a stronger, finer, and more united Norwegian people than ever before. It is as if the overhanging threat of losing our country, our freedom, and all that we hold dear, has stirred the people as they were never stirred before and has created a national unity, a common purpose, and an almost fierce love of country, which confounds the enemy, and in the end will thwart his designs on our freedom. There has come to the surface reserves of strength, courage, and a spirit of sacrifice which in days of peace and plenty must have lain dormant deep in the soul of the Norwegian people. To those of you who are of Norwegian birth or descent, let me say that today, at least, you have reason to be proud of the nation from which your fathers came.

On the fronts mentioned all true Norwegians are today fighting as one man for our irreducible war aims. The first of these aims, of course, is to clear our beloved country of the German invaders and make it once more the home of a free, progressive, happy people.

But in order to make secure the future for our own as well as for other freedom-loving peoples, we have this additional war aim: To join with our friends and allies in muzzling permanently the aggressors which for some time have been running amuck in the world, challenging the peace, freedom, and very existence of civilized peoples. We deeply believe that the world cannot and will not remain half slave, half free.

I sometimes wonder whether, in spite of all, we yet quite realize the extent, the deathly seriousness of the threat facing the civilized world today. A large country, Nazi Germany, has for some years been concentrating all her resources, all her genius of organization, on building up a military machine stronger and more ruthless than any the world has ever known before. It has attacked or threatened into submission, one by one, practically all its neighbors.

Who attacked Czechoslovakia? Was it England, was it France? No; it was Germany. Who attacked Poland, Denmark, Norway, Holland, Belgium, Luxemburg, France? Was it England? No; it was Germany. Who threatened Rumania and Bulgaria into submission? Was it England? No; it was Germany. Who tried to bully Yugoslavia into submission? It was Germany. Who stood up against Hitler and refused to be bullied? The Yugoslavian people.

Nazi Germany has been trying to tell the world that all these countries have joined the New Order. But what is the fact? Not one of them has willingly joined it. They are

held by force, every one of them. They will use the very first opportunity to throw off the yoke of their hated temporary masters. And that opportunity will come perhaps sooner than we now think. As an indication of what the subjugated people think and feel, take what happened a few weeks ago at Lofoten Islands. When given a chance to get away and to join King Haakon and his free Norwegians in England, the young men of the island, more than 300 of them, without a moment's hesitation, grasped the opportunity. The same thing would happen in other countries under German domination. The people burn to escape and join Britain in the fight against those who raped their countries and stole their freedom and happiness.

Perhaps some of these countries to some extent were to blame themselves for their misfortune. I am afraid that may be the judgment of history. Perhaps they were too complacent, too blue-eyed, too secure in the feeling that freedom was theirs for keeps, too unwilling to cooperate with others against the common threat to their existence. Perhaps they had been apt to forget that we are only permitted to keep the things for which we are willing to fight and to die.

But even if we admit this let us not permit such things to confuse the main issue. And the main issue in Norway, in Europe, in the world today, is freedom against oppression, popular government against dictatorship, civilization against mechanized barbarism.

What we are witnessing is not only the conquest by brutal force of free, civilized peoples. What is equally serious is the breaking down of international morality, of all codes of honor and truth between the nations of the world. We had advanced quite far toward higher international standards, toward respect for international obligations and the pledged word, when the Great War broke out in 1914. We remember, many of us, what a tremendous impression it made on the civilized world, how profoundly shocked we were, when Germany broke her solemn pledge to respect Belgian neutrality and broke into that peaceful, progressive democracy. The cynical attitude of the then German Chancellor, his statement that the treaty in question was nothing but a scrap of paper, struck the civilized world as an ominous descent to barbarism. Today, I'm afraid, the air is so filled with "scraps of paper" that we can hardly see the sun. So often have the dictators broken their word and their solemn treaties that the world was on the point of giving up in despair.

Thank God, under the epic leadership of Great Britain, the civilized world is gradually rallying to the defense of fair dealing and decency between men and nations. Slowly but surely the democracies, the freedom-loving peoples of the world, have awakened to the tremendous issue at stake—the biggest and most far-reaching for which any war in the history of mankind has been fought: the issue of whether to be forced back unredeemably to barbarism and darkness or regain the foothold and take up once more the forward march of humanity toward a fuller life.

Democracy is not perfect. It has revealed many weaknesses. It has much to learn in order to be as effective in practice as it is sound and eternally true in theory. Only, democracy cannot, and must not, as some maintain, learn from the totalitarians. It is not the effectiveness of the safebreaker that is needed. Not the discipline of the slave quarters or of the concentration camps. What democracy needs is the inner, spiritual discipline deriving from high ideals and mutual respect and good will among men.

The "wave of the future"—is that the totalitarian dictatorship? How could that be? What is the future if it is not spiritual growth, progress, beauty? How can anyone associate the future with a strutting dictator, haranguing the world with cascades of angry, hateful words? Is there anything more totally lacking in spiritual quality and meaning?

The people of Norway refuse to associate the future with totalitarian dictatorships. From their cruel bondage, under the heel of our temporary masters, they defiantly profess their undying faith in the words and the example of the man who said: "God must have loved the common people, he made so many of them." We believe that when the present appalling nightmare of man's inhumanity to man has passed by, the world shall once more revert to the spirit expressed in the beautiful words of the prophet of old: "To do justice, to love mercy, to walk humbly with thy God."

Yes, to us the future is associated with the spirit of your great, kind man of Illinois, personifying for the ages the virtue of humility, true democracy, the dignity of man, high or low, neighborly helpfulness, and brotherly love. The spirit of Abraham Lincoln, to us, is the always recurrent wave of the future.

Japan and Russia Fabricate a Treaty Out of Synthetic Friendship

REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

Mr. CRAWFORD. Mr. Speaker, as we recoil from the contemplation of the dripping carnage in the Balkans, we witness a strange scene of Russians and Japanese fraternizing for 10 fleeting minutes in the Kremlin in Moscow and announcing that they have ordained that officially—only officially—a friendship existed between them. A Russo-Japanese pact, as ponderous as the cracked bell of Moscow and as useful as a dead Japanese samurai, has come into being and the world gasped in satirical amazement.

An avalanche of comments, columns, editorials, and speeches followed the Russo-Japanese diplomatic deliverance. Among them, I believe, the analysis by Attorney Vicente Villamin, a Philippine economist and writer of world-wide contacts and experience, is one of the most logical and penetrating, and certainly stands out as the most original in conception and reasoning. The article is syndicated in many newspapers throughout the United States.

Among Mr. Villamin's arresting conclusions are that the pact does not bar Russia from declaring war on Japan while Japan is at war with the United States; that Russia gave Japan nothing because despite her high nuisance value to Japan she got nothing; and that Japan is really interested in seeing the defeat, not the victory, of Germany, because a victorious Germany would prevent Japan from realizing her program of territorial expansion, as Germany herself will enter the Far East and Asia as a colonial power as she used to be before the first World War.

I strongly urge Members of Congress to read Mr. Villamin's lucid, logical, and thought-provoking discussion.

"The Russo-Japanese pact is a mutual neutrality, not a mutual nonaggression pact—and does not bar Russia from declaring war against Japan while Japan is at war with the United States. Russia gave nothing because she got nothing. Japan has more things in common with the United States than with Germany, and Japan would be interested in the defeat, not the victory, of Germany."

The heart of the Russo-Japanese pact of April 13, 1941, is in the following words (Art. 2): "Should one of the contracting parties become the object of hostilities on the part of one or several third powers, the other contracting party will observe neutrality throughout the duration of the conflict."

So far as it concerns the United States, the pact is actually harmless if it is not potentially lifeless. Under it and by it Japan has not gained anything appreciable in her tactical international position vis-a-vis the United States.

It is a pact of mutual neutrality and not of mutual nonaggression. There is a world of difference between the two. If it were a nonaggression pact it would be a relief to Japan and it would embolden her in her attitude toward the United States in the present tense situation. In both cause and effect the pact is static and not dynamic.

Let us see how the mutual neutrality pact would work in realism. If Japan goes to war with the United States, Russia will be neutral under the agreement. There is nothing new or significant in that. The United States does not expect Russia to be her ally. And Russia would not join the United States if otherwise she has no reason of her own to do so. If the United States and Russia each have causes to go to war against Japan, those causes are not identical with each other and they have nothing to do with each other. They would conduct their respective wars as independent enterprises. This would be true also as to China, now already a belligerent against Japan. Of course, if two or more nations are at war with one and the same nation at the same time their general staffs would very likely put their heads together so their fighting men wouldn't be in each other's way when hammering on the common foe.

The point to be underlined is this: The pact does not bar Russia from declaring war against Japan while Japan is at war with the United States. Russia is still free to go to war against Japan and select the time to do it. Japan has not acquired the right to bind Russia against declaring war on her and declaring it at the wrong time—to Japan. Putting it succinctly, Russia can be neutral in a Japanese-American war and at the same time be an active belligerent on her own account and for her own cause against Japan. That is the long and short of the whole thing.

Russia gave nothing because she got nothing. Russia knows she has at present a mighty high nuisance value to Japan as she knew 2 years ago that she had some nuisance

value to Germany. She received from Germany a goodly slice of Poland for that nuisance value, but cautious Japan has not yet come across with her votive offerings. Russia would give real satisfaction to Japan if she receives some valuable acreage or beneficial concessions, but Japan so far has proved tight-fisted because, forsooth, she knows only too well the brittle quality of a Russo-Japanese treaty.

Of all the major nations today, Russia is the most calm and collected. Her geographical location and the wondrous shrewdness of her leaders are responsible for this. If her fighting forces have not amazed the world with their effectiveness, her sinuous diplomacy has been bringing home the bacon. And certainly Japan is not the intellectual Delilah to befuddle the mighty Russian Samson.

Still smarting under the humiliation of defeat which she suffered at the hands of Japan in 1904, Russia is not aiding Japan to become a stronger nation, neither is she raising a finger to keep Japan from going the slippery way of disintegration. Practical and prescient Russia is depending not only on her own strength but also on the weakness of her potential enemies, and the leading one of them outside of the Teutonic penumbra is the Imperial Japanese Empire.

Concerning China, the pact and secret understanding that probably accompanies it, if indeed there is one, would affect her adversely if Russia has consented to cease as a source or a passageway for war materials for the Chinese people. This remains to be seen. Here again Russia would not do a favor to Japan for nothing. In fact, from China's capital has already come the word that Russia has given assurances of the status quo in that connection. Press dispatches seem to show that while Japan is making the pact the occasion for a grand political ballyhoo Russia is keeping the driver's seat of the diplomatic tallyho.

Commentators and editorialists as well as wishful thinkers and witless dopesters harp upon the theory that Russia signed the now-famous pact to keep Japan neutral if and when Germany tries to annex the Ukraine and thereby becomes Russia's enemy.

The theory is predicated on the proposition that Germany is too stupid to realize that she was digging her own grave when she induced Russia as a favor to Japan to conclude a pact of some kind with her historic enemy. It is logical to suppose that it was through the urgings of Germany that Russia played the prize 1941 diplomatic game of promise-and-break-it-at-will with a Japanese Government that was known to be tottering at its foundation. Then, too, Russia could not have been so dense as to antagonize Germany with a synthetic friendship with Japan at a time when German arms and German diplomacy must have been profoundly impressing the Russians with their frightful efficiency. Already both Russia and Japan are protesting that they have not the slightest purpose of preparing themselves againt Germany.

It is not improbable by any means that to earn the applause of the world, including those that she has vanquished, Germany, besides extending her dominion, might crack down on Russia to blast communism and sovietism from the face of the earth. In that event it would be infinitesimally unimportant to Russia whether Japan is a neutral or a belligerent.

Yosuke Matsuoka, Japan's Foreign Minister, went on his pilgrimage to Berlin and Rome presumably to explain why Japan had not harassed more the United States and Great Britain in the Pacific; and on the rebound, coming back home, he deftly picked up at Moscow the diplomatic bagatelle that he got, a mutual neutrality pact, and not the formidable instrument that he coveted, a mutual nonaggression pact.

So after the shouting has died down and the good people of Japan have started to meditate upon the verities of the day, they will realize more clearly and more calmly that between Japan and the United States there are great elements of beneficial harmony while between Japan and Germany there are vital interests in sharp conflict with each other.

Outstanding among these conflicts of interests between Japan and Germany are the following: First, stategic—while Germany wants the American Navy in the Pacific, Japan wants it in the Atlantic; and so, while it is in the Pacific, the Japanese wouldn't want to see the Panama Canal sabotaged, because it would immobilize that Navy in the Pacific bearing down upon Japanese territory; second, economic—Japanese-American commercial and financial relations have infinitely greater possibilities of mutual benefit than Germany could ever offer; and, third, political—while the United States has no plans to extend herself territorially in the Far East and on the Asiatic Continent, Germany is preparing to reenter that region where Japan expelled her a score of years ago as a trader or a colonial power, and that would impinge upon the Japanese program of expansion.

Parenthetically, the German reentry in the Far East and Asia, which is the home of over half of the world's population, would deflect thither much of the expected German activities in the Western Hemisphere, to its great relief. The Netherlands East Indies and French Indochina alone have as many people between them as the entire Latin America, and are possessed of as vast and varied natural resources. Being colonies of German-dominated Holland and France, Germany technically has some color of claim to them, where Japan has none. Japanese empire builders consider those rich colonial possession as an integral part of the region which they are organizing as Oceanic Japonica. Germany primarily, and not the United States or Great Britain, would render it difficult if not impossible for Japan to achieve her expansionist aspirations—that is, if Germany should prevail in Europe either by a victory, a stalemate, or by the Wilsonian formula of peace without victory. It is thus but logical to conclude that Japan would wish the defeat, not the victory, of Germany.

The victory of Great Britain—and the United States—over Germany would serve to revive and revitalize the principle of the freedom and independence of nations, big and small, powerful and weak. That would render more certain the complete independence of the Philippines in 1946 and possibly promote the independence or autonomy of colonies in the Far East, in the same way that the last World War was followed by the birth of many small nations in Europe which have since disappeared. The prospective independent nations in the Far East, particularly the Philippines, would become an easy prey for Japan. Their peoples should remember this obvious possibility as they survey today their foreseeable future.

Japan and the United States have not been at war with each other in all their history. To inaugurate or not a war series between them is the serious responsibility of American and Japanese statesmanship. The continuation of an honorable peace between the two nations would illumine the vast Pacific with hope, help rationalize the Japanese code of right and wrong, ameliorate the abysmal poverty of the Asiatic peoples, and lead eventually to an honorable settlement of the Chino-Japanese unpleasantness. But men must be just and understanding and reasonable before a worth-while peace could be achieved. The Pax Japonica must be something infinitely more delectable than the terrifying screed that it is today. The Asiatic peoples would have nothing less and would struggle to the bitter end otherwise.

Lakes-to-Gulf Highway—H. R. 4444

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, President Roosevelt has appointed a committee to work out plans for the creation of a transcontinental highway system in the interest of national defense, and in line with that suggestion, I have introduced a bill, H. R. 4444, for the construction of such a highway from Chicago, Ill., to Mobile, Ala., along the old Lakes-to-Gulf Highway, which follows Route 49 from Chicago to Kankakee, Ill., and Route 45 from Kankakee to Mobile.

I submit, Mr. Speaker, this bill certainly drew an appropriate number for this four-lane highway. You will notice it is referred to as H. R. 4444.

This is the shortest route from the Great Lakes to the Gulf of Mexico. There is already a 40-foot, 4-lane concrete highway from Chicago to Kankakee, a distance of about 60 miles, and a 2-lane, or 20-foot, concrete highway from Kankakee directly south to Mobile, Ala.

This is not only the shortest route from the Great Lakes to the Gulf, but it is a level route that is unobstructed by mountainous or broken terrain; and not 1 foot of it will be interfered with by floods at any time.

One of our greatest handicaps is our inadequate north and south transportation facilities. If war should come, and this country should be threatened with invasion, that threat would undoubtedly come first to the territory bordering on the Gulf of Mexico, because of its proximity to islands and territories belonging to so many foreign countries that might be used for air bases.

In such an emergency this four-lane Lakes-to-Gulf highway, along the shortest route from the Lakes to the Gulf, would be a prime necessity. Mechanized equipment of all kinds could be transported over it at the highest possible speed.

If the emergency should end we would still have this splendid four-lane highway for commercial and domestic use and as a guarantee of our protection in case of future emergencies.

More than 10 years ago we organized a Lakes-to-Gulf Highway Association for the purpose of securing the construction of this Lakes-to-Gulf highway along this route, which, as I said, was found to be the shortest available route from the Great Lakes to the Gulf of Mexico. Sometime ago the Highway 45 Association was organized for the same purpose. These two associations should be coordinated and every possible assistance given by chambers of commerce, county and municipal organizations, and other civic

bodies to promoting this vitally important project.

It is only 885 miles from Chicago to Mobile along this route, which is the shortest possible route across the continental United States; and, as I pointed out, it does not cross any mountains or traverse flooded territory. Mechanized equipment could move from the Great Lakes area to the Gulf in the course of a day if an emergency required it.

This route traverses or touches 23 congressional districts in the 5 States of Illinois, Kentucky, Tennessee, Mississippi, and Alabama. It passes through no large congested centers, and therefore would be unhampered by congested urban traffic.

As I said, there is already a 40-foot concrete highway from Chicago down to Kankakee on Route 49, and then a 20-foot concrete highway from Kankakee to Mobile, down Route 45, which would greatly reduce the costs.

If we are going to prepare this country for defense, we must improve our north-and-south transportation facilities, and especially these hard-surfaced highways that will carry motorized equipment. This is the most important piece of highway construction yet proposed.

Regulation of Administrative Agencies

REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

Mr. WALTER. Mr. Speaker, at the last session of the Congress there was passed a bill designed to regulate the activities of various of the Federal agencies. At the time that Congress passed this bill the question involved was being considered by a committee that was appointed by the Attorney General of the United States. Strangely enough, when this committee reported it was almost equally divided. It is significant, however, that specific recommendations for legislation were made in the reports. I have had prepared an analysis of the two recommendations made by the Attorney General's committee, together with an analysis of the bill the Congress passed, and I include them in my remarks at this point:

COMPARISON OF PROPOSED BILLS TO REGULATE ADMINISTRATIVE AGENCIES

1. Walter-Logan bill.
2. Proposal of Attorney General's Committee on Administrative Procedure (S. 675).
3. Proposal of minority of Attorney General's Committee (S. 674).

This comparison is divided into three headings following the proposals of the Attorney General's Committee: I. General provisions; II. Administrative rule making; III. Administrative adjudication.

Since the Walter-Logan bill contains no provisions relating to the first subject, section I consists of a comparison of the majority and minority recommendations of the Attorney General's Committee.

I. GENERAL PROVISIONS		
	ATTORNEY GENERAL'S COMMITTEE BILL	MINORITY BILL
Statement of policy	Administrative powers affecting private rights should be exercised through established procedures designed to effect declared policies of Congress and to protect private rights and which assure due notice, adequate opportunity to present and meet evidence and argument, and prompt decision.	Similar to committee statement.
Delegation of authority	Authorizes routine, preliminary, informal, and minor matters to be delegated to individuals or subordinates, subject to review and final responsibility of agency. Provides for publication in rules of such delegation or decentralization. Wherever superior authority in agency reviews any matter same opportunity for conferences or submission of arguments to superior as with subordinates is preserved.	Similar to committee proposal.
Appearance and representation of parties	Every person appearing or summoned in any administrative proceeding would be allowed the assistance of counsel.	Any interested person may appear in person or by representatives. All reasonable facilities for information, negotiation, or determination of issues or cases are to be afforded. Every person appearing or summoned may be accompanied and advised by counsel.
Office of Federal Administrative Procedure	Office to be established, consisting of: 1. Director, appointed by President; term, 7 years; salary, $10,000. 2. An associate justice of the United States Court of Appeals for the District of Columbia (ex officio without further compensation). 3. Director of Administrative Office of United States courts (ex officio without further compensation). Personnel and staff: Board may appoint executive secretary, attorneys, investigators, and experts regardless of civil service. Other employees subject to existing employment laws. Director may, with consent of any agency, use personnel or facilities of that agency.	Similar to committee proposal with this additional provision: "No employee may practice before or have private professional relations with any agency or court of the United States, except the Office may utilize personnel of an agency with consent of that agency."
Duties of Office of Federal Administrative Procedure	Investigation of agencies. Recommendations to and maintaining liaison with agencies to improve and regularize procedure. Investigation of complaints against agencies. Investigation and regularization of practice of attorneys and others before agencies. Appointment and removal of hearing commissioners. Annual report to Congress.	Investigation of agencies. Establishment of liaison with agencies. Dispensing information regarding administrative functions. Recommendations to Congress and agencies to secure efficient and uniform procedure. Investigation of complaints. Studying possible improvement of the bill. Regularizing rules of pleading and evidence.
Advisory committees	Director to designate those administrative establishments which are "agencies." Director to designate advisory committee from members of agencies (one from each) named by agencies, and other Government officers or members of public. Agencies have duty to furnish director all information requested and to assist him by all possible means.	No provision.
General restrictions on agencies	No provision.	Bill sets standards of conduct for all agencies and administrative officers: The grants of authority or limitations of administrative power provided by the bill would be mandatory and binding on all persons exercising administrative powers and upon the courts in reviewing the exercise of such powers. Violation would be subject to disciplinary action which might include discharge from public service. Investigation procedure: Investigations to be conducted so as to disturb personal privacy and private enterprise as little as possible. Required reports are to be simplified. Requests beyond the statutory powers of the agency would be forbidden. Informal procedure encouraged. Compulsory process to be used only when necessary. Investigating powers not to be used to effect purposes

ATTORNEY GENERAL'S COMMITTEE BILL

MINORITY BILL

or policies not expressly authorized by statute.

Subpenas: Where subpenas are authorized by statute, they are to be issued only on reasonable showing of grounds, necessity and scope and are to be issued to private parties as freely as to representatives of the agencies.

Publicity: Matters of record, except confidential personal data authorized to be kept secret by statute, are to be made available to all interested persons. Publicity to be withheld in contested proceedings during preliminary or investigative periods. Publicity is to be impartial and is to be limited to documents of public record.

Suspension of provisions of bill

No provision.

Suspension of provisions of bill

The President may suspend application of particular provisions upon recommendation of any agency and of the Office of Federal Administrative Procedure, suspension to last until end of next succeeding session of Congress but may be made indefinite by renewals unless Congress acts. Congress may confirm or revoke suspension or make substitute provisions.

II. ADMINISTRATIVE RULE MAKING

WALTER-LOGAN BILL

Statement of policy

None.

Exceptions

Nothing contained in the act shall apply to or affect any matter concerning or relating to—

1. The Military or Naval Establishments, including the Council of National Defense and the Advisory Commission thereto, the Priorities Board, and any other agency or authority hereafter created to expedite military or naval defense.
2. The Federal Reserve Board.
3. The Office of the Comptroller of the Currency.
4. The Federal Deposit Insurance Corporation.
5. The Railroad Retirement Board.
6. The National Mediation Board.
7. The National Railroad Adjustment Board.
8. The Interstate Commerce Commission.
9. The Civil Service Commission.
10. Federal lending agencies.
11. The Federal Trade Commission.
12. The Department of State.
13. The Department of Justice.
14. Any matter concerning or related to the internal revenue, customs, patent, trademark, copyright, personnel, or longshoremen and harbor workers' laws.
15. The Agricultural Marketing Agreement Act of 1937, including any amendments or supplements thereto.
16. Grading services in connection with purchase or sale of agricultural products.

Certain provisions of the bill would be inapplicable also to the General Accounting Office; and no right of review could be exercised during the construction of any public building or public-works project as to any decision, ruling, or order made with reference to the prosecution of the work.

II. ADMINISTRATIVE RULE MAKING

ATTORNEY GENERAL'S COMMITTEE BILL

Statement of policy

None.

Exceptions

No provision.

II. ADMINISTRATIVE RULE MAKING

MINORITY BILL

Statement of policy

To require all administrative agencies to issue rules and regulations of the types specified by the bill in order to give all interested persons all possible information regarding administrative organization, policy, law, and procedure.

To require formulation of such rules by the procedure specified herein which is designed to extend the legislative process by securing the participation of all interested parties.

To have each agency encourage rule making to reduce the necessity for case-by-case determination.

Exceptions

Where any agency expressly finds it contrary to the public interest, the provisions of this title (rule making) would not apply to military, naval, or defense functions, including procurement of materials for the armed forces, nor to conduct of diplomatic affairs outside the territorial limits of the United States.

WALTER-LOGAN BILL

Adoption of rules

All rules under statutes hereafter enacted are to be issued within 1 year from the date of enactment of the statute.

Rule-making procedure

Notice must be published in the Federal Register and a public hearing held before any rule or amendment of a rule can be issued. No rule is to be effective until published in the Federal Register, unless the President declares a public emergency to exist.

Petition for change of rules

Within 1 year after passage of the Walter-Logan bill, any person substantially interested in the effects of any administrative rule which has been in force less than 3 years may petition the agency concerned for reconsideration of the rule. The agency would be required to publish notice, hold a hearing if requested, and to decide thereafter whether the rule should be continued, modified, or rescinded.

Reports on rules to Congress

No provision.

Liability for reliance on abrogated rule

No one to be penalized for any act or omission in good faith in conformity with any rule which has been rescinded or declared invalid, unless notice of rescission or adjudication was

ATTORNEY GENERAL'S COMMITTEE BILL

Adoption of rules

Every agency shall promptly make available and currently maintain a statement of its internal organization, specifying its officers and types of personnel, its subdivisions, and the places of business, duties, functions, and general authority or jurisdiction of each.

Every agency shall make available to the public all general policies and interpretations of law adopted; rules, regulations, and procedures; and prescribed forms and instructions with respect to reports or other material required to be filed.

Rule-making procedure

No regulation hereafter promulgated by an agency shall take effect until 45 days after publication in the Federal Register. The 45-day rule shall not apply (a) where the regulation or the governing statute provides a longer period; or (b) where the agency certifies and publishes in the Federal Register that stated circumstances require the effective date to be advanced.

Every agency shall designate subagencies or employees to receive suggestions and expedite the making, amendment, or revision of rules, subject to the control and supervision of the agency.

Petition for change of rules

Any person may at any time file with an agency a petition, in such form as the agency may prescribe, requesting promulgation or amendment of any rule in which the petitioner has an interest.

Reports on rules to Congress

Every agency shall report annually all rules promulgated by it, together with explanatory material, and shall also include a summary of requests for rules or amendments received during the preceding year, and the reasons for its refusal of such requests as may have been refused.

Liability for reliance on abrogated rule

No corresponding provision.

MINORITY BILL

Adoption of rules

Organizations and procedures of the agency are to be published promptly on approval of the bill without going through the rule-making procedure prescribed.

Rules are required: Every agency is directed to formulate and publish rules, including all rules specifically authorized or required by statute to carry out particular legislative provisions. In addition, rules would be required to contain:

1. Statement of policy.
2. Interpretations of statute under which agency operates and which will be relied on by agency in its administration.
3. Regularly available procedures, formal or informal.
4. Instructions for statements, reports, examinations, and so forth.
5. Each agency is permitted, but not required, to prescribe the forms to be used by those having business with the agency.

Form, content, and publication of rules: Rules are not merely to repeat legislation. Rules are to be kept complete and current. No agency is to act on unpublished rules (except staff instructions or general instructions regarding internal management). Rules must be published in Federal Register, and in addition, in pamphlet form. Rules are to state expressly organization, practice and procedure, and substance.

Rule-making procedure

Each agency would be required to publish a regular procedure for the making of rules and to designate an existing unit within the agency to receive suggestions and expedite rule making.

Preliminary private investigations before starting the rule-making procedure would be required to formulate issues or proposed rules.

Where practicable, rules are to be published in advance of effective date to permit comment, argument, and revision.

When agency proposes to make a rule, notice would be required to be published wherever practicable to give interested persons opportunity to be heard.

Agencies authorized but not required to use (and may dispense with them in emergencies)—

1. Written views submitted by interested persons.
2. Conferences.
3. Informal hearings.
4. Formal hearings.

Rulings: Rulings in specific cases by agencies are not to have the effect of rules unless the prescribed rule-making procedure is used. Rules are to have no effect against third persons unless published or reproduced in leaflet or bound form.

Petition for change of rules

Any interested person may petition any agency at any time to issue or change rules. Agencies are required to report to Congress on nature and disposition of such requests.

Reports on rules to Congress

Each agency is to report to Congress all rules promulgated during preceding year with explanation of their substance and procedure utilized in their formulation, together with a statement of requests received for issuing or changing rules and the disposition made of such requests.

Liability for reliance on abrogated rule

When rule is abrogated, there is to be no liability for conduct conforming to the rule unless publication of withdrawal of the rule has been made for 30 days.

WALTER-LOGAN BILL

published in the Federal Register 30 days before the act or omission referred to.

Judicial review of rules

United States Court of Appeals for the District of Columbia would be given jurisdiction to hear and determine whether any rule is in conflict with the Constitution or the statute under which the rule was issued. Any interested person may file petition within 30 days of publication of rule. Rules to be defended by the Attorney General. Decision to be declaratory judgment of validity or invalidity. (This appears to provide for judicial review of rules in the abstract.)

This does not prevent determination of valadity or invalidity by courts in suits or appeals involving a rule.

III. ADMINISTRATIVE ADJUDICATIONS

WALTER-LOGAN BILL

Statement of policy

None.

Exceptions

See exceptions under section II.

Miscellaneous provisions, notices, etc.

None.

Declaratory rulings

No provision.

ATTORNEY GENERAL'S COMMITTEE BILL

Judicial review of rules

No corresponding provision.

III. ADMINISTRATIVE ADJUDICATIONS

ATTORNEY GENERAL'S COMMITTEE BILL

Statement of policy

None.

Exceptions

The procedure with respect to appointment, appearance, and duties of hearing commissioners shall not be applicable to the following:

1. Proceedings in which a hearing for the purpose of receiving evidence is held before the agency tribunal, or before one or more individual members of an agency tribunal; or

2. Proceedings which, pursuant to a law of the United States, are conducted before an officer of one of the States; or

3. Proceedings which precede the issuance of a rule, regulation, or order involving the future governance or control of persons not required by law to be parties to the proceedings; or

4. Matters concerning the conduct of the Military or Naval Establishments, or the selection or procurement of men or materials for the armed forces of the United States; or

5. The selection, appointment, promotion, dismissal, discipline, or retirement of an employee or officer of the United States, other than a hearing commissioner as provided hereinafter in this title; or

6. Matters relating to the patent or trademark laws.

Miscellaneous provisions, notices, etc.

None.

Declaratory rulings

Each agency tribunal shall have power to issue declaratory rulings concerning rights, status, and other legal relations within its purview. The purpose of such declaratory rulings is to terminate controversies or remove uncertainties. The agency tribunal may therefore refuse to render a declaratory

MINORITY BILL

Exceptions: In emergencies rules may be rescinded effective immediately upon publication. Rules may be modified in particular cases with consent of persons affected or upon reasonably adequate notice to them.

Judicial review of rules

Any rule may be judicially reviewed upon contest of its application to particular persons or subjects or upon application for declaratory judgment. Declaratory judgments are to be limited to cases where rule or threatened application interferes or threatens to interfere with constitutional or statutory rights or immunities, but controversies as to the application of the rule to any person or state of facts are to be determined under title III, "Administrative Adjudications."

III. ADMINISTRATIVE ADJUDICATIONS

MINORITY BILL

Statement of policy

Administrative adjudications should be by procedures which assure to all persons affected:

1. Specific notice of issues and procedures at all stages.
2. Adequate opportunity to present and meet evidence and argument.
3. Prompt decisions by impartial officers.
4. Full relief authorized by law.
5. Restricting of penalties to those authorized by statute.
6. Opportunity for judicial review.

Exceptions

This title is not to apply to:

1. Administrative determinations made by any court or by any independent administrative tribunal based on a trial de novo.
2. Military or Naval Establishments, including procurement for armed forces.
3. Personnel matters within agencies.
4. Arbitration and mediation, as distinguished from adjudication.
5. Fiscal operations of the Treasury.
6. Public works.
7. Procurement or disposition of public property.

Miscellaneous provisions, notices, etc.

Agencies may make informal disposition of cases with consent of the parties.

All notices, orders to show cause, moving papers, and so forth, issued by an agency are to be specific.

Persons involved in proceedings must have access to the record, the identity of persons appearing against them, and reports of statements of such persons, together with adequate opportunity to rebut.

Formal adjudicatory procedure is required where informal procedures do not dispose of the case.

Declaratory rulings

Upon petition of any interested person every agency must issue declaratory rulings when necessary to terminate a controversy or remove substantial uncertainty as to application of statutory authority or administrative rules. Such rulings not to bind persons who are not parties to proceeding.

WALTER-LOGAN BILL

Separation of prosecuting and deciding functions

No provision.

Hearing or deciding officers

In any controversy arising out of the activities of any independent agency it may be provided by rule that such controversy may be heard in the first instance by one of its trial examiners Written record shall be made, and, together with findings of fact and proposed decision, filed in the agency. Copy shall be furnished the aggrieved party, who shall have 30 days within which to file objections. If no objections filed, the agency may enter an appropriate decision. If objections are filed, the agency shall accord a public hearing before members of the agency. If the agency has less than three members, the hearing shall be before an intra-agency board.

Other than this, there is no corresponding provision for hearing officers nor for regulating the procedure of formal hearings. However, interagency boards of appeal are provided for, which see.

Disqualification of a hearing commissioner

Prehearing procedure

No provision.

Rules of evidence

No provision.

ATTORNEY GENERAL'S COMMITTEE BILL

ruling where that result would not be accomplished or where the tribunal may for other good cause deem the rendering of such ruling premature or otherwise inexpedient.

When a declaratory ruling is sought all persons shall be made parties who have or claim any legal interest which would be affected by the declaration, and no declaration shall prejudice the rights of persons not parties to the proceeding.

A declaratory ruling issued by an agency tribunal shall, in the absence of reversal after appropriate judicial proceedings, have the same force and effect as a final order or other determination of that agency tribunal.

Declaratory rulings may be reviewed by the courts in the same manner and to the same extent as final orders or other determinations of an agency tribunal, except that nothing herein shall be deemed to modify existing provisions of law applicable to closing agreements concerning internal revenue tax matters. Refusal of a request for a declaratory ruling shall not be subject to review in any manner.

Separation of prosecuting and deciding functions

Separation of prosecuting and deciding functions is evidently contemplated, and perhaps impliedly provided for through the designation of hearing commissioners, but such separation is not positively provided for as it is in the minority recommendation.

Hearing or deciding officers

Hearing commissioners to be appointed by Office of Federal Administrative Procedure on nomination of agency, not under civil service; no political qualification permitted.

In agencies having five hearing commissioners, one is to be designated chief hearing commissioner.

Salaries: $5,000 to $8,500.

Term: 7 years.

Grounds for removal:

1. Certification by Director, upon recommendation of agency, of lack of business or insufficiency of appropriation.
2. Malfeasance.
3. Neglect or inefficiency.

Powers and duties of hearing commissioners are enumerated, and are to be similar to those of judges in courts.

Chief hearing commissioner has same powers and duties as other hearing commissioners, and in addition acts as a clearing house or traffic control in regard to the assignment of commissioners to hearings, making recommendations for additional or temporary commissioners, etc.

Disqualification of a hearing commissioner

Provision is made for disqualification in any particular case of a hearing commissioner upon the filing of a meritorious affidavit filed by any party to the proceeding. A hearing commissioner is also required to withdraw from any case in respect of which he deems himself disqualified for any reason.

Prehearing procedure

Prehearing conferences are provided for to simplify issues and expedite disposition of cases.

Rules of evidence

No provision.

MINORITY BILL

Separation of prosecuting and deciding functions

Prosecuting and deciding functions of an agency are to be completely separated.

Hearings are to be held by presiding officers. Such presiding officers are to be head of agency or member of group constituting highest authority of agency or else an appointed hearing commissioner.

Hearing or deciding officers

Hearing commissioners: Each agency may have as many hearing commissioners as necessary.

Appointment without regard to civil service by Office of Federal Administrative Procedure or nomination of agency.

Salary from $3,600 to $9,000.

Term: 12 years.

In emergencies temporary hearing commissioners may be appointed for terms of 1 year, subject to renewal.

Grounds for removal:

1. Certification by agency of lack of business or insufficiency of appropriation.
2. Malfeasance.
3. Neglect or inefficiency.

Powers and duties of presiding officers are enumerated and are to be similar to those of judges in courts.

Disqualification of a hearing commissioner

Provision for disqualification of presiding officers similar to committee proposal.

Prehearing procedure

Provision similar to committee proposal.

Rules of evidence

Strict rules of evidence are not required to be observed, but the basic principles of relevancy, materiality, and probative force recognized by the Federal courts in equity proceedings are to govern the proof of questions of fact. Reasonable cross-examination is to be permitted in the discretion of the presiding officer. Agency is authorized to simplify hearings regarding stipulations and the submission of technical evidence and generally undisputed data.

Decisions as to matters of fact are to be based entirely upon the record.

WALTER-LOGAN BILL	ATTORNEY GENERAL'S COMMITTEE BILL	MINORITY BILL
Enforcement of process and orders	*Enforcement of process and orders*	*Enforcement of process and orders*
No provision.	Where any person disobeys or resists any lawful subpena, order, or process in connection with an administrative proceeding or is guilty of misconduct during a hearing, the agency may certify the facts to the district court which is summarily to hear the matter and compel compliance or punish for contempt.	Provision similar to committee proposal.
Decision of agency in first instance	*Decision of agency in first instance*	*Decision of agency in first instance*
No provision.	Unless otherwise provided in the act, when the evidence has been heard by a hearing commissioner he shall afford the parties an opportunity to request findings of fact and conclusions of law and to file briefs or argue orally in accordance with the procedure prescribed by the rules of the particular agency. The hearing commissioner shall find the facts, formulate the conclusions of law, and enter a decision in the case. Such findings, conclusions, and decision shall be stated in writing, served upon all parties in interest, reported to the agency tribunal, and become part of the record; but in any case where the commissioner deems it appropriate to do so, he may announce his decision orally on the record and shall reduce his findings, conclusions, and decision to written form only if requested to do so by a party or by the agency tribunal. Hearing commissioners may certify to the agency any questions of law for instructions and the agency is to give binding instructions of the questions certified, or else may take over the case for its own decision.	The presiding officer who hears the case is to render a decision, including findings of fact, conclusions of law, and appropriate order or other form of decision. All decisions are to be written and to include separately stated findings of fact and conclusions of law accompanied by a statement of reasons. Deciding officers may have aid of law clerks or assistants, but otherwise are not to receive recommendations or advice of other employees of agency, except on written notice and with consent of all parties, or upon open hearing. The decisions which are regarded by the agency as valuable to the public or are to be relied upon as precedents are to be published. The presiding officer may certify to the agency any questions of law or policy, and agency is to give binding instructions on question certified, or agency may take over case for decision. Penalties and benefits: Penalties and conditions are not to be imposed beyond those authorized by statute. Rights and benefits authorized by law are not to be denied. The effective date of any action is to be deferred for a reasonable time to permit persons affected to adjust their affairs or to seek administrative regulations or judicial review.
Agency review of decisions	*Agency review of decisions*	*Agency review of decisions*
Head of each agency to designate three employees for service on intra-agency boards. Members of such boards to have regular duties in the agencies from which appointed, when not engaged in hearing and determining administrative appeals. No member of a board who has participated in a particular case or in the preparation, draft, or approval of any rule which may be involved, is to sit in appeal of the case or application of the rule. Each board member to take oath to act impartially without regard to the position of the Government as a party in interest, and to decide matters upon their merits in accordance with law and the evidence presented.	Provision is made for appeals from decisions of hearing commissioners to the agency tribunals, and the procedure to be followed in such appeals is set forth. In the absence of an appeal from the decision of a hearing commissioner within the time fixed by the agency tribunal, the decision shall become final, and enforcible or reviewable to the same extent as though it were the decision of the agency tribunal. In any case, the head of the administrative agency may, on his own initiative, review the decision of a hearing commissioner.	If the presiding officer is not the head of the agency or a member of the highest authority of the agency, the parties would have the right of appeal to the agency itself. After review or in the absence of review or appeal, the decision becomes final. Final decisions may be subject to rehearing or review to the extent authorized by the legislation under which the agency operates, except in preliminary or intermediate matters authorized by statute no action is to be taken except on final adjudication.
Reopening of hearing commissioner's decision	*Reopening of hearing commissioner's decision*	
Any person aggrieved by a decision of any agency or employee thereof may notify the head of the agency within 20 days and have the matter referred to an intraagency board. Such board shall give prompt, full, and fair hearing, receiving into the record the testimony and any documents or objects relating to the appeal. Any person having a substantial interest may intervene. Record to be reduced to writing, and a copy furnished the aggrieved person on request at actual cost. Within 30 days after closing of evidence and arguments, board required to make written findings of fact and decision thereon, subject to written approval, disapproval, or modification by the head of the agency or his representative. Copy of the findings and the decision to be filed in the agency as part of the record, and copy to be mailed to the aggrieved person and to the intervenors, if any.	Any agency tribunal may reopen and alter, modify, or set aside any decision of a hearing commissioner which has become final, to the same extent as such tribunal may reopen or review its own final decision.	
Court review of agency decisions	*Court review of agency decisions*	*Court review of agency decisions*
Any party aggrieved by a final decision or order of any agency may, within 30 days after receipt of copy of the decision or order, petition the United States Court of Appeals for the District of Columbia, or the Circuit Court of Appeals within whose jurisdiction the aggrieved party resides or maintains his principal place of business, or in which the	Procedure is provided with respect to the form in which matters shall be presented to the courts in any proceeding for judicial review, restraint, or enforcement of an administrative order or other determination. It shall not be necessary to print the complete record and exhibits in the case unless the court so orders.	It is contemplated that all administrative adjudications may upon proper procedure be reviewed by the Federal courts. All present statutory provisions affecting judicial review applicable to agencies not inconsistent with the provisions of the bill are to remain in effect. Unless otherwise specifically provided by law or excepted from the

WALTER-LOGAN BILL

controversy arose, for review of the decision.

The petition shall state the alleged errors committed. The Attorney General is required to provide for defense of the Government's (agency's) case. The agency is required to file with the clerk of court the original or a complete transcript of the record.

The appropriate court shall have jurisdiction of the matter and to grant such temporary relief as it deems proper. The court may affirm or set aside the decision or order the agency to modify it. A case may be remanded to the agency for further evidence. Cases of this nature may be expedited by creation of special sessions of the court having jurisdiction.

Grounds for setting aside the decision or order of any agency shall be:

1. That the findings of fact are not supported by substantial evidence;
2. That the decision is not supported by the findings of fact;
3. That the decision was issued without due notice and a reasonable opportunity for full and fair hearing;
4. That the decision is beyond the jurisdiction of the agency; or
5. That the decision infringes the Constitution or statutes of the United States.

Judgments of the courts under this section or the section providing for court review of administrative rules shall be final, except that they shall be subject to review by the Supreme Court of the United States upon writ of certiorari or certification.

Where the cause of action is otherwise within the jurisdiction of the United States Court of Claims, the aggrieved party may elect to file his petition for review in that court.

Where a circuit court of appeals or the Court of Claims finds itself in disagreement on any question of law with a previously rendered decision of another court having jurisdiction under this act, it shall certify the question of law to the Supreme Court for further proceedings.

Courts authorized to impose damages where appeal is for purposes of delay: The courts are authorized to impose a reasonable penalty as part of the costs in any case where the decision of the agency is affirmed and the court finds there was no substantial basis for the appeal.

ATTORNEY GENERAL'S COMMITTEE BILL

Where a party makes a mistake as to procedure or as to the court having jurisdiction to review an administrative order or determination, the court may, instead of denying relief:

1. Proceed, if it has jurisdiction, as if the proper remedy had been sought; or permit or direct such amendment, rehearing, or remand to a lower court, as it deems appropriate, for a proper review of the order; or
2. Permit transfer of the case to a court having jurisdiction to review the order.

MINORITY BILL

operation of the bill, any person adversely affected by any final decision of any agency is to be entitled to judicial review in equity or by a writ of mandamus in the appropriate Federal court regardless of whether the subject is one of constitutional or statutory right or immunity. All court decisions in such cases are to be reviewable by the Supreme Court in accordance with present certiorari procedure.

If a court finds that a petition for review should have been filed in some other court it is to transmit the record with its statements of reasons to such other court and the other court is to permit any necessary amendments and proceed with the determination.

All final administrative orders directing action, assessing penalties, or denying claimed rights under the Constitution or statutes shall be subject to court review. An order may be final even though no request for rehearing or reconsideration has been presented to the agency.

Scope of review: The reviewing court is to decide all questions of:

1. Constitutional rights.
2. Statutory authority and jurisdiction of the agency.
3. Lawfulness and adequacy of the procedure.
4. Findings and conclusions of fact unsupported by substantial evidence.
5. Arbitrary or capricious administrative action.

Record: Printing of the complete administrative record is not required unless the reviewing court orders it.

Garrett Whiteside

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

Mr. CRAVENS. Mr. Speaker, March 4 of this year marked another milestone in one of the most unique careers in the legislative history of this country. On that day Garrett Whiteside, of Nashville, Ark., finished 34 years of continuous secretarial service in the Congress of the United States and launched upon his thirty-fifth year of such service and as though it were but another day. He is the oldest in point of service of any man in the legislative branch with the exception of Hon. A. J. SABATH, of Illinois.

Coming to Washington on March 4, 1907, as secretary to the late Congressman Ben Cravens, of Arkansas, he has remained here continuously in that and similar positions to others both in the House of Representatives and in the Senate. He has served, in succession, the late Otis T. Wingo, of Arkansas; the late Senator T. H. Caraway, of the same State; and is now with the present senior Senator from Arkansas, HATTIE W. CARAWAY. During those years many exciting experiences have been encountered to enliven the routine of congressional and senatorial offices. Within the span of years he has seen the duties of congressional life expand from one requiring but a few months a year, dealing with but a few limited subjects, to one of full-time service, embracing nearly every phase of human activity. When he arrived Washington was a comparatively small city. He has seen it grow to its present large, congested proportions. He has seen the leisurely, horse-drawn carriages on its streets give way to a horde of fast-moving, motor-driven vehicles.

Garrett Whiteside arrived a bridegroom; he has remained to become a grandfather. Older, yes, in years, but in spirit and activity unchanged.

From a standpoint of dramatic interest, perhaps the outstanding event in Garrett Whiteside's career is the writing of this country's declaration of war against Germany in 1917. Working late one night at his office, after President Wilson's war message to the Congress, the chairman of the Foreign Affairs Committee of the House looked into the office, looking for someone who could type. Garrett Whiteside volunteered, and before he knew it he was typing the historic document as dictated by Chairman Flood, of the Foreign Affairs Committee—the document later adopted by the Congress and which constituted one of the landmarks in the history of this Nation.

Quiet, retiring, unassuming, Garrett Whiteside probably knows and is known by more people in the Capitol and congressional offices than any other person. Those places have been his workshops for

34 years. There he has seen history made, and he has helped make it. There he has seen joys and disappointments, victories and defeats, but through it all remained his true self, loyal and looking forward to the tasks of tomorrow and those, we hope, of many more years to come.

Stabilizing Farm Prices and National Defense Problems

EXTENSION OF REMARKS
OF

HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

RADIO ADDRESS OF HON. AUGUST H. ANDRESEN, OF MINNESOTA

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me Saturday, April 19, 1941, over WMAL and associated stations of the National Broadcasting Co. from Washington, D. C., in the program of the National Grange during the Farm and Home Hour:

For more than 8 years the people of the United States have lived and worked under a series of political and economic emergencies. Fantastic and uneconomic schemes, costing billions of dollars to all Americans, have failed to solve our domestic problems of unemployment and distressed agriculture. These problems remain with us, still unsolved, and when the second world war comes to an end—as it must—our domestic situation will be aggravated to the breaking point in all lines of American activity.

And now, we are in a new and gigantic world emergency. Unsolved domestic problems have been forgotten. The active participation of our national leaders in the intrigue of old-world politics, has brought our country to the brink of entering another European war. Our country has been committed to the policy of giving material aid, short of war, to the warring democracies and other countries engaged to oppose the forces of conquest and dictatorship. This program can and must be carried out without the need for sending our young manhood to again fight on foreign soil.

All Americans favor a strong national defense to protect our country from any enemy. The people are anxious to pay any bill for this purpose and to make other sacrifices to keep us free and safe. But the people are becoming disgusted and tired with the activities of certain individuals and groups in this country who are conducting their rackets to sabotage and delay the achievement of a complete national defense.

The President of the United States, under the Constitution, is required to administer and enforce the laws passed by Congress. Under authority conferred by Congress upon him, the President has ample power to summarily deal with those in our midst who seek to jeopardize or sabotage the national-defense program. The calling of unjustified strikes and the exaction of exorbitant fees from those who seek the right to work in essential defense industries, should not be tolerated by the public or the Government.

The President also possesses an abundance of legislative authority to promptly deal with the subversive elements within our borders who undermine and scheme to destroy our Republic. Real Americans everywhere are aroused and they demand action now from both the President and Congress so that we may speedily prepare for whatever is to come.

President Roosevelt has called upon the American people to make sacrifices. The vast majority are willing to make every sacrifice to save our country. However, one or two groups should not be called upon to make all of the sacrifices to assure success in a common program. Industry, labor, agriculture, and men and women in every walk of life should share alike in our joint effort for a common defense.

Let us for a moment examine the situation to ascertain who has been called upon to make the sacrifices up to the present time. We first think of nearly a million young men who have been drafted into military service. Several million more will follow as they are called in the draft and they will receive $21 a month for being compelled to sacrifice their lives, if need be, in the event of war. They are making a real sacrifice. They have been forced by law to leave their homes and families and to give up their lucrative posts in industry, labor, agriculture, and profession. Should they attempt to strike or in any way sabotage the defense program, that would be treason and imprisonment would follow. Another group of splendid Americans who are willing to serve without compensation is to be found in more than a million women who have volunteered their services with the American Red Cross.

The only other group of which I have knowledge, now being called upon to make a sacrifice for the cause of national defense, are the 6,000,000 farm families, whom the people look to for an ample supply of food and fiber. And I now want to briefly discuss the problems confronting them today.

For the past 8 years Congress and the administration have been talking about giving farmers parity prices for farm products. Scores of laws have been passed and billions of dollars spent to accomplish this objective. But the goal has never been reached, and most farm products are selling for less than 75 percent of parity. The experiments to save farmers have nearly ruined them.

The administration has now abandoned the objective of securing parity prices for farm products. Leading Cabinet members and others in charge of your affairs at Washington are urging cheap food to make the people happy. They fail to recognize that nearly 40 percent of our population is directly dependent upon agriculture for a livelihood. They also fail to recognize that due to rising wage and other costs in industry, farmers are compelled to pay up to 25 percent more for the things they must buy for use on their farms.

The President has just appointed Leon Henderson to the position of Price Control Administrator. Mr. Henderson has taken a definite stand against any material increase in the price of farm products, and threatens to take drastic action should there be any substantial increase above the prices recently fixed by the Secretary of Agriculture.

The new Government plan to hold farm prices down was announced by the Secretary of Agriculture on April 3. It provides that on the basis of Chicago prices, and for the next 2 years, the Government will peg the price of hogs at $9 per hundredweight, dairy products (based on butter) at 31 cents per pound, chickens at 15 cents per pound, and eggs at 22 cents per dozen. The Government will buy at these prices in Chicago, which means that the prices received by farmers will be materially under the pegged Government price at Chicago, when we take into consideration transportation costs and grades.

The prices set by the Government are all below parity, and on the day the Government announced its price-fixing program, Chicago prices on butter, eggs, and poultry were all substantially above the Government prices.

The present parity price on the farm for hogs is $9.24—at Chicago it would be around $10. Parity price for butterfat on the farm is 35 cents per pound. Parity for poultry is approximately 15 cents, and for eggs 22 cents a dozen.

The Government prices are all below parity, and the question now is whether the pegged prices will be the ceiling or the floor of the price structure. If they prove to be a ceiling, farmers and others interested in agriculture will protest with all their might. Farmers have not sought inflated prices, but they are entitled to, at least, parity prices.

The Secretary of Agriculture states that he will maintain the pegged price for the next 2 years, and we may therefore justly fear that such price may be both a floor and a ceiling. In other words, the Secretary and Mr. Henderson may decide to freeze the prices at the present figures and wholly disregard the increasing spread in prices between agriculture and industry and labor.

During the past 30 days the Government has purchased double its food requirements. The excess will be added to and held as a price-controlling factor—to be dumped on the market if prices go above the figures set by the Secretary of Agriculture, or, the excess may be delivered to Britain or other warring countries.
